The Nation.

NEW YORK, THURSDAY, JULY 7, 1887.

The Week.

THE celebration of the Fourth of July at Gettysburg was perhaps the most impressive social incident that has taken place since the close of the civil war. Many things conspired to make it such. The field of Gettysburg, of all the battlefields of the war, is the one around which the greatest popular interest gathers. Other engagements were as hotly contested. Several others, Vicksburg for example, had more immediate and brilliant consequences. Some others, Nashville and Five Forks for example, were more decisive. Nevertheless, popular attention fixes itself upon the tremendous three-days' struggle that took place at Gettysburg as the turning-point of the conflict. It is remembered, also, that upon that ground Abraham Lincoln uttered the few words that summed up, as no one else had done before or has done since, the thought and purpose of the North in the war for the Union. A special and unique, and almost intense, interest had been given to this union of hands at Gettysburg by the recent battle-flag order of the President. Everybody was willing that those who captured the flags should hand them back. In fact, everybody was ready to applaud the act of returning them, provided only that the channel was the right one. If all the flags had been sent back in a mass by President Grant, nobody would have found fault with him. Battle-flags are frequently exchanged by the survivors of regiments and divisions without reproof and without special notice. It was part of the programme that the standards taken by the Pennsylvania troops at Gettysburg should be publicly returned at this celebration, but the political turmoil which followed the general order of the War Department prevented the carrying out of this intention. The failure to return the flags did not, however, detract from the felicity of the occasion, since the good feeling was expressed in the intention, and was shown forth as heartily in other ways.

The Fourth was a day in which there surely ought to have been some cursing done about battle-flags. Yet, as far as we can learn, the leading cursing men were silent. Not a curse came from Fairchild, Foraker, Halstead, Reid, Phelps, Elkins, or any other son of thunder. What was the reason of this? The reason was undoubtedly that the earlier cursing did no good. Not one stroke of paralysis has it brought down on any friend of peace and goodwill. This shows that the cursing men have not the influence with God Almighty which they evidently thought they had, when they asked Him to kill or disable people for trying to wipe out the memories of a bloody civil war. Their curses, in other words, they see now, are wasted on the desert air. As far as can be ascertained, what God Almighty desires is that Americans should hereafter dwell together in harmony, and that no man should occupy his time in counting up how many of his countrymen he slaughtered or maimed, or how many memorials he has of the agony, and sorrow, and humiliation he inflicted on them. In fact, we think the times are ripe for some cursing on the other side, and that a man who prayed that the promoters of strife and the harborers of bloody memories might be afflicted with the measles, or sprain their ankles, or be prostrated by a severe colic, would probably meet with a certain measure of success.

The District Attorney and his assistants are entitled to great credit for the very able manner in which they presented the case against Sharp. We can recall no trial in recent years in which the city has been more efficiently served than it has in this. Step by step, with the most careful deliberation, and with the nicest calculation as to effect, the mass of circumstantial evidence against the defendant was unfolded; and when the work was completed, the able counsel for Sharp discovered that no defence was possible. Mr. Martine's wisdom in trusting this work to his assistants, Messrs. Nicoll and Semple, was thus most signally vindicated. To Mr. Nicoll the highest praise is due, for it is a well-known fact that he has from the outset had special charge of all the "boodle" cases. He has now the distinction of not only presenting the first case for bribe giving ever brought into court here, but of winning it on its merits. The choice of Col. Fellows to sum up was no less wise, for his forcible presentation of the case undoubtedly had its influence upon the jury.

Still, we are inclined to the opinion that the jury had little doubt about their verdict from the moment that the defence so visibly collapsed. The prosecution had shown, in logical and clear order, that Jacob Sharp had been for thirty years spending money like water to get a railway in Broadway; that he was, during the very time that the Aldermen were bribed, spending money, in cash, more profusely than ever, and that the $1,000 and $500 bills which he was "diffusing" generally, subsequently appeared in the bank accounts of at least seven of the Aldermen; that some of the Aldermen and the go-betweens that Sharp employed are fugitives from justice; that from the time of the first charges against Sharp to the present, he had refused to give any explanation of his use of money, or of his relations with Mololoney and the Aldermen. It was shown, in fact, that the Aldermen were bribed to pass the Broadway franchise, and that in passing it they were doing precisely what Sharp, above all other men, was moving heaven and earth to induce them to do. The only satisfactory answer to this indictment was to put Sharp on the stand, and let him give an honest and satisfactory explanation of all the suspicious circumstances surrounding his conduct.

It is but right and proper, of course, that the hard-working staff of the District Attorney's office should now take a vacation, and that nothing more should be attempted against the remaining "boodlers" until after the hot months. But we trust these things will not lead the District Attorney to forget Cleary. His trial has been the one failure of the campaign against the Aldermen, and was very unfortunate, as there is no reasonable doubt that he was as bad as any of them, if not worse. His case was dropped in order to prepare for Sharp's, as we understood at the time. Now that Sharp's has been brought to a triumphant close, we trust that Cleary's will be taken up again in the fall. The chances of convicting him have undoubtedly been greatly improved by the Sharp verdict, and Col. Fellows, who was absent at the first trial, would undoubtedly be able to play his part in the next one.

The way in which the Mayor has filled the Corporation Counsel's office will, we think, cause general disappointment and regret. Mr. Lacombe had not only taken it out of politics, but had brought it to a very high degree of efficiency. He made it, in truth, such a Law Department as the city has not previously had. This fact greatly increased the Mayor's responsibility in supplying his place. It imposed on him in the eyes of the public the duty of maintaining, if possible, the standard Mr. Lacombe had set up. This made the rumors which had been afloat for some weeks, touching the kind of lawyers among whom he was searching for a successor, little short of alarming, though they were to us absolutely incredible. We did not believe it possible he was seriously considering the "claims" of a low grade of Tammany politicians. And yet there appears to have been some sort of foundation for them; for although the new appointee, Mr. Morgan J. O'Brien, may not be a low grade of Tammany politician, it is as a Tammany politician, and not as a lawyer, that he is best known in this city to the few who have ever heard of him. He may turn out a fit person to take charge of the large business of the city, but it is not quite fair to ask the taxpayers to take any man's word for it. Fitness for such a place should be a matter of notoriety, and not of the information and belief of a few persons. The Mayor's reason for not appointing the one man whose eminent fitness is notorious, Mr. Dean, Mr. Lacombe's first assistant, viz., "because of the very injudicious and indiscreet manner in which his friends have acted," is one which we are sure he would hardly stand by in calmer moments. The only good reason for appointing Mr. Dean would have been that he was the best man for the place; his wishing the place would have been no reason at all. If he was the best man for it, the people of the city were entitled to him as their counsel at Mr. Hewitt's hands, and the conduct of his friends had no more to do with the matter than the conduct of Mr. O'Brien's friends. The Mayor is not charged with the duty of punishing injudicious friends for indiscreet conduct, but with that of filling the municipal offices with the best material he can get.

The explanation given for the President's unfortunate appointment of Leonard A. Giegerich as Internal Revenue Collector of the Third District is, that it is a "recognition" of Tammany Hall. If this be true, it only shows how impossible it is for any official to "recognize" Tammany with credit to himself or justice to the public. Mr. Giegerich is the son of a liquor-dealer, and owes his position in "politics" to the liquor influence which first made him a member of Tammany Hall and then a member of the Assembly. His record in the Assembly last winter consisted mainly of vociferous opposition to the High-License Bill, and of a proposition to make it compulsory upon the railways to carry members of the Legislature free. He declined the pass which had been sent him, and in forgetfulness or ignorance of the fact that the law provides for the payment of mileage to legislators, he introduced a bill making it compulsory upon all railways to give free transportation to members of the Legislature. To put a man capable of such a proposition in charge of an office which collected during the last fiscal year over $6,000,000 for the Government, is not making of public office a public trust, but quite the contrary. It is simple truth to say that no private business of one-tenth that importance and magnitude would ever be intrusted to young Giegerich. He has never had any more important share in business than assisting his father behind the bar. The only use he can make of the office is to put "politics" into it, and give Tammany Hall all the "places" possible in its service.

There are unpleasant stories coming from Boston about charges made or proposed in the Post-office in that city by Gen. Corse. Good officers have, it is said, received notice of dismissal for reasons which seem absurd on their face, and which are generally believed to be mere covers for the ordinary political "removals," or, in other words, the displacement of Republicans to make way for Democrats. We shall not comment on these things until we know more about them, further than to say that anybody who supposes that the Administration can be strengthened in Massachusetts by disregard of business rules in the conduct of the public offices, is a foolish person, of whom the President and Postmaster-General should beware. In this State, barring some antics of Mr. Beattie, the Surveyor, in the Custom-House, everything looks well. The State Civil-Service Commission, which has just sustained a serious loss in the death of Col. Morrison, the Chief Examiner, has happily been able to fill his place by one of the warmest, ablest, most energetic, and upright friends of reform in the country, Mr. William Potts, who has long been the Secretary of the Civil-Service Reform Association in this city. Our Post office, too, remains firm as a rock amid the raging seas of local corruption. It will be sad if Massachusetts becomes at this time of day an awful example.

Our esteemed friend and contemporary Cyrus W. Field has finished playing games of infancy with Jay Gould. He began six or seven years ago "playing bear" with Manhattan to Gould's bull, and has ended by playing bull to Gould's bear. In both games, we regret to say, he was worsted. The bystanders have long predicted how it would turn out. They have said to each other as they watched the gambols that Cyrus had a joyous and sanguine nature, while Gould was cold, selfish, and calculating, and that a day would come when Gould would take the meanest advantage of his too confiding friend. The people down in Wall Street, who were very much mystified about the tumble in Manhattan the other day, say now that they can see through it all, and that their worst fears have been realized. They say that it was not on account of poor Ives that Gould broke the market, but on account of Cyrus himself. They say that Gould knew that Cyrus had borrowed more money on Manhattan stock at high figures than prudence would justify; that he (Gould) knew beforehand, through some clerk or copyist, what Judge Ingraham's decision in the Third Avenue case would be, and that the temporary stringency in money happened just at the right time to make a dash at Cyrus's pocketbook a promising venture. Hence these tears.

The sequel is well known. Gould poured more Manhattan stock on the market than Cyrus could "absorb" at 156½. The price fell to 115. The lenders of money on Manhattan were about to call lustily for their money and throw out every share of Manhattan from their loans, when, to their complete surprise, a shower of certified checks descended upon Wall Street, and all the large loans were taken up. This, they say, was Gould's money paying Cyrus's debts, but paying them on condition of a future settlement on Gould's terms. By these terms Cyrus handed over 50,000 shares of Manhattan to Gould at 120. How much of this stock was acquired at 156½ or higher, we are not officially advised. Gould, who has a fine sense of humor underneath a prosaic and cold exterior, says that he considers Manhattan one of the best properties in the country. Evidently he must so regard it, or he would not take as much as $6,000,000 worth in a job lot. The people who do business down town are naturally much moved by this affecting incident, because they cannot bear to see a confiding and joyous nature betrayed and trampled on in this ruthless manner.

A new constitution has been adopted by the Knights of Labor, including a section which provides for the creation and disbursement of a fund to aid coöperative enterprises. Each local assembly is required to collect and deposit a sum not less than two cents per month for every member in good standing. The money is to be invested by the Coöperative Board, and profits are to be divided equally between the General Assembly, the coöperative fund, and the workmen who create the profit. This is hailed as a new idea among the Knights, but as a matter of fact it is a return to one of the first principles of the Order as it was conceived by its founder, Uriah S. Stevens. His plan was for a union of all laboring men for the purposes of self-education and self-benefit, and one of the necessities in his scheme was coöperation. In accordance with this idea, a coöperative board of six members was added to the other officers, and efforts were made to establish stores on a coöperative basis for the benefit of members of the Order, All these experiments failed, chiefly because of inefficient management. An Insurance Association was also formed, with a secretary appointed by the General Assembly. This was based upon the mutual-benefit principle, the plan being to give $1,000 to the family of a deceased member by an assessment of 25 cents upon each 5,000 members who joined the Association. Membership was not compulsory, any Knight between eighteen and fifty being allowed to join on payment of $1.25. But this plan failed through lack of support. The majority of Knights were so much wrapped up in the strikes and boycotts of the present that they took no thought of the future.

The new coöperative plan is likely to fail for the same reason as the old. In fact, so long as the Knights are composed of such stuff as at present, there is no chance for even a fair trial of anything like coöperation. They are not seeking to make the most of what they receive and to fit themselves by industry and study for deserving more, but all their energies are concentrated upon forcing from their employers higher wages by means of strikes and boycotts. Nothing could be more unlike the original idea of Stevens than the present Order of Knights as it is led by Powderly and the Quinns, Dunns, and Martin Ironses. All experiments in coöperation have demonstrated that a coöperative concern of any kind succeeds only when it has the services of the best class of workingmen. Just as soon as the lazy and incompetent are given equal prominence with the most industrious and capable, the coöperative scheme fails. In other words, coöperation must be conducted upon the same principles that the capitalist employer observes in his business, or it breaks down. Now the Knights insist that all laborers, good and bad, lazy and industrious, must be treated exactly alike, must have the same wages, and must make the injury of one, no matter how dishonest or lazy he may be, the concern of all. No scheme of coöperation can long exist upon that basis, no matter how regular and heavy may be the assessments for its support.

Attention has been called lately to the refusal of our public authorities to allow a few foreign silk-weavers and zinc smelters to land here, while whole ship-loads of unskilled laborers, "the offscourings of Italy and Hungary," are allowed to come. The reason is, as the *Times* states, that a law of Congress prohibits the landing of any person who comes here under a contract for work. He might come under a contract for idleness. Indeed, many come in that way and are freely received. It may be that nobody in this country can do the particular work which the "contract laborer" is hired to do. It may be that he is brought hither to establish a new industry. All those things go for naught. If he comes under

an agreement to earn his own living, he must be bundled on shipboard and sent back home. It all seems very strange until we learn that this law was passed at the instance of Labor. It is akin to the various Prison Labor bills that are now agitating the bosoms of statesmen and statisticians whose object is to secure leisure, and healthful amusements, and mental culture, to convicts.

The formal excommunication of McGlynn has been ordered from Rome, and will in due time be published by the Archbishop. It will be interesting from this date to watch the sure and rapid disappearance of McGlynn as a "force" in politics. Nobody ought to be better able to calculate the time required for this than McGlynn, but he seems not to have been able to realize what he was calling down upon his own head. So long as he was merely in dispute with the local church authorities, he was able to have followers and sympathizers both in and out of his own church; but from the moment he is excommunicated all will be changed. No good Catholic can follow him after that, and as all his following which is not Catholic is political, that, too, will drop away from him, for no political organization can afford to have him for a member. He may go on for a while abolishing poverty, but it will not be long before his own poverty will be the most serious problem confronting him.

The new High-License Law for Minnesota went into effect on Friday, and its influence as a restriction upon the traffic is strikingly shown at the very outset. It requires a license fee of $1,000 in all cities having a population of 10,000 or more, and of $500 in all other places. Returns from each county, showing the number of applications for licenses under the new law, were received on June 30, and they showed a falling off of nearly a fifth from the number under the old law, there being only 1,866, against 2,296 last year. There are many old licenses in St. Paul and other localities which will not expire for some time yet, and when those run out there is likely to be a still further reduction.

We recently noted the fact that the prohibitory law in Maine was being openly nullified by the sale of imported liquors in the original packages, the dealers claiming the right to make such sales under a decision of the United States Supreme Court rendered many years ago. The State authorities have concluded to test the question whether this decision really sustains a citizen of Maine in breaking the State law which forbids the sale of liquor. The Governor a few days ago sent letters to the Attorney-General and to the district attorneys of the various counties, directing them to institute proceedings against such liquor-sellers, and the first steps have been taken in Augusta, where the entire stock of Michael Burns, the most notorious offender, has been seized. Burns asserts that he has the law on his side, and will carry the matter into the Federal courts, so that the question will doubtless ultimately reach the Supreme Court.

The people of Manitoba find themselves harnessed to the Canada Pacific Railway with the most unpleasant strictness. This company receives from the Dominion Government a monopoly of the Manitoba traffic by virtue of a provision of law that no other company shall build a line within twenty-five miles of the United States frontier until the expiration of twenty years from the completion of the Canadian Pacific. The latter company owns the present line from Winnipeg to Pembina, the point of connection with the St. Paul, Minneapolis and Manitoba Railroad. Of course, they have it in their power to make rates high enough to turn the bulk of the trade which formerly went to St. Paul and other American cities over their long line to Montreal, and this they will of course do, because it is all the traffic they can get for the line which follows the north shore of Lake Superior. The Manitobans ought to have foreseen this, and either prevented the making of such a contract, or filed such a protest against it as would furnish them a good moral basis for fighting against it. Having neglected to do this, they find themselves "bound hand and foot," for although they might go on building their new road to the United States boundary if they had the money, or might raise the money if they could give a good mortgage, yet, having neither money nor security, their threats are likely to avail nothing. There is abundant capital in the United States that would be readily invested in the bonds of the proposed railway if the investment were not forbidden by the superior political power of the Dominion.

The great and apparently unexpected victory of the English Liberals in the southern division of Lincolnshire, at a season, too, when the farm laborers are peculiarly open to intimidation, seems to have infused fresh courage into the Gladstoneites and spread corresponding dismay among the Liberal-Unionists. The latter have apparently been flattering themselves, as the Tories did in 1879, that as long as they were approved by London society and the clubs they had nothing to fear anywhere else. But the truth, we presume, is, that the passage of a very truculent and perpetual coercion bill for Ireland as the one piece of legislation of the session is more than the provincial Liberals can stomach, whatever they may think of Gladstone's scheme of home rule.

The difficulty Turkey is making over the signing of the convention with Great Britain about the occupation of Egypt bids fair to result in the indefinite continuance of the occupation. That is to say, Lord Salisbury will make answer to the remonstrances of France (the only Power which directly cares about the occupation), that he has tried to make an arrangement for leaving the country, but, owing to the obstinacy of the titular owner, was unable to carry it into effect. Russia does not care who has Egypt, but finds the occupation by England useful as a means of stirring up trouble between England and France and England and Turkey; and much the same thing may be said of Germany. So that they would probably both be pleased to have the occupation prolonged, in order to keep open a useful sore.

There is a great protectionist splutter in Germany, growing out of the fact that a contract for 4,500 tons of steel rails for a new German railway has been awarded to a Belgian company who were the lowest bidders. The price at which the contract was made was 110.90 marks per 1,000 kilos, duty paid. The London *Economist* figures this as equal to £3 16s. per ton at the mill, which would be equivalent to $18.47. The duty is 25 marks, about $5.50 per ton. The indignation of the German rail-makers, who have been pluming themselves lately on taking some foreign contracts away from the English, resembles in many particulars the explosion of wrath against the late Mr. Vanderbilt in the year 1879, when he gave a large contract for steel for the New York Central Railroad to British manufacturers, in the face of a duty supposed and intended to be prohibitive. The railway directors are denounced in the protectionist newspapers as unpatriotic in buying foreign rails, even though they are offered at a lower price than German rails. As the railway in question has a subvention from the Government, being in part one of the new strategic lines, it is looked upon by the domestic railmakers as peculiarly their plunder, upon the theory that while the directors might have some excuse for looking sharply after their kreutzers in behalf of a wholly private company, they have no such excuse when the taxpayers foot the bills in part. The utmost endeavors of the German malcontents (who, by the way, denounced the Belgian contractors for "starving their own workmen") failed to shake the determination of the rail way directors, who probably thought if the Belgian workmen were starving it would be an act of mercy to give them something to do.

The air is full of rumors about the impending bankruptcy of the Panama Canal. The latest accounts from the Isthmus represent that an important and costly section of the work already excavated is filling up by the sliding of an adjoining mountain; that the moving mass is too great to be held by any retaining wall; that the great problem of controlling the Chagres River has not yet been touched; that the funds in hand will suffice for only four months more, and that the chance of getting any more money is exceedingly slender. But it is noticed at the same time that Panama shares are pretty firm on the Paris Bourse, varying no more than those of the Suez Canal, or the Orleans Railway, or even the Bank of France. For example, the decline in Panama for the week ending June 16 was 3.75 fr., while the decline of Suez was 12.50, that of Orleans 6.25, and of the Bank of France 40.00. Taking account of the selling rate of these several securities, the percentage of decline was about the same in each, and this shows that at the present time Panama follows the market, and does not exhibit any special or peculiar weakness. Yet it is plain to every disinterested observer that the Lesseps company cannot finish the work, and that, if they could do so, they could not earn their fixed charges.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 29, to TUESDAY, July 5, 1887, inclusive.]

DOMESTIC.

THE survivors of the Philadelphia Brigade of the Union Army, and of Pickett's division of the Confederate Army, which were engaged in the battle of Gettysburg, met on the battlefield July 2, and for the two days following exchanged compliments and made demonstration of their regard for one another. In a letter expressing regret that he could not attend, President Cleveland wrote: "The friendly assaults there [on the battlefield] to be made will be resistless because inspired by American chivalry, and its results will be glorious, because conquered hearts will be its trophies of success. Thereafter this battlefield will be consecrated by a victory which shall presage the end of the bitterness of strife, the exposure of the insincerity which conceals hatred by professions of kindness, the condemnation of frenzied appeals to passion for unworthy purposes, and the beating down of all that stands in the way of the destiny of our united country."

A bronze equestrian statue of Gen. Burnside was unveiled at Providence July 4. It stands on a granite pedestal sixteen feet high, and is one and a half times the size of life. The aim was to represent Burnside as he appeared in the field. The sculptor was Launt Thompson. An oration was delivered by Gen. Horatio Rogers. At Hartford, Conn., July 2, about fifty descendants of Dr. Thomas Hopkins Gallaudet celebrated the centennial of his birth, and dedicated a memorial window. He was the first person who taught the sign language to mutes.

On the night of July 4, a party from Portland, Ore., illuminated the summit of Mount Hood, the tallest snow-covered peak in Oregon, more than 11,000 feet high. The light was seen in Portland, a distance of fifty-one miles in a straight line. For the first time in many years there was a general celebration of the Fourth of July at Salt Lake City, alike by the Mormons and the "Gentiles."

Farmers in the vicinity of the great gas wells near Kokomo, Ill., on the night of July 4 closed a grand harvest jubilee and exhibition of wheat-cutting by natural-gas light. Self-binders were run all night, and men shocked wheat at midnight by the light of the gas.

In an address at Saybrook, Ill., July 4, Senator Cullom expressed the opinion that immigration should be "so regulated that the 18,000,000 persons now in this country engaged in gainful occupations should not be thrown out of employment or forced to accept wages which will not support them and their families, and give them a fair chance in the race of life." On the same day Mr. Powderly, the Master Workman of the Knights of Labor, said at Scranton, Pa., that every immigrant should be required to show that he was self-supporting for one year before landing on these shores.

Senator Cullom, one of the framers of the Inter-State Commerce Law, declared at a meeting of the Illinois Grain Merchants' Association, June 29, that he did not think it would be repealed. "If," said he, "any persons or corporations imagine it will, they may as well dismiss that expectation. Its substantial provisions have come to stay, because the people will find out, if they have not found out, that they are in the interest of the general welfare."

The transcontinental railway companies have decided to ignore the long-and short-haul section of the Inter-State Commerce Law after the expiration of the suspension granted by the Inter-State Commission, and to continue to make lower rates from Pacific Coast points than from interior intermediate points until the practice shall have been decided by the United States Courts to be contrary to the law. This is in accordance with the decision of the Inter-State Commerce Commission that it has no right permanently to suspend the law, but that the railroads themselves must determine whether they may ignore section 4 or not, and if their action is found to be illegal by the courts they must take the consequences. The subject can come before the courts only by a suit against one or more of the roads.

Judge Deady, in the United States District Court at Portland, Ore., has given a judicial interpretation of the long-and-short-haul clause of the Inter-State Commerce Law. The receiver of the Oregon and California Road filed a petition asking whether under the law such rates may be made for through traffic as will enable his road to compete for it at points where competition by water or rail exists, although the rates for the long haul between those points may be less than those for a shorter haul in the same direction between said places. The Judge in effect repeated a former decision, in which he authorized the receiver to make a lower rate for a competitive long haul than for a short haul, notwithstanding the act of the Oregon Legislature known as the Hoult Law, which is in effect the same as the long-and-short-haul clause of the Inter-State Law; and he held that the Inter-State Commission is intended to prevent discrimination between long and short hauls, except where they are made under substantially dissimilar circumstances and conditions, and that freight carried to or from a competitive point is always carried under substantially dissimilar circumstances and conditions from that carried to or from non-competitive points.

The total receipts of the United States Government for the fiscal year ended June 30 were $371,180,893, made up as follows: Customs $217,403,983, internal revenue $119,136,447, miscellaneous $34,640,463. The decrease in the public debt for the fiscal year was $109,707,046.38.

Of the 57 clerks in the office of the Quartermaster-General at Washington who have been examined for promotion under the new civil-service rules, 30 are men and 27 women. Six men and two women failed to attain the minimum of 75 out of a possible 100, and the women made a better showing than the men.

A meeting was held at Salt Lake City June 30 to formulate a petition for the admission of Utah into the Union. The chairmen of the Executive Committees of the Republican and Democratic parties on June 2 published a notice that "the whole affair is a Church party movement, conducted solely by members of the Mormon Church to obtain for it Statehood. The earnest private solicitation of many of them failed to induce a single non-Mormon to become a delegate. All non-Mormons in Utah oppose the movement as insincere, and fraught with serious consequences if successful."

According to the account kept by the *Railway Age* of Chicago, the total miles of railway track laid in the United States between January 1 and July 1 is 3,700, and many more miles of roadbed are in preparation.

The record of cases of yellow fever at Key West on July 5 was: Total cases, 63; deaths, 20; discharged cured, 12; now sick, 30.

In northwestern Illinois and in parts of Wisconsin there has been such a long drought that the crops are seriously damaged, and in some places all the vegetation has withered.

A law enacted by the last Illinois Legislature has gone into effect that forbids, under a penalty of $20 fine for every violation, the giving or selling of tobacco, cigars, or cigarettes to any person under sixteen years of age except upon the written order of parent or guardian.

The new High-License Law in Minnesota, which requires the payment of a liquor-license fee of $1,000 in cities of 10,000 people or more and $500 elsewhere, went into effect July 1.

The Prohibitionists of Ohio on June 30 nominated Morris Sharpe for Governor and adopted a resolution in favor of female suffrage. Of the 500 delegates to the Convention, 200 were preachers, 40 were physicians, and 20 were lawyers; and 156 had been Democrats. The enforcement of the prohibitory law at Atchison, Kan., has so reduced the revenue of the government that the town is not lighted, and the Mayor has informed the firemen and all the policemen but two that they cannot longer be paid.

The Ohio State Convention of the Union Labor Party at Columbus, July 5, nominated a State ticket headed by John Seitz for Governor.

E. Henry Lacombe vacated the office of Corporation Counsel for New York city July 1 and entered upon the duties of Associate Judge of the United States Circuit Court; and Morgan J. O'Brien was appointed in his place by Mayor Hewitt.

The formation of negro clubs in South Carolina, chiefly in Greenville County, provoked fears of a strike by the laborers and rumors of plans for violence. On June 30 meetings of white men were held from which armed squads were sent to the secretaries of the "Hoover" clubs, the name that the organization had taken, and they were forced to give up their books. Members of clubs were examined, and their testimony showed that they had joined the organization without any definite purpose, and that no harm was likely to come of it unless visiting agitators used it to frighten them into violent action. The negroes were "warned" and released.

The case of Jacob Sharp, tried for bribing New York Aldermen, was given to the jury June 29, and they found him guilty, but recommended him to the mercy of the Court. Motion for a new trial will be heard July 13, and on that day sentence will be pronounced.

The honorary degree of Doctor of Laws was conferred by Harvard on Charles Eliot Norton of Cambridge, and J. Hammond Trumbull of Hartford: and by Yale on John Randolph Tucker of Virginia, Orville H. Platt, Senator from Connecticut, John S. Beach, and Chauncey M. Depew of New York.

The gifts to Yale University since last September amount to $277,000, and, with certain bequests to be realized at a later time, to $300,000. Mr. A. S. Barnes of this city has presented $40,000 to Cornell University for the erection of a building for the Students' Christian Association. The Clapp Memorial Library Building at Belchertown, Mass., the gift of the late John Francis Clapp of Brooklyn, N. Y., was dedicated June 30. It cost $40,000.

The Yale-Harvard University race at New London, June 30, was won by the Yale crew. Time: Yale 22:56. Harvard 23:10½. Of the twelve eight-oared races between these colleges, each has now won six.

Among the noteworthy persons who died during the week were A. A. Talmage, General Manager of the Wabash Railroad system, June 28; Bion Bradbury of Portland, Me., who was appointed Collector of Customs at Eastport in 1844, and was reappointed by Presidents Polk and Pierce, and had been a Democratic candidate for Governor, and was Surveyor of the Port at Portland at the time of his death; at St. Johnsbury, Vt., July 2, Luke P. Poland, formerly Chief Justice of Vermont, and United States Senator; on July 3, at New Orleans, Duncan F. Kenner, who was a member of the Confederate Congress, and one of the Commissioners appointed by Jefferson Davis to visit England and France in the interest of the Confederate Government; on July 4, at Augusta, Me., Anson P. Morrill, who was the first Republican Governor of Maine, and was afterwards a member of Congress; at Philadelphia, June 29, William H. Ross, ex-Governor of Delaware.

FOREIGN.

On July 2 Queen Victoria reviewed 50,000 London volunteers in front of Buckingham Palace, and in the evening held her first garden party since the death of the Prince Consort.

In the House of Commons, June 30, Mr. Smith moved that if the report on the Crimes Bill be not reached by July 4, closure be applied, and the motion was carried by a vote of 220 to 120. The Parnellites made no response to the Speaker's request for them to move the amendments of which they had given notice. Amendments introduced by Mr. Balfour, Chief Secretary for Ireland, among which was one for the omission of the change-of-venue clause, were agreed to without debate, and the bill was reported. Mr. Balfour announced that the third reading of the bill would be moved on July 5, but the date was subsequently changed to July 7. Every Parnellite left the House and every Gladstonian but two.

In the House of Lords, July 1, the Irish Land Bill passed its report stage; and on July 4 it was read the first time in the House of Commons, and the second reading was fixed for July 11.

The arrest of a young woman on a street in London, on the charge of improper conduct of which she was not guilty, became the occasion on July 5 of a "defeat" in the House of Commons of Mr. Matthews, the Home Secretary. The debate of the conduct of the police led to criticism of the Home Secretary. The vote was 158 to 148.

At a dinner on July 2 given by Sir Joseph Pease in honor of Mr. Gladstone, Mr. Gladstone made a long speech, which was chiefly a criticism of the recent speeches of Lord Hartington. He said that the Spalding victory showed the value of faith and patience in the present crisis. Lord Hartington had declared that the crisis was a serious and grave one, and in this opinion he (Mr. Gladstone) agreed with him. Parliament was not even allowed to discuss the question of home rule, but was confined to the consideration of the Coercion Bill. Ireland was stronger now on the home-rule question than ever. First, her constituencies under the Liberal Franchise Act had a voice; second, the elected members were able to speak their country's wishes; third, an ever-increasing, active force in England was in favor of home rule. This triple cord is unbreakable. "The crisis," Mr. Gladstone said, "is a double one. There is a crisis in Ireland, where, after giving her a large representation, we trample under foot the whole wishes and convictions of her people, as expressed by five-sixths of their members. The second crisis is the reduction of Parliament to paralysis and impotence. I predicted that unless the Irish question was settled, Parliament would find the greatest difficulty in performing its duty towards England and Scotland. That prediction has been more than verified. This inability of Parliament to have Ireland's wishes and wants discussed in a practical manner constitutes a crisis which will prevent the country from going asleep on the subject."

In the Parliamentary election to fill the vacancy in the Spaulding division of Lincolnshire on July 1, the Gladstonian candidate, Mr. Halley Stewart, defeated Mr. Tryon, the Conservative and Liberal Unionist candidate, by a vote of 5,110 to 4,363. This seat had been held by a Liberal Unionist, and it is the fourth that the Gladstonians have won this year.

More than a hundred English, Scotch, and Welsh members of the House of Commons have signed a memorial to the President and Congress of the United States in favor of referring all Anglo-American disputes to arbitration for settlement. It is expected that a deputation of members of the House of Commons will be sent to Washington to present the memorial to President Cleveland.

Lord Salisbury announced in the House of Lords July 5 that the Anglo-Turkish Convention with reference to the occupation of Egypt had not been ratified by Turkey, and that Sir Henry Drummond Wolff, the British Commissioner, had been instructed to leave Constantinople.

At a meeting of the Nationalist members of the Dublin Corporation July 4, Mr. Sexton was unanimously nominated for Lord Mayor.

An International Exhibition is to be held at Glasgow during the summer of 1888. A committee has been organized at Genoa to arrange for a celebration of the four hundredth anniversary of the discovery of America by Columbus. All the States of America, it is declared, will be invited to send representatives.

The Count of Paris arrived at St. Helier, on the Isle of Jersey, July 1, where he was met by a large crowd, many of whom welcomed him with cries of "Vive le Roi." Several large companies of Orleanists during the two or three days following visited the Count and made a demonstration, against which he is reported to have protested. The *Figaro* (Paris) on July 4 published the statement that the heir of a great kingdom (meaning Crown Prince Frederick William of Prussia) had visited the Count of Paris at Sheen House for the purpose of warning him that a Floquet-Boulanger Ministry would mean a war between France and Germany within a month after such a Ministry took office; and that the policy adopted by the monarchic party would be based on that warning.

A committee appointed to report a plan for the complete separation of Church and State in France have declared in favor of the Government's granting no more subsidies or special privileges to religious bodies, of repealing many of the existing laws and regulations, and of pensioning old ecclesiastics.

M. Bouvier, French Premier and Minister of Finance, has prepared the budget for presentation in the Chamber of Deputies. It will show a saving of 15,000,000 francs over the last budget.

The Budget Committee of the French Chamber of Deputies has postponed the mobilization of the French Army until next year, on the ground of economy.

The trial of Herr Klein and several associates for treason in supplying the French with information concerning German fortifications was begun at Leipsic July 4. Klein confessed that he had been paid by Schnaebelé, French agent at Pagny, for acting as a French spy, and that he had sent to the French War Office drawings of the fortresses of Strassburg and Mayence. French persecution of foreigners is again the subject of comment by the German press. No action has been taken in regard to the release of Koechlin, one of the convicted members of the French Patriotic League, and neither France nor Germany seems willing to take the initiative. The Mulhouse Correctional Tribune has sentenced a German domestic to nine months' imprisonment and a small fine for crying "Vive la France" in a tavern.

The German Military Council has decided upon a plan which will prevent the movements of troops becoming known to the public, and thus possibly to the enemy, in the event of mobilizing the army. The landing stages on strategic railways, which have hitherto been permanent structures, will be kept in the shape of materials, ready to be built at a day's notice.

A monument to King Louis I. of Bavaria, the gift of Bavarians in Alsace, has been unveiled at Strassburg, the King's birthplace. A stained glass window has been inserted in the English church at Baden-Baden in memory of Prince Leopold of England by the Empress Augusta and Lady Malet, wife of the British Ambassador to Berlin, and others.

The *British Medical Journal* of June 29 said that Dr. Mackenzie had removed almost all of the fungus growth that remained in the throat of the German Crown Prince, but that since the last operation was performed he had caught a somewhat severe cold. This did not, however, alarm Dr. Mackenzie.

The meeting of the Sobranye has again made the Bulgarian throne a subject of speculation. Prince Ferdinand, whom it is thought all the European Powers except Russia would be willing to see occupy it, has declared his willingness to accept it if he shall be elected.

A new Russian coercive measure directs Government employees in Poland to forward frequently to St. Petersburg complete lists of resident foreigners. Jews are not allowed to remain in St. Petersburg more than a week, and are forbidden to enter corporations and academies. The efforts of Prince Hohenlohe, Count Henckel, and Herr Kramsta, the largest German landowners in the Russian provinces, to have themselves exempted from the effects of the Czar's ukase against foreign ownership of land have failed. They are therefore compelled to sell their estates in Russia at a sacrifice.

Commercial reports from Russia are that the recently increased duty on metals has had an adverse effect upon the iron trade. The furnaces are being extinguished in Upper Silesia, and iron and steel associations report that while superior pig-iron is in fair demand, the production of puddling iron far exceeds the demand, and prices have fallen.

The crop indications on July 1 were of a yield of wheat considerably below the average in all European countries except Russia and Austria-Hungary. There is promise of a good crop on an increased average in Algeria. In India the estimate is of a crop 6 per cent. less than last year.

Gen. Lawton, the new United States Minister to Austria, arrived at Vienna July 2. Mr. Straus, United States Minister to Turkey, presented his credentials to the Sultan July 1, and was warmly received.

The Italian Chamber of Deputies on June 30 granted a military credit of 20,000,000 lire for the garrison at Massowah. The Government regards the adoption of the credit as a vote of confidence in the Ministry, and does not think that anything justifies a fear of war in Europe.

It was reported from Rome on July 4 that orders had been sent to the Archbishop of New York to excommunicate the Rev. Dr. McGlynn and to publish the decree of excommunication in the journals. On July 5 the order had not been received by the Archbishop.

The Belgian Chamber of Deputies has adopted a bill declaring two-fifths of a workman's pay inalienable, and one-fifth free from liability to be taken even in legal process. Clerks' salaries are made free from liability to seizure unless they exceed $240 per annum.

The Indian Government will issue 4 per cent. bonds for a loan of £2,000,000.

The forthcoming marriage of the Emperor of China has been officially announced, and it is reported that the festivities will cost $5,000,000.

The Canadian Pacific Railway has offered to carry the English transpacific mail at a speed of fifteen knots, and to build their boats under Admiralty supervision, so that they may be readily converted into armed cruisers, for a subsidy of £100,000 per annum; and to carry it 3,500 miles across America free of charge. A German company has made a less advantageous bid.

Mr. Erastus Wiman of New York and Mr. Benjamin Butterworth of Ohio, and several men of prominence in the Province, made speeches at Dufferin Lake, Ont., July 1, in favor of commercial union with the United States. On the next day they spoke at Drayton, Ont.

The most violent earthquake that has occurred in Ecuador since 1858 was felt at Guayaquil on the morning of June 28. The shock lasted two minutes and twenty seconds, and the direction of the movement was from northeast to southwest. Clocks were stopped, ceilings were shaken down, and several buildings fell, but no life was lost.

The Emperor Dom Pedro of Brazil sailed for Europe on July 1.

SHARP'S CONVICTION.

It was plain from a very early stage in Sharp's trial that nothing would save him except an explanation, from himself or his lawyers, of the disposition made of the $500,000, or thereabouts, which were raised over and above the cost of constructing the Broadway Railroad, and of which Sharp before the Senate Committee refused to give any account. No attempt was made by him, or by any one for him, to throw light on this part of the case. And yet he had only to go on the stand and say what he did with this money, or what he knew about it, in order to tear to pieces the whole web of probabilities which the prosecution had so ingeniously woven around him. No matter how improperly, or unworthily, or wastefully the money might have been used, if he could have shown that it was not used to bribe Aldermen, he would to-day be a free man. Failing this, it was useless for his counsel to ask the Judge to warn the jury that his non-appearance on the stand ought not to prejudice him, and it was useless for the Judge to comply. The law doubtless says it ought not to prejudice him, but it takes more than a week to get twelve middle-aged laymen into a legal frame of mind. They persist in judging people in court under the moral rules which they have all their lives used in dealing with their neighbors. Under those rules Sharp's silence fatally prejudiced him.

His conviction is most important for a variety of reasons, but for one above all. We do not think it uncharitable to say that he has probably done a score of times already, with perfect impunity, the thing for which he is to-day going to the State prison. It is not at all surprising that, with this experience, a man of his mental calibre should have come to the conclusion that it was not so very wrong to do it, if the object he had in view was a harmless or useful one. We have little doubt that the moral aspect of the Broadway transaction never really troubled him until the newspapers began to make a fuss over it. For he is not alone. He is one of a now large class of "operators" in railroads and kindred schemes, who have for the last forty years almost made a business of bribing legislators and other public officers—that is, getting what they wanted from people in power by paying for it cash down. Sharp has been at work in this way for fully thirty years. This class contains some of the richest, most pushing and energetic men in the community, engaged in all sorts of money-making enterprises, for the success of which official aid or official forbearance is absolutely necessary. To overcome obstacles of various kinds is the business of their lives, and they overcome them generally with money. If they have to make a railroad, for instance, they give money for the land, money for the equipment, money to excavate and fill up, money to buy off opposition, whether it be commercial, or legal, or legislative. They have consequently got into the way of looking at the removal of legislative hindrances for cash, just as they look at the removal of so many cubic yards of earth or rock, or the building of a bridge over a large river. It is an obstacle, and all obstacles wear the same moral aspect to them. The only difference between them is one of cost. Their theory is that the existence in official place of men who take bribes is not their affair, but the affair of those who elect them. It is not their business to see that none but good men get office, or that men in office stay good. Their business is simply to see that important and profitable public enterprises are duly carried out.

That the existence of this class of business men has had an immense influence in fostering corruption in the official class, there is no denying. That we shall have little success in purifying politics until bribe-giving, as well as bribe-taking, is made highly dangerous, is equally plain. The presence in the political field of men known to be willing to pay highly for things which public officers have it in their power to bestow, draws into office men who are ready to sell, just as certainly as a demand for mutton brings sheep to the market. Every year politics, under these conditions, becomes more and more the resort of the needy and broken-down, until finally, as in the case of the New York Aldermen, legislation comes to be looked on as a mercantile pursuit, with its good and bad years and its strokes of good and bad luck. There are in all the State legislatures to-day scores of men who go there simply to make money by taking bribes, and who would never think of going if they did not know that the lobby would be full of Sharps and their agents, ready to pay cash for their votes. Consequently, if we are to break up the market, we must strike some telling blows, like the one which has overtaken Sharp, at the men who keep it open and ask the country dealers to bring in their wares.

Unhappily, the influence of the Sharps does not end with the legislators. It has more or less reached the bar. The long success and impunity which they have enjoyed has finally given them in the eyes of lawyers the air and reputation of dealers, who, under the pressure of overwhelming necessity, now and then have to do things which are not nice, but who, nevertheless, can only fairly be criticised on the ground of having chosen a calling which fastidious men would consider disagreeable. The evidence given by Mr. Bright, the other day, in court, as to the kind of aid he gave Sharp in having his way with the Aldermen, described things which surely would not have been possible in the case of a lawyer of similar standing and similar sensitiveness about his good name, twenty-five years ago. We venture to assert that at that time a reputable lawyer concerned himself about his clients' ends, and refused to supply the means unless he was satisfied that they were such as a man of honor and a good citizen could approve of. The first great step in the downward course was taken when Field and Shearman began to contrive the legal machinery to enable Fisk and Gould to make their predatory attacks on railroads, in return for fees which amounted to a fortune. Before that time the lawyer's duty in standing by wrong-doers was confined to their defence after the wrong was committed. Since then, the doctrine that he may also assist in the preparations for its committal, has made rapid progress. If it be not checked, it will convert a great profession into the worst moral nuisance with which civilized society has had to contend for ages.

THE TEXAS CAMPAIGN.

That in midsummer of an "off-year" a campaign should be under way in Texas so exciting and so interesting as to challenge the attention of the whole country, would have been pronounced impossible a twelvemonth ago. That this campaign should be waged over the question of temperance, and that there should seem an even chance that it would end in the adoption of a prohibition amendment to the Constitution, only adds to the surprises of the situation.

For several years past, temperance sentiment has been growing rapidly in Texas. In 1885 the believers in prohibition succeeded in carrying through the House a measure proposing a constitutional amendment, but appeals to the traditional principles of the Democratic party against "sumptuary legislation" defeated it in the Senate. The advocates of prohibition only redoubled their efforts, and in the Democratic State Convention last year they carried a resolution declaring that the views of a citizen upon the question of local option should not interfere with his standing in the party, and that the question is "one on which every Democrat may indulge his own views without affecting his Democracy." The Convention did not, like the Democratic Convention in Tennessee, declare in favor of the submission of a prohibitory amendment, but when the Legislature met, with 131 of its 137 members Democrats, the demand for such action was made and readily complied with, the 4th of August being set as the day for the election.

The Prohibitionists had no sooner forced the Legislature to submit the amendment than they began operations to secure its adoption by the people, and so vigorous a fight did they make that its opponents soon found that they would have to do their best to beat them. For weeks past, the Prohibitionists and the Antis have been holding meetings in all parts of the State, and the number of these gatherings steadily increases as election day approaches. The meetings are of all sorts. Most frequently one party announces a number of speakers who will advocate its views; occasionally both sides unite in a joint debate and division of time; sometimes the speeches are worked in as incidents of a picnic or barbecue. This latter custom appears to be spreading of late, and a number of barbecues were held on the Fourth of July. At one of these gatherings last Saturday, besides the bountiful feast provided, a tournament was held in which twenty young men contested, and horse-racing, foot-racing, base-ball, and dancing were features of the programme.

A noteworthy incident of the campaign is the breaking down of the color line. Negroes constitute nearly one-quarter of the population of the State, and their votes will very likely decide the result. Consequently both parties are bidding their highest for the support of the blacks. Colored orators speak from the same platform with white, and whites attend meetings addressed exclusively by blacks, who are everywhere made to feel that the two races stand on an equality in deciding the sort of constitution under which both must live.

The breaking down of old party lines is

hardly less noteworthy. Nobody ventures to say that a man is bound to oppose the amendment because he is a Democrat and Democrats have in the past denounced prohibition, when a Democratic United States Senator and several Democratic Representatives in Congress are upon the stump as advocates of the amendment. Gov. Ross and Congressman Mills are working zealously against prohibition, but a majority of the Democratic leaders favor the amendment. On the other hand, the last Republican candidate for Governor, other managers of the party, and its leading newspapers are outspoken against prohibition. Some of the Republican stump speakers and newspapers are disgracing themselves by trying to persuade the negroes that the movement to deprive them of the chance of getting drunk is only the first step towards robbing them of the liberty which they now enjoy.

The result of this extraordinary campaign cannot be forecast, since votes for President and State officers furnish no basis for estimates. Last year the Democrats cast 228,000 votes for Governor, the Republicans 65,000, and the Prohibitionists 19,000. If the Democratic strength is divided about equally, the decision will rest with the Republicans, who are chiefly negroes, and it is noticeable that the Antis count upon the bulk of the colored vote when they figure out a majority for their side. One consideration which upsets all calculations is the question whether, after all the talk, the amendment will call out a very full vote. A case has never been known in any State where a proposed change in the Constitution, submitted when no officers were to be elected, drew out a heavy vote, but perhaps Texas is to furnish an exception to the rule next month. The only certain thing now is, that each side is plainly afraid that it is to be beaten.

THE LEGEND OF FONTENOY.

The Duc de Broglie, in the last number of the *Revue des Deux Mondes*, once more discusses Fontenoy, the most famous battle of the eighteenth century, after the great days of Marlborough, and by far the most picturesque. It was fought on the 11th of May, 1745, on the banks of the Scheldt, just outside the town of Tournay, which was then besieged by the French under Marshal Maurice de Saxe—a considerable soldier in his day, but doubtless far better known to most of our readers as the lover of Adrienne Lecouvreur than as a military man. It was the last great fight at which a King of the House of Bourbon was present. Louis XV. was on the ground, and nominally in command, and displayed a courage and cheerfulness which afterwards sometimes made people forget, for a few hours at least, the feeble sensuality which marked the greater part of his shabby existence. The Dauphin, too, who was never to reign, was there with his father, an ingenuous, fair-haired youth of sixteen, recently married, who had torn himself from the arms of his weeping mother and wife in order to join the army. Argenson, the Minister of Foreign Affairs, tells, in his correspondence with Voltaire, how, when the charge of the household troops swept past him, in the final stage of the fray, the lad drew his sword and tried to join in the rush, but was forcibly detained by his attendants. And he tells how gay Louis XV. was the night before the engagement, how merrily he chatted with his staff, and how he "sang a song with a great many couplets, which was very droll," and how, when he rode about reconnoitring the field, he kept chuckling over the fact that he was "the first King of France to look the English in the face since Poitiers, and he hoped things would go better this time"; how they wanted him to stay on the safe side of the river, so that he could escape easily in case of disaster, but he valorously insisted on crossing the bridge with the bulk of the army, and took his stand on a mamelon over which the balls occasionally whistled. It was, in fact, the last glorious day of the old French monarchy.

The fight was further remarkable as having brought to the notice of the Continent, even more signally than Blenheim, or Ramillies, or Oudenarde, or Malplaquet, which were won by a great military genius, the splendid qualities of the English infantry, the old courage and tenacity and firmness which three centuries before, as Latimer said, had "made all France afraid." The truly murderous character given to their fire by the coolness and steadiness of the men, even in the days of flintlocks, was remarkable at Fontenoy, as it was, sixty years later, in the Peninsular War, where Marshal Bugeaud spoke of it in terms of high admiration, although serving in the army which suffered from it.

But perhaps nothing has done as much to keep Fontenoy in mind as the fact that it was the one victory won by the French over the English in the eighteenth century, and that the Irish Brigade, then in the French service, has always claimed the honor of having restored the fortunes of the day when all seemed lost. That the French should have been ready to forget or ignore this, was natural enough, and it was just as natural that the Irish should have labored diligently, both in prose and verse, to keep them in remembrance of it. Voltaire, who was at that time historiographer of the French Court, barely mentions the Irish Brigade as having assisted in arresting the victorious march of the English column, while the Irish version is that Louis and his whole force were preparing for a vigorous flight across the river, when Marshal Saxe caught his bridle-rein and reminded him that "the Irish were still in reserve," and that then the King took heart and waited to see it out.

The Duc de Broglie endeavors to tell the story with as much fairness as possible. It was the Duc de Richelieu who brought to the King's headquarters the news that all was not lost; that on the extreme left the Irish Brigade had successfully attacked the column, and had by its example restored confidence to the Royal Vaisseaux regiment, which had been so maltreated in the previous part of the fray that only one of its officers was alive and unwounded. These two, he said, had for the moment stopped the English march, and he now advised that four pieces of artillery which had been stationed behind the King, to cover his retreat in case he had to run, should be brought to play on the column. The Irish claim that this suggestion, which exercised a great deal of influence on the final result, was a message from Count Lally-Tollendal, the commander of the Brigade. Richelieu said it was his own. The Duc de Broglie takes no notice of the Irish claim at all, but rejects Richelieu's, and seems at first disposed to give the credit of it to an obscure Captain Isnard of the Toulouse Regiment, but finally decides that the idea probably occurred to a great many at once, owing to the "vivacity of conception" which, he says, is a marked characteristic of "French crowds."

The state of things when the four guns were brought into play indeed seemed desperate. We cannot undertake a detailed description of the battle, which was in the highest degree spectacular, and which Carlyle, in his 'Frederick,' has made familiar to most readers. The English and Dutch, under the command of the young Duke of Cumberland, the second son of George II., were intent on raising the siege of Tournay, around which was lying a French army of 90,000 men, with 100 guns, on both banks of the Scheldt. The sole practicable approach to the place was across an oval-shaped plain about one mile and a half long and a mile wide, with the Scheldt River on one side and thick woods on the other. The woods and the surrounding eminences bristled with French batteries; but if they could be successfully passed, a ravine at the lower end gave access to open ground outside the town.

The Dutch contingent of Cumberland's command began the attack on the French position on the right, but were soon so badly mauled that they ran into shelter, which they did not leave during the remainder of the day. A Scotch brigade under Gen. Ingoldsby was to attack on the left, but never got into action, owing to the cowardice or incompetency of their commander, who, as somebody said at the time, "smelt too long at the physic to have any inclination to swallow it." He was afterwards tried by court-martial and cashiered. There was great glee at the French headquarters over these successes. "Softly, gentlemen," said Saxe. 'We haven't had the English yet; you will find them harder to digest."

It now remained to try what could be done in the centre. The Duke of Cumberland formed a column of 15,000 English and Hanoverians, with twenty guns, and determined, in spite of the redoubts on his right and left, to force his way across the plain, and cut the French Army in two. It was a terrible undertaking, and the way it was carried out made one of the finest feats of arms in history. The close column marched steadily on without faltering, its flanks torn with a cross-fire of round shot, until it reached the wooded ravine, which Saxe, in his confidence that the enemy would never get so far, had neglected to fortify. It burst through this and emerged on the open ground on the other side, unconquered and apparently unconquerable, delivering a stream of fire from every side, and filling the whole French army with dismay, and literally splitting it open. "There was," wrote Argenson, the Minister of Foreign Affairs, "one dreadful

hour, in which we expected nothing but a renewal of the affair at Dettingen; our Frenchmen being awed by the steadiness of the English and by their rolling fire, which is really infernal, and I confess to you is enough to stupefy the most unconcerned spectator. Then it was that we began to despair of our cause." The column, the ground being too rough for horses, dragged their guns by hand, six of them in the van. When they appeared outside the ravine, a portion of the Gardes Françaises stationed there charged them, thinking they had to deal only with a foolhardy handful, and were swept away by one murderous volley. The alarm being given, additional troops were hurried up, and formed across the path. It was at this awful moment that, according to the well-known story, the Duc de Biron and Comte de Chavannes on the French side, and Lord Albermarle, and Lord Charles Hay, the brother of the Marquis of Tweedale, on the side of the English, the lines being fifty yards apart, stepped forward and took off their hats to each other. "Fire, gentlemen," said Lord Charles. "No, gentlemen," answered Count d'Anterroche, a lieutenant in the Grenadiers of the Guard. "We never fire first; fire yourselves." The English took him at his word and delivered a withering volley, which swept away the Gardes Françaises like flies. Battalion after battalion came forward to share the same fate: the Gardes Suisses, four or five of the finest regiments of the line, the Gardes du Corps, the Gendarmerie, and the Carabiniers—all recoiled before the "infernal" English fire, smashed and dismayed. The story of the salute has been treated by many as an anecdote added to heighten the glories of a great day by the excited chroniclers of the time. It was, however, accepted in England as true, and a painting hanging in the billiard-room of the Tweedale mansion in Scotland to-day recalls the scene in which Lord Charles Hay bore so prominent a part. The Duc de Broglie confesses that he, too, had been inclined to discredit it until he found in the 'Reveries' of Marshal Saxe, a small volume of commentaries on the military art, a paragraph entirely devoted to arguing that "troops in the presence of the enemy should never fire first, inasmuch as the force which fires first is a defeated force if the enemy reserves his fire." From this he infers as very probable that the French at Fontenoy, in refusing to fire first, were obeying the instructions of their chief, and not merely indulging in a bit of somewhat grotesque politeness.

The rest of the story is soon told. The column, which of course had suffered severely in the onward movement, began to relax its force after its latest successes. It had no cavalry to follow them up. Its form made it difficult to manœuvre, and Cumberland was so astonished by his triumph that he did not know how to make use of it. There was consequently a pause in the advance, during which the French recovered somewhat from their panic, and began to think of better things than securing the King's flight. The four guns were brought to bear on the British mass, and made a breach in it at which the Irish Brigade, which alone had not given ground, led by Lally, made a successful dash, supported by a furious and concerted charge of all the French cavalry. The column was cut through in various places, and began to retire in separate bodies. But there was no rout, no hasty retreat. The whole force marched back, as it had come, formidable and defiant to the last, having left 9,000 killed and wounded on the field, besides 2,000 prisoners and 40 guns. "Although compelled to give way," says the Duc de Broglie, "the valorous English infantry showed neither in their faces nor in their attitude any sign of discouragement or dismay. 'The English column,' said the Minister of War, 'was like a rock that had to be mined. It took all the vivacity and all the bravery of our troops and the intrepidity of the General to blow it up.' The comparison was good to the end, for the explosion broke the rock up, not into dust, but into fragments, every fragment retaining its own hardness. The heroic battalion, compelled to retreat in small parties, left the field marching slowly, carrying their heads high, until they rejoined their own cavalry, and Saxe did not think it prudent to pursue them."

Fifty years from that day the French monarchy was ruined. The names of the proud noblesse who had charged so fiercely in the Maison du Roi, were only to be found in the proscription lists of the revolutionary tribunals. Within ten years the gallant Lally-Tollendal, after having almost won India for France, had been executed on trumped-up charges intended to cover up the corruption and frauds which had ruined his campaign, and his memory had become the eternal disgrace of the Old Régime.

THE TEACHING OF LATIN.

If Latin is not better taught, practically and theoretically, it will not be due to the lack of a thorough conviction on the part of some of our prominent teachers of Latin that the methods and the theories are all ready, and only need honest application. In a pamphlet on the 'Art of Reading Latin' (Boston: Ginn & Co.), Prof. Hale of Cornell University has made a vigorous attack on the old evil of dissecting the Latin sentence and rearranging its mangled members in the English order. Of course every teacher knows the mischief of this; every teacher knows that no one can be said to read Latin or Greek in any proper sense until he can read it in the order of the original. But, unfortunately, most teachers shirk the troublesome task of guiding the student into such a command of the language. Translation is so convenient a test of knowledge that the logical dissection of the sentence is actually encouraged, as the quickest way of getting at the common ground on which teacher and pupil meet.

All this, to be sure, is demonstrably wrong. An accusative at the head of a sentence is not the same thing as an accusative at the end of a sentence, and the translation that is the result of this mechanical transposition is dry and sapless. With a reasonable use of the oral method in the beginning, the wretchedness of this dislocating process may be entirely obviated, and sentences may be expanded from three words to a dozen or twenty, until the student can hold a long Latin or Greek sentence in the ear and on the brain from beginning to end. For private training, any number of simple mechanical devices may be suggested for the prevention of the tricks that the eye seems to play on the most resolute will; but, in any case, the words of the longest and most complicated sentence must be read and understood in the order of the original, or there is no real understanding at all. In fact, a firm hold on this elementary principle will carry the young student through difficulties that seem at first insurmountable; and even maturer scholars might profit by taking heed to their own steps, and by asking whether the more simple order in which they often present a tangled sentence is not a positive sin against the language they are teaching. Do we not find, in some of our best editions of the classics, explanations such as the whole analogy of Latin or Greek, as the case may be, shows to be impossible? A man who has been trained from boyhood to look for "subject," "predicate," and "modifier," will not stop to ask himself about the relative carrying power of the cases, and will construe genitive or dative with a distant word as readily as an accusative or a nominative.

It is therefore with great pleasure that we see an active and enthusiastic teacher like Prof. Hale going forth to do battle with this false habit of work; and those who have charge of elementary classes especially will do well to examine the plans by which he proposes to meet the real practical difficulties of the classroom. Still, it is well not to be too confident. Every teacher who feels the language must hate translation as an inadequate means of getting at his pupils' conception of the original; but it is too convenient and too ready a test to be laid aside entirely even in a higher stage of study, and it is often well to check the enjoyment of Latin or Greek as literature by exacting English equivalents, although the process of translation involves to a certain extent the dire dissolution of the original order.

Not content with this assault on the common sleepy ways of work in Latin, Prof. Hale has turned his attention to the simplification of Latin grammar, and has made an onslaught on the Sequence of Tenses in Latin—a set of rules that have been falling into more or less disrepute of late years. Indeed, it has been rather fashionable for some time to speak of the "so-called" sequence of tenses. Who started the depreciatory adjective, we do not know. We do know that Madvig long ago put the phrase *consecutio temporum* in a foot-note, and seemed rather ashamed of the whole business. It is a curious exhibit of the tendencies of our democratic age that revolutionists will not even let a leading clause dictate to a dependent clause what its tense must be; and the object of Prof. Hale's elaborate paper on the Sequence of Tenses in Latin, which has been reprinted from the *American Journal of Philology*, is to prove that every subjunctive stands on its own temporal bottom.

Neither thesis nor method can be called absolutely new, though, as so often happens, Prof. Hale did his own thinking before he found out that the inevitable German had been working on the same lines. In his zeal to establish his position, it seems to us that Prof. Hale, while doubtless doing much to make the dependent subjunctive more vital by a return to its original independent use, has borne too heavily on mere phraseology, has exaggerated the number of exceptions to the rule, and has overlooked the manifest indications of drift, to which that very imperfect vehicle of thought—language—is undoubtedly subject. But a full discussion of this matter would involve too many technical details and too much special illustration; and Prof. Hale's paper will doubtless provoke discussion enough at the hands of those to whom he addresses his protest, "the actual and potential makers of school grammars"—those most luckless of human beings, detested by schoolboys of every degree, and abused by teachers of every capacity.

Correspondence.

A GARIBALDIAN IN DISTRESS.

To the Editor of The Nation:

Sir: An old friend and agent of Mazzini, one of the English Committee which sent 600 men to Garibaldi's aid in Sicily, could I read without interest the account in this week's *Nation* of the "First Pilgrimage to Caprera"? Yet, while reading it, there lay before me a letter dated this June 25, telling me of Garibaldi's Admiral, the Admiral of the Sicilian expedition, Garibaldi's and Mazzini's friend also, now here in America, crippled and penniless, and, so far as I can learn, not one of his old Italian friends or of Italy-loving foreigners to give him help.

May I ask your insertion of these few lines, perhaps to call forth some friendly inquiries which I shall be glad to privately answer?

Very faithfully, W. J. Linton.

P. O. Box 1139, New Haven, Conn., July 2, 1887.

Notes.

The Photo-Gravure Company of this city send us some charming specimen illustrations at once of their art and of a work in preparation by G. P. Putnam's Sons, 'The Land of Sleepy Hollow,' being a series of scenes about the home of Washington Irving, together with a reprint of his 'Legend of Sleepy Hollow' and 'Chronicle of Wolfert's Roost.' Our publishers have hardly begun to realize the resources which this process offers for the decoration of books, with very slight enhancement of the cost.

The Messrs. Putnam have further to announce 'Decisive Battles since Waterloo,' in continuation of Creasy, by Col. T. W. Knox; 'The Isles of the Princes; or, The Pleasures of Prinkipo,' Turkish experiences of S. S. Cox, late United States Minister to Turkey; a new 'Life of Washington,' by Edward Everett Hale; an illustrated edition of W. S. Mayo's 'Kaloolah: the Adventures of Jonathan Romer'; 'The Art of Conversation,' by Prof. John P. Mahaffy; and 'The Revolution in Tanner's Lane,' by Mark Rutherford.

'Industrial Instruction' is the title of a work by Robert Seidel of Mollis, Switzerland, translated by Margaret K. Smith, and now in the press of D. C. Heath & Co., Boston.

The revival of Moore's 'Epicurean' in the Leisure Hour Series (Henry Holt & Co.) reminds one forcibly of the characteristics of that *excursus* into the Orient which is so interesting an episode of English literature at the opening of the century, and which left so strong a mark on Byron's works; but, as fiction, this story seems preternaturally unsophisticated to a modern reader, who cannot easily believe his ancestors such simple creatures as this romance implies they were. On the other hand, there is a distinction of style, a purity and breeding in the expression, which measures the decadence of our common books in literary form so clearly as to give us a very uncomfortable feeling.

Dr. Johnson's Memoir of Roger Ascham has been published in the "Chautauqua Library," with an introduction by James H. Carlisle, President of Wofford College, S. C.; and the same volume contains selections by the same editor from Stanley's Life of Arnold.

We have received Wright's 'Australia, India, China, and Japan Commercial Directory and Gazetteer' (New York: Gaylord Watson)—a portly volume whose several divisions are printed on paper of varying tints, making reference easy. The range is larger than the title, taking in something of England and America also, though here we are chiefly treated to advertisements. A folding map introduces each of the Australian sections, which furnish, indeed, the chief motive of this publication. The Directory is well equipped with general historical and statistical information and with indexes. Its commercial value is obvious.

The customary abstract of proceedings of the annual session of the American Philological Association has been published in the case of the meeting at Ithaca a year ago. Among the papers of a somewhat popular interest we remark Prof. Fisk P. Brewer's, on the word *election* as an Americanism, meaning 'voting at the polls, to ratify or reject a proposed measure.' He says its use in this sense does not antedate 1831, and he cites the mistake of a British Quarterly Reviewer who supposed a special election meant the choosing of a special legislature. Mr. Leo L. Grumbine's paper on Pennsylvania Dutch, and Prof. Charles F. Smith's on Southernisms, have much curious information, though a good deal of it is not fresh. Prof. March showed, by comparisons with Milton, Pope, Tennyson, and the Bible, that the number of once-used words in Shakspere is not extraordinary, so that "there is no need of help from Jonson, or Bacon, or Beaumont, or Camden, to accumulate them." Prof. W. I. Knapp discussed the location of Munda in ancient Spain, and made a very convincing argument in favor of the vicinity of "the still marshy and now malarious plain of Nabrissa, on the old highway from Seville to Medina Sidonia and Xeréz," as the scene of Cæsar's great battle, 45 B. C.

The June Proceedings of the Royal Geographical Society contains the annual address on the Progress of Geography during the past year, by Gen. R. Strachey. Africa, as usual, occupies the chief place, with the account of the explorations of the French, German, and English in the Congo Basin, and Dr. Junker's adventurous journeys in the Monbuttu country. Mr. Carey's extraordinary feat in travelling unarmed and without an escort through a large part of Tibet was dwelt upon, as well as the activity of the "native explorers" on the northern frontier of India. The discovery of a great river in German New Guinea, navigable for more than three hundred miles from the sea, was also noted. In an interesting review of what has been accomplished in the last fifty years in exploration and discovery, Gen. Strachey referred to the work of the United States Government in surveying the Mississippi Valley and the Pacific Coast as having been carried out "with a degree of completeness, both in respect to its topographical representation and its physical characteristics, that has probably never been approached elsewhere." The remainder of the number is taken up with the usual notes, and a paper by Gen. J. T. Walker on the Lu River of Tibet. This, he contends, is the real source of the Irawadi, an hypothesis which, if true, will account for the great body of water in this latter river, which has led many authorities to regard it as the continuation of the Sanpo, now generally held to flow into the Brahmaputra. He gives an interesting sketch of the different attempts (strangely omitting that of the late T. T. Cooper, however) to penetrate the still unknown region lying between Assam, Tibet, and China, especially of the romantic journeys of the French missionary, the Abbé Krick, who perished in his last effort to preach the Gospel to the fierce tribes inhabiting the mountain slopes and valleys.

The first number of the *Ohio Archæological and Historical Quarterly* (Columbus: A. H. Smythe) has made its appearance in a neat form. Its most important article relates to the Ordinance of 1787, and the name of the writer, Wm. P. Cutler, recalls Dr. Manasseh Cutler, whose title to the fathering of this great political edict is once more asserted. The rest of the number is largely devoted to archæology, and in especial to mounds and other aboriginal earthworks.

We called attention at the time to certain reprints from the Dominion archives in the *Magazine of American History* for January, 1887, which put Ethan Allen in the light of a more or less sincere intriguer for the annexation of Vermont to Canada. Mr. Fernow, of the State Department at Albany, furnishes additional documents on this subject, including autograph letters of Ethan Allen and his brother Levi, to the *Pennsylvania Magazine of History and Biography* for July. It is very hard to reconcile them with genuine patriotism—indeed, Allen expresses himself as a member of an independent State, looking with distrust on the attempted reconfederation of the United Colonies. He tells Lord Dorchester explicitly that "matters were so contrived between the General [Haldermand] and certain men of influence in Vermont, that hostilities ceased between Great Britain and Vermont the last three years of the late war, which answered all the purposes of an allyance of nutrality and at the same time prevented the united States from taking any advantage of it." "The leading men of Vermont," he continues, "are not attached to a republican form of government" so far as to make it an obstacle to returning to British allegiance. He argues from the New England origin and ties of the inhabitants of Vermont the impossibility of coercion from that side—forgetting that this kinship would work as much against secession as against coercion.

There is a highly humorous British book on the 'Manners and Tone of Good Society, by a Member of the Aristocracy,' so very insular in its advice that it has never been reprinted by an American pirate, although it has gone through many editions in England. In its fourth edition now is a similar French work, the 'Manuel de la Bonne Société, par la Comtesse de Valresson' (Paris: Auguste Ghio; New York: F. W. Christern). It is amusing to note the way in which the French authoress holds up the English as exemplars of selfish bad manners, while the Americans figure in her pages only casually as rather too free and easy. American girls who wish to understand exactly how a well-bred French woman is taught to conduct herself in public, at a theatre, a concert, or a dinner, cannot do better than read this pleasantly written and unpretentious little manual. And students of society who may wish to see exactly how foreign to our ideas of marriage and of giving in marriage are the French, may read the chapter which Mme. la Comtesse de Valresson has devoted to this important subject. It is almost as instructive as the elaborate discussion of French ways of thought and feeling on this question to be found in Mr. Hamerton's 'Around My House.'

The first volume of M. Bengesco's edition of Voltaire's select works to appear in M. Jouaust's "Nouvelle Bibliothèque Classique" is the "Théâtre" (New York: Duprat), comprising "Œdipe," "Brutus," "Zaïre," and "Mérope." The next three volumes will be devoted to the *romans*.

Of late years the monologue has had a great vogue in Paris—a vogue now decreasing, as the monologue, from being a genuine play in one act, with one character only, has descended to a mere recitation, comic or poetic. "Le Monsieur en habit noir" of M. Abraham Dreyfus, for example, is a model of the true dramatic monologue; but most of the so-called monologues which have showered from the French theatrical publishers are empty of action and stupid to the verge of inanity. A most pleasant return to true principles is to be found in "Le Retour d'Arlequin," by M. Raoul de Najac (Paris; Hennuyer; New

York: F. W. Christern), which is not only a monologue, but a pantomime also. It is a pantomime in one act, with only one character—*Arlequin*—but it is a genuine drama, with abundant action and with a clear and simple story. "Le Retour d'Arlequin" is now published with more than a dozen illustrations (by M. F. Lix), showing all *Arlequin's* successive moods and movements; and also with the full score of the light and tuneful music composed for it by M. André Martinet. It makes a very pretty book, and contains all that the amateur will need if he cares to venture on so novel a performance as a monologue in pantomime.

Several of the shorter stories which have appeared in the *Revue des Deux Mondes* since the beginning of the year have been issued recently in separate volumes, although, instead of running through three or four numbers of the *Revue*, they have appeared in only one or two. The latest of these are 'L'Inconnu,' the very original and striking contribution of M. Paul Hervieu to the numbers for May 1 and 15, and from that for February 15, 'Le Maître à danser' of M. Adrien Chabot (Paris: Calmann Lévy; Boston: Schoenhof), the most delicate and subdued of sketches, but quite perfect in its way, and in point of propriety unexceptionable. Both of these appeared in June. In May, Perrin issued in a volume the story with which M. Gilbert Augustin-Thierry made his very brilliant début in literature, 'Marfa' (Boston: Schoenhof). This appeared in the number for March 15 under the title of 'Le Palimpseste,' which is retained in the volume as a sub-title.

A collection of the scattered papers which Pierre Loti has contributed to various periodicals during the last three years has just appeared under the title of 'Propos d'Exil' (Paris: Calmann Lévy; Boston: Schoenhof). These are the impressions made upon the author's imagination by the various Oriental regions in which he found himself in the course of the recent war in the East, and in the voyages connected with his service there as the commanding officer of a French man-of-war. 'Propos d'Exil,' the very expressive title given to the volume, is also the title of one of the most characteristic of the earlier papers, which originally appeared in 1884 and 1885, while the author was still at the seat of war.

The third series of M. Ferdinand Brunetière's "Études critiques sur l'histoire de la littérature française" has just appeared (Paris: Hachette; Boston: Schoenhof). This collection should not be confounded with the other, by the same author, called "Histoire et Littérature," and published by Calmann Lévy, of which three volumes have also appeared. The two previous volumes of the "Études critiques" were published as long ago as 1880 and 1882. The present one contains papers on Descartes, Pascal, Le Sage, Marivaux, Prévost, Voltaire and Rousseau, and one entitled 'Classiques et Romantiques.' Three of the names in this list were the subjects of papers in the earlier volumes—Pascal and Voltaire in the first and Marivaux in the second. It will be interesting to compare these with the corresponding papers in the new volume, for the softening influence of time upon the severity and intolerance of M. Brunetière's judgments has been great.

In reviewing the meteorological conditions at the time of the eruption of Mount Tarawera, New Zealand, it is surprising to find that the eruption caused no great atmospheric disturbances except in its immediate neighborhood, and there was no evidence at all of any indrawing currents. In the Government Sanatorium at Rotorua, the self-registering barometer recorded a nearly uniform pressure throughout all the principal part of the eruption, after which the glass began to rise by a small amount. The curve was elsewhere smooth, and even shows only a small number of oscillations which trebled its thickness and are attributed to earthquakes; but whatever may have been their cause, they certainly mark the outburst of Rotomahana and the crisis of the eruption. The violently disturbed area of the openings being small, the equilibrium was restored at very short distances around, and for this reason the volcanic eruption had none of the effects of a cyclone. Other meteorological conditions examined by Mr. Hutton exhibit nothing out of the ordinary course of events. The eruption was, however, as usual, the cause of much electrical disturbance, but this did not affect the weather.

Prof. Mallet, late of the University of Virginia, has detected the presence of silver, a material hitherto unknown among volcanic products, in the ashes ejected from Cotopaxi during the eruption of July, 1885. The dust was collected on the Pacific Coast about one hundred and twenty miles west of the volcano, at which point it fell to the depth of several inches. Prof. Mallet found a proportion of about two-fifths of an ounce troy of silver per ton of ash—a proportion which, while apparently insignificant, represents a large quantity of silver in the total bulk, as the amount of the ejected ash was very great.

A curious physical novelty results from the new optical glass in the shape of lenses which magnify and yet have perfectly plane surfaces on both sides. The refracting index of the glass is made to decrease in a regular manner from the surface inwards, by means of processes employed by Schott and Co. of Jena, the manufacturers of Prof. Abbe's new optical glass.

We learn that the project of holding a Summer School of Physics at Harvard College this season has been abandoned; but on July 19th and 20th apparatus designed for use in the "forty-experiment course," preparatory for admission to Harvard College, will be shown to teachers or others at the Jefferson Physical Laboratory, Cambridge, Mass., and questions relating to the experiments will be answered. The same thing will be done for the "sixty-experiment course" on the second day, July 20.

—Whether Harvard may be called a rich man's college, and whether a man of moderate means need be put to shame on going there, were questions considered by Prof. Geo. H. Palmer in a speech at the late Harvard commencement. Inquiries made by him of the graduating class, and very generally answered, show that the annual expenses of about one-fourth were from $400 to $650; of another fourth, from $650 to $975; of another, $975 to $1,200 (as we infer, though the item is omitted); of another, upward of $1,200. The lowest sum reported was $400; the highest, $4,000. If we compare these figures with the official estimate of the cost of living in the last catalogue, we shall find that one-half the students expend more money than is deemed necessary ($1,000) "to cover all ordinary comforts." Prof. Palmer's inquiry excluded, as was proper, the expenses of Class Day; but we apprehend that this is the occasion *par excellence* on which lavish expenditure and social distinctions put the poor man "to shame." The line is also drawn, we will add, at Harvard, as elsewhere, by secret societies whose membership is determined above all by social and pecuniary considerations. Prof. Palmer points out that the plain living and high thinking go together, as a rule; but scholarship and free spending are far from being incompatible. The College, in its commons system, has done what it could to make wholesome food as cheap as possible, and (regarding the splendid hall in which it is eaten) as enjoyable. Its high rents and tuition still handicap the poor student, being indispensable to the revenue on which the College machinery depends. On the other hand, an extraordinary sum is dispensed to the deserving in the shape of scholarships.

—The practical outcome of his inquiry was condensed by Prof. Palmer in the following two pieces of advice:

"First, to the parents. Give your son an allowance when you send him to Harvard, and oblige him to stick to it. If you pour $2,000 into his pockets, $2,000 will come out. We cannot remove $1,000 from your son's pocket, and say to him, what would be perfectly true, 'You are better off with the remaining $1,000 than you would be with the $2,000.' It is you, the parents, who must perform this operation If you ask me, then, what will be a suitable allowance, I can state it to you in several classes. If your son is something like an artist in economy, he may live here under $600 a year. If he is able to live closely, carefully, and yet with due regard to all that he requires, he may easily accomplish it on between $600 and $800. If you wish him to live here at ease, from $800 to $1,000 may be well expended. I should be very confident that every dollar given him over $1,200 was a dollar of danger.

"My second advice is to you graduates. Should you meet a poor boy, do not rashly advise him to come to Harvard College. If he is a good boy, docile, worthy—and commonplace—advise him to go somewhere else. But if you encounter a poor boy of eager, aggressive mind, who loves knowledge, who is capable of feeling the enjoyment of struggling with a multitude and making his merits known, let him understand that Harvard is expressly constituted for such as he."

—The 'Monumenta Germaniæ Pedagogica,' edited by Karl Kehrbach and published by A. Hofmann & Co., Berlin, promises to be the most extensive pedagogical publication ever undertaken by private enterprise, unless the well-known Encyclopedia of Schmidt be an exception. The series is to comprise nothing less than all the chief literary products, not already commonly accessible, in the history of education in Germany during the entire middle ages. The plan has been years in maturing, and the names of several scores of scholars who are to coöperate are given. Representative text-books in all the leading branches, from primer to university logic; laws and orders, civil and religious; theoretical treatises; and a rich school miscellany—all without distinction of party or religious confession—are promised. The editor seeks to show what men of all stations, who received any kind of training, really had in the way of culture and education, and they broadly intimate that the future historian of this period must wait for their texts. Among the more interesting will doubtless be the volumes promised on mediæval rhetoric, the laws and customs concerning the education of princes, the school regulations of the Moravians, geographical instruction in the sixteenth century, school comedies of the Jesuits, the history of military education, and copious illustrations of school legislation. The first volume contains over 600 large pages on the school orders of Brunswick, with a long introduction on the development of the school system of that State from the eleventh century, of 200 pages. The edicts are printed in the original typography, and extend from 1251 to 1828, and critical remarks and explanations, and an index of obsolete terms, are printed in an appendix. The edicts themselves cover the entire constitution of school organization and administration, and are full of curious points of interest even to the general reader. A second volume has also appeared, containing the famous *Ratio Studiorum* and *Institutiones Scholasticæ Societatis Jesu*, with a portrait of Loyola and other eminent leaders of the order. An Introduction gives an extended list of printed and manuscript authorities.

—The French censorship under the First Empire and under the Restoration, or, officially and euphemistically, "La Direction générale de l'imprimerie et de la librairie (1810–1815)," is the theme of the sole leading article in *Le Livre* for

June. The writer, M. Henri Welschinger, chooses for his epigraph Napoleon's own words to the Council of State in 1809, "A body of censors will always be afraid of not doing enough, and will therefore always overdo." This learned article abundantly proves the truth of the proposition, which did not, however, deter the Emperor from making the experiment. M. Welschinger brings to light for the first time a great number of illustrations of the servility of the censors, some of whom, reëmployed under the Restoration, showed a disgusting disloyalty to Bonapartism. But the most curious and laughable exhibition is of the literary criticism which they attempted, in the hope of recommending themselves to their superiors. Anything more flat and fatuous could hardly be conceived. Of keenness of scent, the most shining and ridiculous instance occurred in the case of the 'Dictionnaire universel de la langue française et Manuel d'orthographie et de néologie.' Here the zealous censor lighted upon

"SPOLIATEUR, s. m. *Spoliator*, qui dépouille, qui vole.—Spoliatrice, s. f.—*Buonaparte.*"

He at once clapped an injunction on the work, conceiving that the Emperor was named as an *example* of a spoliator. The unfortunate publisher explained that the word *spoliatrice* was a neologism used by Bonaparte, and therefore ascribed to him, as had happened elsewhere in the same dictionary. The injunction was removed. Another of these miserable agents of obscurantism commented a translation of Dante with the remark that this poet's genius "tient de la nature des météores"! M. Welschinger has no reproaches to make of that function of the censorship which consisted in the suppression of obscene publications. He wishes it were more actively employed at the present day. "Our literature," he says, "once the honor and the admiration of France and of the world, is sullied by such infamous productions that, despite our innate aversion for all preventive censorship, we almost would applaud an institution or police regulations capable of arresting the output of noxious works whose very titles excite disgust. That would not be censorship, but a useful scavenger operation."

—The Cirque Molier is one of the famous institutions of Paris, although it is private and extremely exclusive. A certain M. Molier has converted the great court of his hôtel into a picturesque ring, surrounded by loggias, which replace the rows of seats in an ordinary circus. Here, on great occasions, he invites his friends to witness performances which rival those of professionals, though the bearers of some of the most aristocratic names of France are among the performers—the Comte de la Rochefoucauld ranking especially high as an acrobat, and M. Molier himself as a rider in the ring. It was here that M. Robert de Bonnières placed some of the most effective scenes and the dramatic climax of his story of 'Les Monach.' In the early part of June one of the private performances by the frequenters of this elegant place of amusement and exercise took place, and a very original and picturesque part of the programme was a series of combats, representing, in the costume of the periods, the principal epochs in the history of fencing. These began with a combat of the time of Louis XII., with two-handed swords; then the duel of the Italian school under Henri II., with sword and buckler; the *assaut des mignons* of Henri III., with rapier and poignard; the *assaut de Saint-Georges* and that of the Chevalier d'Éon; and, finally, the modern *assaut d'escrime*. The realistic interest in the last of these may have been the greatest for an audience in which any man might be called upon to-morrow to take part in a similar combat; but to a reader at this distance it would seem as if there must be a certain æsthetic pleasure and interest quite as great in witnessing a duel according to the rules laid down by the great authorities of the time of the French wars in Italy, for instance, or of the period of the Ligue, or even of that of the Regency.

—In awarding to Dr. Backlund of Pulkova the Lalande prize of the French Academy, for his researches on the orbit of Encke's comet, the Committee were inclined to consider the result of the investigation of the first importance. The comet will be recalled as an unusually erratic member of the solar system, first discovered about 100 years ago, and shown by Encke early in the present century to have an accelerated motion in its orbit unaccountable on the Newtonian theory of gravitation. This gave rise to his celebrated hypothesis of a resisting medium in space, through the action of which the sun's attracting force was supposed to draw the comet into a smaller and smaller orbit with each revolution. Dr. von Asten of Pulkova, in continuing the researches of Encke, was led, through an unfortunate error in his formulæ, to the anomalous conclusion that between the years 1865 and 1871 this apparent acceleration had vanished. The discovery of this error is due to the work of Dr. Backlund, who finds, however, that the progressive acceleration is becoming less and less pronounced, having been reduced in the last fifteen years to about half the amount from 1820 to 1865—a result which renders the discovery of the cause of the acceleration even more difficult than before. In the course of his researches on the motion of the comet during its apparitions from 1871 to 1886, Dr. Backlund found that it approached Mercury so closely in 1878 as to afford the data for a new determination of that planet's mass from the perturbations it caused in the motion of the comet. Even supposing the acceleration of the comet's mean motion to have been constant during the last fifteen years, it is impossible to represent satisfactorily the observations made in that period if the mass of Mercury be supposed to be greater than 1-5,000,000th that of the sun, while the value of the mass of Mercury concluded from Dr. Backlund's work is the 1-2,668,700th part, and is noteworthy as being the largest value of this planet's mass hitherto determined.

—In connection with this subject we may note the recent paper of Mr. Monck on the retardation of Encke's comet, in which its slower motion is accounted for by its passing through systems of meteors, rather than by the generally accepted theory of a resisting gaseous medium. Whatever meteors existed, the path of the comet in motion among them must be retarded by their influence, because a large majority will be coming from an opposite direction. While in the case of a solid body like the earth the shock of collision would be inappreciable, the impact would, with a light body like Encke's comet, seriously retard its motion. Collisions with meteors would also be more frequent nearer the sun, certainly up to the distance at which Encke's comet approached it. Astronomers have inferred the existence of a large mass of meteors inside the orbit of Mercury as the only way of accounting for well-known irregularities in the motion of that planet; and, as the comet and the meteors also would then be near their perihelion, their consequent increased velocity would make the retarding effect greater.

A MISSIONARY ROMANCE.

The Story of Metlakahtla. By Henry S. Wellcome. Saxon & Co. 1887. Pp. x, 483, 8vo, illustrated.

IN 1856 Fort Simpson, situated in British Columbia within a few miles of the southern boundary of Alaska, was the trade centre maintained by the Hudson Bay Company for nine tribes or clans of the Tsimshian Indians. This people were known, from the first explorations of the coast, as turbulent, bloody, given to merciless war on neighboring tribes or weak bands of whites, and plunged in the depths of gloomy superstition. In war they enslaved the women and children made captive, and beheaded the men. The heads were preserved as trophies, and it is on record that the heads of three murdered white men belonging to a vessel of the United States were objects of barter with a neighboring tribe during the first years of this century. Their religious practices were in many respects most revolting—one order or sept among them, during certain dances, running amuck among the spectators, tearing a living dog to pieces with their teeth, and even going so far as to indulge in cannibalism: the object of their fury being sometimes a corpse, and at other times a living slave or an unfortunate spectator.

The horrors of their barbarism were shown in strong relief by the fact that they were above the ordinary level in intelligence—their language, in great part soft and flowing, lending itself readily to eloquence; and in their peculiar arts of carving wood, stone, and metal, these people attained a remarkable degree of proficiency and good taste. But it was necessary that a strong guard should be kept: regular sentinels were set at night and during the day; cannon were mounted in stout bastions; and only a few ndividuals were admitted to the fort at one time, when trading. To this day the bullet-marks on the heavy cedar logs are shown to visitors, where they have remained the silent witnesses of attacks on the fort or of mutual warfare among the bands assembled for trade.

Capt. Prevost, R. N., on his return from the North Pacific Station, excited great interest in England by his accounts of the state of barbarism existing there. About 1857 William Duncan, a lay reader of the Church of England, animated with the true missionary spirit, sacrificed a prosperous business to devote himself to missionary labor in this forbidding field. He went out under the auspices of the Church Missionary Society, from whom he received personal support to the amount of five hundred dollars a year; and, after a voyage round the Horn and many warnings of the certain failure supposed to await him, was taken to Fort Simpson. Here he was introduced, shortly after his arrival, to the habits of his future pupils, by a horrible scene of cannibalism, debauchery, and murder which took place outside the bastion from which he witnessed it, and which was subsequently prolonged for several days.

It is probable that Mr. Duncan's commercial experience had endowed him with more practical good sense than is possessed by many missionaries to the heathen; at all events, he began by studying the language, so as to dispense with the profane trade jargon which was the sole means of communication in those days and totally unfit for mission use, and by getting hold of the children and opening a school. After many dangers and tribulations, he secured a certain number of converts or adherents, and became convinced that to obtain permanent and genuine results he must get away from the whiskey and debauchery of the vicinity of the fort, evils constantly augmented by the coming and going of strange natives from different parts of the coast. It is characteristic of his methods that one of the first things he succeeded in doing at Fort Simpson was to get the price of soap reduced. Later, he taught his people to make it.

Determining, as we have said, to remove from the evil influences about him, he selected for his purpose a place called Metlakahtla, about twenty miles from Fort Simpson, and the site

of an ancient Tsimshian village. After a year of preparation he embarked, with fifty followers of all ages, in six canoes, and with the logs of their school-house rafted for transportation to their new home. A week after, thirty more canoes followed, with two chiefs, raising the whole number of people to about 350. Having settled, he went about his Master's business with such good, hard, common sense, as well as tact, as makes one groan for the very rarity of it, especially among those, in such places as missions, where it is needed most. He instituted a town meeting, taxes, a common council, and established public works—that is to say, drains, roads, landing places, a house for strangers, wells, a public playground. He abolished slavery and harbored fugitives, often at great risk from the man-stealers. Liquor was prohibited, smashed if landed. He vaccinated his people and all comers. He introduced a coöperative store, and thus incurred the hostility of the traders. He built, with his people, a schooner, which fetched their goods, as the traders would not carry them. She paid good dividends, and the astonished Indians named her the *Slave*. A sort of savings-bank was instituted, most of the currency being in the shape of blankets. A sawmill was imported, town lots laid out, good houses built for the community, a fine church and school-house erected—solely with the labor of the people. In short, by giving them practical illustration of the facts that cleanliness, industry, handicraft, knowledge, order, *paid*, he conquered the utilitarian Indian completely, and the way was open for the Gospel, which came to them with a force and power unattainable by any other road. The transfer was made in 1862. In 1866 the Metlakahtlans posted about 200 letters each trip of their schooner.

The success, spiritual as well as temporal, of this undertaking was phenomenal. It was universally attested by bishops, laymen, chance visitors, even hostile traders. It was the only genuine mission success on the coast for many years. Others worthy of praise, since instituted, have profited by Metlakahtla methods. All this time Mr. Duncan remained a layman, preferring to work untrammelled for many reasons. He gave, of his own means and by subscriptions from personal friends and admirers, many times the support accorded him by the Society. His secular fund amounted to nearly $40,000. There was nothing sectarian in his teaching. Morals and practical Christianity, as of the Apostles, were inculcated. The sacrament was not administered. It was difficult to explain to fresh converts from a religious cannibalism the theory of the Eucharist without causing confusion in their minds. The bare taste of wine might awake to fury the half-subdued devil of drink in some poor fellow. Suffice it to say that the executive of the Missionary Society and Reverend Bishops alike, when the case was laid before them, approved the modified congregational teaching of Mr. Duncan, and were satisfied with making their Indian fellow-creatures clean, moral, healthy, sober, loving one another and their church, prosperous and happy unsectarian Christians.

After some twenty years' service Mr. Duncan left his charge, and a clergyman was installed whose indiscretions threatened to ruin everything. The founder of Metlakahtla was recalled to save his life-work from an outbreak of misplaced religious emotion. He came, and all was calm. Later, a serpent entered this Eden. Sectarian counsels began to rule the Church Missionary Society. The creed and articles of religion had not been sufficiently insisted on, so they said. A Bishop of New Caledonia was appointed, having three clergymen and two laymen in his diocese. He was a bigot, a sectary, and began at once to stir up dissensions. A conference of the missionaries was held, from which the Bishop absented himself. Mr. Duncan was advised by this conference, to whom he submitted the facts of the situation, (1) not to resign his charge, and (2) to continue as a semi-independent lay mission, practically taking care of itself.

The doings of this Bishop we cannot chronicle: for them the reader is referred to the book. The facts are well attested and are there. No honest man, whatever his creed, can read them without a stirring of the blood, if not a clenching of the fist. In effect, failing to win the Metlakahtlans away from their trusted teacher by persuasion, fraud, or force, he has endeavored to deprive them of all that they have accumulated, and even of the very logs which they had hewn to build their dwellings, the land which belonged to their forefathers, which no other had ever occupied, and which their labor had made to blossom as the rose. A servile provincial government seems to have lent its power in defiance of law or justice to further the ends of My Lord Bishop.

Mr. Duncan has visited the United States recently, hoping to obtain a concession of wild land in Alaska, near the southern boundary, where his tormented flock may gather and remain in peace. That this may be brought about promptly and efficaciously, is the hope of all who know the circumstances.

The book derives dignity from its subject. It is a little provoking in the want of clearness, especially as to the arrangement of events and the insertion of dates, which are only to be found with difficulty; even the year of Duncan's arrival at Fort Simpson has to be inferred from other statements in the appendix. The righteous indignation of the writer occasionally injures his style or weakens the force of the facts, better simply stated. The printing and binding are good; but there is no index.

MICHIGAN.

Memorials of a Half-Century. By Bela Hubbard. G. P. Putnam's Sons.

THE word Michigan ought to appear in this title. Michigan is the subject of Mr. Hubbard's story, as *Cassius* said honor was his—Michigan first, last, midst, and without end. The author has been a wide wanderer and harvester in all the continents, but this book garners only his Michigan gleanings. Nor is there a better book about Michigan. Indeed, there is no other which covers the same, or so diversified, ground.

The chapter on the Beaver is the shortest, but whoever reads these seven pages will get such a taste of Mr. Hubbard's quality as will give him an appetite for the other five hundred. The early French in Michigan had Catholic hearts, but their stomachs were Protestant. One result was that the beaver, thanks to his tail, was pronounced a fish by the medical faculty of Paris, and in consequence the faculty of theology there decided that it might be eaten on fast-days. Thus far Charlevoix is quoted by Mr. Hubbard with a keen sense of the admirable evasion. He ought to have added the next sentence, where Charlevoix says (i, p. 97), "M. Lemery thought this decision related only to the beaver's tail. The truth is, that it allowed the whole animal to be eaten just as freely as mackerel (*Il a été mis tout entier au même rang que la maquereuse*)." The hunters who kept their fast on beaver repeated the history of those Scotch fishermen who, having reported that they had picked barnacle-geese from trees, were permitted by their priests to comfort their hearts on meagre days with those constructive vegetables. The Dutch brag that they created Holland: *Tellurem fecere Dii, sua litora Belgae.* Mr. Hubbard says the beaver made a large part of Michigan, and proves it, too. The papers on fishing, the birds of the author's neighborhood, four-footed inhabitants, and wild beasts, abound in stories, well substantiated, which to most readers will be revelations, and will make many a Michigan boy wish he had been born half a century earlier. The more we see of men the more we must love such dogs as we here read of. Their tongues, which were the best of plate-cleaners for Gen. Sherman in California, had long before been equally serviceable to Mr. Hubbard on the upper Lakes.

The author explored Lake Superior in 1840. Few that pioneered there so long ago survive. Who of those few has written out his impressions at large? We know not where else to find such accounts as fill Mr. Hubbard's pages of the Pictured Rocks and the Grand Sable. Decades hence his romance of travel will be extracted into guide-books for tourists who will then throng our "unsalted sea." His book is a pair of those spectacles through which our eyes see nature better than they ever could if unassisted. "Seeing many things, thou observest not," is a more truthful description of men to day than when Isaiah coined the phrase. Mr. Hubbard's senses have been exercised to discern. Who of us has heard by night, as he did, the crackling sound of growing corn? In reading his discriminations of color we accuse ourselves of color-blindness. Culture had added a precious seeing to his eye, and then he betook himself to the best fields for observing, as Macready resorted to a madhouse when he would learn to act *Lear*. His observations have ranged through the largest State save one east of the Mississippi. They run back a year before it became a State, an era that has passed away without begetting a son in its own likeness. Travelling in canoes, on foot, or in wagons slower than footmen, he mastered topographical knowledge that is beyond the dreams of modern wayfarers. It was his to see the forest primeval, the Indian, pre-Indian monuments, trappers, voyageurs, French habitants, quadrupeds, and birds that have ceased to be seen. He was of the party whose explorations in 1837 opened the eyes of Michigan to her wondrous wealth of salt, copper, and iron, in virtue of which, though surpassed in age by twenty-five States, she outranks them all but eight in population. Mr. Hubbard's range of observation is wide. For fifty years he has risen early to inspect his thermometer with as much zest as the hungry Jew gathered morning manna. But all nature is beauty to his eye, music to his ear, and an infinite book of secrecy which he is never weary of searching. His notings bring to mind Thoreau, and White's 'Natural History of Selborne.'

The last third of these Memorials is consecrated, as the French say, to climatology. It was wise to place this topic last. Such a long talk about weather few would listen to, had not the foregoing chapters served as what rhetoricians call an introduction inquisitive to this, leading readers to ask, "What next?" But when thus beguiled into dwelling on its details, we confess it a latter end better than the beginning, like the proverbial postscript of a lady's letter. Here the book shows an originality in observation and deduction which is the hiding of its power, and demonstrates of what interest and value the labors of a single observer may prove. The influences of the Lakes, the largest collective fresh-water area on the globe, we cannot remember to have seen treated so fully and so ably. Mr. Hubbard gives a long array of statistics and diagrams, largely based on his own observations, which lead him to conclude that when sun-spots abound, a low temperature soon follows, next comes a maximum rainfall, and then lake-waters rise to their highest point; these phenomena recurring in cycles each of about a dozen years.

Mr. Hubbard's account of pre-historic mounds

is the more worth reading because he has, like Schliemann, excavated in person. Perforated skulls, prognathous jaws, flattened tibias, as well as proofs of cremation, he has himself unearthed. In regard to ancient garden-beds, he holds "that they are confined to Michigan, except a few in Wisconsin on the western shore of Lake Michigan" (p. 244). But this conflicts with the statement of Canfield, in his 'Sauk Co. Sketches' (p. 16, 1861), that "for several miles every way from Babb's prairie [which is more than a hundred miles west of Lake Michigan] you find large fields of from ten to a hundred acres of garden-bed mounds." To Mr. Hubbard, however, belongs the credit of first showing by eight woodcuts the nature of these beds.

Regarding Champlain, certain trivial errors ought not to be left unnoticed. Mr. Hubbard says, "Champlain had in 1611 and 1612 [1613 and 1614] ascended the Ottawa as far as Lake Huron, and returned by way of the Straits [Detroit] and Lake Erie." The fact is, that Champlain never reached Lake Huron till the summer of 1615, and did not return at all by the Straits, but, says Parkman, "Champlain turned homeward [from his only journey as far west as Lake Huron] following that long circuit of Huron and the Ottawa which Iroquois hostility made the only practicable route" ('Pioneers,' p. 384). This route east, though circuitous, was really far less so than the journey via Detroit would have been. Mr. Hubbard says the Mississippi "was explored by Marquette, accompanied by Joliet" (p. 158). This mode of speaking perpetuates a popular error. The names Joliet and Marquette should change places. Joliet was the principal, and would have made the expedition if Marquette had never existed. Thus Parkman says (p. 47), "Talon looked about him for a fit agent to find the Mississippi, and made choice of Joliet." Marquette's own words are: "Je m'embarquay avec le Sieur Joliet, qui esté choisi pour conduire cette enterprise." Marquette's name would never have stood before Joliet's had not Joliet's papers been lost. Marquette's relation to Joliet was similar to that of Hennepin to La Salle, or that of a regimental chaplain to its colonel.

Treating of the saint who was the first female founder of an anti-property society, and whose name was given to the lake between Erie and Huron, Mr. Hubbard quotes "Way's" (Wey's) work on Rome as saying: "Santa Clara has her tomb in the [Santa Maria sopra] Minerva, and she dwelt between the Pantheon and the Thermæ of Agrippa. The tenement she occupied at the time of her decease still exists, but is little known. In a little triangular place on or near Via Tor Argentina lodged the first convent of Clarisses [Claresess ?]. If, crossing the gate-way, you turn to the left, you will face two windows of a ground floor. . . . It was there that the first abbess of the Clarisses died," etc., etc. (p. 165). Wey will be understood to mean that Santa Clara lies buried in the Roman church above mentioned, and probably he himself so thought. The truth is that she is not in Rome at all, but in Assisi, where Mr. Hubbard may himself have seen her. Hare ('Northern Italy,' iii, 381), describing the Santa Chiara Church at Assisi, says: "Steps in front of the altar lead to a crypt where we see the body of St. Clare, clad in the habit which she wore when living." No tomb of hers in the Minerva is noted in Baedeker or Gsell-fels. The monument of Catharine of Siena in that edifice seems to have been mistaken by Wey for one of Santa Chiara—perhaps because the names of both have the same significance. He resembled Jacob, who thought his bride was Rachel, but in the morning behold, it was Leah! It is unlikely that the remains of St. Clare ever rested at all in the Minerva, partly because the first stone of that church was not laid till long after her death, and partly because, according to Gsell-fels, as well as Butler's 'Lives of the Saints,' she died, not at Rome, but at Assisi. Mr. Hubbard, who takes pains to correct the spelling of Lake St. Claire, would be sorry to propagate an error regarding the local habitation of its tutelar saint, and we are therefore more careful to rectify a false impression, which his book must stamp.

Mr. Hubbard wields a facile pen, and his pages show not only classical culture, but acquaintance with modern standard poets. Occasional lapses of memory are, however, noticeable. His motto, *Serit arbores quæ alteri seculo prosint*, which he attributes to Cicero, according to Cicero himself belongs to Statius ('De Senectute,' viii, 25). He says to the *manor* born, unmindful of "Hamlet" (I, iv, 15). He uses steppes as a synonym of inclines. Such misspellings as Nemerosa, etc., may be credited to proof-readers. "Poor Claires" is an outcast from both French and English. Claires is no more English than poor is French. The cuts to illustrate the shapes or skeletons of trees are instructive, but we have never seen a black walnut of such an outline as appears on page 401.

These memorials are printed on such excellent paper that they are heavy to the hand, yet they are by no means heavy reading. In and out of Michigan we predict for them an appreciative reading public. The author will enjoy making such memorials as long as he lives; indeed, the making of them will help him to live longer. Similar will be the influences of his writings upon their readers.

COMBA'S WALDENSES.

Histoire des Vaudois d'Italie depuis leurs origines jusqu'à nos jours. Par Émile Comba. Première partie: Avant la réforme. 8vo. Paris: Fischbacher; New York: F. W. Christern. 1887.

In the awakening of the human mind and conscience during the dawn which followed the darkness of the tenth and eleventh centuries, three men present themselves preëminently as embodiments of the widely felt craving for an amelioration in the spiritual condition of Christendom—Peter Waldo, Dominic, and Francis of Assisi. The motive which inspired all three was nearly identical, although the results of their several activities were so antagonistic. In their origin the Waldenses, the Dominicans, and the Franciscans responded so closely to the same impulses, that one may say with reasonable confidence that, had Rome listened to Waldo's appeal for recognition of the congregation of preachers which he desired to found, he and his followers would never have thrown off the yoke of obedience, and the outcome of his labors would have been an order of Mendicant preachers in which Dominic and Francis would probably have been enrolled, and which would have played the part of the Dominicans and Franciscans in forming a bulwark for the papacy against the perils threatening it in the thirteenth century. At the same time it must be conceded that if Dominic and Francis had been rejected by Innocent III., there is little probability that they would have emancipated themselves from the fetters of obedience, and have independently pursued their purpose at the risk of creating a schism. Waldo's convictions of duty, however, were so deeply seated and so vivid that when the alternative came of obedience and silence or missionary work and revolt, his election was quickly made and firmly adhered to. To the churchman of the period disobedience was the blackest of sins and the foulest of crimes, which no virtue could atone for and no purity of faith could excuse. Unsuccessful repression was followed by persecution, and persecution inevitably produced rebellion, which necessarily justified itself by denying the authority of the persecutors. Thus it happened that the Waldenses found themselves schismatics when they had proposed only to labor within the Church—to do, in fact, the work subsequently undertaken by Dominic and Francis.

It is thus easy to understand why the doctrinal dissidence of the sect was in reality but small—much less than has customarily been represented by historians, who have regarded them as Protestants in the sense attached to that word at the period of the Reformation. In a body scattered over Europe, from Aragon to Bohemia, in small communities hiding from persecution, there necessarily sprang up differences of belief, as occasional bolder spirits carried their congregations further from Rome; but in the main the heresy was purely antisacerdotal, with a common bond of union in rejecting all submission to the Holy See. Many of them, to comparatively a late period, went to the Catholic churches for the sacraments, although the Donatist heresy of the vitiation of sacraments in polluted hands gradually spread among them and was widely received. In their religious tracts they quoted unhesitatingly from the doctors of the church, even from so late a one as St. Bernard, whom they regarded as an authority. Transubstantiation was generally accepted, and it was some time before they brought themselves universally to reject the doctrine of purgatory. It is a striking evidence of the evils resulting from the sacerdotal system of the mediæval church, that a heresy with so little to distinguish it in fundamentals should have inspired its believers with constancy to endure ruthless persecution for centuries, and to furnish martyrs by the thousand.

History affords few examples of the height to which the human soul can rise above the weaknesses of the flesh, more ennobling than that of these obscure sectaries—peasants and unlettered folk for the most part—who through so many generations patiently suffered the extremity of oppression for conscience' sake. The story is one which will never lose its interest, and the more that we know of it the higher becomes our admiration of the humble martyrs who in endless tribulation sought to ascertain and obey the will of God, regardless of the prescriptions of man. For the rightful understanding of this story much has been gained for us by the researches of scholars during recent years. The labors of Dieckhoff and Herzog have been continued by Montet and Karl Müller. Fable and legend have been brushed aside, and the facts have been brought out in the clear, cold light of history. The time has come for these investigations to be coördinated and rendered accessible to the public, and we are glad that the task has been undertaken by so competent a scholar as Prof. Emilio Comba of the Waldensian College of Florence. Belonging himself to the Waldensian Church, he has the personal sympathy requisite to give life to the story of its vicissitudes, while he has labored too earnestly amid the original sources to permit that sympathy to mislead him into supporting claims which documentary evidence has shown to be unfounded. His previous work, 'La Riforma in Italia,' had shown his intimate acquaintance with the spiritual movements of the Middle Ages, enabling him to grasp his subject in its entirety, as one manifestation among many of revolt against the theocracy of the Church, so that few men could be found more thoroughly equipped for the task. His impartiality is shown in the manner in which he treats the legend of the derivation of the Waldenses from the primitive church through the so-called Leonistæ and Claudius of Turin—a legend which naturally arose among them and has with difficulty been disproved in recent times. This same

spirit is shown in his treatment of the questions which are still *sub judice*, as to the Waldensian origin of the so-called Catharan Bible of Lyons and of the MS. of Tepl, in which he gives us an unbiassed statement as to the existing condition of opinion among scholars, without attempting to magnify the influence ascribed to Waldensian sources. This mental attitude, so rare among those who discuss controversial subjects, inspires confidence in his readers and gives them assurance that they are following a trustworthy guide.

The work is necessarily much more than its title would indicate, for the Waldenses of Italy could not be treated without a careful review of the growth and creed of the sect throughout Europe. It is, in fact, virtually a history of the movement in all the lands of Christendom to which it penetrated, and we regret that Prof. Comba did not see fit to render it complete in that sense, for it is so nearly so that but few additional pages would have been required. For these he had the materials in his hands, as his citations and references abundantly testify, and the omission has evidently arisen of purpose and not through oversight. Perhaps, when the second portion appears, relating the tragic history of the massacres from the Cottian Alps to Calabria, a more restricted horizon may be advisable, but during the pre-Reformation period the sect could readily have been treated as a whole, in all its details. Still, we have reason to be thankful for what the author has seen fit to give us; we shall await the remainder of the work with impatience, and, when it is completed, we hope that a translation will render it familiar to English-speaking readers on both sides of the Atlantic.

CYCLING LITERATURE.

Around the World on a Bicycle. Vol. I.—From San Francisco to Teheran. By Thomas Stevens. Charles Scribner's Sons. 1887.

Ten Thousand Miles on a Bicycle. By Karl Kron. Published by Karl Kron, University Building, New York. 1887.

At the meets of wheelmen during the present year, a conspicuous figure has been Thomas Stevens, who has lately accomplished the remarkable feat the record of which appears in 'Around the World on a Bicycle.' The attractive portrait forming the frontispiece of the book, in which Stevens appears mounted on his wheel, his baggage strapped to the handle-bar, his graceful costume flowing free as he proceeds at speed, gives a picture but little flattered. Stevens's features are resolute and manly, while his form, though not tall, is the perfection of vigorous symmetry. He came as a boy from England to a back town of Missouri, and, after various experiences on ranches and in frontier towns, undertook at length the expedition which is really a very extraordinary achievement. The substance of his book has already appeared in the form of letters to *Outing*. In spite of a lapse of grammar now and then, it is in its workmanship a good record—a frank, straightforward presentation, without brag or bosh, of the most novel adventures, sometimes amusing, sometimes full of hardship and peril. A bicycle trip from San Francisco to the heart of Asia, with no break except where the sea intervenes! The suggestion takes one's breath away; but its incidents are less full of excitement and danger than those of the trip from Teheran through Eastern Asia, which are reserved for a second volume.

Stevens's work is always with the wheel, but he is by no means always mounted. Sometimes he wades through the sand of a desert, pushing before him the deeply embedded tire. Sometimes, through a rough or swampy country, he bumps his machine for miles along a railroad trestle-work; or, on a high mountain pass, carries it in the air above his head. But he finds, also, much good riding ground—now the alkali plains by the Great Salt Lake, now the finished roads of civilized lands, in America; across France and England, and down the Danube; now the caravan tracks of Asia Minor, worn smooth by the constant beat, since patriarchal times, of the flat feet of camels.

His way of surmounting natural obstacles is no more remarkable than his way of getting along with men. Disregarding warnings he receives that he can never get through without being robbed, or, indeed, murdered, taking counsel only of his own courage and persistence, he pushes straight on, and invariably finds the nettle danger turning to feather-down in his bold grasp. With extraordinary tact and pluck he faces in one hemisphere Piute, cowboy, and tramp, and in the other, Turk, Koord, and every kind of nondescript vagabond of the desert, and invariably brings his own skin and his wheel away whole. The stupor into which he strikes a suspicious company is often his salvation. As he dashes into a horde of possible robbers or past a village of reputed thieves, upon his glittering machine, they forget for the moment their proclivities in their surprise or consternation, and, before they recover themselves, he is well on his way. Generally, indeed, he finds that people have a worse reputation than they deserve. Gypsies and Tartars of the most villanous look and repute receive him with friendliness, as he throws himself audaciously upon their hospitality, and, so long as he stays, treat him, as he says, "as well as they know how."

The book, however, is far enough from being a record of hardships merely. By the great fraternity of wheelmen, which he finds represented wherever civilization has spread, he is fêted sumptuously as one undertaking a bold enterprise. The dazed desert tribes, finding him a most mysterious, if not superhuman visitant, pay him often honors unmeasured and sometimes most uncomfortable. When at last, rolling past Ararat into Persia, he brings into the gates of Teheran his wheel apparently as sound and glittering as when he left San Francisco, the reader feels that Stevens deserves it all when the Shah does him special honor and he rides in presence of the whole army. "It is pleasant," says Mr. T. W. Higginson, in a preface full of hearty commendation, "to know that while peace reigns in America, a young man can always find an opportunity to take his life in his hand and originate some exploit as good as those of the much-wandering Ulysses. In the German story 'Titan,' Jean Paul describes a manly youth who 'longed for an adventure for his idle bravery,' and it is pleasant to read the narrative of one who has quietly gone to work in an honest way to satisfy this longing."

The book of "Karl Kron," 'Ten Thousand Miles on a Bicycle,' comprising nine hundred pages of fine print, is "a gazetteer, a dictionary, a cyclopedia, a statistical guide, a thesaurus of facts," a book of American roads for cyclists. As regards its literary form, it is a rattling affair, the animal spirits of the writer bubbling well into the pages, with the pronoun of the first person thrust unsparingly forward. Two chapters of the book—one devoted to a biography of Curl, "My Bull Dorg, the very best dog whose presence ever blessed this planet" (to whose memory the book is dedicated), the other, called "Castle Solitude in the Metropolis," and giving an account of life in the New York University building—seem quite irrelevant to the volume's purpose and to be introduced without sufficient reason. For the most part, however, the book is packed with information of interest to wheelmen, collected, it is plain, with great labor and, so far as we can judge, accurate. Of especial interest is a biography of Thomas Stevens, beginning page 473, which all who read 'Around the World on a Bicycle' will be glad to see. The chapters throughout are most frank and unconventional, and many a graphic passage occurs to relieve statistical detail. For the public it seeks it will be a handy volume, the shortcomings of which one feels disposed to overlook, since the compiler has been so hard-working and good-natured.

Review of the New York Musical Season, 1886–1887. By H. E. Krehbiel. Novello, Ewer & Co.

The Musical Year-Book of the United States, in which is merged the Boston Musical Year-Book. By G. H. Wilson. Boston: A. Mudge & Son.

The Musical Herald for 1886. Boston.

Mr. H. E. Krehbiel has once more placed the future historian of music in America under immense obligations by issuing a year-book of the New York musical season, as elegantly bound and printed as last year's. All the operatic performances and concerts of any significance whatever are mentioned, with lists of performers and programmes; and novelties are always discussed at such length as their importance justifies. Most of the criticisms appeared originally in the *Tribune*, but the author has endeavored, in revising them, to obliterate the traces of hasty midnight work and opinion. The music of Rubinstein's "Nero" would have borne, we think, more rapturous praise, while that of Berlioz's "Les Troyens" is possibly overrated; but as Mr. Krehbiel himself prepared the work for concert performance, he has a good deal that is interesting to tell regarding its dramatic and literary features. Liszt also appears to us underrated in the estimates of his oratorios of "St. Elizabeth" and "Christus." Every man has a right to his opinion, but we for our part prefer to side with Saint-Saëns in believing that Liszt's compositions have a great future in our concert halls. The most elaborate, and at the same time the most interesting, article is that on "Tristan and Isolde," in which some instructive comparisons are made of the different modes of treating the same legend by Tennyson, Swinburne, Matthew Arnold, and Wagner. In his discussion of the love-draught, Mr. Krehbiel shows true æsthetic insight, and puts to rout the absurd objections of shallow German critics. This article will repay study, even by those who are quite familiar with Wagner literature, and the general reader will find in it abundant reasons for the fact that "Tristan" was the most popular work of last year's opera season.

Mr. Krehbiel's retrospect contains some general considerations regarding the Italian, "American," and German opera seasons, including some valuable statistics provided by Manager Stanton, showing that the receipts of the Metropolitan Company (including assessments on stockholders) amounted to about $410,750 and the expenses to $442,000. The attendance was 137,399 (excluding stockholders), and the average income for each ticket sold, $1.47½.

"It must be borne in mind that a large portion of the cost is not directly chargeable against the performances, but is in the nature of fixed charges against the building. If these fixed charges, and the cost of new properties and repairs, be deducted from the amount paid in on assessment, it will be found that the actual cost of the operatic representations per box was $800, or about $13 per box (of six seats) for each performance."

An excellent index facilitates reference to Mr. Krehbiel's volume.

Mr. Wilson's Year-Book is a much less ambitious undertaking than Mr. Krehbiel's, as it excludes all critical matter and confines itself to statistics and programmes. In another sense, however, it is more ambitious, since it includes a record of the performances given in all the leading musical cities of the country. The Boston season, however, is the main thing, the others being merely "side-shows"; and this excuses the fact that New York is disposed of in eight pages while Boston gets fifty. Boston still retains its supremacy over New York in choral music, but how far it falls behind this city in every other respect is vividly brought out by comparing the concert and opera statistics of the two places. Boston had two operatic performances in Italian and twelve in English—*c'est tout*. New York had sixty-one in German, sixteen in Italian, and twenty-two in English, or seven times as many as Boston. Mr. Wilson, no doubt, will agree with us that what Boston needs now more than anything else to quicken its musical spirit is good opera, especially German opera, which has revolutionized musical taste in New York. Mr. Wilson's book is a valuable supplement to Mr. Krehbiel's local review.

Besides choral music, there is another thing in which Boston stands preëminent, and that is its conservatories. The professors of the New England Conservatory find time to edit the monthly *Musical Herald*, which is one of the most readable musical periodicals of either hemisphere. It contains newsy foreign letters, terse editorials, and general articles, together with some of the lectures delivered by the professors. The most valuable papers in the bound volume for 1886 before us are the articles on Chinese Music and Instruments and the History of German Song, by Mr. L. C. Elson. Mr. Elson, we believe, is the presiding spirit of the paper, and he is one of the cleverest and most liberal-minded musical writers in the country. He cannot, therefore, have read (much less written) the absurd editorial on Herr Seidl in the May number (1887), which not only contains several misstatements of fact, but is animated by a malicious spirit worthy of the "trade-sheets" that live by blackmail.

Popular Tales and Fictions: Their Migrations and Transformations. By W. A. Clouston. London: William Blackwood & Sons; New York: Scribner & Welford. 1887. 2 vols., post 8vo, pp. xiii, 485, 515.

THE collection of popular tales is still going on with unwearied ardor, and the amount of material at the disposal of scholars has already reached alarming proportions. Not only has the field of the Indo-European nations been carefully gleaned, but the outlying territories of the non-Aryan peoples have yielded a plentiful harvest, and the collectors of popular tales have invaded the isles of the seas and ransacked the tombs of ancient Egypt. There seems little hope that any material positively new will be collected, and it is time to pause and consider whether it is worth while to continue the search. From a literary standpoint it certainly is not, for none of the later collections equal the first made in this field. Basile's 'Pentamerone' (1637), Perrault's 'Contes de ma mère l'Oye' (1694), and the Grimms' 'Kinder- und Hausmärchen' (1816) have never been surpassed.

There remains the scientific worth of popular tales, and that, we suspect, has been greatly exaggerated. The subject offers but two questions for investigation—one of the origin, the other of the diffusion of popular tales. Three theories have been propounded to account for the former: according to one, popular tales are the disintegrated myths of the mythology forming the common patrimony of the Aryan peoples; another sees in them the survival of savage conditions of life; while a third considers them merely in the light of entertaining stories, for the most part consciously borrowed from India within historical times. The manner of diffusion follows from the theory of their origin. According to the first, they were taken to their present homes at the dispersion of the Aryan peoples; the second "thinks it impossible at present to determine how far they have been transmitted from people to people, and wafted from place to place, in the obscure and unmeasurable past of human antiquity, or how far they may be due to identity of human fancy everywhere"; while the third theory believes they were put into extensive circulation by the translations of Indian story-books made into Persian, Arabic, Latin, and the vulgar tongues of Europe between the sixth and thirteenth centuries.

Each of the above theories has been propounded in well-known works, of which (in the order of theory mentioned before) Cox's 'Mythology of the Aryan Nations,' Lang's 'Custom and Myth,' and Benfey's translation of the 'Pantchatantra' may serve as representatives. Since, from the very nature of things, no positive proof of two of the above theories can be obtained, it would seem, again, as if little were left to do, although Prof. Max Müller and Mr. Andrew Lang, like the enchanted dog and hare in Furetière's story, may pursue each other for all time. On the contrary, the theory of the importation of popular tales into Europe from India still offers a wide field of investigation, and is susceptible of documentary proof. It is not strange, then, that it has commended itself to many Continental Orientalists, who find rich stores of new material in the great mass of inedited Buddhist legends and story-books, one of the most extensive of which, the 'Kathá Sarit Ságara,' has just been rendered accessible to the English reader by C. H. Tawney's admirable translation in the 'Bibliotheca Indica' (Calcutta, 1880–1886, 2 vols.).

While the general reader can follow intelligently the arguments of Cox and Lang, only a specialist can accompany Benfey into the heart of India and the steppes of Tartary, and his theory has not, therefore, found wide circulation in England and America, although many have read with pleasure Max Müller's essay on the "Migrations of Fables" ('Chips,' vol. iv, p. 165), which contains the "Benfey" theory applied to one class of folk-tales. For this reason we welcome very heartily Mr. Clouston's learned and entertaining—in this case the two terms are not incompatible—book. Not that he seeks to support any particular theory—indeed, it might be objected that he is too discursive and unmethodical; but the reader who turns over his pleasant pages cannot, we think, escape the conviction that in regard to a large mass of our entertaining stories, jokes, fables, and the like, there is no doubt that India is their home. What the channels of their diffusion were, and what modifications they underwent during the process, are the real subject of the 'Popular Tales and Fictions,' and constitute the unity of the work.

The Introduction gives a brief account of the way in which stories were brought into Europe from the Orient and so widely diffused. Besides the preachers, who played such an important part in this matter, the *jongleurs*, or itinerant minstrels of the middle ages, many of whom were unfrocked priests, deserve notice. Before the Crusades the stream of Eastern stories entered Europe by way of Spain, where they were translated by Jews into Latin and thus started on the road to popularity. Another landing place was undoubtedly Italy, whose merchants must have brought back many a curious tale from the Orient. After the Crusades, of course, the transmission went on with redoubled vigor, and the number of channels was largely increased. Mr. Clouston's first volume is devoted to fairy tales proper, the second to "stories of common life, which have little or nothing improbable in their details." The fairy tales are treated in groups containing similar features, as, for example, those in which the hero steals or otherwise comes into possession of objects with magical properties, as invisible caps and cloaks, shoes of swiftness, inexhaustible purses, etc. In the second volume the stories are treated separately.

The author has already made himself favorably known by his excellent edition of 'The Book of Sindibád' (1884), and was well prepared by his Oriental studies to undertake the task of comparing Eastern and Western tales. As he modestly says in his preface, he has made some "discoveries," "links which were wanted to unite European stories with their Asiatic originals or prototypes; and occasionally, hitherto unknown sources, or at least Eastern variants, of our household tales" Outside of these and of the ordinary European parallels Mr. Clouston has not gone, and American readers will miss in the chapter on the "Hare and the Tortoise" a reference to the 'Amazonian Tortoise Myths' of Prof. C. F. Hartt (Rio de Janeiro, 1875), and Mr. Harris's 'Uncle Remus.' Sometimes European versions easy of access have been omitted, as in the story of the "Good Man and the Bad Man," which has interesting Italian parallels, and a large number of additional references for the "Heir of Linne" may be found in Oesterley's edition of Pauli's 'Schimpf und Ernst' (Stuttgart, 1866), appendix No. 16. It was, however, no part of Mr. Clouston's plan to extend his researches over the entire field of folk-tales, European and otherwise, and he is evidently little interested in Mr. Lang's theory of their origin; but, on the other hand, he has enriched our reading with many a delightful Oriental tale which had else escaped us.

Thus far we have examined Mr. Clouston's book solely from the standpoint of its scientific value. It would be unfair not to consider it also as a contribution of no mean order to entertaining literature. Almost every branch of popular literature is represented in it, from the nursery rhyme to the legend; while those who are fond of jests and anecdotes may draw many fresh parallels from its pages. In short, it is calculated to interest a wide circle of readers, from those who wish to while away pleasantly an idle hour, to the serious student who desires to track a tale of Chaucer or Boccaccio to its Oriental home. The book is beautifully printed, and is, moreover, bound in half Roxburghe style, gaining a solidity of appearance denied to the usual ephemeral cloth binding.

Connecticut: A Study of a Commonwealth Democracy. By Alexander Johnston. Boston: Houghton, Mifflin & Co. 1887.

THE easy and graceful style of which Prof. Johnston is master would make almost any subject attractive in his hands, and the subject that he has chosen is well-fitted to be treated in such a style. However important the lessons of this history may be, the stage upon which the events were enacted is too small to justify the stately sentences and pompous phraseology of Gibbon or Macaulay; and the simplicity, not to say poverty, of the life of the early settlers is properly reflected in unadorned narrative. There is a twinkle of humor from time to time in the author's writing that is not only appropriate, but serves to light up details in their main features somewhat monotonous. It serves, too, in the place of such gossip as Judge Sewall's, which is for the most part lacking in the Connecticut annals. To make an interesting book out of the ma-

terials available and within the allowed limits is no inconsiderable literary achievement, and men of Connecticut descent may well be satisfied with their representative.

The dominant idea of the book is the spontaneous generation, so to speak, of democracy upon Connecticut soil. There and nowhere else, according to Prof. Johnston, did it originate. Neither in the cabin of the *Mayflower* nor on the shores of the Bay Colony was anything conceived other than theocracy or aristocracy. He admits that the Plymouth system was "accidentally" democratic, but thinks that it was from the absence of any great need for government, or from care to preserve homogeneity in religion, not from political purpose. The *Mayflower* covenant had, according to him, "not a particle of political significance." In Massachusetts, too, the development of democratic feeling was subsequent to the settlement of Connecticut.

Matter so highly contentious as this ought to be very carefully stated, and we do not find that Prof. Johnston's proofs are altogether convincing. For example, he says: "Hooker was undoubtedly the strength of the migration; and he had been so notoriously opposed to Cotton in the old colony that it would be reasonable to presume that he differed *toto cœlo* from Cotton's views as to democracy." Whether this is a reasonable presumption or not depends upon a good many considerations. The fact that Hooker preached that the choice of public magistrates belonged to the people is not decisive. He also preached that this choice must be exercised not according to the humor of the people, but according to the law of God. Where there is an established church this is not a democratic sentiment. Undoubtedly the emigrants to Connecticut were hostile to the dominant party in Massachusetts, and very naturally asserted their independence when they got a chance. To suppose that they had any other purpose than to get away from a tyrannical majority, is much like maintaining that the Pilgrim fathers intended to establish religious liberty in some other sense than liberty to be religious in their own way. Prof. Johnston points out that the State required no religious test of citizens, but he says nothing as to the tests imposed by the towns. His arguments go to show that the Government of Connecticut was less centralized than that of Massachusetts—there could hardly be much of a "central" government for three towns—but these do not seem to us to justify the conclusion that there was any very distinct purpose to constitute a democracy. We should desire further information as to the numbers of the slaves and bondmen, as well as of the non-church-members, before joining in the pæan—The birthplace of American democracy is Hartford.

Something the same is to be said of Prof. Johnston's theory that in Connecticut the towns created the commonwealth, while in other States the relation was reversed. He traces the life-principle of the American Union to the league of the three settlements on the bank of the Connecticut River. In other words, he considers that the Constitution of the United States is a magnified form of the Constitution of the State of Connecticut. We do not observe that he makes the claim—which we suppose to be tenable—that the special reservation of powers to the States was a Connecticut suggestion. But perhaps this is implied in the claims that he does make. It is not that we wish to dispute any of these claims that we have criticised them; but we doubt if they are sufficiently defended against the jealousy with which they will be viewed in other States.

At the risk of making our notice, what we do not intend it to be, ungracious, we must say that Prof. Johnston yields too much to patriotic sentiment, and is prone to apply the maxim *Nil nisi bonum* to whole communities. The Pequot war was an infamous massacre, provoked by the whites, and properly to be compared with the cruelties of the French in Algiers or the Turks in Bulgaria. The suppression of the proposed college for free colored people at New Haven was an act of too much significance to be dismissed with a dozen lines. There were others concerned in this scheme besides "free negroes"; the Rev. Mr. Jocleyn of New Haven had started it, and Arthur Tappan had bought land and agreed to contribute one thousand dollars out of ten which the white friends of the institution should provide. They and Mr. Garrison had recommended New Haven to the blacks on the ground that its inhabitants were "friendly, pious, generous, and humane," and its laws "salutary and protecting to all, without regard to complexion." Those generous inhabitants, however, partly under the influence of that singular agency for whipping the devil around the stump, the Colonization Society, partly out of a pitiful fear of offending their Southern patrons, resolved, at a city meeting, with only four dissenting votes, that they would resist the establishment of the proposed college by every lawful means; and thus an end was put to the scheme. Such a proportion of righteous men would have taxed the intercessory powers of Abraham.

As to the Prudence Crandall episode, Prof. Johnston's explanation is singular. He says, on the one hand, that the town of Canterbury would have been assuming a great responsibility in permitting the school, because this would have been the work of no superior power, but its own act; and, on the other hand, the recognized principle that towns should control their own affairs made it easy for Canterbury to get an act from the General Assembly empowering its selectmen to deal with this question. We fail to see the extenuating character of these circumstances. Pilate did not better his moral position by turning his prisoner over to the Jews for trial; nor do the Jews stand better for getting leave to persecute from Pilate. If the people of the State had sympathized with Miss Crandall instead of with her persecutors, they would not have passed an act intended to relieve the town of Canterbury of a responsibility which, as Prof. Johnston says, it could not shirk. The blame of this discreditable affair is not to be thrown upon "the peculiar local constitution" of Connecticut, but upon the cowardly spirit of its inhabitants.

However it may be as to these matters, no one can dispute the greatness of the influence of Connecticut institutions, and her people may well feel pride in the story that Prof. Johnston has told. He has told it with judgment, and it is easy to see how irksome he must have found his narrow limits.

Such a State and such a book deserve a better map than the publishers have supplied, which has been borrowed, apparently, from a railroad time-table. In future editions, which will no doubt be called for, this ought to be replaced with something more respectable; and in such editions, the sentence near the foot of page 88 and the misprints on pages 268–9 should be corrected.

The Kernel and the Husk: Letters on Spiritual Christianity. By the author of 'Philochristus' and 'Onesimus.' Boston: Roberts Bros. 1887.

It is an open secret that the author of this volume is Dr. Abbott, Head-master of the City of London School, and author, besides the anonymous books mentioned above, of the article on the Gospels in the 'Encyclopædia Britannica,' which is particularly valuable for its working out of the "triple tradition" of the first three Gospels, *i. e.*, the fundamental nucleus in which they all substantially agree. Some things are now treated much more exhaustively than heretofore; notably, the New Testament miracles and their relation to early Christianity. The volume is dedicated "to the doubters of this generation and the believers of the next." In his preface Dr. Abbott expresses his belief that the time is not far distant when few will believe in miracles who do not believe in an infallible church; then his book will appeal to a larger circle; but, as things are, he begs all who worship a miraculous Christ without difficulty to let his book alone. It is written for those who feel drawn to the worship of Christ by love and reverence, yet repelled by an apparently inextricable connection of the story of Christ with a miraculous element which, in their minds, throws a doubt over the whole of his acts. He tells a story of a fellow-clergyman who had read 'Philochristus,' and when dying sent to him to ask him if he could look him in the face and say, "This theology and Christology of mine are not merely literary." The dying man had been "taught to believe too much while he was young," and had reacted violently to the "abyss of agnosticism." Dr. Abbott was able to tell him that his views were not merely literary; yet, while his honesty will not be suspected by any generous person, it is doubtful if many will be able to keep pace with his elastic step. The majority will probably wonder at his confidence in the sufficiency of his opinions, which imply a passion of credulity so strong that his sticking at the New Testament miracles appears exceeding strange. Between his propositions and those of the traditional theology many will choose the latter as less trying to their faith, or as being, at any rate, less trying to their powers of intellectual comprehension.

The form of the discussion is not well chosen. It is that of imaginary letters to a sceptical young friend, whose answers are not given except in brief particulars, quoted in the letters of the monologuist. There is here the same danger as in a game of chess or a dialogue with one's self—that we weaken our imaginary opponent in order that we may win an easy victory. But Dr. Abbott is not so much a victim to his method as are many who make use of it. Certainly the objections that occur to us as we read are generally met in the succeeding letters. But this is not to say that the book is as satisfactory as it would be if the answers were from some hard-headed actual opponent. He sometimes arouses our suspicions by the ease with which he makes all difficulties disappear. His solvent is too irresistible. We are reminded of the schoolboy's axiom, "Things that are equal to each other are equal to everything else," so completely are the usual lines of difference effaced.

The book is very unequal in its different parts. Some are characterized by hard sense and critical judgment, and others seem given over to the wildest possible vagaries. The valuable parts are those in which the scholar and the critic speaks; the less valuable those in which we hear from the psychologist and metaphysician. The opening letters state the question. The author's correspondent is in danger of giving up Christianity and refusing ordination because he cannot accept the miracles of the New Testament as true. A letter headed "Personal" is interesting as evidently a brief autobiography of Dr. Abbott. Then follow several chapters on the relation of imagination to reason and belief. It is exactly here that it is much to be desired that Dr. Abbott's letters should be answered by another person, and Prof. Tyndall would do very well. Dr. Abbott is very full of Dr. Mozley's notion that scientific certainty is only of the past, but for his "irrational impulse" he predicates the imagination. What he wishes to introduce by this postern, however, is not the miraculous, but various beliefs of which no rational account can be

given. And here Prof. Tyndall's article on "The Scientific Use of the Imagination" would be a good answering letter. That use is very different from any of the wildness for which Dr. Abbott eloquently contends. It will be observed that the faith on which he insists as born of the imagination is very different from the traditional faith of Christianity. This is a supplementary faculty superior to reason and much more infallible. But Dr. Abbott's "faith" is something that looks for its justification to the uncertainties of ordinary knowledge. It is of a piece with these uncertainties.

The most remarkable feature of Dr. Abbott's book, considering that its principal object is to contend for a purely natural Christianity, is its insistence on the existence of Satan. Nowhere is the book so nearly eloquent as in making this point. He finds it "difficult to listen patiently," he says, "to what people are pleased to call arguments against it." It seems to him "that if we are to have a genuine trust in God it is almost necessary that we should believe in the existence of a Satan." The poor need the comfort of this belief, and the rich the help of it for a social inspiration. The New Testament warrant for it is easy to make out, but Dr. Abbott argues it from experience as well as from the words of Jesus. He does not think it would be well to personify Satan with the same vividness with which we personify the Father in heaven. Where this Satan, this "enemy," came from, he does not attempt to say, but he is sure that the Almighty is not in the least responsible for him.

The part played by illusion in the development of faith is the subject of several letters, and "the worship of Christ" of several more. Dr. Abbott worships Christ as the incarnation of the goodness of the world, but the steps by which he passes to this worship from a conception of his purely human character are difficult to find and follow. It is not a little refreshing, after the vague and fanciful character of much that he has written here, to come upon the succession of chapters on the miracles of the Old Testament and New. The method and the results of these chapters may not commend themselves equally to all, but they will not be found either vague or dull, and their considerations are such as the traditional believer in the miraculous must squarely reckon with. Their freshness is owing in a great degree to the boldness and ingenuity of their attempt to account for the miracle stories by the unconscious perversion of words and phrases in early hymns and Scriptures of the Church. His minute and patient study of the New Testament makes all he says in this connection interesting and important. His treatment of the greatest miracles recorded, the resurrection of Jesus and his miraculous birth, is much less successful than his treatment of the others, for with these he is "bound in the spirit" to save something of reality. What he saves from the resurrection is (he thinks) a vision purely subjective, but absolutely convincing, of the immortal Christ. His negative considerations are likely to be much more effective than those that aim at a positive rehabilitation.

Lastly, we have two letters on the relations of the Church of England to a non-miraculous Christianity. The first asks the question, "Can a believer in Natural Christianity be a minister in the Church in England?" The second tells "what the Bishops might do" to make it easier for those who have given up miracles, and the infallible Bible, and the deity and authority of Christ, to accept ordination. Dr. Abbott contends in advance that he has not "the clerical mind"; that he is not a special pleader for the Church or for its ministers, but a man resolutely bent on seeing things as they are. But it may well be doubted whether he has obeyed the injunction of old time, "Know thyself." His book throughout impresses us as the work of a man bound at all hazards (never with conscious indirection) to save the husk of the old doctrine and observance, while letting the kernel go. His problem is, How can we still keep up a show of the old forms and phrases, whatever must be given up of their original contents? And though we are sure he would be immeasurably grieved to have it so, we are obliged to think that the encouragement of intellectual dishonesty will be the principal outcome of his book. He "cannot think that any sincere worshipper ought so far to take offence at one or two expressions in the Creed—which may be interpreted by him metaphorically, though by others literally—as to separate on that account from the national Church. Grant that his interpretation may be a little strained—nay, grant even that he is obliged to say, 'I cannot believe this'—yet I should doubt the necessity, or even wisdom and rightness, of cutting himself off from the Church of England because of one or two clauses of the Creed, so long as he feels himself in general harmony with the Church doctrine and services"; advice which, by force of contrast, reminds us of Carlyle's to John Sterling: "Elsewhither for a refuge or die here! Go to perdition if thou must; but with a lie in thy mouth?—By the Eternal Maker, No!" But what need there is of some device to save the young men of England to the Church, is evinced by a postscript to "Letter 30." At Trinity and St. John's, Cambridge, the two largest colleges, only eight Fellows out of sixty took holy orders from 1873 to 1879; from 1880 to 1886, only three out of sixty. Of sixty Fellows of Trinity who took degrees from 1873 to 1886, only two have been ordained. Carlyle's advice to Sterling seems to have prevailed.

Historia Numorum: a Manual of Greek Numismatics. By Barclay V. Head, Assistant Keeper of the Department of Coins and Medals in the British Museum. Oxford: Clarendon Press; New York: Macmillan.

THIS book, long looked for by students of numismatics, constitutes, in the entire range of coinage, Greek and related to the Greek, the *vade mecum* which, since Mionnet's catalogue was issued, has been a desideratum unfulfilled. Its limitation to Greek coinage and its affiliations is justified by the enormously greater importance of Greek numismatics, as an aid to archæology, art, and history, in comparison with all other branches of the science, as well as by the fascinating completeness and harmony of its system. It replaces the voluminous Mionnet by a still ponderous but much more useful book, hardly by its bulk (808 large octavo pages, besides introduction and alphabetical tables) disqualified to be the travelling companion of the student of numismatics. To make it less was clearly impossible, for condensation could go no further than Mr. Head has carried it without becoming obscurity. The introduction of eighty pages of fine type containing an admirable index and résumé of all that part of archæological lore which is necessary to the student; a brief and modest preface; such a compendium of bibliography as will suffice for all students not specialists; a condensed history of the coining of money as far as known, beginning with modes of exchange by barter employed before money; the metric systems of Egyptians, Babylonians, and Assyrians; the Phœnicians, the Lydians, and their position in relation to numismatics and their invention of coinage; Babylonian and Phœnician values of the precious metals; transmission of weight standards (an interesting exposition of an involved subject); the types of Greek coinage, in which this almost romantic subject is fully dealt with in principle; chronological classification, which is, in fact, a brief history of coin art; a section on inscriptions, and another on inscribed names of functionaries; the relation of public games and festivals to coinage; civic titles and epithets; alliance coins, colonial coins, and dated coins—this synopsis will suffice to show how complete is the investigation involved; but the book alone will give one to understand with what scholarly intelligence and conciseness the pith of all these themes has been given by Mr. Head.

To quote from the mass of concentrated information is difficult, but the section on the chronological classification of coins by style may be taken as giving one of the principal reasons of the importance of the author's subject:

"It has been often and truly said that Greek coins are the grammar of Greek art, for it is only by means of its coins that we can trace the whole course of art from its very beginning to its latest decline. Neither statues, bronzes, vases, nor gems can, as a rule, be quite satisfactorily and exactly dated. Coins, on the other hand, admit of a far more precise classification, for in every period there are numerous coins of which the dates can be positively determined; and around these fixed points a little experience enables the numismatist to group, within certain limits, all the rest."

Besides the coinage of Greece properly considered, those of states whose mints were influenced by the Greek are considered briefly, as, the Roman, Latin, Etruscan, Phœnician, British, etc. In speaking of Central Gaul, the author says this "was the district in which the gold staters of Philip were first imitated." Without contesting the accuracy of this statement, for Mr. Head is too careful and learned a numismatist to make it without authority, we should like to know the grounds of this conclusion, for this seems hardly the conclusion of Pulski (not noted in the bibliography), who has studied the question profoundly, and traced the staters copied from Philip's, from the lower Danube to England. As the Gauls of the lower Danube were those who first came in contact with Greek civilization and carried on trade with Macedon, in the time of or soon after Philip, it seems hardly natural for the first copies to be made so far away as Aquitaine.

The 'Historia Numorum,' from the name and authority of its author, will find its way as a book of reference into every numismatic library; but as a compendium of all that the beginner and casual collector wants to know, for its judicious selection of types for illustration, as well as for lucid statement, whether with reference to the artistic or historical side of numismatics, it becomes an indispensable text-book. The "process" illustrations, made from casts of the coins, are all that is needed for identification of the various mints and epochs, as well as for the general artistic qualities of the coins. There is no attempt on the part of the author to urge speculative theories, or to pass the limits of sober investigation, though in a subject of this kind conjecture must often bridge over the void between well-ascertained facts; and no dogmatism impairs the value of this admirable book, which may be safely recommended as a guide into the study of general as well as Greek numismatics from the way in which the connection of Greek with non-Greek coinage is shown at all points of contact.

Life among the Germans. By Emma Louise Parry. Boston: D. Lothrop Co. 1887.

MISS PARRY'S book is sensible, fresh, and fairly interesting—just what one would expect a book to be which was written by a young American woman (she calls herself a female), neither rich nor poor, orthodox in faith, and, apparently, a schoolmistress by profession. It lacks, indeed, the touch of genius which converts the dross of

mere fact and opinion into the gold of literature: but this is partly the fault of the subject. Not even Mr. Hamerton could invest his abode in Germany, if he had one, with the nameless charm which pervades every page of his account of 'Round My House' in France. From Howitt and Mathews, of forty years ago, to Miss Parry of to-day, not one of many English writers who have described German life has been able to produce a work (we exclude fiction) of any literary value, unless we except Mr. Hawthorne, whose work is a satire rather than a description. All young Americans return from Germany full of enthusiasm, and dreaming of the time when they can resume their delightful life there. But if they resume it after a dozen years, as occasionally happens, they usually find that the charm lay in the glamour of youth and of intellectual emulation, not in the German background. Miss Parry, however, is less enthusiastic than is commonly the case, perhaps because too mature to be carried away by temporary impressions. She never forgets the American standard of manners, domestic comfort, and household sentiment, and finds that even in instruction Germany is behind America in some departments.

The preface to her book, written by another hand, dwells upon the fact that it is not a mere traveller's diary, but a view of German life from the inside. It is this, but hardly to the extent which the preface indicates or the author evidently thinks, in spite of the fact that she spent less than a year in Germany. She studied Latin at the Victoria Lyceum, and was regarded as a phenomenon in consequence; and indeed she would be deemed a phenomenon, as a Latin scholar, in any country, judging by the phrase "omnia *est* vanitas," the only one from that language with which she adorns her pages. It is not clear why she should quote the Old Testament in the Latin version, but it is certain that the translator of the Vulgate does not authorize the opinion that vanity is everything. Her chief effort, however, seems to have been to learn German, which, she says, she "resolved to conquer." We regret to say that, judging from the evidence her book furnishes, she has but imperfectly succeeded. There is an error of some kind on nearly every page; and though many of these are doubtless due to the printer (as when Varnhagen von Ense is distorted into "Von Hargen von Euse"), he cannot be made to shoulder all of them. Especially reckless is she with her genders, giving or withholding them with as much abandon as a cockney does his "h's." When she enters her boarding-house (the description of which is the best thing in the book), she finds "ten other *pensioneren*," meaning *Pensionäre;* on the table she finds a contribution-box "für *den* [die] Armen," as well as meets a "herzliche [s] Willkommen," after which she is "melded" (*gemeldet*) to the police; she is taken in to dinner by a "Herr Capitaine" (*Kapitän*, sea-captain, but the context shows that *Hauptmann*, captain in the army, is meant), and so on; while her ignorance of the difference between shall and will, and the frequent misuse of other words, make the reader think that less Latin (and German) and more English would improve her style. Perhaps her most singular error is where she confounds English and German in her version of the familiar legend of the Wartburg—"Wart', Berg, du sollst eine Burg werden"—which, *werden* here being translatable into "become," she quotes, "—— du sollst eine Burg bekommen." Almost equally comical is the frequently recurring translation of the familiar phrase "es geht los" as "it goes loose," and of "gern haben" as "have kindly." But though our author's fund of general information, as well as of German, might be increased, we take leave of her with regret, and shall remember with pleasure several of her entertaining pictures of Berlin life—above all, that of the "family of American ancestry," whose good deeds and charming manners are described so minutely.

Yachts, Boats, and Canoes. By C. Stansfeld-Hicks. *Forest and Stream* Publishing Company.

As a manual for amateurs who are seeking amusement in small boats and canoes, Mr. Stansfeld-Hicks's book, although roughly put together, will serve a useful purpose. It makes no pretence of being a scientific treatise—indeed, much of it is little better than a commonplace scrap-book; but it contains the facts that amateurs need to know, and it states them in such a way that they can be readily grasped. The author appreciates keenly the fascinations of single-handed sailing, and his enthusiasm for this most exacting and most delightful sport will find a warm response from all genuine yachtsmen. With anything larger than a three-tonner he has little to do. A considerable part of his book is devoted to the amusement that has come into vogue of late years, under the name of "model yachting." As compared with real yacht-sailing, model yachting, though in its diminutive way a pretty sport, hardly deserves its name. Apart from the element of danger, which of course is wholly wanting, and the uncertainty attending its conditions and results, there is no analogy between the miniature craft, used for automatic racing in tiny seas, and the real vessel navigating a real sea under the guidance of a mind and hand on board. In spite of its uncertain elements, however, model yachting bids fair to have a future, and the author's practical hints will assist its development.

Mr. Stansfeld-Hicks has of course a word to say on the vexed question of "skimming-dishes" versus cutters. He goes so far as to admit that "the present English type of racing yacht, which is produced by the tonnage rule taxing length and beam and allowing unlimited depth, though far superior to the shallow class of boat, has probably been carried to an extreme"; and he adds: "The contests between the *Genesta* and *Puritan*, *Galatea* and *Mayflower*, and especially the *Miranda* and the American schooners, show that beamy vessels of small proportionate displacement and large sail area are not to be despised, especially in smooth water and light winds." This is a handsome concession for an Englishman to make, though it is much like a Frenchman's saying, after the war of 1870, that the Germans were not altogether contemptible antagonists. After reading it, one is hardly surprised to learn from this ingenuous author that the Americans, "with *Puritan* and *Mayflower*, have kept up the idea that they are able to put something together that will get through the water." It may be suggested that the recent contest at Marblehead has come just in time to keep up still further this "idea," and that, as the race took place in genuine cutter weather, it has sufficiently proved that smooth water and light winds are not indispensable conditions for a victory of the *Mayflower* over the *Galatea*.

Chapters on English Metre. By Joseph B. Mayor, M.A. London: C. J. Clay & Sons.

In the above-named work, Prof. Mayor has published certain papers, "greatly modified and expanded," originally read before the London Philological Society between 1874 and 1877, which form seven chapters of the work, and has added five other chapters. He entitles the work 'Chapters on Metre' "in order to show that it makes no pretence to completeness," and states his object to be "to ascertain, by a process of induction, the more general laws of our modern metre, and to test the results in a variety of instances." He adds the wish "that some competent scholar would take up that historical side of the question which I have left untouched." While Prof. Mayor is acquainted with Schipper's 'Englische Metrik,' as he makes two references to it, he does not state that this is just the point of view from which Schipper's work is written, and when it is completed, probably during the current year, we shall have a complete historical development of English rhythms. Schipper's first volume ends with Lyndsay, and Prof. Mayor begins his studies with Surrey, so that the two do not occupy common ground.

The subject of English metre is one of great importance, and has been heretofore much neglected. It is an interesting sign of progress that scholars are devoting themselves to the study of it, notwithstanding the different "systems," so called, to a criticism of which Prof. Mayor devotes a large portion of his work. His introductory chapter assumes the postulate "that a scientific treatment of the subject of metre is possible and is desirable," and his criticisms are directed to ascertaining "how far this desirable end has been already achieved." He holds that the classical names of the feet are to be retained for the sake of convenience, it being clearly understood what they mean in English verse; that "the routine scansion" is "natural and necessary," as well as scientific—as against Mr. Alexander J. Ellis; and that it is "of use in the interests of education." In this latter aspect Prof. Mayor has a co-worker in this country in Mr. F. B. Gummere, who has endeavored to popularize a knowledge of metre in the interests of education, by his 'Handbook of Poetics.'

After a brief summary of the business of a metrist, Prof. Mayor proceeds to criticise the metrical systems of Dr. Guest, Dr. Abbott, Mr. Symonds, and Mr. Ellis, with brief notice of Prof. Masson and Mr. Keightley on the verse of Milton. The chapter on Dr. Guest's 'Antiquarian A-Priorism' is a work of supererogation, for no one can read Prof. Skeat's recent republication of Dr. Guest's work without realizing that it is altogether antiquated, and that no such cumbrous system can ever be applied to English metres, though we must give Dr. Guest credit for realizing the importance of accent in English verse, and for first attempting an historical treatment of English metre. Prof. Mayor's system is so similar to that of Dr. Abbott that the differences seem to be more a question of words than facts. He says, indeed: "In its general outline I believe this to be the true and natural system, giving technical expression to the practice of the best writers and readers of poetry, and not setting up an antiquarian standard to which they are required to conform." He thinks, however, that Dr. Abbott "is too much enamoured with a mechanical regularity, and makes too little allowance for the freedom of English versification." The criticisms touch mainly contraction and resolution in verse, which Prof. Mayor would restrict, and therefore admit anapæsts and dactyls more freely in iambic and trochaic verse. He objects, too, to the accentuation of *the*, *a*, and other light words usually unaccented, and so would admit the pyrrhic much more frequently than Dr. Abbott; but it is difficult to see how we are to get over accenting such words sometimes in Shaksperian verse, even though the stress may not be as heavy as that on a fully accented syllable, for a pyrrhic in iambic or trochaic metre will follow the normal accentuation of the foot. Dr. Abbott's remarks on this chapter show that the two are in closer agreement than one would suppose from Prof. Mayor's criticisms. Mr. Symonds's views, as given in his article on the

"Blank Verse of Milton" (*Fortnightly Review* for December, 1874) are styled "Æsthetic Intuitivism," and they are criticised as encouraging the delusion "that poetry is subject to no rules and admits of no science." "His æsthetic analysis may be excellent in itself, but it cannot take the place of the scientific analysis, nor is there the least inconsistency between them." Prof. Mayor finds himself in closer agreement with Mr. A. J. Ellis, and quotes largely from a paper read by Mr. Ellis before the Philological Society in 1876 in exposition of his system; but he well remarks upon this: "Whilst I admire, I with difficulty repress a shudder at the elaborate apparatus he has provided for registering the minutest variations of metrical stress"; and further: "If the analysis of rhythm is so terribly complicated, let us rush into the arms of the intuitivists and trust to our ears only, for life is not long enough to admit of characterizing lines when there are *forty-five* expressions for each syllable to be considered." This is a very just criticism of Mr. Ellis's elaborate, but, as it seems to us, purely ideal system. Mr. Ellis is enamoured of mechanical symmetry, and not one ear in a thousand would distinguish a tithe of the forty-five degrees of "force, length, pitch, weight, and *silence*" (!) that he has worked out in his comprehensive scheme; and he himself adds: "For all practical purposes the three principal degrees suffice, but fewer will not serve." But this gives us *fifteen* points to consider about every syllable, and practically excludes all but the initiated few from discussing metrical questions. For some of Mr. Ellis's complex distinctions Prof. Mayor fails to see any ground, and says: "To insist upon them as essential to the appreciation of rhythm seems to me to be putting an unnecessary burden on all students of poetry."

But the brief limits of this notice will not permit further discussion. Prof. Mayor has an interesting chapter on "Metrical Metamorphosis," but is not always consistent in his own scansion (cf. *myriad* on pp. 81, 88, 98, 189). His naming and classification of metres, with illustrations from Tennyson and the Hymn-Book, will be generally concurred in, though here, too, exception may occasionally be taken to the scansion of certain lines. He closes his work with a discussion of the blank verse of Surrey and Marlowe, of Shakspere as seen in "Macbeth" and "Hamlet," and of Tennyson and Browning. We cannot assent to his accentuation of many of Surrey's lines, especially of proper names, and where he admits a trochee in the *fifth* place, which is particularly harsh in iambic rhythm. The Chaucerian accentuation was still alive for Surrey. We close with the remark that if any one needs to be convinced of the great superiority of Tennyson to Browning as a metrist, let him read Prof. Mayor's last chapter.

The Development of the Roman Constitution. By Ambrose Tighe, formerly Tutor and Douglas Fellow at Yale College. [History Primers.] D. Appleton & Co. 12mo, pp. 131.

Mr. Tighe has rendered American scholars a very great service in placing before them a compact statement of the present accepted view of the early history of the Roman Constitution. Such a view, in a clear and connected form, has not hitherto been attainable in the English language; and students of the Roman institutions who had not access to German or French treatises, have been obliged to put up with the exploded theories of fifty years ago, or to search for a more correct system scattered through the pages of a general history. The only objection we have as a whole to the work before us is its brevity. It is an admirable sketch of its subject; but it is a subject which could not advantageously be compressed within the pages of a "primer." In several instances the statement lacks precision merely because the author had not room to work out the point as was needed. References, also, and in some cases authorities, would have been very desirable.

Mr. Tighe has held pretty closely to Mommsen's views, as he states in the preface; yet he is not a slavish follower, but gives evidence of independent study and independent thinking. In some instances, he says, he has followed Mommsen "in spite of my own conviction that he is in error," instancing the notion "that the *gens* was a union of kinsmen." It is hard to say what is the duty of the compiler in such a case. Mr. Tighe has solved the problem by accompanying the accepted view with a discussion (p. 33) of its validity. This discussion is excellent, but belongs rather to the subject of the history of institutions in general than of Roman institutions. We think it would have been better to have simply qualified the general statement with some such phrase as "generally believed," or "believed by the ancients." This discussion is really out of place in a book as small as this.

The part of the book which satisfies us least is chapter v., "The Fight without the City"—not that this is not in the main correct and instructive, but that the author does not appear to us to have grasped the facts of the external growth of the Roman State as fully as those of the internal growth. In the first place, we have no definition of the city, that fundamental institution of both Greeks and Romans which hardly any English writer appears fully to comprehend. The successive stages in the development of the Roman power in Italy are not clearly marked, nor are the different classes of Italian States distinctly defined, in their relation to Rome. Neither the *municipia* nor the *coloniæ Romanæ* are mentioned, nor are the two classes of *præfecturæ*—those which enjoyed the *jus Cœritum* and those which were stripped of all local autonomy—distinguished. The section upon the Roman Roads is hardly more than a description, with no adequate account of their relation to the governmental system. In short, this chapter seems hurried and unduly abbreviated by the exigencies of the "primer." In the two succeeding chapters, "The Fight within the City" and "The Government of Rome," this defect is less observable, and these chapters are, as a whole, admirable. We think it a mistake to represent the secession of 494 as a result of the agrarian controversies; the agrarian laws were proposed as a remedy for the evils, but the evils themselves were principally due to other causes. The Canuleian law, a measure of fundamental importance, is not mentioned. The constitutional changes in sections 12 and 13 are overcrowded, so as to result in loss of perspective, another result of the compendious treatment; for example, the reader would certainly gather that the military quæstors were established directly after the decemvirate, instead of twenty-eight years later.

We have a few criticisms upon points of detail. It is perhaps probable, but by no means certain—and, we believe, without an atom of historical evidence—that "the clan . . . had a natural head, who ruled over it with absolute power" (p. 44) in the earliest times. On page 49 there is no mention of the *lex curiata de imperio*. On page 79, "the" before "Formiæ" should be omitted. On the same page it is misleading to assert that the tribes of Servius Tullius "were made up after the analogy of the three original tribes." Even if each of the original tribes had a territory to itself—which has not been stated—yet this territory was simply an adjunct to the genealogical tribe, while the new tribes were primarily territorial. The Latin colonists were in later times "Roman citizens, who were willing to suffer a diminution in their political rights" (p. 82), but originally they were in part Latin citizens. The money paid for the use of lands held by *occupatio* can hardly be called "a fixed annual rental" (p. 89); it was a fixed proportion of the produce. The statement (p. 116) that the duty of appointing the senators was given to the censors in 435 is incorrect: it was not until more than a century later. It seems to us that Willems has proved that the *senatores pedarii* had "the right of speaking" (p. 117). It was only the *sixteen* earliest formed rural tribes that "took their name from the principal clans" (p. 119); the seventeenth, *Clustumina*, had a local name. In most of these cases the inaccurate statement seems to have come from the necessity of condensing and abridging.

Through the Fields with Linnæus. A Chapter in Swedish History. By Mrs. Florence Caddy. London: Longmans; Boston: Little, Brown & Co. 1887. 2 vols., pp. 347 and 376.

In these chatty and discursive volumes, notwithstanding the exceptions that might be taken here and there by an austere censor, Mrs. Caddy contrives to make a very life-like picture of Linnæus, and to bring him closer to the sympathies of ordinary educated people than he has ever been brought before. Her method is to follow the footsteps of the great naturalist on his way through life, to study and depict his environment at every stage, to accompany him on his scientific journeys, and make his observations with him—in short, to try to revivify all the scenes through which he passed. For this work the writer has prepared herself by visiting and carefully examining the various localities with which the fame of Linnæus is chiefly connected, and by travelling over at least a large part of the ground which he traversed. The aim of the work is not to build a new monument to a man of genius, not to expound his theories or to explain his exact position in the history of science, but to take us with him, and enable us to see what he saw, to participate in his feelings, and to think his thoughts over after him. But we may as well let the author speak for herself as to her intentions:

"What the present generation knows about Linnæus is an obsolete system and a few trivial anecdotes. In painting his portrait I have tried to give as a background the things he saw, the scenes he moved in, the continuous diorama of his life, which abounded with adventure more than usually falls to the lot of scholars, 'whose fame is acquired in solitude.' I wish it may be thought a pleasant yarn about Linnæus."

The first chapter is devoted to the neighborhood of the naturalist's early home, to the pedigree of his family, and to his boyish fondness for plants and insects; a second describes his school life at Wexiö, a third takes him to Lund, and a fourth to Upsala, where his bitter struggle with poverty is vividly portrayed. Then we accompany him on his first scientific journey through northern Sweden and Lapland, the descriptions at this point being based upon Linnæus's 'Lachesis Lapponica.' Then a journey through Dalecarlia is described, after which the author follows her hero to the Netherlands and the multifarious good fortune awaiting him there. The first volume ends with his journey to England in 1736. The second volume is less interesting; it deals with the life of Linnæus during the years of his prosperity, and the story of middle-aged success is always much less captivating as a story than that of youthful privation and struggle.

When, now, we turn from this very meagre outline of Mrs. Caddy's subject-matter, and would fain characterize her manner, which is in this case everything, we find a wealth of epithets suggesting themselves. Her manner is by turns learned, satirical, sentimental, polemical, didac-

tic, gossipy, and sedate. Dubious pun and obvious reflection, poetic sentiment and solid erudition, flow from her pen with equal facility. Interwoven with her sprightly narrative, we find incidental comments upon everything under the sun. Here we have a digression upon "the time-murdering train that dawdles fifteen minutes at every wayside station, . . . and steams in and out of each at one-horse—no, one-donkey or puppy-dog power." There the author indulges in a passing fling at the "horrible, uncivilized print that the Germans blind themselves with." Presently we come across a strong defence of the study of Latin and Greek, with caustic remarks at the expense of those who would discourage such study in the supposed interest of natural science. Here a dash of fine writing or a burst of romantic sentiment; there the speech of common sense and worldly wisdom; and quotations—quotations by the hundred (good ones, too), for the adornment of the tale and the pointing of the writer's reflections. Occasionally a number of these quotations are fired off in quick sequence, like the successive pops of a Roman candle. Then the effect is bewildering; but there is usually entertainment in it, for the language of the book is throughout the language of high breeding and of genuine culture. It is indeed "a pleasant yarn about Linnæus."

Roundabout to Moscow. An Epicurean Journey. By John Bell Bouton. D. Appleton & Co. 1887.

Mr. Bouton is not a Russian, but a Continental, traveller. Though he spent a short time in Moscow and in St. Petersburg, the principal portion of his journey was in the regions of "roundabout." He begins his story with the gaming tables of Monte Carlo, and afterwards runs through the well-known itinerary of tourists, southward to Paestum, at Rome during Easter, in Switzerland when the passes became practicable, and so on through the guide-book stations of Germany to Russia, and homeward by Sweden and Norway and Amsterdam. The narrative is an easy-going diary, and is enlivened by a somewhat free use of the characters of chance acquaintances and specimens of their conversation. After reading passages of this nature, one comes to think the traditional frozen-up Englishman the pattern of discretion. The young man from North Adams and the art critic from Philadelphia will hardly peruse the pages devoted to them with the good-humor that seems ordinarily to be among their amiable qualities. The freshest part of the book is that which concerns Russia, of which our knowledge is in some respects so full, and in others so defective as to amount only to ignorance. Mr. Bouton was surprised at the apparent looseness of the officials in examining his passport, and at his freedom from annoyance by the police; he found summer travelling, contrary to common report, very pleasant for one accustomed to American heats; and if he did not stray from the beaten paths, or meet with any adventures, or look on common things with new eyes, he certainly enjoyed his dinners and had a good time. The surface view obtained in a rapid tour along well-known lines of travel can make no great claim for itself; at the most, Mr. Bouton's book is a long letter from a press correspondent.

Letters from the Far East. By De Lancey Floyd-Jones. Public Service Publishing Company.

In a book of very comely appearance, Col. De Lancey Floyd-Jones of the United States Army has brought together his letters written to relatives during his recent trip round the world. Collected from the newspapers in which they were originally printed, they now form a connected narrative of travel without the slightest pretence to literary excellence or rhetorical embellishment. The illustrations, numbering one short of a dozen, are well chosen and beautifully executed; and all the appurtenances of a good book (except an index) put the reader on good terms at once with author and publisher. Without any display of professional knowledge, one discovers that the writer's military eye was open and alert; and there is a good deal of information pleasantly conveyed, relative to the armed strength of England, India, China, and Japan—the countries visited. Like all visitors to the Mikado's realm, Col. Floyd-Jones is pleased with country and people. Though the title of the book is 'Letters from the Far East,' yet the opening and closing chapters are devoted to the United States, and two are descriptive of England. The narrative is an easy, unpretentious diary of a gentleman who seems in good health, able to enjoy life, and kindly disposed towards humanity and all the world. In one gratifying feature, the book is free from the average grumbler's complaints and impertinent details of discomfort. It is a sunny story of enjoyable travel.

Forty Years of Stewart Rule (1603-1643). By the Author of 'The Heir of Redclyffe.' [Cameos from English History.] Sixth Series. Macmillan & Co. 1887. Pp. 400.

It is hard to find a term which precisely describes Miss Yonge's 'Cameos' of the history of England. They do not form a continuous history, but, on the other hand, they are not wholly detached stories; each "cameo" has a certain completeness in itself, and the subjects are at the same time so selected and arranged as to cover the ground pretty thoroughly and consecutively. Nor are they, as the title would imply, confined to England. The reader can get from the present volume a fair acquaintance with contemporary affairs in France, Germany, and the Netherlands, as is shown by some of the titles—"The Arminian Persecution," "The Snow King" (Gustavus Adolphus), "The Reign of Richelieu." There are in all thirty-one cameos, bringing the story down to the outbreak of the Civil War in 1642. And while it is a period which would naturally invite the expression of the writer's well-known prejudices, we must say that we have found her on the whole fair and impartial. The King's want of good faith is somewhat glossed over, and his offences against the Constitution belittled; but his opponents are not misrepresented and vilified, while, on the other hand, Sir John Eliot and Sir John Hampden are described with hearty praise.

BOOKS OF THE WEEK.

NEW PUBLICATIONS.

IVAN ILYITCH.

By Count Lyof N. Tolstoï. Translated from the Russian by Nathan Haskell Dole. Cloth, 12mo, $1.25.

The popular interest awakened in the works of this famous author will be quickened and intensified by this volume, in which Count Tolstoï's whole system of philosophy is concretely revealed—and the latest phase in the evolution of the author's peculiar views is presented under the guise of short allegorical tales or tracts for the common people of Russia.

THE CONQUERING CROSS.

(THE CHURCH.)

By Rev. H. R. Haweis, M. A. 12mo, $1.25. The fifth volume of the "Christ and Christianity" Series, by the same author.

The *Spectator* of January 22, 1887, says: "We gladly say at once that there is much in Mr. Haweis's treatment of his subject which we admire, and that with his general aim to give a living, personal interest to the records of Christianity and the words and acts of Christ, we heartily sympathize. There is much freshness and vitality, much 'unction,' to use a word now happily rescued from the mockery with which it was once used, in the application of his subject to the personal spiritual life."

The Nation.

NEW YORK, THURSDAY, JULY 14, 1887.

The Week.

THE President's letter withdrawing his acceptance of the invitation to visit St. Louis during the Grand Army Encampment at that city has produced a sensation in all parts of the country, and has unquestionably strengthened the position which he took when he vetoed the Dependent Pension Bill. It would be an entire mistake to suppose that the recent battle-flag order was the cause of the savage hostility which has broken out here and there in Grand Army circles against the President. That order was seized with avidity as the occasion for cursing, but the real cause was the pension veto. It is a question of dollars and cents that stands between the implacables and the President. It is this which has interrupted the harmony of the St. Louis celebration. Nor is this the last that we shall hear of it. A new dependent pension bill, in substantially the same form as the vetoed measure, has been brewing in all the posts, and has been approved by many of them since the adjournment of Congress. It will be introduced and pushed with all possible vigor next winter. It is safe to say, however, that its momentum will be somewhat lessened by the St. Louis incident. The people are, as the event proves, extremely sensitive to the dignity of the Presidential office, and very sure to resent any insult offered to the person who represents it for the time being. He stands for the dignity of the nation as a whole, and this is of much more consequence to them than pension bills or any other matter of dollars and cents. The great attendance upon the public meeting in St. Louis on Friday to extend him a fresh invitation as the guest of the city, and the heartiness which characterized the speeches, only reflect public sentiment throughout the country. The Republican organs may well take a warning from the words of ex-Gov. Fletcher of Missouri, who, after announcing that he was "an old Black Republican," said: "I gladly extend a hearty welcome to Grover Cleveland as a man, aside from the fact that he is President of the United States; and I say this, as my political opinions differ from his, because in every position in which he has been placed he has shown himself to be a man."

Gen. Corse, the Postmaster of Boston, has been so well known as a believer in civil-service reform that it seemed hardly possible he could suddenly have turned spoilsman; and a detailed statement of the changes which he has made since he assumed charge of the office on December 1, relieves him of such an imputation. The force under his control numbers 756 persons, and in the eight months he has removed only nineteen, or one in every forty. The grounds for these removals are given, and they appear to be amp le in almost every case. In one or two instances, the friends of the removed officials make a pretty good showing in their defence, but the manifest justice of Gen. Corse's action in the majority of cases certainly raises a strong presumption in his favor in these disputed cases. We doubt if during the period when the Republican party was in power a change was ever made in the head of an office with 750 subordinates which was not followed by many more than nineteen removals within eight months; and it marks a long step forward when a Democrat, succeeding a Republican, instead of making a "clean sweep," changes only one in forty of his subordinates in two-thirds of a year.

Gov. Hill has asked for the resignations of Mr. Jay and Mr. Richmond, the two remaining State Civil-Service Commissioners. The Albany *Morning Express* professes to know that the cause is the appointment of Mr. William Potts as Chief Examiner in place of Col. Morrison, deceased. It suggests that the Governor hates Mugwumps, and cannot abide a commission under his control which would give an office to a Mugwump, but that of course he will not give this as his excuse for removing the Commissioners; that what he will say will be, that they have violated the law in appointing Potts when an "old soldier" might have been had for the place. The *Express*, however, apparently forgets that the duties of a Chief Examiner are "to act with the Examining Boards so far as practicable, at Albany and elsewhere, and to secure accuracy, uniformity, and justice in all their proceedings"—a very responsible position, calling for an amount of education and capacity which only a very small number of old soldiers in search of employment possess, and that the law provides that even old soldiers shall be qualified for the places they seek. So that, if the Commissioners are to be removed on account of Mr. Potts, it must be, we are bound to suppose, on account of Mr. Potts as a Mugwump and not on account of Mr. Potts as taking the place of an old soldier. The names of those whom the Governor appoints as the successors of Mr. Jay and Mr. Richmond, will explain his action, even if he offers no other explanation. If they are men of high character and standing, and friends of the merit system, and desirous of seeing it succeed, they will furnish an excellent answer to all his critics except in one point, and that is the inexpediency of frequent changes in the personnel of a body charged with the maintenance of a system in which practical experience of its working is the chief guide.

The report that Mr. Powderly is "worn out," and will resign his position at the head of the Knights, is received with general incredulity in Labor circles. He himself gives indirect denial to it by greatly enlarging his field of operations. He has now undertaken the task of abolishing wheat and other "corners," and of regulating immigration, and hints at a purpose of assuming control of the telegraph. His method for preventing "corners" is set forth by him as follows:

> "The lesson taught our members by the experience of the last six weeks is to keep their eyes open, and to keep them turned toward the Produce Exchanges of New York, Chicago, and other large cities; and the moment the grain and produce gambler stacks the cards and announces that there is a scarcity in a certain article of food, that the price must go up in consequence, every member should resolve, and resolve out loud, that until the unhallowed hand of the speculator has been removed from the control of the article in question, not a pound nor an ounce more than can be avoided will be purchased."

That shows what a tremendous mind Powderly is. Instead of being "worn out" with the work of elevating the wages and social condition of all Labor, he is constantly on the lookout for something else to do to fill up his leisure moments.

The cause of Labor suffered a severe loss in this city last week. James Devens, a Walking Delegate, was convicted of having abandoned his wife and four children in December last, and was sentenced to six months in the penitentiary. It was proved that he had been receiving four dollars a day for his "services," and had refused to give any of it to his family. This shows what an exacting mistress Labor is. To be one of her Walking Delegates a man must abandon wife and children, and even go to the penitentiary; and the worst is yet to come, for in the penitentiary he will be required to work.

The Union Labor party and the United Labor party are coming into conflict with each other by reason of the inability of the former to swallow the land theories of Henry George and Dr. McGlynn. The Union Laborers look to the farmers for a large share of their support. The farmer considers himself too much taxed now. His vote will never be cast for a party that proposes to increase his taxes. The United Laborers propose to tax him and other landowners up to the entire rental value of the property. Hence the disagreement between the two parties. We venture to predict that the United Laborers will get the worst of it in the end, for although they are the more numerous of the two just now by reason of their organization in the large cities, they offer no attractions, but on the contrary the strongest repulsion, to the rural communities. The farming population will not only vote against the Henry George doctrine whenever they have a chance to do so, but they will fight against it if necessary.

The formal excommunication of Dr. McGlynn from the Roman Catholic communion has sobered some of his followers, but not himself. His speech at the Academy of Music on Sunday, if made by a politician, or a member of the Order of United Americans, would be called a tirade. Hardly anything in our anti-Catholic literature is more drastic than the following paragraph:

> "I also said, and I also repeat, that the best way to get anything from that Roman machine is to show your teeth rather than be too humble. Bismarck and the Czar of Russia understand that, and because they have defied the Pope, when they are willing to make any kind of a half concession, the Pope is delighted. He has fallen in love with Bismarck. He has fallen into a sickly, womanish love with Bismarck, and Bismarck has been flirting with his Holiness. They have even exchanged portraits."

It will be impossible for Dr. McGlynn's friends to maintain the fiction that a man who holds

this language towards the Pope can still be a good Catholic. He might be a good Protestant, because the essence of Protestantism is dissent in matters of religion. It will be impossible also to maintain the fiction that the Pope has been misled by false information, which he may soon correct, since there cannot be any mistake that Dr. McGlynn was summoned to Rome and refused to go. The weakness of his case from the beginning has lain in the fact that, being a priest of the Roman Church and having taken the vow of obedience, he has disobeyed an order which his superior, the Pope, had a right to issue. The comparison of himself with Galileo fails in two important particulars. In the first place, Galileo was not a priest. In the second place, the Inquisition was then in force, and the Roman authorities had both the power and the will to imprison and torture those found guilty of heresy. Nobody is subjected now to any other than spiritual penalties for spiritual offences. The truth is, that Dr. McGlynn has been treated with great lenity and consideration at Rome. It has been within his power at any time during the past six months either to convince the Pope and the Propaganda that he is right and Archbishop Corrigan wrong, or to make a serious and honest attempt to do so. In the latter case, if excommunication had followed, the non-Catholic world would have said that it was a difference of opinion which all impartial persons were bound to respect. As the matter now stands, the only prejudgment of the case has been that of Dr. McGlynn himself, who has declared that he had no confidence in the tribunal which he had himself elected when he became a priest.

Dr. McGlynn's speech contains a very significant passage, which the *Tribune* and the *Sun*, not less significantly, have suppressed. We quote from the *verbatim* report of the *Times*:

> "They calumniate me when they say I took the stump for Mr. Cleveland. It is a lie. They tried to make a religious feeling against Mr. Cleveland because he vetoed an appropriation of $25,000 for a Catholic Protectory. I should have done the very same thing in his place."

This is the first revelation "from the inside" of the reason why "they tried to make a religious feeling against Mr. Cleveland." Everybody knows of the effort, and that it was strong enough, in the secrecy which enveloped it, very nearly to defeat Mr. Cleveland. Many people also knew well enough the reason for it, but could not prove it. Now it is officially revealed by a man who knows perfectly what was going on in the councils of Mr. Cleveland's opponents in 1884. The revelation is one of the greatest pieces of Mr. Cleveland's proverbial luck. A secret diversion of the Roman Catholic vote from a Democratic candidate is a serious misfortune, but open, announced opposition on religious grounds is another matter. No better piece of luck could befall a candidate than to have it known that he was to be "jumped on" by some of our foreign citizens "because he vetoed an appropriation of $25,000 for a Catholic Protectory." Such an announcement would insure his election. Our people will not stand religion in politics; least of all will they stand the Pope in politics.

Dr. McGlynn's name heads the list of delegates from this city to the Convention of the United Labor party which is to meet at Syracuse in August. If he goes to the Convention and takes an active part in the campaign afterwards, it will be very difficult to prevent this particular wing of Labor from developing into a purely anti-Catholic organization. Henry George is doing his best to make it so now, for he is boldly taking the ground that McGlynn is a much bigger man than Archbishop Corrigan, saying that the latter will be remembered as the "Archbishop who excommunicated McGlynn." Together with this anti-Catholic tendency, the United Labor party has developed great strength among the Socialists of this city, and it is now admitted that the latter will capture at least half the delegation to the Syracuse Convention. Combined Socialism and anti-Catholicism will make a most interesting campaign issue, and we presume that the abolition of poverty will be added.

The *American Hebrew* complains, we must say reasonably, "against the improper and unjustifiable obtrusion of sectarian religious exercises into the annual commencement of the Normal College of this city." It quotes the provision of law, that "No school shall be entitled to or receive any portion of the school moneys in which the religious doctrines or tenets of any particular Christian or other religious sect shall be taught, inculcated, or practised," and rightly says that "the singing of the doxology is a distinctively Christian religious practice. It is an essential part of a Christian service. It involves a dogmatic Christian doctrine, and is, therefore, inadmissible in any school receiving money from the city of New York." Our Jewish contemporary says it will be urged that singing the doxology is but a little thing, and one certainly not to be objected to by any who make no trouble over the more important matter of reading the New Testament in the school. But the answer to this is: "In the first place, we will have our bond. The reading from the New Testament is made compulsory by a positive injunction of the act of 1851, while religious exercises are as positively forbidden by the same act." But, beyond this, the very clear distinction is urged that the reading does not implicate any pupil; it is a thing imposed from without, to be submitted to, merely; what is read may be listened to or not, it may be believed or not; whereas, on the other hand, the singing of the doxology involves active participation by all the pupils in a confession, personally made, "of belief in the triune God of certain Christian sects." We think this must be allowed to be a hardship unduly imposed upon conscientious Hebrews.

The people who are pleading for Sharp's escape without legal punishment should really back up their case with some moral consideration. It is not enough to say that he is old and that his health is poor. He was old and his health was poor when he committed the offence of which he has been found guilty. Moreover, we venture to assert that if liberated to-morrow, he would be quite well enough to do the same kind of thing again if he saw any "money in it." The people of the State of New York, after all the labor and money which have been expended in bringing him to justice, are surely entitled to turn him to some sort of account in the way of warning or example. Therefore we say emphatically that if he be, on any plea of sickness or infirmity, allowed to get off without his making one word of acknowledgment of the justice of the verdict against him, or one word of admission of the gravity of his offence, it will amount to a gross failure of justice. He has perjured himself about this matter over and over, has displayed the utmost audacity in meeting the charges, and the utmost contempt for his accusers, and the utmost confidence that he would get the better of the law—has never given the slightest sign, in or out of court, that he was sorry, or would not do it again if he got a chance. His punishment should be made to depend on his own moral attitude and not on his physical condition.

Somehow or other, there is always trouble wherever Mr. James G. Blaine goes. Something goes wrong surely. Either somebody misreports him, or says something about him, or does something to him, which necessitates "a card" from somebody, and several versions of one story. In the speech he made in Edinburgh the other day he started off characteristically with a blunder by lauding Sydney Smith as a Scotchman—Smith, who was never tired of poking fun at Scotchmen. Then he went to a meeting and could not get in, and the Lord Provost had to apologize because the doorkeeper did not know who Mr. Bliane was, and Mr. Carnegie had to publish a letter telling how it all happened. Now his friends at home are attacking the President for not having gone to the war, and therefore remaining ignorant of how soldiers feel about battle-flags, etc. This, of course, brings to mind once more that Mr. Blaine, who was in 1861 a young and lusty fellow, did not go to the war either, but occupied himself more profitably and comfortably in Washington in selling rifles to the War Department as the agent of a manufacturing company. They are reproaching Mr. Cleveland, too, with having employed a substitute, and are trying to show that the said substitute is now in an impoverished and neglected condition, which of course again recalls the fact that Mr. Blaine sent a substitute, too, who remained but a short time in the field, and was soon in a penitentiary for some infamous crime.

The Gladstoneites have substantially won another victory in North Paddington, one of the London boroughs, by reducing the Tory majority at the last election from 911 to 318 on an increased vote. North Paddington is probably one of the most thoroughly Conservative constituencies in England, and the mere fact that home rule has made any

progress there, however small, is a striking sign of the probable drift of popular sentiment in other places. Moreover, there has evidently been some shirking among the Liberal-Unionists on the final passage of the Coercion Bill, for the majority in a full house of 611 was only 87, a serious falling off. There is a ludicrous side to these figures in the fact that, according to the Liberal-Union organs in the press, the 177 English and Scotch members who voted in the minority are Separatists, bent on dismembering the Empire, and are knowingly approving of and associating with assassins; and, more comic still, that almost half of each English constituency which votes for Gladstoneite candidates is in the same category. When one reads this stuff, one wonders what becomes of people's sense of humor in political campaigns.

The third of the elections which Englishmen have been watching with so much interest—that of the borough of Coventry—occurred on Saturday, and resulted in the election of a Liberal by a majority of 16. At the last election a Tory was returned by a majority of 405. This, following on the Liberal victory at Spalding and the Liberal gains in North Paddington, has naturally created the greatest excitement in England, as an additional sign of the turning of the tide in favor of Gladstone and home rule. The two remaining elections to come off are the St. Ives division of Cornwall, and North Hampshire. St. Ives was carried last year by a Liberal-Unionist by a majority of 2,507. Of course, the Liberals do not hope for more than a reduction of this. From North Hampshire a Tory was last year returned unopposed.

The brilliant successes of Miss Ramsay of Girton in the classical Tripos at Cambridge (where she was, like Eclipse, "first and the rest nowhere") and of Miss Hervey of Newnham, who achieved equal distinction in the Modern-Language Tripos, have revived attention to the position of women as regards the degrees and other privileges of the University. Women are admitted at Cambridge to the competition of the Honour Schools, but not to the University classes, in which the best knowledge is to be obtained, nor to the University libraries, museums, etc. When they carry off honors, the University does not give them the degree which follows honors earned by men, nor does it admit any women to the lower examination for pass-degrees. In other words, Cambridge admits women to its most trying examinations, while denying them equally the accustomed rewards of extraordinary success when won, and the best means of winning it; and as to ordinary success, such as is attainable in a pass-examination, it denies not only rewards and means, but even opportunity. This sounds very unjust, but of course there is reason for it. So far, indeed, as concerns the refusal of a degree to a woman who has beaten-off all the men of the University, the reason is not obvious, but objections to the mingling of young men and young women in the classes, etc., are certainly conceivable. The most important point is the exclusion of women from the lower examination, and on this head—the objection being that the strain upon the nerves must be injurious—it is urged with some show of force that if it is not bad for women to undergo the severer test, it cannot be bad for them to undergo the easier one. This argument, however, contains the grave defect in logic known as "mistaken application." The easier test would not be bad for the same women, but the question is about other women. Those who compete for honors are a small picked lot, necessarily of unusual degree of bodily and mental strength. That they can "stay" through most severe labors by no means proves—indeed, it scarcely even raises a presumption—that the bulk of women students are fit for labors somewhat easier, but still severe.

The performances of Gen. Boulanger and his admirers are again very disappointing to those who think the French Republic can be made permanent. He has had not only to be dropped out of the Ministry, but sent away from Paris in order to prevent his becoming a dangerous popular idol at the seat of government; and on his way to his command he allowed himself to be made the recipient of demonstrations such as are usually bestowed only on a home-returning conqueror. Finally, the Minister has accused him in the Chambers of having been concerned—he, a military man in high command—in an "illegal manifestation" on the occasion of the election of a deputy. It has to be borne in mind, too, that the Radicals are trying to raise above the Government and the law a soldier who has never fought or won a battle, and might, for aught they can tell, be routed as ignominiously as MacMahon was at Reichshofen, at the very opening of the next campaign. Consequently, observers both at home and abroad are naturally asking themselves what would become of the republic if a war with Germany should now take place, and the General-in-Chief were to come back a victor, and were as vain and ambitious as Gen. Boulanger?

Protectionism is running mad on the continent of Europe, but is going at a faster pace in France than anywhere else. It has now reached the stage where both workmen and employers demand the exclusion of foreigners from any kind of work done for the Government, and from the furnishing of any kind of supplies for the public service. One bill pending in the Chamber of Deputies provides that only French coal shall be used for the navy and only French oats for the army, and in general that nothing of foreign growth or production shall be bought for public use except such articles as are not produced in France. Another proposes a tax on foreign workmen. These bills are now engaging the serious attention of the Government, and will probably pass, although some difficulties have been raised by clauses in commercial treaties. The Exhibition Committee have caught the fever. By way of promoting good feeling and insuring a large attendance from other countries, they have restricted the bids for buildings to French firms exclusively, ruling out foreign firms, even though they may be established [illegible] and employing only French workmen. The commercial irritation between Germany and Russia grows apace. The latter having put a prohibitive duty on iron which has caused the closing of some furnaces in Silesia, the official organs in Berlin have called attention to the financial instability of Russia, and cautioned the investing public to be extremely careful how they buy Russian securities. The warning has had a marked effect on the price of Russians.

There is apparently no limit to this species of folly short of a mutual prohibition of trade. When France has reached the point of excluding all foreign products that she can possibly produce, for herself and all foreign workmen, Germany will of course not be outdone in that kind of warfare. She will fight France and Russia with tariffs just as readily as with infantry and artillery. When they are all hedged about with a Chinese wall so that nobody can sell or buy except from his immediate neighbors, they will be in the happy condition of a certain Western village settled by German immigrants, where all the people got rich by selling lager beer to each other. The French will sell their own wines and silks to Frenchmen exclusively, the Germans will do all their trading with each other, and the Russians will consume their own hemp and tallow in solemn grandeur. We, the people of the United States, know how it is ourselves. We have been trying to sell as much and buy as little as possible from foreign countries, but we never dreamed that foreign countries could play at that game also. We are finding out now that if protection is a good thing for one country, it is good for all, and that its acme will not be reached until our breadstuffs and provisions are excluded from the continent of Europe, or saddled with such duties that no profit will be left to us. The toiling millions have to pay the cost of these commercial wars as they do of the wars that are fought with cannon and bayonets. The governments, whether republican or despotic, are in the hands of those who own property, and these, having set out to secure the monopoly of sale in their own countries, can find no place to stop. Each dose of protection calls for another dose. It would seem as though the civilized world, with the exception of England and Sweden, were going back to the mercantile system of the seventeenth century. Even little Belgium has taken her dose of protection lately, and will soon want more.

The election of Prince Ferdinand by the Bulgarian Sobranye is a much less important event than it seems. He is a young and almost unknown man, probably very ill-fitted at best to steer the principality through the breakers which now surround it. But in addition to this he is a subject and dependent of the German Crown, which is not in the least likely to let him accept if Russia objects, and Russia does object strongly, and he has accepted only on condition that the Powers approve. If Bismarck says he may go, he will probably say it as he said it to Prince Alexander, with a sneer that will chill the marrow in the youth's bones before he starts.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 6, to TUESDAY, July 12, 1887, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND had accepted an invitation to visit St. Louis during the forthcoming National Commandment of the Grand Army of the Republic; but on July 4 he wrote Mayor Francis a letter withdrawing his acceptance, wherein he said: "I should bear with me there the people's highest office, the dignity of which I must protect, and I believe that neither the Grand Army of the Republic as an organization, nor anything like a majority of its members, would ever encourage any scandalous attack upon it. If, however, among the membership of this body there are some, as certainly seems to be the case, determined to denounce me and my official acts at the National Encampment, I believe they should be permitted to do so unrestrained by my presence as a guest of their organization, or as a guest of the hospitable city in which their meeting is held." On July 8 a mass-meeting of citizens of St. Louis was held whereat an invitation was extended to the President and Mrs. Cleveland to visit the city at another time—during the Fair there. The approval of the President's letter has been almost universal.

The President and Mrs. Cleveland went from Washington July 11 to Clinton, N. Y., to attend a celebration of the founding of the town.

The Governors of New York, Connecticut, Massachusetts, Vermont, and Pennsylvania have requested the Governors of other States and of the Territories to send representatives to a conference, to be held at the Murray Hill Hotel, in this city, at noon on August 23, to devise and propose a uniform system of rules and practice in the matter of the inter-State extradition of fugitives from justice.

The Governor of Massachusetts July 8, in accordance with a resolution of the last Legislature, issued a proclamation asking the social, trade, and labor organizations to accept the invitation of the citizens of Philadelphia to send representatives to the centennial celebration of the signing of the Constitution of the United States September 17.

The Mormon Convention at Salt Lake City to draft a Constitution of the proposed State of Utah adjourned July 7. The Constitution that they drew up provides for the entire separation of Church and State, and for non-sectarian education, and forbids polygamy, providing penalties therefor. The Utah Commission will permit the votes for the ratification or rejection of the Constitution to be counted by the election judges at the general election on August 1. The non-Mormon population of the Territory regard this anti-polygamy Constitution as insincere.

Atlanta, Ga., has been selected as the place for holding a national exposition of the artistic and mechanical products of the skill of the colored race throughout the United States, beginning in November and continuing three months.

A bill has been introduced in the Georgia Legislature "to protect the rights of white and colored people alike," by making it an indictable offence for teachers and directors of the public educational institutions of the State to admit white pupils into colored schools, or colored pupils into white schools.

Logan E. Bleckley was elected by the Georgia Legislature as Chief Justice of the Supreme Court of the State July 11.

Dr. Edward M. McGlynn, the priest who had been deposed for his advocacy of the George theory of land-holding, was excommunicated from the Roman Catholic Church July 8, by Archbishop Corrigan of New York. The Archbishop's letter to the clergy and laity of the Archdiocese explains his "excommunication by name" by saying that "he is cut off from the communion of the Church, from its sacraments and participation in its pra[illegible] and, should he persevere in his contumacy, deprived of the right after death to Christian burial."

On Sunday, July 10, Dr. McGlynn made a defiant speech in the Academy of Music in this city, in which he said: "So long as Catholic people give the Pope to understand that he can do what he pleases with them, and allow an Archbishop in New York to forbid an American priest to make a political speech or attend a political meeting without first obtaining the consent of the Sacred Congregation of the Propaganda, who don't know but what Florida is a suburb of New York and Mobile a street in San Francisco—so long as Catholics let the Roman machine, of which the Pope is the mere puppet, do this, that machine will use Paddy in Ireland and German Paddy and American Paddy as pawns on the political chess-board, to be sold out at any time for what it can get in return. This policy arises from an insane and foolish lust for the restoration of the Pope's rotten old temporal power, that everybody but a fool and the Italian diplomatists at Rome knows is as dead as Julius Cæsar."

The counsel for the Andover professors have served notice on the Visitors of an appeal to the Supreme Court of Massachusetts from the recent decision in regard to Prof. Egbert Smyth. The court will meet in November.

Queen Kapiolani arrived in this city from London July 11, and here first learned of the Hawaiian revolution.

Near Nacogdoches, Texas, where six wells have been bored, one 600 and another 300 feet deep, oil was found at a depth of eighty-five feet, and is reported to flow in great abundance.

The discovery of an eight-inch vein of quartzite carrying free gold in large quantities is reported from a place near Ishpeming, Mich.

Oscar J. Harvey, recently chief of the "horse claims" division of the Auditor's office in the Treasury Department at Washington, was arrested July 8 at Wilkesbarre, Pa., and imprisoned at Washington for forging applications for payment for horses to the amount of more than $11,000.

A sloop with a pleasure party on board was capsized in a squall in Jamaica Bay, just outside New York Harbor, on Sunday, July 10, and twenty-four persons were drowned.

Fire broke out on the stage of the Alcazar Theatre at Hurley, Wis., on the night of July 9, and within an hour the business part of the town was in flames. Seventeen persons perished.

FOREIGN.

At the election for member of Parliament for the North Division of Paddington, July 8, Mr. Aird (Conservative) received 2,230 votes, against 1,811 votes for Mr. Routledge (Gladstonian). At the general election of 1885 Mr. Cohen, the deceased Conservative member, carried the district by a majority of 911 votes. The significance of the election is that the Liberals polled more, while the Conservatives polled fewer votes, not merely than in 1886, but even than in 1885; that is, there was a larger Liberal vote than there had been before home rule entered British politics. The moral effect is a defeat for the Conservatives.

At the Coventry election of a member of Parliament on July 9, a Liberal was returned by sixteen majority. At the last election the Conservative candidate had a majority of 405. The comment on this election is on the one side congratulatory, and on the other a confession of an ominous defeat for the Tories.

At an election for the seat for Dublin University, made vacant by the elevation of Attorney-General Holmes to the Irish bench July 12, there were two candidates, Mr. Madden and the Hon. Richard Clere Parsons, both Conservatives. Mr. Madden was elected, receiving 1,376 votes against 710 for his opponent.

The rebuke by the House of Commons of Mr. Matthews, the Home Secretary of the Salisbury Cabinet, for his conduct in defending the police who improperly arrested a young woman named Cass on Regent Street as a person of ill repute, has been the occasion of severe comment on the Ministry even by its supporters. On June 6 Mr. Smith announced in the House of Commons that the Lord High Chancellor would institute a thorough inquiry into the matter. Mr. Matthews on the same day offered to resign, but he was requested to remain in office until the close of the present session of Parliament. Forty-nine Conservative members of the House of Commons signed a letter to Lord Salisbury asking him to accept the resignation at once.

The Crimes Bill passed its third reading in the House of Commons July 8 by a vote of 349 to 262. On the preceding evening Mr. Gladstone, in a speech against the passage of the bill, said that former coercion measures had been aimed at crime only, but this new one, passing beyond crime, aimed at societies. If Parliament retained any regard for the traditions of liberty or of party usages, the measure would be abandoned. While resenting the imputation that the Liberals had done the same thing, he would admit that past measures had been failures. As the bill stood, if an Irishman joined an association, it was for Mr. Balfour to say whether or not he became a criminal by the act. In the whole British Empire there was not a square yard of land which England held by force alone, excepting in Ireland, where force was employed. Ireland was held by mastery, but the Government refused to learn that mastery involved responsibility. They knew that the literature of the whole world was against them.

Mr. Balfour, Chief Secretary for Ireland, moved the second reading of the Irish Land Bill in the House of Commons July 11, and provoked a long debate. A Liberal motion that the bill be rejected was pending July 12.

The House of Lords on July 7, by a majority of 11, abolished primogeniture in cases of intestacy.

The American testimonial to Mr. Gladstone was presented to him July 9, in the presence of a number of Mrs. Gladstone's guests at a garden party. The presentation speech was made by Mr. Joseph Pulitzer. Mr. Gladstone, in reply, spoke in praise of the American interest in home rule for Ireland.

A deputation of English women presented an address to Mrs. Sullivan, wife of the Lord Mayor of Dublin, July 11, asking her to assist in an agitation for the repeal of the Coercion Law.

Mgr. Persico and Mgr. Gualdé, who have been sent by the Pope to inquire into the situation in Ireland, arrived in Dublin July 8.

More evictions have been made in Ireland At Coolgraney, in Wexford, seventy families have been evicted with great hardship, and five at Woodford. The members of Parliament from the city and county of Cork, all Home-Rulers, have joined in a summons calling a convention of the Irish National League to meet July 17 to devise means to enable the tenants of Ireland to resist eviction. The tenants on Sir Alexander Jardine's estates in Dumfriesshire, Scotland, have resolved to adopt the Irish plan of campaign. They demand either a reduction of rents, a revaluation, or a release from their farms at Whitsuntide. William O'Brien, on his speech-making tour through Scotland, provoked many expressions of approval of his Bodyke policy, and large subscriptions for the Bodyke fund were made.

Mr. John Bright, in a speech before the East Indian Association July 8, advocated the admission of the natives of India to the highest positions in the civil service. This extension of the civil service, he thought, was a part of the principles contained in the proclamation issued by her Majesty at the end of the Mutiny; and it would be better if England tried whether a moral sentiment and a Christian

principle would not prove to be a greater permanent influence than continued aggrandizement.

England has obtained for her imports into Cuba and Porto Rico the same treatment till the end of the year as is accorded American imports by the Spanish-American Convention.

The report made by Sir Edward Thornton and Mr. Braithwaite respecting their efforts to obtain some adjustment of the Virginia debt satisfactory to the English bondholders, is that there was no sincere desire on the part of the Virginian representatives to arrive at any settlement on terms other than such as the State might dictate.

Mr. Andrew Carnegie, the Pittsburgh iron manufacturer, on July 9 laid the foundation stone of a new free library building in Edinburgh, his birthplace, for the endowment of which he gave $250,000. Mr. J. G. Blaine was present and made an address.

The French Cabinet on July 7 decided to dismiss from office all French mayors who were in any way concerned in the royalist manifestations in honor of the Count of Paris during his visit to the Isle of Jersey. The Count returned to England on the 6th. The *Gaulois* reported that in bidding farewell to his friends, after advocating silence, the Count said: "You may be sure we shall win before long. Monarchy will come without violent effort and by a gentle transition, for our organization is in training and everything is ready. The new Government will get into immediate working order, and on the eventful day I, helped by all good Frenchmen, shall be King."

When Gen. Boulanger went from Paris, July 8, to take charge of his command at Clermont-Ferrand, a great popular demonstration was made in his honor. Many houses and newspaper offices were illuminated, and his departure was delayed for an hour by a vast crowd. They carried him to the railway station, and he was surrounded by so many persons that he was obliged to ride on a locomotive to Bercy, where he took a train. He was even much bruised by the enthusiastic attentions of his admirers. The demonstration made a sensation, and was regarded as a possible forerunner of further manifestations during the coming July national fête and review. The Government organs condemn Gen. Boulanger for permitting it, and warn the Republicans of France to beware of such a dictator as he would be. When he arrived at Clermont-Ferrand the houses were gayly decorated in his honor, and the streets were lined with troops. He was greeted with shouts of "Vive Boulanger!" In replying to an address of welcome by the municipal authorities, he said: "Yes, I am a Frenchman and a Republican, and I am deeply interested in the welfare of the army and the greatness of the country."

These demonstrations provoked a stormy discussion in the Chamber of Deputies July 11. The Premier, M. Rouvier, declared that Gen. Boulanger was concerned in the illegal manifestation on the occasion of the recent election of the Deputy for the Department of the Seine. It became necessary, therefore, to remove him from his political surroundings and to return him to his proper station. If the civil power had hesitated, M. Rouvier declared, it would have been all over with it. M. Clémenceau condemned the demonstrations, but maintained that Gen. Boulanger's popularity was that which the Chamber would have had had it resolutely entered upon the work of reform.

The Committee of the French Chamber of Deputies having in charge the measure imposing a tax on foreigners residing in France, notwithstanding the objections of the Minister of the Interior, decided in favor of the measure on July 6. The *North German Gazette* (Berlin), referring to this tax bill, declared on the same day that the moment seems to have arrived for Germany to consider whether all the anti-German measures which are being carried out in France should not, in a fully reciprocal manner, be enforced in Germany, especially in Alsace-Lorraine.

At a meeting July 8 of the Board of Directors of the Panama Canal Company at Paris it was decided to issue 500,000 new shares at 440 francs, bearing 30 francs interest, and reimbursable at 1,000 francs in forty-eight years, by bi-monthly drawings. The subscription will open on July 26, for one day only, in Europe and America, 30 francs being payable on application, 70 francs in August, and 75 francs every quarter afterwards until the full payment is completed. M. de Lesseps said in a letter to the shareholders that 100,000,000 francs of the last emission still remain in the company's coffers, but that prudence demands a new emission in order that the company may not want money suddenly at a later moment. He maintains that with the sum of 600,000,000 francs authorized by the Government the canal will be finished.

The total amount received for the benefit of the sufferers by the recent Opéra Comique fire in Paris, up to July 7, was 673,000 francs.

Prof. Virchow's latest report on the condition of the throat of the Crown Prince of Germany is that the growth last removed proves to be, more clearly than previous pieces, a hard compound wart, issuing from a moderately irritated and compressed surface. Its basis does not give the slightest ground for the belief in the existence of a new formation of the invading tissue.

Two of the men tried at Leipsic for treason to the German Government in betraying military secrets to the French were found guilty, and sentence was pronounced, July 7, of nine years of hard labor on one, named Klein, and five years on another named Grebert. Klein protested that he had committed no base crime, but that his chief offence consisted in being caught. "Punish me," he exclaimed, "as a French spy. I was born a Frenchman and am no German traitor." A witness who was suspected of aiding one of Grebert's witnesses to escape, committed suicide. The Procurator declared that the trials had shown that the frontier police not only countenance treason, but incite it. The Frenchman Schnaebelé, whose arrest by German police came very near being a *casus belli* between France and Germany, has been appointed to a higher position at Laon.

A measure that has already been much discussed for the insurance of workmen against want in their old age is ready for the German Reichstag. It proposes a minimum annuity of 120 marks, which may be claimed by workmen when they reach the age of seventy years or when they are hopelessly invalided. The Imperial Exchequer is to pay one-third of it, and the other two-thirds are to be paid in equal amounts by employers and employees, associations paying for their members.

The issue of the first 100,000,000 marks of the new German loan was subscribed for seven times over July 7. The applications of Berlin subscribers alone amount to 400,000,000 marks.

Two unpublished letters from Luther to Brentz, and five from Melanchthon to the Swabian reformer Lachmann, have been found in an old desk in a school at Heilbronn.

Prince Ferdinand of Saxe-Coburg-Gotha was elected Prince of Bulgaria by the Sobranye July 7; and it was reported that if the Powers refuse to recognize his election, the Sobranye intend to abrogate article 3 of the Berlin Treaty and proclaim the independence of the country. On the 9th the Sobranye adjourned. All the leading Russian newspapers express disapproval of the election and pronounce it the result of Austro-German intrigue, and urge the Porte to intervene and the Powers to withdraw their representatives from Sofia; and the Coburg *Zeitung* (semi-official) said: "In view of the attempts of the Bulgarian party of independence to draw Prince Ferdinand into its confused affairs, we must point out the fact that a German prince such as Prince Ferdinand cannot accept a crown without the permission of the head of the house to which he belongs, nor without the consent of Emperor William; and until their consent is obtained nothing can be settled." The Austrian press is a unit in congratulating the people of Bulgaria upon the election.

It was announced July 12 that the Emperor William on July 24 will meet the Emperor Francis Joseph at Gastein. Until this meeting the policy to be adopted about the election of Prince Ferdinand will not be determined. It was reported from St. Petersburg July 12 that Turkey had approved the election of Prince Ferdinand.

The Bulgarian Regents have tendered their resignations, regarding their task as finished by the election of Prince Ferdinand. The Sobranye refused to accept the resignations, desiring to await the return of the delegates who went to visit the Prince. All the Ministers have resigned, and a new Cabinet has not yet been formed.

A new Bulgarian Cabinet was announced July 11, of which M. Stoiloff is President of the Council and ad interim Minister of Finance. He telegraphed to the prefects of the departments ordering them to release all political prisoners.

A great fire was reported from Vitebsk, Russia, July 11, whereby 413 dwellings, the police offices, six school-houses, and a bank were destroyed, many people were made homeless, and property to the value of 2,000,000 rubles was lost.

It was reported on July 12 that there had then been 200 cases of cholera at Catania, of which 140 proved fatal. The disease has broken out also in Sardinia.

A land slide at Zug, Switzerland, July 6, precipitated a part of the town into the lake. Many houses were engulfed and as many as 100 persons, among them the President of the Canton, perished.

The latest news from Stanley, the African explorer, is that on the journey beyond Leopoldville he found great difficulty in replenishing his commissary. The threatened scarcity of provisions made a number of his men insubordinate, and it became necessary to punish them with much severity. Stanley himself was ill from the excessive heat.

A fire in the Citadel at Quebec on the night of July 6, spread rapidly and burned ammunition wagons, guns, and many stores, and made its way towards the magazine where a large quantity of powder was stored. A number of bombs were exploded, and there was great consternation because of the imminent danger of the fire's reaching the magazine. After a hard night's work it was checked.

On the night of July 9 the steamer *Merrimac*, from Halifax to Boston, was wrecked at little Hope Island, off the Nova Scotian coast. The passengers lost all their personal effects, and suffered from cold and hunger, but none perished.

The dissatisfaction with King Kalakaua's government of the Hawaiian Kingdom culminated on June 30. A mass meeting of citizens of Honolulu, in which residents of American birth took the most prominent part, having organized a military company and practically seized the Government, demanded of the King the dismissal of his Cabinet and the appointment of another, to consist of persons whom the meeting named, the restitution of $71,000 bribe-money which the King had taken, and a pledge "not in future to interfere, either directly or indirectly, with the election of representatives, and not to interfere with or attempt to unduly influence legislation or legislators." Kalakaua in great trepidation acceded to all these demands and was allowed to retain the crown. No violence had been used when the last boat, which arrived at San Francisco July 9, sailed. Along with the fear of violence, there was a hope that the scheme of a constitutional monarchy would prove successful.

THE GRAND ARMY MACHINE.

THE Grand Army of the Republic came into existence not long after the close of the war. The organization was established with good motives and for excellent purposes. It was intended to bind together in the bonds of friendship the survivors of the Union Army, and to furnish a convenient medium for relieving members who fell into distress, and for preserving from suffering the families of those who died in want. It appealed forcibly to the sympathy of the public, and enjoyed its respect.

It was not long, however, before ambitious politicians perceived that such an organization might easily be prostituted to partisan and personal ends. The majority of the members were Republicans, and it was plain that if the leaders of the order in any State could secure its backing for their ambition, they could establish strong claims to the favorable regard of Republican conventions. The rank and file of the order also came to see that if they should present a "solid front," they could make demands upon legislators and Congressmen which time-serving officials would readily honor. If the Grand Army endorsed a particular pension scheme, for example, the vengeance of the whole body could be invoked upon any man in public life who interposed any objection to its becoming a law. Both the officials and the privates of the Grand Army thus came to see that the organization offered excellent opportunities for promoting selfish purposes.

The good-natured public, busily occupied with its own affairs, was slow to realize the possible dangers which lurked in such an organization so conducted. There was need of some pointed action by the Grand Army, as a body, to open the eyes of the country to its real character. The President's vetoes of sundry private pension bills for unworthy claimants, and of the Dependent Pension Bill for an immense army of such claimants, served this purpose. The latter veto was no sooner announced than Gen. Fairchild, the head of the Grand Army, issued orders to have all posts express their views upon it, with the evident purpose of bringing such a pressure to bear upon Congressmen who at heart opposed the bill, as would force them to vote to pass it over the veto, against their convictions. The veto having been sustained by Congress, as it was by the country, the leaders of the Grand Army set at work to frame a new bill of the same sort, and to have this measure endorsed by the organization, so that Congress might be frightened into passing it and the President into signing it. As a means of "showing their power," the managers next began abusing the President for having done what he conceived to be his duty, and threatening him with insult and even personal violence if he should accept his invitation to the St. Louis encampment. Gen. Tuttle, who is the commander of the posts in Iowa — the State that will probably be most largely represented at St. Louis—declared a month ago that he knew the feeling of the Grand Army, and that they would "snub and insult him," and hinted that there was "a good prospect of there being trouble" if Mr. Cleveland should attend the encampment. A fortnight later, Gen. Fairchild seized the excuse of the battle-flag order to break forth with his invocation of "three kinds of palsy." That no doubt might be left that such blatherskites as Tuttle were entitled to speak for the order, the posts in Iowa have been passing resolutions heartily endorsing his utterances.

The result of all this is, that the public is coming to understand the real character of the organization. It is no longer a benevolent institution working for unselfish ends; it has become a machine for the procuring of pensions and offices. It is easy to see how this has come about. The whole membership of the organization, which is now placed at 350,000, is not much more than one-fourth of the whole number of surviving Union soldiers. This one-fourth includes almost all the self-seekers, the men who were only tempted into the army by high bounties, and the men who are always trying to trade upon their services in the war. Any one who investigates the matter will find that a large proportion of the better sort of veterans either do not belong to the Grand Army, or hold aloof from an active share in its proceedings since they have found what influences dominate it. The best proof of this is the support of Tuttle by the Iowa posts. Soldiers who deserved the respect of their fellow-citizens would be quick to repudiate such talk as Tuttle's, instead of commending it.

Fortunately, the danger of serious harm from the Grand Army has been removed by the exposure which it has thus made of its character. If it were universally supposed to be an association of old soldiers devoted unselfishly to the public interests, its weight might be thrown with tremendous force for or against any measure or any man. But when it is seen to be an organization chiefly concerned in extorting undeserved offices and pensions for unworthy members, its endorsement or its condemnation is of little moment. No body of men can present a Tuttle and a Fairchild as its perfect flower, and long retain the confidence of the American people.

PRESIDENT CLEVELAND AND THE SOLDIERS.

THE course of a few demagogic leaders of the Grand Army towards the President has already put that organization on the defensive, as is shown by the excuses which representative partisan Republican newspapers are already making for the course of its leaders. The *Tribune*, with characteristically vulgar mendacity, says that the President has "displayed on every occasion his cynical contempt and utter lack of sympathy for the loyal defenders of the Union cause," and "has repeatedly sneered at the Union veterans in his veto messages, and never manifested sympathy or respect for them." The Philadelphia *Press*, to excuse the Grand Army, says that it "does not object to his pension vetoes because of their number, or because of the specific cases he selected to veto"; but "the objection rests wholly on the spirit of these vetoes, their implied attack on the pension system, their grudging recognition of patriotic service."

To show definitely how false is any charge that the President has been actuated by any unfriendly feeling towards the veterans in writing his veto messages, it is only necessary to read the messages themselves, whose text papers like the *Press* and the *Tribune* take it for granted that the people have forgotten. It should be remembered that the great majority of the private pension bills which the President vetoed, covered claims which had undergone the most careful scrutiny of the Pension Bureau—a department specially organized for making such investigations—and had been rejected as dishonest or out of the list of assistable cases. A would-be pensioner, defeated in this way, then (generally at the instigation of the agent with whom he is to divide his money) throws himself on the member of Congress from his district, and induces the latter to introduce a private bill in his behalf. Hundreds of these bills come before every Congress and are passed, not in a regular session of the day and after full discussion, but at some evening meeting, when only the members interested in such bills are present, and these to the number of perhaps a few dozen; for there is nothing in the Federal Constitution requiring at least a majority of the whole House to pass a bill. In vetoing a bill increasing the pension of A. J. Hill, the President, on May 8, 1886, used this language:

> "The policy of frequently reversing, by special enactment, the decisions of the bureau invested by law with the examination of pension claims, fully equipped for such examination, and which ought not to be suspected of any lack of liberality to our veteran soldiers, is exceedingly questionable. It may well be doubted if a committee of Congress has a better opportunity than such an agency to judge of the merits of these claims. If, however, there is any lack of power in the Pension Bureau for a full investigation, it should be supplied; if the system adopted is inadequate to do full justice to claimants, it should be corrected; and if there is a want of sympathy and consideration for the defenders of our Government, the Bureau should be reorganized. The disposition to concede the most generous treatment to the disabled, aged, and needy among our veterans ought not to be restrained; and it must be admitted that in some cases justice and equity cannot be done, nor the charitable tendencies of the Government in favor of worthy objects of its care indulged, under fixed rules. These conditions sometimes justify a resort to special legislation; but I am convinced that the interposition by special enactment in the granting of pensions should be rare and exceptional."

Certainly no one can dispute the soundness of this view, nor can the warmest friend of the soldier find fault with its form of expression. It is easy to discover in the special veto messages constant repetitions of similar expressions of the President's feeling towards the deserving soldiers. In refusing to assent to a pension for Rebecca Eldridge, whose husband was killed in 1881 by a fall from a ladder, the President said: "It is not a pleasant thing to interfere in such a case. But we are dealing with pensioners, not with gratuities." In vetoing a bill granting a pension to Harriet Welsh, whose husband was killed by a fall from the cars in 1877, the President wrote: "I believe her case to be a pitiable one, and wish I could join in her relief. But unfortunately official duty cannot always be well done when directed solely by sympathy and charity." In declining to sign a bill granting a pension to Mary Anderson, whose husband was killed by the cars in 1882, the President wrote:

"His wife and children present pitiable objects for sympathy, but I am unable to see how they have any claim to a pension." In the case of Mrs. Maria Hunter, whose application was at the time under examination in the Pension Bureau, he wrote: "I have no doubt the widow will receive ample justice through the instrumentality organized for the purpose of dispensing the nation's grateful acknowledgment of military service in its defence."

The President left no doubt whatever of the spirit which actuated him in withholding his signature from pension bills. Again and again he indicates that he foresaw the use that partisanship would make of his interpretation of his duty, but he never allowed this to influence him in any decision. In one of his messages he says:

"I have not been insensible to the suggestions which should influence every citizen, either in private station or official place, to exhibit not only a just but a generous appreciation of the services of our country's defenders. In reviewing the pension legislation presented to me, many bills have been approved upon the theory that every doubt should be resolved in favor of the proposed beneficiary. I have not, however, been able to entirely divest myself of the idea that the public money appropriated for pensions is the soldiers' fund, which should be devoted to the indemnification of those who, in the defence of the Union and in the nation's service, have worthily suffered, and who, in the day of their dependence resulting from such suffering, are entitled to the benefaction of their Government. This reflection lends to the bestowal of pensions a kind of sacredness which invites the adoption of such principles and regulations as will exclude perversion, as well as insure a liberal and generous application of grateful and benevolent designs. Heedlessness and a disregard of the principle which underlies the granting of pensions are unfair to the wounded, crippled soldier who is honored in the just recognition of his Government. Such a man should never find himself side by side on the pension roll with those who have been tempted to attribute the natural ills to which humanity is heir to service in the army. Every relaxation of principle in the granting of pensions invites applications without merit, and encourages those who for gain urge honest men to become dishonest."

Lieut.-Col. Loren Burritt, receiving a pension of $72 a month, would have had this increased if the President had signed a private bill passed in his behalf. In explaining why he could not consent to this increase, the President wrote:

"No man can check, if he would, the feeling of sympathy and pity aroused by the contemplation of utter helplessness as the result of patriotic and faithful military service. But, in the midst of all this, I cannot put out of mind the soldiers in this condition who were privates in the ranks, who sustained the utmost hardships of war, but who, because they were privates, and in the humble walks of life, are not so apt to share in special favors of Congressional action. I find no reason why this beneficiary should be singled out from his class, except it be that he was a lieutenant-colonel instead of a private."

It is unnecessary to go on multiplying extracts from these messages to show the President's appreciation of the soldiers' services to the country, and his own clear interpretation of the responsibility which his high office places on him in dealing with such legislation. His indignation at times has found some expression when bill after bill has come before him granting the public money to men whose claims had been rejected in the Pension Office, whose injuries had no connection with their military service, or who, as one applicant, William Boone, under his own signature, admitted, "never thought of trying getting a pension until my old comrades urged me to do so." But no honest veteran can take to himself a single word of the President's censure, and every friend of the soldier ought to thank the President for his zeal in keeping off of the pension list men who are so unworthy to be associated with those who receive testimonials of the nation's gratitude.

ARE THEY DISSATISFIED?

For years the Republicans have professed that the chief object of their party was to re-establish the Union upon a secure basis. They have claimed that their great desire was to have the South loyally accept the new order of things brought about by the war and by the constitutional amendments. They have insisted that their earnest hope was to see the time when the two races should live in concord, and when there should no longer be any "negro question." These were most patriotic professions. Indeed, a political party could not propose ends more desirable or more commendable.

For two years past there have been most convincing proofs that these ends were largely achieved. A national administration which owed its election in great measure to the support of "the States lately in rebellion," has been in power, and everybody sees that "the fruits of the war" are as safe as when the Republicans were in power. Rebel pensions have not been suggested, rebel claims have not been presented, the payment of the rebel debt has not been asked; and no sensible man in the land longer believes that anything of this sort is expected by anybody in the South outside of a lunatic asylum. The good-natured indifference with which the South received the suggestion of returning in bulk the rebel flags, has shown that the flag of the nation is the banner to which the South as well as the North is now devoted. The recent notable reunion of Confederate and Union soldiers at Gettysburg, and minor occasions of the same sort, have shown that the soldiers of the "lost cause" are as loyal to the Union as those of the cause which won.

Experience has proved that the negroes are not dependent upon any political party, and that they are as well off when there is a Democratic President as while Republicans sat in the White House. No attempt has been made to put them back into slavery, or to restrict any of the rights which they had previously enjoyed. Schools for colored children have not been closed, and the Southern whites have not attempted to put obstacles in the way of negro education. On the contrary, it is the testimony of such a life-long Republican, Union soldier, and negro teacher as Gen. Armstrong of the Hampton (Va.) Institute, after a recent tour through the South, that the relations of the two races have never before been so harmonious; that the education of the blacks was never before progressing so rapidly; and that the negroes as a race never before stood upon so secure a footing in the South, and never before came so near to enjoying their rights.

In short, there never has been a time since the formation of the Republican party when there were such unmistakable proofs as now that the Union was restored, and that the "negro question" was in process of successful solution; or, in other words, that the future of the republic, so far as the South is concerned, is assured. One would expect to find Republican newspapers filled with these proofs of the restoration of the Union and of the growth of harmonious relations under liberty between former masters and former slaves, and Republican orators waxing eloquent over the development of love of country and of respect for the rights of man. Certainly, no party ever had greater reason for rejoicing over the accomplishment of the ends which it had professed to seek.

Extraordinary as it may seem, however, the fact is that Republican newspapers and orators make rare and scant allusion to any of these glorious achievements. Patriotic speeches by Southerners are referred to but seldom and grudgingly; the encouraging reports as to the progress of the negroes during the last two years made by such men as Gen. Armstrong are not published. In a word, anything which shows that the drift of things in the South is in the direction desired by every patriot, is either suppressed or depreciated. And that no doubt may be left as to the animus of this course, the greatest prominence is given by the same newspapers and orators to every petty incident which makes against the overwhelming drift, like the impatient outburst of some antediluvian Bourbon against the new order, or the occasional outrage upon some negro.

The question inevitably arises, Are the Republicans dissatisfied with their success? And this suggests the other question, Do the Republicans propose to enter the campaign of 1888 upon a "view-with-alarm" plank of a new sort—alarm because the Union is really saved and the negro can take care of himself?

THE FAMILY OF MONTAIGNE.

I.—HIS MOTHER.

A volume published at Bordeaux twelve years ago, entitled 'Michel de Montaigne, son origine, sa famille,' contains, in the dry form of legal documents and genealogical tables, with annotations and comments thereon, much that is of interest. The readers of Montaigne, who become in so peculiar a sense his friends, his intimate friends, cannot fail to recognize from first acquaintance with him the strength of his affection for his father; and some few indications of companionship with his brothers introduce us to them. But of his mother he tells us nothing, save that his father obliged her to talk Latin with him in his childhood, which she "avoit aprins pour iargonner avec moi."

In this invaluable volume of documents, brought together by M. Théophile Malvezin, we learn not much but something about her. She was Antoinette de Louppes; and M. Malvezin brings a mass of evidence to prove, and makes it much more than probable, that she belonged to a Spanish family, the Lopès, and that they were Spanish Jews. Great numbers of this people took refuge at Bordeaux, Toulouse, and Bayonne, when driven out from Spain and Portugal in the fifteenth century, under circumstances which Montaigne narrates with exactness in the essay entitled "Que le goust des biens et des maulx

despend, en bonne partie, de l'opinion que nous en avons." These refugees, even after their flight, were obliged to become Catholics, and they were known as "new Christians." Among the "new Christians" who settled at Bordeaux were many men of considerable ability, who, after the wonted manner of Jews, soon gained high places in their adopted city, and from whom sprang important and respected families. There were men of learning—doctors of letters, who became regents of the College of Guienne (where Montaigne's earliest public education was conducted); doctors of law, and doctors of medicine. Among these last was a certain Bertrand Lopès (or Loppes, Louppes, or De Louppes; the name is spelled indifferently in all these ways), while his brother Antonio Lopès was a great trader in wines and dyes (as were likewise Montaigne's paternal grandfather and great-grandfather, Grimon and Ramon Eyquem). Another brother, Pierre Lopès, was a merchant of the same kind at Toulouse, and M. Malvezin believes Antoinette de Louppes to have been his daughter. One little link in his chain of evidence is Montaigne's phrase when, speaking of his father, he says, "He married . . . on his way back from Italy." Toulouse is precisely on the way back from Italy; and the Eyquems and the Lopès, these two families of great merchants, it is every way probable already had business relations together. It is at least certain that "Mademoiselle de Montaigne" (her style in those days) was of Spanish descent. And this fact throws a pretty little light on Montaigne's statement that his father was familiar with the Italian and Spanish languages (II, 12), adding elsewhere (II, 2), "He talked little and well, and mingled in his speech illustrations from modern books, especially Spanish." It will be remembered that it was he who put into his son's hands the work of the Spanish author Raimond de Sebonde, the study of which was not without influence on Montaigne's thoughts and reputation. Suppose it had been the work of the Spanish author Cervantes: how different would Montaigne have been? *Que sçais-je?* But though Cervantes was then in the world, 'Don Quixote' was not.

M. Grün, writing before the discoveries of M. Malvezin, is strongly disposed to believe that Montaigne must have received the latter part of his education at the University of Toulouse, where the men who were his friends in after life, Estienne Pasquier, Pibrac, Paul de Foix, Adrien Turnèbe, and others are known to have been; but he acknowledges an objection to lie in the distance of Toulouse from Bordeaux. If Toulouse was the home of the family of Montaigne's mother, this objection vanishes; and the "riche vieillard pulmonique" at whose house in Toulouse Montaigne speaks (I, 20) of meeting Simon Thomas, "un grand médecin de son temps," was very likely his grandfather.

There is no record of Mme. de Montaigne during the life of her husband; but an interesting document exists, dated ten weeks after his death, which is "a transaction" between "damoiselle Anthoinette de Louppes . . . et M. Me. Michel de Montaigne, escuyer, conseiller du Roy en sa Court de Parlement de Bourdeaux, mère et fils." It is an agreement based on the will of the deceased husband and father; and, translated with some concisions, it is as follows. After arranging for the settlement of certain moneys to be paid to the widow, it continues:

"Item, because, in the said article of the will it is ordered that the said damoiselle shall be entertained and maintained out of the property of the testator with the same authority and everything else (*tout ainsi*) that she had had during his life, it is agreed and understood between the parties that the said clause cannot cover other superintendence and mistress-ship than honorary and maternal; and that as to the entertainment and maintenance, it has been agreed that whilst the said damoiselle and sieur de Montaigne shall agree to live together at Montaigne, the said damoiselle shall be maintained there according to the said will with all honor, respect, and filial service, together with two chamberwomen and a man-servant; and for her maintenance and small expenses the sieur de Montaigne shall pay to his above-named mother 100 *livres tournoises* a year, quarterly.

"Item, as to the habitation in the château de Montaigne bequeathed by the said article for the said damoiselle, the sieur de Montaigne wishes and intends that she should enjoy it just as it is specified, provided that the said right of habitation be not interpreted to extend beyond the persons of the said damoiselle, two chamberwomen, and a man-servant; and provided . . . that the command and mastery of the said château de Montaigne in general, and of its courts and its entries and issues remain entirely with the said sieur de Montaigne without derogating from the right of habitation that the said damoiselle has for herself [and her three servants], nor from their right (for herself and her servants) to go in and out of the château, nor from the right of the use of the wells and gardens bequeathed to her service by the said will."

In case they should not be able harmoniously to live together, it is stipulated that a lodging furnished according to her taste shall be provided for the mother, or in place of it she shall receive a hundred livres a year, besides a pension of three hundred livres yearly.

After these arrangements the "transaction" goes on to order that, conformably to the will, the demoiselles Léonor and Marie de Montaigne, the young sisters of Michel, shall be "entertained, educated, and maintained by the said sieur de Montaigne," their guardian conjointly with their mother and M. de Gaujac, their father's brother; and that if difficulties arise on this subject (*quelque doubte pour le gouvernement desdictes filles*), the parties shall be obliged to accept the arbitration of MM. le président de Belcier de Sainte-Croix and Villeneufroc, conseiller au grand conseil (the former a cousin of the deceased, the latter of the widow).

This document has a dismal accordance with some passages in the Essays, such as this (III, 3), when, speaking of his special "tower," his library, he says: "Here is my kingdom: I try to render my dominion of it entire, and to withhold this sole corner from conjugal, filial, and civil community; everywhere else I have only a verbal, seeming, confused authority." It is probable that disagreements did not arise, at least of sufficient consequence to bring about a separation, and that through all Montaigne's life his mother lived under his roof, and in her old age was one of his "famille esgarée, faisant peur à ses amis et à soy même," for whom, in the terrible days of the pestilence of 1585, he was "en tres pénible queste de retraicte." But it may be feared that, at least in the early days of their forming one household, the domestic affairs of the château de Montaigne had trying complications; and another legal document of a still more curious nature opens the door of the salon to us at a moment such as Montaigne may have had in mind when, writing of anger, and especially, one may say, of household anger, he says: "Aux grands occasions cela me paye [me satisfait] qu' elles sont si justes, que chacun s'attend d'en voir naître une raissonable colère: je me glorifie à tromper leur attente."

This paper is dated May 23, 1569, which is nine months and more after the one just cited. In this interval the youngest of Montaigne's brothers, Arnaud, had died, unmarried, twenty-eight years old. He was "le capitaine Saint-Martin," whose death, from being struck by the ball in playing tennis, Montaigne relates (I, 19). Now the notary speaks:

"To-day, the 23d day of May, 1569, in the château de Montaigne in Périgord, has appeared the noble Michel de Montaigne, lord of the said place, and speaking to damoiselle Anthoinette de Louppes, his mother, has declared to her that he has found in the coffers of his wife a gold chain which the late noble Arnaud de Montaigne, lord of Saint-Martin, his brother, had left there; the which the said damoiselle de Louppes has said to be due and to belong to her, and requires to be given to her. And this gold chain the said lord of Montaigne, in the presence and with the consent of the noble Thomas de Montaigne, lord of Beauregard, and the noble Pierre de Montaigne, lord of La Brousse, brothers of the late Saint-Martin, has now left and delivered to the said de Louppes, and she has received it."

The Jewess evidently cried to better purpose than poor *Shylock*:

"Justice! the law! my ducats! O my daughter!"

The last record of her is in December, 1600, when she sanctioned by her presence and consent the marriage of her great-granddaughter (the daughter of Montaigne's only child, Leonor). She must have died soon after, a nonogenarian at least, since she was married in 1528. In her will she boasted that "it is well known that I labored for the space of forty years in the house of Montaigne with my husband, in such manner that by my labor, care, and management the said house has been greatly increased in value, improved and augmented; which, with its dependencies, the late Michel de Montaigne, my eldest son, has enjoyed peaceably by my leave and permission, and since his death Leonor de Montaigne . . . holds and possesses almost all the property left by the late sieur de Montaigne, my husband, being very rich and opulent." If this last phrase be not a prejudiced view, due to a desire to leave her own property to her two surviving sons, and but little to this granddaughter, it is of interest in confirming one's impression of Montaigne's wealth.

THE UNIVERSITY OF MICHIGAN AND ITS RECENT JUBILEE.

ANN ARBOR, July 4, 1887.

THE University of Michigan has just been commemorating the completion of the first half century of its legal existence. Festival ceremonies of one kind or another continued through four or five days, the most memorable feature of all being the fine Commemoration Address by President Angell. I will not here enter into the details of the celebration, which have been duly chronicled by the newspapers; but, quite apart from such details, the anniversary is one which invites reflection and possesses more than a local interest.

By general consent the University of Michigan is regarded as the most prominent representative of that class of higher educational establishments which derive a large part of their revenue from popular taxation. The ideas upon which it has been built up are by no means universally accepted in this country, and hostile criticism of them has never been entirely silent even here in Michigan. A considerable part of the population are disposed to look upon their University, with its expensive equipment, as a costly luxury, of doubtful benefit to the people as a whole. This opposition is not always aggressive; it takes various forms, exhibits different degrees of energy, and comes from people of all grades of intelligence. There is, for example, the well-informed doctrinaire who has views of his own as to what are the "legitimate" functions of the State. Then there is the business man, whose paramount solicitude is to get richer, and who naturally takes a commercial view of things. With this type of man the instinct of social benevolence commonly exhausts itself in giving to the poor and the unfortunate, in contributing to the support of a church and of church schools, and in promoting all sorts of enterprises that seem to smack of material progress. Such men are in many ways the bone and sinew of the land, but it is the exception ra-

ther than the rule to find them really caring anything at heart for the large ideal interests which it is the especial business of a university to conserve. Then, again, we have to reckon with a class of voters who are habitually hostile to whatever makes for the refinement of the natural man; this class has no sympathy with gentlemen, nor with anything that gentlemen appear to believe in or are prominently associated with. And, finally, there is the skinflint *sans phrase*.

How strong numerically the opposition to the University would prove to be if there were any opportunity of testing its strength with the people of Michigan, no one knows. What is known is that the University is part of the historic life of the State; that it has been from the beginning strongly intrenched in the affections of the most intelligent part of the population; and that during the last two decades it has received from the State treasury about a million of dollars. Confirmed by this liberality in an ever-increasing confidence that the good-will of the State is behind it, and anxious to keep pace with the recent progress of university ideals, the Michigan institution has rapidly extended its facilities for work until its annual expenditure considerably exceeds the income from its regular sources of revenue. Were the help of the State to be withdrawn, it would not indeed perish utterly, but it would suffer a collapse which would effectually destroy not only a large part of its present usefulness, but also whatever of prestige it may have acquired among institutions of learning. There is probably no reason to fear any such withdrawal—in fact, the indications point strongly the other way; and yet the possibility of such a contingency is never suffered to remain long out of sight of the friends of the University, and has just been thrust prominently upon their attention by circumstances which have forced this question of the relations of the University to the people into the forefront of popular discussion all over the State.

The circumstances alluded to were as follows: The University was sorely in need of additional facilities for physical and biological investigation, and the Regents, upon examining the situation, incorporated in their usual memorial to the Legislature a request for $75,000, to be used in erecting laboratories for the aforementioned purposes. Upon invitation, both houses of the Legislature visited the University en masse, to satisfy themselves of the reasonableness of the request, and in due time they passed by easy majorities substantially such a bill as had been asked for. This bill the Governor saw fit to veto—an act which was a surprise to everybody, and at once precipitated the popular agitation above alluded to. The present Governor of the State is a *de ore* farmer (*de facto* he is a banker), and would doubtless be called by any fair critic an eminently respectable product of the Republican Machine in this State at a time when it was deemed expedient to do something for the Granger vote. But the Governor's argument in his veto message was so flimsy, and betrayed such naïve ignorance of the University's affairs, as to lead to the conviction in the minds of many people that the Executive was playing a deeper game than that of the economical farmer, and was seeking a pretext behind which to hide a general opposition to any and all further appropriations by the State for University purposes. It was thought that he had concluded, as a political move, to test the strength of this idea among the toiling taxpayers whom he is conventionally supposed to represent. Such an appeal would undoubtedly meet with strong support, and, however it might eventuate, would have the calamitous result of dragging the University into State politics. But in due time the Governor took pains to make known that no such thought was in his mind—he was the stanch friend of the University, proud of its record, and devoted to its interests; but he thought that laboratory item too high. This was, I am confident, an entirely honest expression of feeling, although there are not wanting people who see in it a politician's method of dropping, in consequence of new light, an article that had proved to have a somewhat higher temperature than he supposed when he picked it up.

The remainder of the episode must have, for the outside world at least, a rather comical aspect. The Senate promptly passed the bill over the veto by an almost unanimous vote; but, the House refusing to follow this example, a new bill was introduced like the former, save that it reduced the laboratory item by more than one-half. This bill has since become a law. The amount granted is entirely and ridiculously inadequate to the purposes contemplated. The comedy of the situation lies in the fact that no one really sympathizes with the Governor's position. There are many people in the State who would be glad to see all State aid to the University either suddenly or gradually withdrawn; but there are few indeed who will not say that if the policy of appropriations is to be kept up at all, then the State should not be niggardly in giving to the University what it actually needs to do its work—so long, at any rate, as the sum involved represents an amount absolutely inappreciable to the individual taxpayer. The absurdity of having the scientific necessities of a great university gauged by a farmer-Governor who knows nothing at all about such matters, is all the more apparent when we consider that the Regents of the University are in this State elected by popular vote, that they have always administered their charge with the strictest economy, and that their chief function is to stand between the greed of professors and the purse-strings of the people.

In view of the occurrences just narrated, it is not surprising that the retrospective addresses of the recent jubilee should have been largely occupied with the great question of the University and the people. It was as if the establishment felt called upon to justify its existence on the score of its past services to the State as a whole. To this problem the various speakers addressed themselves, both in formal discourses and in post-prandial oratory, with much ardor and with evident confidence in the strength of their case. And as one looks back, the case does indeed appear to be a tolerably strong one. The briefest possible sketch of the record made may be appropriate in this place. The history of the University really begins with a period of splendid but quixotic planning which was to have given us a German university (minus the theological faculty), and a number of gymnasia organically connected with it, and scattered here and there through the State. These "branches," as they were called, were to depend for support upon the university fund, the proceeds of the Congressional land grant of 1826. This fund was in 1837 confidently estimated at a million of dollars, but the relief legislation in the interest of settlers which followed the financial stress of that period, ultimately reduced this sum to less than half the amount named; and even this afforded for a time a precarious income. So it came about that the educational concern which finally opened its doors for students in 1841, began its career under grave financial embarrassments, and bore but a faint resemblance to the fine plan that had originally been conceived. Instead of a university there had been started a feeble school of Latin, Greek, and mathematics. The branches soon died of inanition, and the central establishment, at Ann Arbor, went on its way as well as it could in the manner of the Eastern colleges.

From this point on, the history presents two clearly marked epochs. The first, beginning with the accession of Dr. Henry P. Tappan to the presidency in 1852, was a period in which the infant college grew as far toward the stature of a university as the limits of its income would permit. President Tappan, a man whose memory is highly venerated by those who knew him, was thoroughly in sympathy with the German theory of a university, and, though himself a clergyman, was essentially one of the modern type of secular college presidents. He at once set about loosening the grip of the Puritan tradition, took great pains to expound to students and to the public his idea of what a university should be, and, in the matter of appointments, did what he could to substitute scholarly for religious tests. A school of medicine had been established in 1850, and schools of engineering and of law followed a few years later. A so-called scientific course was started to run parallel with the classical curriculum and lead to the degree of B.S. And thus the University of Michigan was committed thirty years ago to its peculiar solution of the modern burning question of the "college fetish." It confers (unfortunately, I think) four different bachelor's degrees, but no one receives, or is likely to receive, the traditional degree of B.A. without the traditional modicum of Greek.

In due time it was seen that, if the sketch of the founders and of President Tappan were ever to be filled in, the University must have help from the State. Application was first made to the Legislature in 1867, and was successful; from that time the institution entered upon a new period of still more rapid expansion, rendered possible by continual State appropriations. In this recent development, the guiding policy has been to bring the University into the closest possible relations with the people. It was along the line of this policy that, in 1870, women were admitted to all departments, and that at the same time the University began to receive into its Freshman class, without examination, the graduates of approved high schools. This last step has proved of great influence for good throughout the State's entire system of public instruction. A strong effort has continually been made in the recent past to foster the sentiment that the University exists by the people and for the people, and has no other ambition than to make itself, in the long run and in the highest sense, useful to the people. During the collegiate year just closed the University faculties numbered in the aggregate eighty-six teachers of various grades, and the total enrolment of students was 1,572. Of this last number about three-fifths were the children of farmers, and more than three-quarters the children of men who work with their hands. The graduates at the recent commencement numbered 409.

I said above that the jubilee orators were able to make out a strong case in behalf of the University of Michigan. This, of course, could not be done on the theory that a university is in its essence a polishing institution existing for the sole benefit of those who are polished. If what is called a "liberal education" is of the nature of a luxury which, like a yacht or a fast horse, means nothing beyond the personal gratification of the possessor, then this luxury should certainly be paid for by those who want it. But if, on the other hand, everywhere in life, accurate knowledge, trained faculties, and the spirit of research are of benefit not only to their possessor but to the community in which he lives—if, in short, these things are of value as agencies of social amelioration—then the commonwealth may very properly take steps to enlist these agencies in its own service. Mr. Lowell, speaking where there was no danger that the word would come back to plague him, might well define a university as a "place where nothing useful is taught." We understand him, and do not criticise; but we

should shrink from adopting his phraseology. *Our* cue is to prove, if we can, that what is to be learned at a university *is* useful. This highest ground is also the safest and strongest ground upon which a State university can be defended. The common argument, that a people can well afford to tax themselves in order to realize *la carrière ouverte aux talents*, is entirely sound; but its soundness requires that the talent to which a career has been opened by the people should be, in some proper sense, devoted to the people's service. Is this condition actually fulfilled? Do the graduates of our highest institutions of learning carry about with them, as a rule, any peculiar sense of consecration? Are they possessed, more than other men, by a feeling of social obligation—by a sentiment of *noblesse oblige?* Do not these very questions sound like chimerical nonsense? As one counts over the list of his friends who are college graduates, does it not appear that, for nine out of every ten, their so-called "education" was nothing but a conventional episode of early life, without ulterior bearings of any kind? Perhaps so; but it is well to remember that, in a matter of this kind, appearances are particularly liable to be deceptive. In any event, there is the tenth man, and it is the tenth man that counts. *He* is our chief reliance in proving the usefulness of colleges and universities. And if this proportion of one in ten be painfully small, then it is evidently a pressing business of the colleges and universities to consider how it may be increased.

C. T.

WOMEN AT CAMBRIDGE AND OXFORD.

CAMBRIDGE, MASS., July 6, 1887.

NEWNHAM and Girton Colleges, Cambridge, and Lady Margaret and Somerville Halls, Oxford, have long been familiar names to American readers; yet, although a detailed description of them is unnecessary, a few notes of impressions obtained in a recent visit to them may not prove a repetition of well-known facts.

I remark, first, that the women students have felt the influence of the movement among the men which is embodied in Toynbee Hall, London. Toynbee Hall is the well-known residence of a group of Cambridge and Oxford graduates, situated in one of the worst centres of poverty in the East End. Its residents strive to arouse and help their neighbors in quite the same way as any high-minded man may seek to influence the little community about him. They take their part in the political, educational, and social life of their centre, and make their hall life a silent object lesson in refinement and culture. Their avowed object is to "provide education and the means of recreation and enjoyment for the people of the poorer districts of London," and they measure their success by the degree in which they attain "the creation of a higher tone of feeling and thinking, the growth of sympathy, courteous and mutual intelligence, and the destruction of social and conventional barriers between the so-called classes." Toynbee Hall, as a community of men, is naturally much restricted in its influence upon the women of its neighborhood. This limitation impressed me deeply in my visit to the Hall. It was most interesting, therefore, to find, on visiting Cambridge, that others felt this lack, and that brave hearts and trained heads were planning to extend the work to women. Preliminary meetings have already been held towards forming a "Women's University Association for work in the poorer districts of London," after the Toynbee model. At the time of my visit there were such meetings at these four colleges for the purpose of ratifying the constitution which a joint committee had drawn up. The object of the association, as stated, is "to promote the welfare of the people of the poorer districts of London, and more especially the women and children, by devising and advancing schemes which tend to elevate them, and by giving them additional opportunities for education and recreation; to rent and maintain a house for the residence of educated women who will engage in carrying out this work; to receive subscriptions and donations from all persons desiring to promote these objects, and to do such other things as are incidental or conducive to the attainment of these objects."

Only University members constitute the electoral body, but subscribers may become associate members. The Executive Committee is drawn from the past and present members of the four Oxford and Cambridge colleges, with liberty to add representatives from London University if desired. The details of the plan are still undecided. Whether or not a salary shall be paid the "Head Worker," is a burning question. The opinion prevails that it is more consistent with the spirit of the scheme that the workers should, so far as possible, be self-supporting, and that any form of almsgiving should be avoided. Southwark is thought to be a desirable centre, and good work is expected to be done there among that class in the board schools known as "pupil-teachers." The experiment will be first tried on a small scale. It is hoped that, if a sufficient number possessing an income of their own, either through inheritance or by their daily employment, do not at first present themselves, women may come, in the frequent vacations of the schools and colleges, to share temporarily in the work.

One of the undertakings of our American Society of Collegiate Alumnæ—the collection of the health statistics of women college graduates—has lately been copied in England by a Cambridge lady, a former officer of Newnham College, I believe, and who has the coöperation of the heads of the Cambridge and Oxford colleges for women. The questions are taken directly from the American circular, and only slightly modified to suit the differing conditions of English life. It is to be regretted, however, that some of the questions thought by the American investigators to be of vital importance were omitted. An ingenious scheme was devised for obtaining at the same time similar statistics of non-college graduates as a ground for comparison. A like set of questions is sent to each graduate, with the request to fill out for that sister nearest in age who did not go to college, or, failing a sister, that cousin who fulfils the same conditions. The answers are coming in very rapidly, and it is hoped that they will prove a satisfactory reply to the strictures on the higher education of women made by Dr. Withers Moore, the President of the British Medical Association, in a recent address before that learned body.

The intellectual life of the women's colleges is so bound up with the complicated machinery of the university system, and their facilities and opportunities are based so largely upon the methods and the equipment of the men's colleges, that a comparison with American colleges for women is most difficult. The attention is consequently drawn the more strongly to what may be called, by way of contrast, the physical conditions. The "cottage" system of dormitories prevails. Newnham is erecting the third of these small halls, Somerville her second, while Lady Margaret has already established a second of simple appointments for those students who wish to economize. Girton alone is built on the large scale of Vassar and Wellesley. I was taken most literally in my expressed desire to "see" the colleges. Probably the prettiest rooms were exhibited—those belonging to students whose residence had been long enough for the accumulation of attractive accessories. There were no apparent evidences of extravagant outlay, but everywhere cultivated tastes had been exercised in employing inexpensive trifles to form a refined whole. There was no trace of that vulgar extravagance of large spenders which one of her professors has recently acknowledged to have a home at Harvard.

A visitor interested in the subject must notice how slight is the attention paid in all these colleges to physical education. Somerville Hall possesses no gymnasium whatever. Lady Margaret Hall has a small one, inadequately furnished, and unprovided with an instructor. Girton, also, possesses only a small one, reported "unused"; while Newnham's, too, is diminutive and rarely used, and its benefits are restricted to those who care enough for its advantages to pay a fee. A paid instructor visits it once a week. None of the colleges have a resident physician, and physiology is not down in the list of subjects in which instruction is provided at the Oxford halls, while in Cambridge it apparently finds a place only in the studies of the few who prepare for those examinations in natural science in which this subject is obligatory. Tennis, an English game called "Fives," walking and riding, are the popular forms of exercise. These, of course, have their advantages, but it must be admitted that such exercise is necessarily irregular and inadequate.

Notwithstanding the popular impression that the expense of living in England is less than in America, the charges for tuition and board during the academic year of twenty-four weeks have a minimum of about $375, and special charges are not insignificant additions to the student's expenses. There are, however, a large number of scholarships open to English students. Of the 122 students at present enrolled at Newnham, twenty-eight enjoy scholarships, and a similar proportion holds in the other colleges.

The number of students is increasing, and all but Lady Margaret are enlarging their accommodations in order to meet the demand for rooms. In both Cambridge and Oxford, provision is made in the scheme of instruction for mature students who prefer not to put themselves under the discipline of life in one of the halls. In Oxford no difference at all is made between "out-students" and "hall-students," but one of the authorities of the Oxford Society for the University Education of Women wrote me that she "should always recommend a hall for young students, because of the great advantages in guidance by hall teachers and in the society of other students. There are always a small number of out-students, but it is difficult for a girl, not at a hall, to become much acquainted with those in the halls, and she may feel isolated." Residence is obligatory at Girton, and strongly recommended at Newnham.

FRANCE AND RUSSIA.

PARIS, July 1, 1887.

IT would be difficult to deny that a sort of irresistible force draws together the two Powers of Europe which are, or are supposed to be, the most hostile to Germany—I mean France and Russia. For a very long time this tendency was not well marked. I do not attach much importance to the so called revelations lately made to a Paris paper, the *Figaro*, by an ex-Ambassador to Russia, Gen. Le Flo. It would result from these revelations that a few years ago, under the Presidency of MacMahon, France was in very imminent danger of a sudden and unprovoked aggression, and that we were saved by the late Emperor Alexander II. The despatches published by Gen. Le Flo show that Alexander II. expressed at the time good wishes for France, desired its welfare, and

saw no reason for a war. In order to prove that there was anything more than courteous expressions of good-will, it would be necessary first to prove that there was a real danger, and to show what was the exact character of it. It is very tempting to say to somebody: "I saved you"; but gratitude in such a case must be somewhat in proportion to the peril. If a man is on dry land, you cannot save him from drowning. Those who have not been brought up in the diplomatic career find it somewhat difficult to estimate the true value of declarations made to diplomats, who are easily nervous, who make no difference between the courtesy shown to themselves and the sentiments felt towards the countries they represent. They never follow the famous precept of Talleyrand, "Surtout, messieurs, pas de zèle."

The real *rapprochement* between France and Russia only began after the Treaty of Berlin. At that time a great irritation was felt against England, and by degrees also against Germany. Lately many despatches have been published in Berlin tending to prove that Germany acted the part of a good friend, and did not try to deprive Russia of the advantages to which she thought herself entitled; but we have an old proverb: "Qui s'excuse, s'accuse." Public opinion has probably not been converted by these publications. The Russians, as a nation, admit a certain sort of natural antagonism on the part of Austria in the East, and are almost ready to forgive her rather than Germany for the action of the Congress of Berlin. Ever since that period, the influence of Katkoff has been increasing, and his doctrine is hostility to Germany in every form—economical, social, political.

This deep-rooted hostility is well shown in all Russian literature; and, by a singular accident, it is only in recent years that the French public has become acquainted with this literature. It has to many minds been a sort of revelation. The seed was sown by Ivan Turgeneff, who lived long in France and who was personally much admired and liked; but since his time we have become acquainted with other Russian writers, and, without entering now into an elaborate criticism of Russian literature, I will only say that it has impressed all minds with a peculiar sort of admiration. Russia has been revealed to us as an enormous, mysterious, extraordinary Power, full of virtualities, of aspirations, of singular ambitions; and a curious sympathy has been felt for a nation which, in its infancy, could give such proofs of intellectual and moral fertility. It will, perhaps, seem to some that the influence of literature has not much bearing on politics—that the great masses of the people are not led by books, novels, and the drama. This seems to me a narrow view. A nation, considered in itself as a unit, has a sort of soul and a mind; and this mind is led by general ideas, formed by some mystical process, in which literature has a very important part. Such men as Shakspere, as Goethe, as Molière are worth an army; they give incalculable force and prestige to the country which they have honored and magnified by their genius.

The great masses of the French people have not read Turgeneff or Tolstoi. But the politics of the nation, in spite of the arithmetical rule of universal suffrage, is always influenced by the press, by the cultured classes, by all those who read and write; and it cannot be denied that Russia, her statesmen, her imperial family, her newspapers, her books, have taken a greater place in the preoccupations of the French people than they did before. There is a certain sort of what we call *engouement* in this feeling: it is not very much reasoned out. Ignorance has as much part in it as knowledge: "major a longinquo reverentia." My friend M. Klaczko, who wrote so long in the *Revue des Deux Mondes*, and who lives now in Vienna, had some curious expressions when he spoke of Russia. He said once that when Russia wished to please another country, she used what he called "la politique des cantharides," by which he meant that she sent some grand-duke or grand-duchess, or prince or princess, who made it his or her business to be very charming, very seductive, and very inviting. The Russians who belong to good society speak French marvellously well, and they have faculties which enable them to be immediately at home in French society. We have all seen and known those "cantharides," who profess an immense admiration for France, French manners, French fashions; who speak in Paris as if they were in exile in any other place. We know their houses; their faces are familiar; they are all semi-accredited ambassadors of the great Power of the north.

There was no occasion for France to look for any allies after the war of 1870; we all felt that the work of reorganization of the country would take years, that the work was immense, and that, till it was accomplished, isolation was the only natural, the only proud policy. At the time when the colonial policy was inaugurated by the expeditions to Tunis and Tonkin, the necessity of foreign support began to be felt. Italy and England showed great dissatisfaction and some ill-humor at the indirect annexation of Tunis. The ambition of France was denounced. Madagascar became a bone of contention with England, and the relations with our neighbors across the Channel became even more difficult when the *condominium* in Egypt came to an end. The French Chambers refused to vote funds for an English expedition, and England was allowed to go alone to Alexandria, to Cairo, and afterwards to Khartum. The old school of French diplomats was very discontented. Among all their traditions was the necessity of preserving French influence in the valley of the Nile. It would perhaps be hard to give an exact definition of the character of this influence; but as it is thought to have suffered from the solitary action of England, French diplomacy has been occupied in trying to counteract that action. At the present moment, France is opposing in Constantinople, by all the means in her power, the ratification of an Anglo-Turkish Convention, whose object is to regulate the further action of England in the valley of the Nile, to fix a limit for the existing occupation, and to determine under what conditions a new occupation may take place hereafter. France is not alone in her opposition—she has the support of Russia; and thus we see for the first time the delineation of a new European policy, which shows on one side the constellation France, Russia, and on the other, England, Italy, and, at a little distance, Germany and Austria.

The gravity of this division is apparent. Even if this affair of the Anglo-Turkish Convention is arranged by some compromise, the political aspirations, hopes, and fears which have brought together on this occasion Republican France and autocratic Russia cannot be neglected. This natural attraction was first clearly shown at the time of the downfall of Prince Alexander in Bulgaria. You may remember that much enthusiasm was felt for this Prince at the time of his victories over the Servians, much pity and indignation when he became the victim of a military conspiracy, and when Russia signified that she would no longer tolerate his presence in Bulgaria. After these extraordinary events, Bulgarian delegates made the tour of Europe and tried to find some support and sympathy. The reception given to them by the French Minister of Foreign Affairs was informal but very significant. He did not hold out any hope to the partisans of Prince Alexander; his language was correct and cold, and it was felt at once that it was inspired by a desire to give satisfaction to Russia. This was the first evident mark of a wish to bring France and Russia nearer together; and it was so well understood that Prince Bismarck hastened to throw cold water on the Bulgarians, and to put a stop to the anti-Russian campaign which the German papers had begun after the kidnapping of Prince Alexander.

Since that time, France and Germany have gone through a severe crisis, which at one moment seemed to be the preparation for a great war. The danger is averted. The minister who personified the war feeling in France has been obliged to leave the Cabinet, and he has just now been sent to the provinces in command of a corps d'armée; but it must be remembered that during the noisy campaign of the radical press in favor of an active policy, the name of Russia was constantly pronounced. Such men as Rochefort daily represented France as having an ally all ready to take the field with her. When I read his articles I remembered one which he has probably forgotten: after the assassination of Alexander II., he dared to praise the murderers, and to hold them up as examples to the world. Now he uses a different language, and the Russian Emperor is represented as the natural ally of French radicalism. For, it must be said very distinctly, the war party has, during the last few months, consisted exclusively of the radical and communistic party. The men who made the Commune of 1870 want a war, because they hope that a war will make them at once masters of the French capital. Their political horizon is not large, and their ambitions are very selfish. It is the old story, told by Corneille, when he speaks in "Cinna" of the men who

> "Si tout n'est renversé, ne sauraient subsister."

In fact, what may be called the war party has much weakened itself by consenting to be tied to radicalism, as radicalism or communism has no real hold on the French people, and can never hope to obtain a majority in the Chambers.

Correspondence.

THE REBEL FLAGS.

To the Editor of The Nation:

Sir: The flurry over the flags arises, in part at least, I think, from confusion of ideas respecting the character of the war in which they were captured. The mistake of regarding it as a "war between the States," by Southern men who were misled by their erroneous views of States' rights into the rebellion, is a more rational and even a more pardonable one than that of treating it, as many Northern men seem inclined to do, as a "war between fellow-citizens."

It was not a war between the States, nor a war between fellow-citizens of the United States. It was a war between the United States and its enemies. Its character has been correctly described in the laws and other official acts of the Government, as, for example, in sec. 218 of the Revised Statutes, which requires the Secretary of War to cause to be transmitted to him "all flags, colors, and standards captured from the enemies of the United States." How far the annual reunions of soldiers or armies or the Grand Army of the Republic, on the one side, or camps of Confederate veterans, on the other, are responsible for the prevalence of the false conception of the war as a deadly conflict in which what you or I may have done, or this or that State may have done, is forced into prominence over the accomplishments of the Government and its organized enemies—is a question that should receive at least a moment's consideration. For a moment's reflection will show that, except as identified with the national Government in a self-oblivious devotion, on the one hand, or as

absorbed in the idea of rebellion and responsibility to an organized belligerent, on the other, the men who took part in the war had no more sanction for their deeds of valor or blood than the parties to any vendetta. During the short time I was enlisted in the service of the Government I have no recollection that I had a hostile feeling personally to the men arrayed against me – they were not my personal enemies; and the exchange of coffee and tobacco was carried on occasionally, as opportunity offered, with as much good-will as the men who engaged in such acts of personal comity between the lines now meet to drink and smoke together. The reflecting soldiers on both sides knew and felt, at all moments when reflection was possible, that only as elevated above all individual considerations in their identification with the belligerent Governments which they represented, was it right or duty for them to slay each other.

The flags on either side represented the respon sible parties in the war; the stars and stripes standing for the national Government, the stars and bars for organized rebellion against it. With the rebellion defeated, and national supremacy established, I am unable to see on what proper conception of the war the rebel flags can be returned to any person or organization in the Southern States. They cannot properly be returned to the Southern State governments, for they have no significance except as the representatives of an organization and a cause which we now felicitate each other exist no more in the South than in the North. As they were never personal emblems, there is no propriety in returning them to the persons who bore them. In short, there is no propriety that I can see in doing anything with them, except to let them remain in the custody of the War Department. They have never been flaunted in public, and Northern soldiers even do not look upon them as trophies so much as signs of a restored Union. As such they cannot be offensive to any loyal citizen of the United States. S. B. Pettengill.

Portland, Ore.

NEED WE HAVE A PANIC?

To the Editor of The Nation:

Sir: Pessimistic financiers are predicting a panicky wave as being likely, in the near future, to follow the failure of the present attempts of real-estate speculators to "corner" the possible building sites in hundreds of large and small cities and towns throughout our land. Is it enough for the financial doctor to simply predict calamity, without at least suggesting a remedial measure that might mitigate, if not avert, the danger now so generally anticipated? Need bubbles float round without pricking, while so many interests may be affected injuriously if their gas is not let out?

With the permission of the *Nation*, three suggestions are offered for consideration by those who desire to see the present speculative real-estate fever checked without dangerous results:

(1.) Try and change the present nomenclature of the subject, and instead of writing or speaking of "dealing in real estate," say of those whose operations are confined to city and town-lot purchases or sales, "dealing in building-sites." By correctly and promptly naming the true character of this branch of business, the imagination would not be left to play any fantastic tricks with the judgment.

(2.) Discourage fairly and squarely the buying upon slim margins of town lots by those who do not need them to occupy and use for actual building purposes. The classes whose earnings and savings are now being put up as "margins" for town lots in many towns, are the people who ought to be wisely counselled against taking so many chances, not only of losing the cash paid down for first payments, but also of having judgments entered up against them for unpaid balances of purchase money, if such material shrinkages should occur in the value of their lots as would oblige the vendor to enforce his contract stipulations, in preference to exercising his reserved right to simply cancel the contract and keep the cash already paid as forfeit money. But few town-lot buyers with whom one converses fully understand that they stand upon much more dangerous ground than the ordinary grain or stock speculator, whose only loss may be the wiping out of margins already up.

(3.) Bankers doing business in these centres of speculative activity ought not to furnish their names or their money, directly or indirectly, to aid or foster the speculative spirit. Self-interest and self-preservation, in the absence of any higher philanthropic or moral motive, ought to keep them firmly set against attempts to levy taxes upon unborn children's children who may want a space 25x125 upon which to found a home.

Eastern bankers ought also to be very careful about rediscounting for banks located in feverish towns. By too great liberality and good-natured, easy-going methods of carrying "paper" for correspondents, some of the responsibility of aiding "booms" rests upon managers of staid, respectable institutions and their shareholders, who are at present perfectly ignorant of their complicity in contributing to the very dangers they decry.

By exercising discriminating care and good judgment in time, we need not involve ourselves in a great heap of financial ruins. Confusion, calamity, and crime need not come to us if we will only be patient and not be too greedy for great gain. Eagerly discounting the future, and blocking off building sites by a limited number of men for populations of 500,000 people in cities where perhaps only one-tenth of this number will be found a quarter of a century hence, ought not to be permitted to more than temporarily hinder us in our wonderful material and moral progress. Joseph Sampson.

Storm Lake, Iowa, July 6, 1887.

HINTS FOR VILLAGE IMPROVEMENTS.

To the Editor of The Nation:

Sir: Is there anything in the inherent nature of atoms that forbids our small towns and villages assuming a more attractive aspect? Can you not do something to raise the ideal of the average builder? In cities where every foot of ground is costly, there may be a reason why houses should have a narrow front, with a succession of contracted rooms stretching as far back as the ground of the owner; but is it necessary to carry this defect into smaller towns? Could you not also mildly suggest that there may be too many bow windows? Such a window used to suggest an opportunity given to the inmates of the house of seeing with greater ease a garden or a lawn, or a view of fields and waters and sky; now it seems to be a swelling protuberance in the "best room" of the house, with inside shutters carefully to shut out the prying eyes of inquisitive neighbors and the sight of the delivery of parcels by the grocer's boy at the house opposite.

Then as to piazzas—are not many of them too narrow to sit in during the heat of summer, and yet wide enough to keep light from the windows during the winter? God gives light and air freely, and bad builders alone block up windows by piazzas that cannot be used, or by inside shutters, that enable the poor housekeeper to save her carpets and furniture at the expense of the health of her household. Venetian shutters temper the sunlight when needed, without excluding the air, and they give expression to a house; inside shutters do neither.

Will you not urge owners and builders to set their houses back some distance from the street whenever it is possible? It is the most effective way of beautifying a town, but it is going sadly out of use.

Can you not hold up for ridicule the bracketed projection over the front door that has taken the place of the old-fashioned stoop? I for one should be perfectly willing to have the landlords of all my fellow-citizens pay a tax on such a projection and thus abolish it.

Say a good word, please, for *wider*, not higher, windows and doors, and for putting two windows together sometimes, if there is a view to be seen.

When you have succeeded in changing the outside of the houses, will you caution the builders against putting their doors in the middle of the wall space of small rooms? A room always seems smaller if all its walls are cut up by windows or doors, and it is impossible to give such a room an occupied and comfortable look. When rooms are small, don't you think the central chandelier might be abolished, and the lights come from brackets at the side, now that lamps are so generally used for reading?

Have you any influence with architects? If you have, urge them to use long and narrow bricks in ornamenting buildings, as the old Romans did. Such bricks would cease to be expensive if a few architects would demand them of the brick-yards, and certainly the old "herring bone" was effective, and not necessarily hard to lay.

If we must have large apartment-houses in cities, give us at least central court-yards, with a bit of greenery in common, and add a loggia to the upper story, or put a flat roof over some part lower than the rest, where a hanging garden may be made. Who does not recall with pleasure such features of the palaces of Genoa and Florence? If a patron does not care for nature, will he care for art? An architect is short-sighted who does not inaugurate a reform in the large flats of our closely-built cities.

Comfort is the great requisite in all houses or apartments, and is within the means of most. Grandeur must be paid for always in money, and often by the sacrifice of comfort; and when it is aimed at but not attained, it shares the fate of all shams and becomes ridiculous.

Most sincerely, M. N. S.

New Bedford, Mass., July 5, 1887.

THE MAGIC WAND.

To the Editor of The Nation:

Sir: I have just read with very great satisfaction the 'Preliminary Report of the Seybert Commission,' appointed to investigate the truth of modern Spiritualism (published by J. B. Lippincott Co.). My interest in the matter concerned not so much the truth of Spiritualism as it did the means by which mediums practise deception, more especially the means by which Zoellner was duped by Slade. The report is perfectly satisfactory and clear so far as it goes, and has satisfied me fully as to the Zoellner case.

Now, upon the spur of the occasion, it occurs to me that many of your readers may be in a state of mind similar to my own some years ago concerning the magic wand. That the whole story about this wonderful little instrument is untrue, few of your readers at this day will doubt; but how, in the name of common sense, it is possible that there are not a few persons left who still not only firmly believe that the magic wand shows where there is water under the ground, so that a well may be successfully made,

but honestly practise the art of thus finding water, is a puzzling question. This question is all the more interesting because here we have a remarkable case of repeated *self-deception*. The operator with the wand himself produces, unconsciously, the effect which remains a wonder to himself and his neighbors. So far as I have been able to find out, no book gives a satisfactory explanation of the actual bending downward and even breaking of the wand which takes place. This I have not only seen, but it has happened when I was myself the operator. Now I wish to show how the operator deceives himself, and how it comes to pass that he attributes to an occult cause what he does by his own action.

Take a forked twig of hazel or willow, each tine about two and a-half feet long, and in thickness at the upper end like a common pen-holder or a little thicker. Extend your arms before you, almost horizontally, elbows quite straight, hands closed and four or six inches apart, thumbs up. Now turn both arms so that the thumbs are turned outward as far as you can get them. In this position of your hands grasp the wand firmly and hold it in a horizontal position. Hold it so firmly that the wand cannot twist or slip around in your hands. Now walk over the ground. You cannot long hold your hands in this strained position. Unconsciously your hands turn somewhat towards an easier position, you twisting the wand without knowing it, for you are holding as firmly as ever. But mark the effect. The tines of the wand as you held it at first were bent in your hands so that the figure thus formed by the wand approached a narrow loop open at your hands. This loop at the beginning lies approximately in a horizontal plane. As your hands turn back to an easier position, the loop does not remain in the horizontal plane, but becomes a figure of *double* curvature, the jointed end pointing downward. This pointing downward is taken as an indication of water. Of course the operator would thus find water wherever he might go, were it not that sometimes he begins nearer, sometimes further away from the spot where it is desired that a well be sunk, so that in some cases he is more tired than in others. Besides, the wands are not all of the same length, pliability, etc.; and last, but not least, cases of failure occur, which of course never shake the faith of the true believer.

Hazel-twigs are the most famous. You can often find a long, slender, forked branch that will work nicely.—Respectfully yours,

WERNER A. STILLE.

MARINE, ILL., July 7, 1887.

TENNESSEE AND HER CREDITORS.

TO THE EDITOR OF THE NATION:

SIR: The record fastened upon Tennessee, in the matter of her public debt, by demagogues, timid political leaders, and a powerful lobby of bond speculators, is one that no citizen of the State can regard with pleasure. I, for one, find little to say in favor of a policy which I have always bitterly opposed as neither just nor statesmanlike. But in your comments on my letter of May 29 you make an erroneous statement and do us less than justice.

On page 490, after describing the repeal of the first funding act and the passage of the second, you add: "As if to emphasize its avarice and meanness, Tennessee actually forced its creditors to pay for the second exchange of bonds." Tennessee actually did just the contrary, and, by sec. 11 of the Funding Act of 1883, provided for paying the expense of the exchange out of the State Treasury. In this respect at least the Funding Act of 1883 was an improvement on that of 1882, as well as in paying the State debt proper (a small part of the whole, it is true) dollar for dollar.—Respectfully, &c., CAMPBELL BROWN.

[Our correspondent is right, and our mistake arose in the following way: Individuals who had been obliged to scale their bonds twice showed us the payments on their books for the second scaling, and also a certificate issued by the Fourth National Bank of Nashville, which contained the following notice: "Having special facilities for the transaction of such business, this bank offers its services to act as agent for those at a distance who may have bonds to fund. Our charges are based on those of the State, and will be ninety cents on each bond of $1,000 and forty-five cents on each bond of $100." Having, therefore, the idea in our minds that the creditors were required to pay for the second funding, we carelessly read the eleventh section of the act of 1883, which provides that payment shall be made from the State Treasury as follows: "Be it further enacted that the Comptroller, Treasurer, and Secretary of State shall receive ninety cents on each bond of $1,000 and forty-five cents on each bond of $100, to be equally divided among them and to be paid out of the Treasury of the State, etc., etc."

The payment of bank charges cannot, of course, be put upon the State, although we do not understand the meaning of that circular when the State could make no charges, and although one individual, who funded twice, stoutly maintains, without meaning to be sarcastic, that the expenses of the exchange were caused by the State, because he did not dare to send his bonds directly to the State officers for fear they would pocket the proceeds and deny they had ever received them.—ED. NATION.]

Notes.

GINN & Co. announce a 'Treatise on Plane Surveying,' by Prof. Daniel Carhart of the Western University of Pennsylvania.

Lee & Shepard, Boston, will publish a compilation from Bailey's 'Festus,' prepared by Mrs. Sara Louise Saunders. The aged author is preparing an eleventh English edition of the poem for the press. It has had thirty in this country.

On the cover of 'Allan Quatermain' appears the facsimile of a letter from Mr. H. Rider Haggard, announcing that the Messrs. Harper are now the authorized American publishers of his stories. A letter from Mr. Robert Louis Stevenson, announcing that his American publishers were the Messrs. Scribner, was printed in the London *Times* a few weeks ago.

'The Fitzboodle Papers' is the general title given to the latest volume in the pocket Thackeray published by J. B. Lippincott Co. One finds in it also the 'Papers by the Fat Contributor,' 'Miss Tickletoby's Lectures on English History,' the 'Character Sketches,' and other minor pieces.

Pepys's Diary for 1664-65, Shakspere's "Julius Cæsar," and Pope's 'Essay on Man' and other poems, extend Prof. Morley's pocket "National Library" (Cassell). And even as we write comes Arthur Young's 'Tour in Ireland (1776-1779),' most impressive reading at this time by reason of its description of that condition of the Irish peasantry (with its causes) out of which has flowed a steady stream of misery, violence, and revolt. Stronger language than this famous traveller used concerning the wrongs of Ireland could not issue from Mr. Gladstone himself. The landscape, both picturesque and economic, enters largely into this narrative, and makes it altogether entertaining.

'Ticknor's White Mountains' is before us in an eighth edition, with the customary revision. If there is any better guide-book, American or foreign, we do not know of one, and we have tested it severely by experience. Its new map feature is a chart of the White Mountains, to which the Appalachian Mountain Club has furnished positions and elevations of the various summits—a coöperation which will doubtless continue hereafter to the profit of Mr. Sweetser's admirable compilation.

The late Mr. Henry B. Stanton's readable 'Random Recollections,' as first given to the public by Harper & Bros., forms a third edition of memoirs originally intended for private circulation. There has been an enlargement of at least one-third over the second edition, and the rearrangement has been very extensive and for the better. Mr. Stanton was a born politician; and as an actor or a witness in the caucuses and conventions which attended the dissolution of the Whig party and the creation of the Republican, he had first-rate opportunities for being the historian of the transition period of 1840–1860. But other qualities for this task were wanting, and "random" well expresses his mental as well as moral habitude. We cannot imagine him to have kept a diary, for that would have implied a degree of consistency and stability that did not pertain to him. These 'Recollections' lack the authority which such a record would have afforded. Mr. Stanton was a lawyer by profession, and his book abounds in legal anecdotes drawn from his experience in Massachusetts and New York in particular, and amusing enough. The present edition is furnished with a portrait which is hardly adequate.

Another private memorial, that of the late William E. Dodge, has, very properly, been offered to the public through A. D. F. Randolph & Co. It has been well edited, in view of the subject and the materials at command, and presents the many phases of Mr. Dodge's career as a business man, public servant, and philanthropist in convenient chapters, from which the thoughtful reader may derive not a little profit.

Some months ago we had occasion to speak of a vainglorious paper read by Mr. Eli Thayer of Worcester, Mass., before the Society of Antiquity in that city, in which his scheme of a Kansas Emigrant Aid Society was held up as the sole efficient instrumentality in putting an end to slavery. Mr. Thayer also indulged freely in contempt and abuse of the abolitionists, who had been carrying on a moral agitation for the same end for a quarter of a century before he appeared on the scene as the *deus ex machina*. To this feature of his paper Mr. Oliver Johnson temperately but most effectively replied in a paper read by the Rev. Samuel May before the same Society on May 10, and, like Mr. Thayer's, printed separately from the Proceedings as a pamphlet ('The Abolitionists Vindicated,' Worcester: Franklin P. Rice). To this Review are appended some remarks which it elicited from Mr. Thayer's townsmen, who treated him with much less consideration than his New York critic.

'Bar Harbor Days' (Harpers), by Mrs. Burton Harrison, is one of those books the enjoyment of writing which is apt to be greater than the pleasure of reading. It is written in an easy, lively way, and there are some pretty descriptions of Mt. Desert life and scenery, with a few fair illustrations. Its humor, however, is a little beyond the young readers for whom it is apparently intended, and the story is too slight to interest them.

'The Blind Brother' (T. Y. Crowell & Co.), by Homer Greene, is a story of two boys who worked in a Pennsylvania coal mine in the days of the Molly Maguires. It is full of incident and graphic descriptions of life above and below ground. There is also a pathetic short story, treating of the same scenes, called 'Dick the Door-Boy.'

Mr. Kirk Munroe has made a very good use, in 'The Flamingo Feather' (Harpers), of the incidents connected with the unfortunate attempt of Laudonnière, in 1564, to found a Huguenot settlement in Florida. While following closely the historical facts as given by Mr. Parkman, he at the same time introduces enough of romance to relieve the gloom of the story, and to give it a thrilling interest. It is a pity that the illustrator had not reproduced some of Le Moyne's pictures, as, for instance, that showing the building of Fort Caroline, since this artist and author is one of the characters in the story.

'The John Spicer Lectures' (Boston: D. Lothrop Co.), by Mrs. A. M. Diaz, are talks by a boy of eight, on such subjects as Money, Food, Clothes, and Fourth of July, to an audience of children. They exhibit a keen appreciation of boyish character and tastes, and, while pure fun predominates, lessons in honesty, truthfulness, and unselfishness are at the same time shrewdly taught.

With the first number for July, *Science* effected a change in its size and price, enlarging the one and diminishing the other. Its quarto form is now somewhat smaller than the *Nation's*.

More testimony in regard to the shocking havoc made by commercial plume collectors among the bird rookeries of Southern Florida is given in the *Auk* for July (New York: L. S. Foster). "I saw," writes a recent correspondent, "one whole wagon-load of the scapular plumes of *Ardea wardi*, at one point. It is a burning shame, and it would make your heart ache to hear the wails of the starving young birds whose parents have been killed. . . . Cannot something be done to stop such wicked slaughter?" On another page of the same periodical, an agreeable and, no doubt, humane writer tells of shooting a bluebird in New Brunswick to satisfy himself (and others) of the identity of a rare visitor, and of his remorse at having done so. He "almost cursed that professional incredulity which drives an amateur into acts of needless cruelty."

The opening article of the June number of *Petermann's Mitteilungen* (which is unusually interesting and varied in its contents) on the "Plant-zones of Japan" is followed by an investigation by the editor, Dr. A. Supan, into the temperature of Europe. This is accompanied by three maps so colored as to show the mean duration of the frost, warm, and hot periods. From the observations, taken at 471 stations, we learn that Malta is the hottest place in Europe, Nice in France, Bellinzona in Switzerland, Mannheim and Carlsruhe in Germany, and Barnstaple in England. Ernst Hartert gives an account of a visit to the Sultans of Sokoto and Gandu in the western Sudan, together with an elaborate description of the plants of the regions traversed. This is followed by a number of letters from Dr. Emin Pasha, extending from August 10, 1883, to October 26, 1886, and giving a graphic picture of a man wholly thoughtless of self in his devotion to his work and his people. Referring briefly to terrible marches through water breast high, to which was added "many times a little hunger," he hastens to say, "but these are private concerns which have no interest for you." His greatest grief is, not for his utter isolation and danger, but at the thought that his ten years' work seems to have been all for naught, "about to crumble into dust." There is now no slave trade in the Equatorial Province nor in that to the north. The Mahdi's insurrection has done thus much good "in driving out the Khartumers." At present, a small additional force with supplies could easily reconquer this whole region, and insure its peaceful development. "If help comes from any source, so much the better; if not, then will I fall on the field in which I have done my work." In order that by forced inaction he may not "sink into the condition of a beast," he considers what he can best do for science, and determines to make a thorough survey of Lake Albert and Beatrice Gulf. After an examination of Dr. Junker's journals and maps, he says that "the precision and conscientiousness of his work, together with the overpowering fulness of new materials, will place him in equal rank with the first of African travellers." His last letter refers with pardonable pride to the specimens, which he is sending to Europe, of the shoes, cloth, soap, tobacco, and grain which he has taught his people to manufacture and raise. The supplemental number, recently issued, is devoted to the first part of a monograph by Rudolf Credner, on the "Proofs of the Marine Origin of the so-called Inland Seas."

M. G. Rolland contributes to the *Revue Scientifique* for June 18 an interesting account of the work done by the French in the colonization and cultivation of the Sahara, especially the valley of Oued Rir, about 150 miles south of Constantine. This valley, which till recently was nearly all desert, but is now dotted over with small oases, he describes as "a little Egypt with a subterranean Nile." It is a narrow strip of land about 80 miles in length, the surface sand from 15 to 30 feet in depth lying upon a bed of clay 200 feet thick on an average. Below this, water is found in abundance, some hundreds of wells producing 130,000,000 cubic metres annually. The presence of some living springs seems to have suggested to the natives the art of boring artesian wells, for there are some with wooden pipes made in very remote times. He states that it is an incontestable fact that certain of these wells send out living fish, crabs, and mollusks of the same species as those which live in the surface waters. The chief agricultural product as yet is the date. The trees are planted on an average of about seventy-five to an acre, a little wider apart than the wild palms grow; but this permits grain, vegetables, and even cotton to be grown on the same ground. The trees begin to bear in five years, are at maturity at eight, and continue to produce from ten to sixty years. There are no indications that the limit of the water supply has been reached, but it is now proposed, in view of the rapid influx of colonists, to regulate the position and number of new wells dug.

The *Pall Mall Gazette* prints from *Le Livre* M. Octave Uzanne's accusation that "A Bookman's Purgatory" (included in Mr. Lang's papers on 'Books and Bookmen') is an impudent plagiarism from one of this French writer's 'Caprices d'un Bibliophile,' and the English paper adopts the charge with most offensive comments. Mr. Lang's "Bookman's Purgatory" was avowedly imitated from "L'Enfer d'un Bibliophile" of the late Charles Asselineau (who died before M. Uzanne's book was published). Although Mr. Lang had borrowed little more than the central idea of Asselineau's *conte*, he inserted in his little story an ingenious acknowledgment of his indebtedness.

The admirable collection of "Les Grands Écrivains Français," just begun, as our readers are aware, with M. Boissier's 'Mme. de Sévigné,' is obviously modelled on Mr. John Morley's series of "English Men of Letters," and bids fair to follow it in one unfortunate particular. Mr. Morley has neglected the English dramatists; there is as yet no volume on Shakspere, and the sketch of Sheridan by Mrs. Oliphant is quite the poorest book in the series. M. Jules Jusserand, the anonymous editor of the French collection, has already announced eighteen volumes, among which we find lives of only two dramatists, Racine and Voltaire. As yet there is no sign of a Beaumarchais, a Corneille, or a Molière, and all students of the French stage know the need of brief biographies of the first and the last of these three.

Benvenuto da Imola's Latin Commentary on the 'Divine Comedy' has been published, for the first time in its integrity, by Barbèra in Florence (New York: Christern). It makes five grand octavo volumes. The history of the enterprise is curious. The Dante Society of Cambrige, Mass., had determined to publish the commentary, and had charged Senator Pasquale Villari with the copying of the Codice Laurenziano, when Lord Augustus Vernon, recalling his father's interrupted project for publishing the same work, begged leave to assume the direction and cost of it now. To this the Dante Society acceded; but Lord Vernon dying like his father, the task devolved on his brother William, and at last the commentary sees the light.

H. Mereu writes, in the *Courrier de l'Art* for May 27, that his hasty impression of the new façade of the Duomo at Florence is unfavorable to its lasting esteem. He hopes, however, that the fate of Napoleon's façade to the Cathedral at Milan, constructed "à tambours battants," may not overtake it. "One may be," he says, "the Michael Angelo of politics, and only the Napoleon of architecture." Bonaparte's façade is to come down and give place to a better.

—The *Century* for July contains an interesting selection from the series of photographs in illustration of animal motion, taken by Mr. Muybridge under the auspices of the University of Pennsylvania. The sensation made some years ago when Mr. Muybridge first published his photographic studies on this subject, is still fresh, and much was hoped from the further investigation for which the necessary funds were secured. Thirty thousand dollars has been spent upon it, and the result is a photographic record of some 20,000 positions taken by birds, the lower animals, and man. In the present sketch it is stated that these more careful and perfect studies tend to "a reaction to the more familiar views of movement," and to conclusions that "somewhat redeem the unaided human eye from failure to catch the principle of animal locomotion." The automatic character of the motion, at first so striking, appears modified by individual peculiarities of the animal; and as a whole, according to Dr. Allen, whose views are here followed, "the history of animal movement is the development of the rear limbs for use as a spring and source of energy, and of the fore limbs as a basis of support." In race-horses, he says, the fore-limbs are "vaulting poles." We have no space to follow the subject out, and this article itself is merely a sketch, in which the illustrations give as much information as the text. The figures of the flight of birds, with the suggested analogy between their flight and the scientific stroke in rowing, are of great interest, and in the figures of horses it is worth noting that the position which sculptors have often been criticised for selecting, namely, that in which the two feet on the same side are raised, is precisely one shown in the series. The writer calls attention to this as a striking justification of the sculptor as against the critic, from the Parthenon down. The most important article in the number is a powerfully destructive criticism of the mind-cure and faith-healing superstition from Dr. Buckley.

—The most attractive article in the last number of *Les Lettres et les Arts* (Chas. Scribner's Sons) is the one in which M. Eugène Rendu recalls the life and influence of his relative, Jeanne-

Marie Rendu—in religion, Sœur Rosalie of the order of Saint Vincent de Paul. Likewise, the most beautiful of the illustrations is the portrait, engraved by Claude Ferdinand Gaillard, of this Sister of Charity, who for more than half a century reigned over the poorest quarters of Paris, as M. Rendu expresses it, "par le droit de la vertu et par la grâce de la charité," and who exercised so astonishing an influence over all ranks of Parisian society, from the Queen Marie-Amélie and the Empress Eugénie to the poorest workman of the faubourgs. M. Eugène Rendu, who is a personage himself in the Catholic world of France, the friend and collaborator of Lacordaire and Ozanam as a young man, and the lifelong laborer, officially and privately, for the primary instruction of the people, writes of this "saint of the faubourg" with the enthusiasm of one who has lived in the same *milieu*, and shared in the same social and religious movement, in which Sœur Rosalie was a power. A restrained and not at all unpleasant fragrance of devotion breathes from the whole paper, which is written with that refined and subtile elegance which gives to the style of the Catholic literature of the day, whether religious or worldly, a character quite distinct from all other French writings. "Dans le Val d'Arno" is a series of pictures and recollections of rural life and occupations at the villa or *fattoria* of an Italian friend, by M. Henry Cochin. The graceful text is sparingly but sufficiently illustrated by the delicate sketches of an Italian artist, Fabbi. "Le Pieux Ahmed" is a legend of Mohammedan India, related by M. Robert de Bonnières in the most satisfactory manner for a story-teller at once serious and respectful of his materials, and transparent enough to suggest his malicious enjoyment of their incongruity. In his "Sonnets militaires" the Vicomte de Borrelli continues a series of poems recently published under the title of "Les Mercenaires," a name given, for some reason, to the soldiers he commanded in the East. The sonnets are full of fervor and melody, but the artifices of their construction are not sufficiently concealed for complete poetic enjoyment. There is also the long article, suggested by the English Jubilee, "Victoria Regina," which was to have been expected, and the conclusion of "Aux Affaires étrangères," in which M. Paul Hervieu has again proved his fine quality as an artist by exciting the interest and sympathy of his readers by means of the most ungrateful materials.

—The eighth volume of the *Goethe-Jahrbuch* opens with a very successful heliogravure of a hitherto unknown bust of Goethe, which was found lying amid the furniture and other appurtenances of the newly opened Goethe house in Weimar. The bust shows a striking resemblance to the familiar "Apollo-Goethe" by Trippel, and would appear to be the original of that work. Coming to the text of the volume, we notice an innovation in the shape of two original poems—one by Ernst von Wildenbruch in memory of Wilhelm Scherer; the other, written by the novelist K. F. Meyer in answer to a request that he would describe in prose or verse the influence which Goethe had exerted upon himself. Next come several batches of letters, occupying in all a hundred and sixty pages. Taken together they serve to give a vivid idea of the cosmopolitan character of Goethe's interests, and of his relations with men. Only a few of them, however, notably those of Niebuhr, Oehlenschläger, Madame de Staël and the Humboldts, have any intrinsic interest as letters. The department of "Abhandlungen," or critical essays, contains three numbers: Von Loeper discusses the "Trilogy of Passion"; Victor Hehn, the philological indebtedness of Goethe to Luther's Bible; and Th. Süpfle, the literary influence of Goethe upon France. Under a third heading we have a copious assortment of miscellaneous notes and a still more copious bibliography for the year. An appendix reports concerning the German and English Goethe societies, and also contains a prospectus of the forthcoming Weimar edition of the poet's works. This edition, we learn, will appear in octavo volumes of 300 to 400 pages each, and will comprise four parts: first, the "works" proper, fifty volumes; second, the scientific writings, ten volumes; third, journals; and fourth, diaries. The number of volumes in parts three and four cannot yet be announced.

HUNT'S BRISTOL.

Bristol. By William Hunt. London: Longmans. 1887. 8vo, pp. xi, 230.

THE second contribution to the series of "Historic Towns," edited by Edward A. Freeman and Rev. William Hunt, is a book of substantial merit. It is the work of a painstaking student who has diligently and judiciously sifted his authorities. He has not, like Mr. Loftie in his 'London,' confined himself to inadequate printed sources, but has gone direct to the records in the Bristol archives, which he has exploited with the independent spirit of an original investigator. Bristol has been selected to represent the class of ancient English trading towns. Hence, special emphasis has been laid by Mr. Hunt on the development of its trade and industry, though the other phases of its history have not been neglected.

"The place," he says, "that Bristol holds in our national history is one of peculiar importance, for it was for centuries the greatest purely trading town in a country that owes its greatness to its trade. For centuries it was second only to London, and London at least, from very early times, has been something more than a city of merchants. Bristol history, indeed, does not begin until a period that seems almost modern, when one thinks of the relics that bear witness to the overthrow of Aquæ Solis, the forerunner of Bath, or of York, or Lincoln, or other cities of Roman times. For Bristol has always been an English town, and the first fact we know about it does not take us further back than about the year 1000. . . . Whatever and whenever the beginning of Bristol may have been, it is evident that its importance in the eleventh century was of recent growth. And it almost certainly owed its rise to trade with the Ostmen, as they were called, of the towns on the eastern and southern coasts of Ireland. . . . In the trade of Bristol with the Ostmen, the chief articles of export were slaves, and it seems to have been on the worst form of this traffic that the early prosperity of the town was founded" (pp. 1, 10, 11).

This short opening chapter, entitled "Beginnings," admirably illustrates a characteristic of the whole book, namely, the author's abstinence from idle speculations. This negative virtue is a refreshing novelty among writers on English topography. Chapter vi, "A New World," is of particular interest to Americans. It shows how active the Bristol merchants were in discovering and colonizing various parts of North America. Mr. Hunt, like the writer in the new 'Dictionary of National Biography,' adheres to the old view that Sebastian Cabot was born in Bristol, and not, as many eminent authorities have recently contended, in Venice (pp. 128, 129). The concluding chapter treats of the causes of the decline of Bristol trade and the efforts made to restore its commercial prosperity. "This decline was due to the general determination of commerce to the north of England, to the rapid rise of Liverpool, to the natural drawbacks of the port, to the ruin of the West India trade, and to a large extent, also, to the short-sighted policy which drove trade away from the city by the imposition of heavy local rates" (p. 208). Ever since the municipal reform of 1835, there has been a gradual improvement in the trade of the city.

We have found only a few errors of detail in Mr. Hunt's book. Among the principal sources for the history of Bristol, enumerated on page 7, Seyer's 'Charters, etc., of Bristol' (Bristol, 1812) should not be wanting. According to the 'Red Book of the Exchequer' and Tovey's 'Anglia Judaica,' the Jews left England in October, and not in July, 1290 (p. 30). On pages 52 and 82 the author alludes to "Cornesers, or corn dealers." This is evidently a misconstruction of "corvesers" ("corvesarii"), shoemakers, or, according to the definition of Du Cange, "sutores veterinarii, qui coris veteri utuntur." The statement on page 60 that the liberties of Bristol constituted the standard for five Irish and fourteen English towns, should have been hedged in by the words "at least." To the nineteen towns enumerated in the *Antiquary* (April, 1885), which was doubtless Mr. Hunt's source of information, Galway, Limerick, Rathcoole, Rathmore, and probably others, may be added. The lists of affiliated towns in the *Antiquary* do not pretend to be exhaustive.

In his account of the inception of English municipal government (pp. 53–56), the author adopts some of the prevalent errors concerning the gild merchant and the "commune." He tells us that in the twelfth century these terms were synonymous, that the grant of a gild merchant constituted a municipality, that this fraternity was the governing body, and held the "ferm," or rent, of the town. Recent German investigation, the fruits of which the insular mind is somewhat slow to gather in, has shown that all these views are wrong. Not a single charter to English towns in the twelfth and thirteenth centuries contains the grant of a "commune"; and the gild merchant was only a particular part of the town government with circumscribed functions. In a document of the year 1372 it is stated "that Bristol is an ancient borough with mayor, bailiffs, and a communa from time immemorial; that the burgesses had a free merchant guild, and that, in virtue of this guild, the mayor and bailiffs, their predecessors and successors, are used to take a certain fee from all admitted to the said guild for their own use." "Here," says Mr. Hunt, "we have a distinct declaration of the oneness of the merchant guild with the governing body of the town" (p. 57). In our opinion this passage proves nothing as to the "oneness" referred to; and the gild merchant and the "communa" are spoken of separately, as if they were two distinct conceptions.

In enumerating the liberties that were essential to a municipal borough (p. 54), the possession of courts distinct from those of the hundred and county should not have been omitted; this was doubtless more important than any other municipal privilege. In his account of the "great insurrection" of 1312 (pp. 63 71), the author deserves credit for ignoring the prevalent opinion that it was a contest between the gild merchant and the crafts. The documents relating to this trouble mention neither the one nor the other. Mr. Hunt does not speak of the crafts in this connection, but he seems to cling to the misconception that the merchant gild took part in the insurrection. From certain remarks on pp. 64 and 68 one would infer that an oligarchical government was already strongly established in Bristol in 1312. But all the evidence points merely to an unsuccessful attempt of fourteen burgesses to establish an oligarchy, which caused the uprising of that year. The author is right in emphasizing the value of the royal grant of 1373 by which Bristol was made a county, but he exaggerates its importance. True, it "freed Bristol men from all attendance on the courts of other shires, and from the intrusion of the sheriffs" (p. 84); but this, to a certain extent, was the case before 1373. Mr. Hunt should have pointed out that

this new charter was only one of a progressive series of grants by which the administration of Bristol was freed from external interference, and he should have more clearly defined this new stage of municipal freedom.

In justice to the author, however, it must be said that when he now and then errs he does so by falling a little short of the whole truth, rather than by flagrant perversions of the truth in the form of positive misstatements. The few conspicuous errors that disfigure the book are put forth unobtrusively; and even they would doubtless have been in great part avoided, if a single reliable guide existed to give one even the fundamental facts of English municipal history. The work as a whole is well done; if all the volumes of the series equal this one in excellence, the undertaking will be eminently successful.

LABBERTON'S ATLAS.

New Historical Atlas and General History. By Robert H. Labberton. Townsend MacCoun.

We have from time to time noticed the successive revisions and enlargements of Labberton's Historical Atlas with great interest and approbation. The plan was excellent, and the execution in general satisfactory, and each revision was a positive improvement. For the object for which it was primarily designed—that of class instruction in historical geography—it has had no rival. All this commendation the book has richly deserved, even while we recognized some defects in execution and even some surprising mistakes in detail. Last winter the plates of the work were destroyed by fire, and the author and publisher have taken advantage of this occurrence to make an entirely new book, largely based upon the old, but with some features entirely changed.

In the first place, the fundamental character of the book is changed. It was originally an historical atlas, then an historical atlas with explanatory text; now it is a general history with illustrative maps. The maps are in great part the same as in the earlier editions, but appear now as subordinate to the text, which is greatly extended, and made into a complete and continuous general history. In this way a certain lack of proportion which was observable in the earlier text is avoided; when there must be a page of text to every map, it is easy to see that those periods at which there are frequent geographical changes will receive a fuller treatment than those periods, even more important perhaps, at which the map is more nearly stationary. The English Heptarchy, for example, occupied as much space (five maps) as European History from the Reformation to the French Revolution, and many important events were omitted entirely because they did not fit into the scheme of the atlas. In the new work it has been possible to avoid this disproportion. For example, the Heptarchy has three and a half pages in the new book (just about the same matter as in the old, the pages being larger), while thirty pages are given to the period from the Reformation to the French Revolution. As a result, we have a compendium of universal history which is really very complete and accurate. The principal criticism we should make upon it is an excessive number of names and dates which, *for the purposes of general history*, are unessential. We need say little about this historical portion; Mr. Labberton is so thorough and accurate an historical scholar that full dependence may in general be placed upon his statements. On page 29, in speaking of the Centuriate organization of Servius Tullius, the "camp-followers" are put down at *seven* centuries. It should be *five;* and "camp-followers" is a misleading expression for the musicians, mechanics, and light-armed troops who composed these five centuries. On page 68 the union of Burgundy with the empire should be 1032; 1016 was the date of the arrangement, which was consummated sixteen years later. The statement of the origin of the Feudal system (p. 72) is very inaccurate. The Franks did not divide the lands of Gaul among themselves, and the King did not at this period grant *beneficia* to be held of him "in return for acts of special service." On the same page *socage* is spelled *soccage*, and on the next page we read *Feudalisme*.

We shall subject the maps to a more careful scrutiny, because it is here that we find Mr. Labberton weakest. His historical knowledge and historical sense, as we have already observed, rank very high, and the plan of the maps is most excellent. But in *map-work* he has not always an accurate eye, and would seem not to have had a good proof-reader. In all the earlier editions, we have noted a number of unaccountable errors and inaccuracies; and although these have for the most part been corrected in the present edition, it is yet not at all free from blemishes of this nature. At the same time we consider it the best historical atlas for purposes of class instruction, and urge that the greatest pains be taken to make it faultless, or as nearly so as it is in the nature of school-books to be.

We will first note what appears to us to be a defect in proportion in the present edition. The editor has evidently been fascinated by the recent discoveries in the early history of the Orient, and has greatly expanded that part of his work. We have four full-page maps for the period before B. C. 1000—most valuable for any person studying or reading upon this period. But the whole series of important and instructive changes caused by the French Revolution and the Napoleonic wars are passed over unnoticed until we come to the greatest extent of the empire in 1810. The changes of the last generation, on the other hand, are given very well; in plate liv., however, the northern boundary of Greece is incorrectly indicated. The maps of Oriental history, which occupy the seven first plates, are so much a matter of recent and special scholarship that no one but a specialist would be qualified to criticise them. In plate ix. we find the misprints *Arcolis*, *Phalereus*, and *Thebes* (all the other names, as *Athenæ*, being in classic form). In plate xii. the division of Alexander's empire after the battle of Ipsus has been substituted for that after the death of Lysimachus—we think unadvisedly, as the empire of Lysimachus was very transient, and the older map gave the beginnings of Pergamus. The map after the battle of Magnesia is a valuable addition. In the small map of B. C. 74 Galatia is embraced in the Roman possessions, of which it did not form a part until B. C. 25; and in the map of B. C. 63 Galatia and Bithynia, as well as Lycaonia, are included in the "Roman Province of Asia." Plate xiii., "Latium and its Neighbors," is very unsatisfactory; misprints are *Tarquinia* and *Lalneum* (for *Labicum*); Præneste, Gabii, Nomentum, Lanuvium, Velitræ, and Antium are omitted, and a number of mythical or wholly unimportant towns inserted; the Volsci are not given, the Hernici are placed among the mountains occupied by the Æqui, while the Æqui are transferred to the valleys of the Tolerus and Velinus. If they had really lived there, they would not have been such troublesome neighbors to the Romans. In the lower map we read *M. Saeer* for *Mons Sacer*. In plate xiv. we find *Russellæ* (for *Ruselle*), *Amiterum* (for *Amiternum*), *Lucretia* (for *Luceria*), Fl. *Aapus* (for *Anapus*), and *Vadimonium Lake* applied to *Lacus Sabatinus*—the real *Lacus Vadimonis* being much further to the north.

In the excellent group of maps, plate xv., Syracuse was not subject to Rome at the end of the First Punic War. And why the modern names *Vienna*, *Durance*, *Turin* mixed in with ancient names? In plate xvi., the West, 100 years after the Punic wars, the organized provinces ought to be distinctly marked off; but the student would infer that Numidia was an independent province, and that there were three in southern Gaul—*Provincia*, *Gallia Transalpina*, and *Gallia Narbonensis*, while *Illyrium* (for *Illyricum*) would not appear to be a province at all. In plate xvii., a valuable new map, we find *Arenticum* for *Aventicum*, *Juliamagus* for *Juliomagus*, *Autiosiodurum* for *Autesiodurum*, *Cadurei* for *Cadurci*, *Laureacum* for *Lauriacum*, *Vindolona* for *Vindobona*. In plate xviii., Celtic Britain, we have *Cantion* for the *Cantii*, *Trinovantes* for *Trinobantes*, while the Brigantes are not carried far enough to the north. In the map of the Roman Provinces, plate xix., the provinces of the early and the late Empire are mixed together in such a way as to make it wholly worthless for the purposes of historical study. In the maps of the subdivisions of the later Empire (plates xx. and xxi.) we have nowhere any clear representation of the four præfectures and thirteen dioceses; in xxi. the Vandals should be in Pannonia, while the Marcomanni were not at this period an important nation. It is also wholly misleading to place *English* on the German coast of the North Sea. In plate xxiii. we find *Ripārian* for *Ripuarian* Franks. In the valuable series of English maps, from Green, two (for 674 and 685) have very properly been omitted; but it is a mistake not to have any map which shows the seven or eight kingdoms of the Heptarchy—which are a distinct and important list, even if there was no one period when all of them were in existence. In plate xxvii., Arabic ascendency under Walid I., Sicily and the other islands should not have the Saracen color. It would be proper to give Testry and Tours in this map, while Laon does not belong here. Pavia is put west of Milan. In plate xxviii., the division of Verdun, the name *Lorraine* is applied to the whole of Lothair's division. In plate xxx., *Spoleta* is printed for *Spoleto*. In plate xxxv. we find side by side the English name *Naples*, the Latin name *Beneventum*, and the Italian name *Salerno*. *Marseilles* is spelt *Marsielles*. In plate xxxvi. the English forms *Normandy* and *Flanders* stand by the French forms *Picardie* and *Bretagne*, while *Poitiers* stands for *Poitou*. During this period of the fourteenth and fifteenth centuries western Europe is excellent—France even more fully treated than necessary—but for the east of Europe it is very inadequate. In plate xli. Glarus should form a part of the Swiss Confederacy.

For the modern maps we have little but praise. In plate xlv. we find *March* for *Marck*. There is a valuable series of American maps, much improved from the earlier edition; in the several land grants we miss that to the Duke of York. The genealogical tables are also very full and good. In No. xii. *Goleazzo* is printed for *Galeazzo*. In No. xxv. it is a mistake not to put the sons of Henry II. in the order of age—*Godfrey* (put by mistake for *Geoffrey*) stands after John, while Henry is omitted. There is an index and a table of contents with an excellent bibliography.

A serious defect in many maps of the earlier editions was want of proportion in distances, and inaccuracy in the situation of places. This defect has generally, but not always, been corrected in the present edition.

This may seem a formidable list of corrections; but many of them are misprints merely, and although some of them are sufficiently serious, they do not affect our judgment as already expressed—that for purposes of instruction there is nothing to compare with this book, while as a reference atlas it is probably the best in English. For the

latter purpose it could still be improved by taking pains to insert at their proper epochs names of important battle-fields, etc., and omitting them at periods which they do not illustrate.

Episodes in a Life of Adventure. By Laurence Oliphant. Harper & Bros.

It is always dangerous for a man to hazard the assertion that his neighbors are all lunatics. It is too much like the outcry, "All men are liars," and the Cretans "always" so. Mr. Oliphant's present outlook upon the world is that it is "a gigantic lunatic asylum" (p. 342), and his attitude to his readers is that of "compassion" (p. 343), with "attachment." Fortunately for buyers, readers, and hasty critics, he has penned his most amazing chapter last of all, so that many of the lunatics and compassionated ones may escape its reading. We suspect that his entire scrap-book, or bundle of pamphlets—we can hardly suppose a fresh manuscript—was made for the purpose of publishing that colophon. Being now engaged upon investigations in psychic phenomena, Mr. Oliphant is encouraged by the results thus far achieved, and believes that "a new moral future is dawning upon the human race." Meanwhile, since ordinary mankind does not believe this, being perfectly willing to think the present world good enough, our author launches a book out of his portfolio, describing that portion of his life which, he assures us, appeared to him "distinctly as a most insane period" (p. 342).

We lunatics must confess that, according to our feeble minds, the episodes in Mr. Oliphant's life of adventure are well told; for this writer of many books—here so well advertised in foot-notes—has a readable and fascinating style. His opportunities were such as fall rarely to the lot of one man. We do indeed wonder, even as we wondered when reading Hobart Pasha's autobiography, how a man can have any conscience left after he has been so large a personal part of the episodes narrated. Perhaps, however, it is a symptom of our lunacy when we say that this is apart from the literary value of the book, which is considerable. Mr. Oliphant's story, like so many other good ones we have read, gains nothing, but loses distinctly, by having a moral tacked on the end. He had much better have spared his compassion and his moral, and given us a good index of honest workmanship. He would have saved not only our perplexity in locating the lunacy which he harps upon—whether in his head or ours—but would have allayed our natural suspicion that his book-making, in this instance, is contract work for a publisher, or the hasty emptying of a portfolio to provide means for his psychic researches.

The episodes described are those of diplomacy, filibustering, visits to out-of-the-way places in the interest of curiosity or pursuit of knowledge, war correspondence, and travel. "The Overland Route Forty-six Years Ago" and "Revolutionary Episodes in Italy in 1848," give us a good picture of the facilities of travel in that day, and provoke a contrast with the appliances and possibilities of our own time. In "My First Experiences in Diplomacy" we touch upon American affairs, and are intensely interested in seeing ourselves as others see us. A lively picture of Washington before the war, as seen by a young and verdant Briton, is given in this chapter. Soft-shell crabs and champagne lying upon Congressional stomachs, and the outward blandishments and flatteries of Lord Elgin, seemed, to our young diplomatist's eyes, the potencies that secured the reciprocity treaty between the United States and Canada. Strangely enough, Mr. Oliphant names the figure-heads of the British Commission, but not Sir Ambrose Shea, by whose efforts mainly the treaty was made and carried through. He probably includes this most important person in the Treaty Commission in the "one or two Canadians whose advice and assistance in the commercial questions to be treated were of value." In another chapter, "Adventures in Central America," in his description of the Confederate States immediately after the war, he draws an interesting comparison between the nature and extent of the resistance and exhaustion of the Confederates and those of the French during the German invasion. In the one case, "ruin and devastation marked the track of invading armies over vast tracts of country, and testified alike to the severity of the struggle and the obstinacy of the resistance." Having marched with the German armies through most of the Franco-Prussian war, he says that, "except immediately around Paris and in one or two isolated localities like Châteaudun, it [the conflict] left no traces at all," showing "the flimsy nature of the resistance which had been offered." He declares: "The Franco-German battles were essentially artillery combats; and that, with the exception of one or two of the earlier battles, such as Speichern and Gravelotte, the opposing forces never came to close quarters at all." "During the Loire campaign . . . both sides played at such long bowls that it was very difficult, even with the aid of a field glass, to see a Frenchman." With this he contrasts the case in the American war, when, towards the close, "both sides almost abandoned artillery as a useless arm, and a source of weakness rather than strength when men, not to be deterred by noise, rushed in on the guns." "If the German armies had found themselves confronted with the comparatively raw and untrained levies of the American rebellion, they would have discovered that there is another art of war altogether from that in which they have perfected themselves, of which they have had as yet no experience, and which consists in an invincible determination to get at close quarters with the enemy as quickly as possible, and, if necessary, to die there rather than come away."

In the Asiatic possessions of Great Britain and in China and Japan, Mr. Oliphant's episodes were thrilling; and his review of the events in the hermit stage of these countries is all the more interesting reading by contrast with the present. We wonder whether it is still true, as Lord Elgin wrote twenty years ago: "I have seldom, from man or woman since I came to the East, heard a sentence which was reconcilable with the hypothesis that Christianity had ever come into the world." In his account of "The Attack on the British Legation in Japan in 1861," in which Mr. Oliphant lost blood, he illustrates that British impenetrability to ideas for which some of his eminent countrymen are noted. On page 111 he speaks of the visit of Lord Elgin's party to Yedo, as though this was the first time foreigners had entered it. On the contrary, Mr. Townsend Harris had previously lived nearly a year in the city, and he, with a party of twenty-eight Americans from the United States steamship *Mississippi*, had taken up his quarters, establishing the Legation of the United States in Yedo July 8, the English party not arriving until August 12 of the same year. Mr. Oliphant still calls the Japanese who attacked the British Legation Lonins, when there is no *l* in Japanese; and seems even yet, in the twentieth year of the present Mikado's reign, to be without a clear understanding of the causes of that event. The rō-nins, or "wave-men," rovers, who had severed the tie of feudal loyalty to their former masters, he speaks of as "belonging to Prince Mito." While they had once served that baron, their object in shedding English blood and attempting to burn the foreigners' legation was a simple one—to embroil the shō-gun ("Tycoon") in a war with Great Britain or some other treaty power. The Yedo government thus weakened, the Mikado could the more easily crush the shō-gunal usurpation, and restore ancient monarchy.

The remainder of the book, notably the account of the Polish Insurrection and the Schleswig-Holstein war, is readable and full of graphic details.

Initials and Pseudonyms: a Dictionary of Literary Disguises. By William Cushing. T. Y. Crowell & Co. 1886. 610 pages, double columns.

Mr. Cushing states in the preface, what might appear to advantage in the title, that this compilation is designed as a dictionary of American and English initials and pseudonyms. The few Continental examples given represent the subject so feebly that it would have been better to omit them, unless, like the "Bibliophile Jacob" and "George Sand," foreign authors have become in a sense English through translations. If, also, biographical details, especially those not literary, had been reduced to a closer limit, this book would have cost less and reached more persons. Information regarding Balzac's struggles with poverty, for instance, and the "wunderful vississytoods" of Joseph Barber, the "Disbanded Volunteer," could better be found elsewhere.

Turning over the pages of this book and the larger collections of Halkett and Laing, Barbier, Quérard, and Weller, one is astonished at the extent of this kind of literature, and puzzled to know on what it feeds. Franklin describes in his autobiography how, when a boy, wishing to write for his brother's paper, and suspecting that anything of his might be rejected if its source were known, he wrote an anonymous paper in a disguised hand, which he placed at night under the door of the printing-office. When his brother showed the paper to his friends, he "had the exquisite pleasure of finding that it met with their approbation, and that in their different guesses at the author none were named but men of some character among us for learning and ingenuity." This story suggests one of the reasons why concealment is so common among authors, especially those who are like certain unknown quantities in algebra which have no fixed value, but depend upon assumption. The unknown is always wonderful, and, given mist enough, one may appear of the proportions of the Spectre of the Brocken. Often the motive is a desire to disarm criticism. The Brontë sisters confess that in veiling their names they did not declare themselves women because they suspected that "authoresses" were looked upon with prejudice. Equally unwilling to appear in men's attire, they selected names which might belong to either sex. An aversion to publicity may arise from timidity. The would-be author, while doubtful of welcome, may prefer concealment. "I shall write first to see if I can write; then for money, and then for fame," announced a young Southern woman calling herself "Viola." It is during the tentative period, while testing one's powers and the endurance of the public, that an assumed name is found convenient.

As the cothurnus magnified the appearance of the Athenian actor, a well-selected pseudonym serves to give dignity and attract attention. Readers of pamphlets and newspapers published seventy-five years or more ago, when questions of the formation of government were under discussion, know how often such worthies as "Brutus," "Cato," "Phocion," "Publius," and "Algernon Sidney" appear—not, however, representing as many individual writers. Samuel Adams wrote over the signatures "Candidus," "Populus," "Sincerus," "Valerius Poplicola," and other names, his plan having been to work in secret behind the scenes, from motives of tact putting

others conspicuously in the foreground; and while these disguises may sometimes have been too transparent to deceive the public, the effect probably was, by multiplying himself, to create public opinion. Doubtless he concealed himself at times from expediency, as then became a man prudent as well as bold.

Earnestness is less apparent in anonymous literature in recent times. On the contrary, authors of solid books occasionally drop their own names when they turn aside for relief to lighter work, as when the mathematical lecturer at Oxford steps down from his desk to appear as "Lewis Carroll" in 'Alice's Adventures in Wonderland.' M. Rivail gave up his own name, attached to his books on education, to assume that of "Allan Kardec," when writing on spiritualism. Sometimes there may be a suspicion that the unacknowledged work will prove to be rubbish; in that case, like the mist which enveloped the Trojan heroes, a pseudonym enables one to retreat undetected and unharmed.

A disguised name has been found to give an advantage in controversy. Since the time of "Junius," political satire would have lost half its sting if its authors had been obliged to stand responsible for it under their own signatures. Concealment adds both length and edge to the sword, which may be drawn in a bad or questionable cause as well as a good one. M. Philarète Chasles has described how, during the eighteenth century, English writers "deliberately renounced the lustre of their own names, and sacrificed their vanity to their interest or passion, concealing their names and disguising their hands to carry out their work better."

Mr. Cushing has been a laborious and careful worker, and his book is more comprehensive and accurate than its predecessors published in this country. It is gratifying to learn that it has received so generous a welcome that this revised edition has been published, in which many of the errors of the first edition have been corrected. Errors must of course be expected in compilations of this kind, which deal with shadows. Often, as in the case of the Nihilistic writer "Stepniak," a book is ascribed to several persons, no one of whom may be responsible for it. The true author may be discovered only as a city is taken—by gradual approaches; and during this process much that is printed needs to be cancelled. There still remains a great work to be done in this department of research; indeed, as far as English literature is concerned, only a beginning has been made. Mr. Cushing acknowledges his indebtedness to a friend who has furnished one-sixth of his titles. Credit might properly have been given also specifically to others, as to the *Library Journal*, which for ten years has had a department of anonyms and pseudonyms, containing largely original matter. Information of this sort is obtained with great labor, through correspondence and in other ways, and deserves to be regarded as literary property.

Altaic Hieroglyphs and Hittite Inscriptions. By C. R. Conder, Capt. R. E., Author of 'Tent Work in Palestine,' etc. Scribner & Welford. 1887.

In reviewing W. Wright's 'Empire of the Hittites' (No. 1022 of the *Nation*) we made an attempt to characterize the flimsiness of the foundations on which the pretentious structure of Hittite archæology has been reared in our day. We showed some striking instances of the critical levity with which tentative identifications and more than dubious analogies are made to serve as scaffoldings for vast aerial constructions. Of the best equipped and comparatively most conscientious laborer in that new field of antiquarian restoration, Prof. Sayce of Oxford, who, perhaps, has the best chance of being called the father of Hethology, we could only say that he was "piling guesses and surmises upon conjectures and hypotheses." Yet, with all our experience of Hethological practices, we were far from being prepared for such an advance in that line as Capt. Conder unfolds before us in his latest work. He boldly embraces the entire extent of "Hittite" remains—Syrian, Cappadocian, Lydian, and all; establishes a Cypriote "connection," a Cuneiform connection, an Egyptian connection, a Canaanite connection, and wonderfully numerous "other connections" in the most remote east and west of the Old World; combines the whole of the Hittite inscriptions in the widest sense into an Altaic system; and professes "to have found a true key to the reading of the Altaic system"—a key "simple and demonstrable"—and "to have identified the language of these texts as belonging to the family of Ugro-Altaic dialects, of which the Proto-Medic and the Accadian are, perhaps, the oldest known examples," and the Magyar and Finnish the most noteworthy living idioms.

Capt. Conder also endeavors to show "that the symbols are the prototypes whence the Cuneiform system has developed." He treats of the rules of translation, of "Altaic" grammar, and religious ideas, more extensively of the "Altaic" symbols, and then presents an analysis of the various Altaic inscriptions as found at Hamath, Aleppo, Jerabis, Marash, Ibriz, etc. The Jerabis Text No. 1 is presented as the most distinct and best-preserved of all "Altaic hieroglyphs," and the following as a probably correct verbatim translation of it:

"1. Prayers-his (stone Set ?) -him-to for Fire flames-growth-for-to-ing. King king . . . ing. God (Ane) become words to strong. . . .
"2. . . . to . . . (flow ?) Tamzu-Aa to. Fire-flames-grow-for-ing King over king descending right (or propitious) become Thee mighty Set strength.
"3. (the memorial to ?). Thee . . . watering Set Bull-water-of-to prayer-memorial for thee for, thou (accept ?) stone (of) Set sheep-water-of-to . . . protect to Thou . . . meing become for."

We omit the last two stanzas of the memorial hymn, as differing little from the first three. Nor shall we enter into an analysis of the analysis, being ourselves possessed of too little Proto-Medic, Accadian, and general "Altaic" knowledge, presupposing little of it in our readers, and seeing that the author himself uses throughout second hand knowledge, and that mainly drawn from the contributions of Prof. Sayce. The work of the latter, we are distinctly told, "stands in quite a different category to that of other students of the Altaic inscriptions," being "marked by a penetration and originality which others have not equalled," and entitled to claim the present discovery as "its direct result." This being the case, and finding that the highest Hethological authority has expressed his opinion on the value of his disciple's Altaic key (in the London *Academy* of May 21), we for once deviate from our rule not to copy reviewers in reviewing, and deferentially make room in these columns for the master's judgment on the cardinal point of the argument:

"The reasons . . . which led Capt. Conder to his belief that Accadian words are concealed under Hittite symbols were all based on a misapprehension. *Me* or *ma* is *not* the word for 'country' in either Accadian or 'Protomedic'; in Accadian the word is *mada* and *kengi*, in 'Protomedic' *murun*. . . . Sceptre in Accadian is not *pa* but *gisdar*; *pe* probably means 'a leaf.' *Ku* is not the 'Protomedic' word for 'King,' which (as Oppert long ago discovered) is *anin*. . . . *Khar* does not mean 'mountain' in Accadian, and there *is* 'a real distinction' between the sounds of *l* and *r* in that language; *kakama* is not the Accadian word for 'amen,' but an ideographic mode of writing *erimma*, afterwards contracted into *ri*; *sa* and not *ua* means 'and'; and though *zu* certainly is 'thou,' the Kypriote character read *zu* by Capt. Conder has been shown by Dr. Deecke to have the value of *nos*. . . . When the supports of Capt. Conder's Accadian theory thus fall away, it is not necessary to discuss the interpretations of the inscriptions which he has based upon it."

An Easter Vacation in Greece, etc. By John Edwin Sandys. Macmillan & Co.

It is not permitted to everybody to go to Corinth, and Athens is still further away; but if it is permitted to everybody who goes to print his journal, the world will come to pray that some wide disaster may close the road to Greece. Dr. John Edwin Sandys and his wife, having made a vacation run to Greece, lasting from March 17, when they left Cambridge, to April 20, when they left Corfu (the author adding considerately, at the end of the book, that he got back for the beginning of the term on the 30th of April), Dr. Sandys perforce must write thereon a book! Duller than ditch-water it is, but it has one quality which renders it of interest to the bibliophobe—it shows lucidly how little brain-work it takes to make a book. It is not clear, by any means, that the Doctor is deficient in brain power—his degree, "Litt.D.," is presumptive guarantee that he is not; but the journal of his sojourn of twenty-six days in Greece, "kept at the time for my own convenience only, and now printed [for that of the printer, possibly] with such slight omissions and additions as appeared requisite to render it suitable for another purpose," might have been made far more useful and complete if it had been compiled from the last edition of Murray, without leaving Cambridge. He quotes Baedeker, apparently ignorant that it is published in English, for he says that "the routes of the steamers, though duly recognized in Baedeker's 'Griechenland,' are imperfectly known to English travellers in Greece"; and he seems to have been so little observant that he did not learn that "Baedeker's 'Griechenland'" (by which he evidently was guided, for he sees nothing that is not given in it) is the most inaccurate guide-book published, probably, since Marco Polo—so inaccurate, indeed, that a scholar had better take Pausanias and stick to him. The delusive portability of the guides of this house (outside of Germany) betrays travellers into great loss of labor; but especially for Greece and Italy they are treacherous and untrustworthy as information, and silly as comment, to a degree incredible in a German publication. The fact that Dr. Sandys did not discover this, shows that he depended very little on the use of his own wits. If people will depend on a guide-book for what they see in travelling, they should, at least in Greece, use Murray, which, though heavier and of a higher price, is cheaper as being far more complete and accurate.

Seriously, the triviality of this book is beyond exaggeration. The journal begins with the journey to Folkstone, and goes through with the barest school-boy diary of what the travellers saw every day, from Paris to Peiræus and then on, which, we are fully persuaded, was ever put into print except in a comic journal. It seems inconceivable that a Cambridge scholar should consider it worth while to make a book of such commonplaces as the following:

"The sky was brilliantly beautiful when we went on deck at seven o'clock, and, in the pearly light of our first Greek morning, saw the sunlit hills of Salamis. We were rowed ashore by two boatmen, who landed us at the custom-house, which happens to be on the site of a temple founded by Conon in memory of the battle of Cnidus; and after going through the formal ceremony of walking past the courteous officers of the customs, we were soon driving along the five miles of dusty road to Athens, catching one or two glimpses of the Acropolis on the way. At the further end of the long street of Hermes,

which runs from the Theseum [!] and the railway station on the west to the Royal Gardens and the Square of the Constitution on the east, we found our hotel, the Hôtel des Etrangers, looking out upon the green trees which are a relief to the eye after the glare of the surrounding streets. An excellent room was ready for us, and we arranged to stay for a week, paying a sum equivalent to £1 a day for both of us; this charge including lodging, meals, and attendance."

And so on, as if nobody had ever been in Greece, through 110 pages, at the end of which the Muse, as in duty bound, gets the Doctor by the hair and extorts from him a full page of such music as the following:

> "Farewell to all the classic land,
> The fame-encircled Attic strand;
> August Athena's matchless fane,
> Colonus 'mid the olive plain"

—a *catalogue raisonné* of everything he saw in Greece, with the one virtue the diary has not—that of brevity.

The author has been at the trouble to print a bibliography of travel in Greece which hardly justifies his book, and a time-table of steamers in Greece, of which he remarks the absence in the guide-books. If he had learned the reason of the absence, viz., that the times of sailing are continually changing, so that tables are of no use beyond the season, he would have been spared another appendix even more useless than his bibliography. Appendices, when they are added to a book that is worth having, have sometimes a permanent value, but nobody publishes a book for the sake of the appendices, and nobody is likely to carry Dr. Sandys's book to Greece for the sake of his.

On Teaching English. By Alexander Bain. D. Appleton & Co. 1887.

THIS work is supplementary to the author's text-book on rhetoric. He says that the great principle of teaching is to call the pupils to account for "the matters actually imparted in teaching"; and he would confine the art so closely to mere instruction and examination, imparting and extracting in turn, that he strenuously objects to original composition, and hardly tolerates paraphrasing as a means of teaching our language. He prefers a minute criticism of passages from writers of reputation, and recasting them, not for the sake of change of vocabulary and phrase, but only to better them or show that they cannot be bettered. He objects, also, to the use of our standard authors, and has a special antipathy to Bacon and Shakspere, to read whom is, in one of his expressions, "to abolish the three intervening centuries." The greater portion of the volume is occupied with a precise criticism of several poems of our literature, with a view to illustrate how they should be used in teaching English; and Prof. Bain also tries to define poetry. More inept criticism, greater practical misconception of the methods of the poet, and a more indifferent blindness to his point of view, we have not met with in a book from so eminent a hand. The power of suggestiveness is to him only feeble obscurity, and at all points he requires a dryness of intellectual light which leaves only the facts of experience as scientifically discerned and ready for tabulation. Such a writer naturally prefers Wordsworth's "Skylark" to Shelley's, and seems to think that even then too much is made of a very small bird; and one is not surprised to find him citing the more rhetorical parts of Pope with thorough satisfaction. A good example of his poetic incapacity is the analysis of Dryden's "Ode on St. Cecilia's Day," in which his judgments are ludicrously inapplicable, as when he seriously refers to the "necessarily humble character of Jubal's original shell" as a reason why his brethren could not have been so much affected by its "celestial sound" as Dryden represents. But the critic reaches his acme when he describes the magnificent last line of the ode, figuring the trumpet-blast of the Last Judgment—

> "And music shall untune the sky"

—as "obscure or insufficient."

For ourselves, we decline to accept Sir Arthur Helps as "completely superseding" Bacon, even in the single essay on "Business"; we cannot think Shakspere will be sufficiently known by our youth through quotations from him in other books; original essay-writing seems to us to have a value in education, and the extracting by examination matters imparted by an instructor strikes us as a narrow view of the office of the pedagogue; and as for poetic criticism, commend us to some other professor, and preferably to one who will not cite "In Memoriam" as an attempt "to disparage geology," or remark, apropos of Goldsmith's famous line, that "much more than a breath is necessary to make princes and lords."

Grundzüge der Meteorologie. Die Lehre von Wind und Wetter. Von H. Mohn. Vierte verbesserte Auflage. Berlin: D. Reimer. 1887.

MOHN'S 'Meteorology' may be characterized as an eminently safe book. The author is Professor of Meteorology in the University at Christiania, and director of the Norwegian Meteorological Institute; he holds a distinguished position as an investigator of observed phenomena, and, jointly with his colleague, Prof. Guldberg, has contributed several papers to the deductive and mathematical study of atmospheric movements. His book, therefore, presents a view of the elements of meteorology as seen from the higher level of advanced knowledge, and consequently has nothing in common with compilation text-books, which are written, as it were, from the under side of their subjects. The paragraphs on the constitution and movements of cyclones may be referred to as good illustrations of mature and conservative views. On the other hand, the style of the book is rather too authoritatively didactic for our modern conceptions of the best teaching. It would suit very well those teachers who depend on the text-book for their knowledge of the subject; their students could memorize and recite page after page, and thereby harmlessly acquire a large body of good facts. It would also suit those rare teachers who use a text-book only as they use a dictionary, and make up the work of the class from their own knowledge. But the average teacher, who needs from the text-book some assistance in his method of presentation, as well as some addition to his store of facts and definitions, will find this book rather too hard for him: his scholars will be instructed, but not trained; they will learn something about meteorology, but they will not learn how to learn anything more. In short, Mohn's book is so good that it needs a good teacher to use it.

The recent supply of valuable works on meteorology is remarkable. Buchan of Edinburgh has revised his 'Text-book' in his article in the 'Encyclopædia Britannica'; Scott, of the British Weather Service, has a volume on 'Elementary Meteorology' in the "International Scientific Series"; Van Bebber, of the German Weather Service at Hamburg, has prepared an exhaustive work on weather prediction; Sprung, lately a colleague of Van Bebber's, now engaged in the Prussian Meteorological Institute at Berlin, has written an admirable text-book of dynamical meteorology; and Ferrel, lately a professor in our Signal Office, has completed a volume on 'Recent Advances in Meteorology,' to which his earlier researches led the way. The allied subject of climatology has two works—one, by Hann of Vienna, than whom no one is more competent; the other, by Woeikoff of St. Petersburg, originally in Russian, and now translated into German. The ambitious meteorologist is well supplied with books, provided only that he can do what all ambitious students must do—read German.

Life of John Colet, D.D. With an Appendix of Some of his English Writings. By J. H. Lupton, M. A., Submaster of St. Paul's School, and formerly Fellow of St. John's College, Cambridge. London: George Bell & Sons. 1887. Pp. xiv, 323.

MR. LUPTON has already made his own all that pertains to Colet; his successive editions of the Dean's works before unpublished, from the 'De Sacramentis' in 1867 to the 'Opuscula' in 1876, having done as much as anything to make Colet something more than the shadow of a mighty name. This 'Life' is thus a fitting close to the series of Mr. Lupton's publications in the same field. As a biography it is disappointing on account of the exceedingly meagre material available, and the strange uncertainty which attaches to many features of Colet's life. Indeed, it is part of the value of Mr. Lupton's work that several of the certainties of Knight and other biographers are resolved into uncertainties under the analysis of his profounder research. Thus he shows that the commonly accepted opinion that Colet was educated at St. Anthony's School and at Magdalen College (an opinion advanced without qualification in the 'Britannica,' we notice) rests upon little more than conjecture. It is strange that the contemporaries of a man who so strongly impressed himself upon his age should have permitted important facts of his life to fall into such obscurity; the pious effort of Erasmus to embalm the memory of his friend accomplishing little, owing to English indifference.

The book is written in all scholarly soberness. The full learning of the author on all the points he touches makes his occasional conjectures always plausible and suggestive. For the most part, however, he is content to show what is known, and to leave the unknown with no guesses about it. When he does undertake a Cuvier-like restoration at the hint of a fragment, he sketches extinct forms with the hand of a master. Life at Oxford at the close of the fifteenth century, for example, rises before the reader vividly. On the ground of strict relevancy to the subject, there may be thought to be something too much of such affluent illustration of a possibility—four pages of description of Florence, for instance, her teachers, philosophers, and preachers follow the supposition "if his [Colet's] steps were really turned to Florence" (p. 50); but one in search of pleasant and instructive reading will advance no objection on that score. The great school which had its birth in the Dean's foresight and generosity and love of learning, remains his best memorial. In striking contrast with certain founders of our own day, who thought that wisdom would die with them, is the long look into the future taken by Colet in the statutes of St. Paul's: "Notwithstanding these statutis and ordinancis," is their closing section, "in whiche I have declarid my mynde and will, yet because in tyme to cum many thingis may and shall surwyne [supervene] and grow by many occasions and causis, which at the makyng of this boke was not possible to come to mynde, . . . I leve it hooly to theyr dyscrecion and charite, I mean of the Wardens and Assistences of the Felowshipp, with suych other counsell as they shall call unto theme, good litterid and lernyd menne, they to adde and diminish unto this boke, and to supply in it every defaute, and also to declare in it every obscurite and derknes, as tyme and place and just occasion shall requyre." His famous Convocation sermon, given in full in the appendix, reminds one,

in its fearless plainness of speech and direct stroke, of Luther and Savonarola, and would alone make good Green's assignment of Colet to a place among the Reformers before the Reformation.

The Shaybacks in Camp. Ten Summers under Canvas. By Samuel J. Barrows and Isabel C. Barrows. Boston: Houghton, Mifflin & Co. 1887.

THESE unwearied campers have spent all but one of their ten summers on the shore of Lake Memphremagog; and by going always to the same spot, and storing utensils and conveniences from one year to another, they appear to be as well provided for residence there as one would be in a country house. It is not camping of the old-fashioned kind, with discomforts and make-shifts unexpected and innumerable, of which perhaps the chief use is to remind us of our civilization; but, quite the contrary, the "Shaybacks" progress instead of barbarizing, and end their first decade with a steam-launch and a substantial well-chinked log hut, to say nothing of hammocks for pews during meeting time. The volume which they have published contains the history of this evolution, and is brightened by some anecdotes of mild adventure, principally in navigating the steam launch; but its value lies in the hints and explicit advice it gives in regard to family camps, and its account of how this particular camp conducts its domestic and foreign affairs. The success of "the Shaybacks" is beyond question, and Lake Memphremagog seems to be an admirable spot for further experiment in the process of returning to savage life and re-emerging from it. Perhaps it would be as well to start with a steam-launch and a log hut, and see if one could not work up to hired stokers and a French cook. The book is agreeable reading, though its adventures are, as has been said, of a mild order, and its reflections have just the tenuity that consists with the absolute nirvana of a true camp life.

Prose Pastorals. By Herbert Milton Sylvester. Boston: Ticknor & Co. 1887.

SUMMER volumes which describe the life of nature have become very common of late, and they betray a tendency usually either towards the specialty of natural history or the generality of an Emersonian reflectiveness. Mr. Sylvester has the Emersonian characteristic, but it has a poetic rather than philosophic turn, and does not interfere with his giving his readers a very natural picture of the old home of his boyhood, a farm somewhat to the southward of the White Hills, in the midst of scenery and homely tasks dear to the New England heart. The author's own honest and unrestrained pleasure in his recollections, his attachment to the homestead and all the doings of his young life there, make the pleasantest quality of the book. There is next to nothing of character and no human nature except his own in the pages; but he has the artist's eye and the fisherman's infatuation, and gives us still life and speckled trout in about equal profusion. A definite portion of the volume is devoted to angling in the White Mountains, which may be of some special interest to brothers of that craft; but the atmosphere and the scenes of the remainder are in one general tone, almost a monotone. Were it not for a forest fire, with its aftergrowth of blackberry-vines, a swamp which one thinks would have rewarded further exploration, and an admirably described boyhood ride to the market-town in the small hours of the night, with all the morning changes of light, mist, and sound, the volume would have had no more variety than a succession of summer days in the quiet country it makes poetical.

BOOKS OF THE WEEK.

Appleton, G. W. A Terrible Legacy. D. Appleton & Co. 50 cents.
Bacon, Prof. E. F. Leitfaden zum Erlernen der deutschen Sprache. Clark & Maynard.
Barbey d'Aurevilly, J. Le Théâtre contemporain. Paris: Frinzine; Boston: Schoenhof.
Boissier, G. Mme. de Sévigné. Paris: Hachette: Boston: Schoenhof.
Bridgman's Indexed Map of the Environs of New York City. E. C. Bridgman. $4.
Confessions of a Society Man. Belford, Clarke & Co.
Delitzsch, Prof. F. A Day in Capernaum. Funk & Wagnalls.
Field, P. B. Canvas Canoes: How to Build Them. *Forest and Stream* Publishing Co. 50 cents.
Garlanda, F. The Fortunes of Words. A. Lovell & Co.
Gilman, A. Historical Readers. 3 vols. Interstate Publishing Co. 36, 48, 60 cents.
Haggard, H. R. Allan Quatermain. Chicago: Rand, McNally & Co.; New York: Geo. Munro.
Horr, N. T., and Bemis, A. A. Municipal Police Ordinances. Robert Clarke & Co.
Hugo, V. Things Seen. Harper & Brothers. 25 cents.

American Society for Psychical Research.
The Research work of the Society is at present divided between five Committees:
1. The *Committee on Thought-Transference* is engaged in ascertaining whether a vivid impression or a distinct idea in one mind can be communicated to another without the intervening help of the recognized organs of sensation.
2. The *Committee on Apparitions and Haunted Houses* wishes to collect accounts, from trustworthy sources, of apparitions of absent or deceased persons, of premonitions, whether these occur in dreams or in the waking state, of disturbances in houses described as "haunted," and of any cognate phenomena.
3. The *Committee on Hypnotism* is engaged in the study of the mesmeric or hypnotic trance, with the object of ascertaining its causes and of elucidating its psychical and physiological accompaniments.
4. The *Committee on Mediumistic Phenomena* is chiefly concerned with the experimental investigation of the phenomena commonly described as "Spiritualistic," and is particularly desirous of obtaining opportunities for investigation with private and unpaid "mediums," or other persons in whose presence "mediumistic" phenomena occur.
5. The *Committee on Experimental Psychology* is making investigations in folk-thought or the study of sociology in its psychological aspects. It seeks to ascertain the psychical characteristics which many individuals may possess in common in virtue of their being members of particular races or communities.
Communications are earnestly requested from all persons interested in any branch of the work of the Society.
Further information can be obtained from the Secretary, RICHARD HODGSON,

JOHNS HOPKINS UNIVERSITY,
BALTIMORE.
Programmes of the instruction offered, for the academic year beginning October 1, 1887, to Graduate, Undergraduate, and Special Students will be sent on application.

Germany.
PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, French, and other branches. Summer resort for seabathing. Fine surroundings. Isle of Rügern, University of Greifswald. For circulars address PROF. J. M. CROW, Ph.D. Grinnell, Iowa.

TO ALL GOOD LIVERS
Miss Parloa's Kitchen Companion
APPEALS.
It is an entirely new work of a thousand pages by *the* authority on household matters, in 1 vol., crown 8vo, cloth, $2.50.
This book merits the highest praise. It has not been hastily written to meet a sudden popular demand, but is rather the result of conscientious labor in leisure hours for several years, and it will unquestionably be a welcome visitor in thousands of families all over the land in which Miss Parloa's name and fame alike are familiar.
IT IS THOROUGHLY PRACTICAL;
it is PERFECTLY RELIABLE; it is MARVELLOUSLY COMPREHENSIVE; it is COPIOUSLY ILLUSTRATED; it is, in short, overflowing with good qualities, and is just the book that all housekeepers need to guide them in their daily duties and to enable them to make their homes happy.

The Nation.

NEW YORK, THURSDAY, JULY 21, 1887.

The Week.

LAST month the London *Economist* had two editorial articles on "The United States Treasury," examining the national finances in all branches, including the national-bank currency, the silver question, the revenue surplus, and the public debt. The conclusions reached by it ought to be highly flattering to our national pride. It finds that our circulating medium of all sorts is backed by 54 per cent. of specie, as compared with 30 per cent. in the United Kingdom, and that, even after making allowances for the depreciation of silver, the specie reserve is still somewhat higher than that of the Bank of England, "so that it must be admitted that the convertibility of the paper is placed beyond all question." We may remark parenthetically that the substitution of gold and silver certificates in place of national-bank notes withdrawn has the effect to increase the metallic basis of the paper circulation from 25 per cent. to 75 and 100 per cent respectively. Probably the increase of metallic reserve is even greater than this; the original law requiring the banks to keep a reserve of 25 per cent. against circulation having been long ago repealed, and no other fund to redeem circulation being required except the 5 per cent. fund in the Treasury at Washington. But for every gold certificate issued there must be 100 per cent. of gold deposited and held for its redemption, while for every silver certificate there must be from 75 to 78 per cent. of gold value so deposited and held, looking merely at the bullion value of the standard silver dollar. The fiduciary part of the paper circulation is thus becoming less and less, and the value part more and more, as the substitution goes on. Whether this is upon the whole desirable or not, it is an important although unseen element in the national finances. It has attracted no attention even among those who habitually give thought to this class of questions. Of course, there must come a time when the substitution of specie certificates for bank notes will cease; but so long as it continues, the metallic basis of the total paper circulation is becoming more solid.

The multiplying embarrassments of our national finances at the present time have given birth to much humorous comment both at home and abroad. A nation getting too much revenue, and yet unable to repeal its taxes, is in a worse plight than any country visited and described by the most daring travellers. These embarrassments lead to a remarkable inversion of ideas and phrases. Economy becomes a national vice, and that which is called in other parts of the world a "lightening of the public burdens," is here called an attack upon the industry of the people. Perhaps the most happy thought that the situation has given rise to is found in a letter written a few days ago by the Hon. Samuel J. Randall to the St. Louis *Republican*, criticising the Morrison tariff bill of last year. The spirit which prompted this bill was set forth in all its enormity, says Mr. Randall, by its supporters, who said in substance: "Let us take off one-fifth now. If that does not reduce the revenue, we can take off more. Some time we can *cut to the quick and draw blood.* If 20 per cent. does not reduce the revenue, perhaps 50 will." There it is. In any other part of the world "cutting to the quick and drawing blood" is accomplished by putting on taxes. Here it is accomplished by taking them off. Where, oh where, is the Lemuel Gulliver who shall describe the hardships of the American taxpayer?

Judge Barrett's sentence of Sharp was at once severe enough to comport with the heinousness of his offence, and mild enough to meet whatever claim for clemency may properly be based on age and alleged ill-health. To appreciate fully the importance of this sentence of Sharp to four years in Sing Sing, one must recall the almost hopeless condition of the public mind as to the proper punishment of the offenders when the bribery was disclosed. It is safe to say that ninety-nine persons out of every hundred then supposed that Sharp would get off somehow; and the idea that so rich and powerful a man would ever be sent to the penitentiary seemed absurd. Nobody in New York, probably, was so confident that he would escape punishment as Sharp himself. His lawyers attempted to make it a ground of merit that he had not run away. But there is no reason to believe that Sharp supposed there was anything to run away from. All his life he had found that money purchased immunity, and he doubtless expected that there would be no trouble about getting an acquittal.

Ex-Senator Thurman is quite justified in refusing the use of his name, as a candidate for Governor, to the Democrats of Ohio. If age and infirmity did not constitute sufficient grounds for his attitude, he might properly base it upon the outrageous treatment which he has received from Ohio Democrats in the past. Despite his yielding to the soft-money craze, Mr. Thurman has been one of the ablest and best Democrats in public life since the war, and the shameful way in which he was shoved aside by the gang who seized control of the party organization in Ohio, makes it little short of an insult for them to turn to him for aid in rehabilitating the party, now that they have brought it to such straits.

The *Tribune* publishes an instalment of replies to its circular to Grand Army posts, inquiring whether they favored the Dependent Pension Bill that was vetoed by the President, whether they favor a Service Pension Bill, *i. e.*, a pension to every man who served in the army, and whether they approve of the President's veto of private pension bills. Probably no great significance attaches to the answers, since they are sent in contravention of the orders of the highest authority in the organization. Nevertheless, they show what ideas are afloat in Grand Army circles, just as the remarkable case at Elmira the other day, where the Government was defrauded of $13,700 in one pension claim, shows what sort of rascality may be perpetrated even under existing laws. For example, C. J. McDevitt, Past Department Commander, Abilene, Kan., writes: "I would rather see one hundred men get a pension who do not need it (I will not say who do not deserve it) than to have one poor, old, crippled, broken-down veteran deprived of what he has a right to demand." The Elmira candidate was poor, old, crippled, and broken down, and a sot besides. The question, "what he had a right to demand," was the one raised when the officers of justice were sent in search of him and his pals. What he and all others have a right to demand is exactly what the law gives them. But this, we judge, is not what Mr. McDevitt means, because he says also that not ten posts in the State will vote against a service pension bill, and that he is in favor of such a bill because so many veterans are unable to furnish the proof required by the persons now in charge of the Pension Bureau. A service pension bill would dispense with every kind of proof except enrolment in the army list. It would dispense even with proof of service.

The *Times* has been overhauling the war record of Gen. Tuttle, and finds that he resigned in 1864 under a very black cloud of complicity in an attempt to blackmail a planter who had secured permission to send $100,000 worth of cotton down the Mississippi to New Orleans. The evidence seems to leave no doubt of his guilt, and the performance is entirely consonant with what is known of the man's character in peace. The only thing that makes his record of the slightest importance is the fact that he was elected Commander of the Iowa Department of the Grand Army a few months ago, and is thus one of the most prominent representatives of that organization in the country.

The sources of Cleveland's strength with the people are well illustrated in a series of brief interviews with the magistrates of Davidson County, Tenn., at their meeting as a county court, in Nashville, the other day, published by the *American* of that city. These magistrates come from all parts of the county, and are for the most part leading farmers of their respective towns, so that their views constitute as fair an expression of public opinion as could easily be gained. Excluding the Republicans, forty-three Democrats gave their choice for President, and forty-two of them were for Cleveland, the solitary exception favoring Thurman. The question propounded by the *American* was, "Who is your choice for President, and why?" The answers to the latter clause are peculiarly interesting, and we quote several as fair samples: "Grover Cleveland, because he is honest and upright, and knows his duty, and

is not afraid to perform it"; "Grover Cleveland, because he has administered to the people at large, as far as I can judge"; "Grover Cleveland, because he is a good man"; "Grover Cleveland, because he is an honest man"; "Grover Cleveland, because he does what he believes correct and stands firm to his pledges"; "Grover Cleveland, because he has the manhood to do what he thinks right."

The *American*, in some editorial comments upon these interviews, pronounces them the highest evidences of public sentiment in that county, as the magistrates are not politicians, but simply good types of the people, and says that "this is a fair exhibit of the public sentiment in Tennessee." Moreover, it declares its belief that similar investigations "would develop exactly this state of feeling in all parts of the South," and it concludes: "That the masses are with Mr. Cleveland as they have been with no man since the days of Jackson and Polk, there is not a doubt, and because he is honest, capable, and fearless." There is little question that the Democratic politicians who have been abusing the President because he did not turn over to them the spoils, failed to appreciate the impression which honesty and fidelity in the discharge of duty make upon the masses of the people. The Democratic politicians may be "down on" the President, but what difference does that make as long as the Democratic people are for him?

Justice to President Cleveland requires from us the statement that the candidate of Tammany Hall for the office of Collector of Internal Revenue in this city was Edward Cahill, and not Mr. Giegerich, the new appointee; also that Mr Giegerich was recommended by leading German-Americans, and that these recommendations were such as the President was justified in regarding as worthy of his entire confidence. We believe it is true, however, that after the Tammany leaders were informed that Cahill could not be appointed, they made a virtue of necessity by joining in the recommendation of Giegerich.

Senator Blair continues to push his absurd and demoralizing "Bill to Promote Mendicancy," and, with the help of Mr. Mayo, succeeds in getting it endorsed from time to time by sundry conventions of one sort or another, like the National Education Convention which met at Chicago last week. Fortunately, the public sentiment of the country is so pronounced against the scheme of Federal aid to Southern schools, since it has been demonstrated that such aid is not needed, that there is no longer any danger of its becoming a law; though, for that matter, if it ever should become a law, there is not the slightest reason to doubt that the Supreme Court would declare it unconstitutional as an interference with the rights of the States. A few Republican politicians and organs, groping wildly for an "issue," still cling to this discredited project, but the preponderance of sentiment is plainly with those who oppose it. The Hartford *Courant* of Saturday contained a most forcible editorial article upon the subject, which shows the gross unconstitutionality of the measure, and declares that, however bad Southern illiteracy may be, "the centralizing remedy proposed will be a greater damage than the evil." The worst effect of the continued discussion of Federal aid as a possibility is its demoralizing effect upon independent effort in the South. The *Texas School Journal*, for example, says that "the sentiment is rapidly gaining ground among sound educational thinkers that we should encourage and stimulate local taxation, instead of looking to the Federal Treasury for funds to support the school system in the South"; and that "we can see no possible effect of agitating the subject, other than that of giving to some communities in which public spirit is decidedly at a low ebb, some pretext for postponing such action as they owe to their schools, through some vague hope that manna will somehow descend upon them from above."

A negro lawyer of this city gives an interesting account in the *Freeman* of his own experiences of color prejudice in New York restaurants. He went into a restaurant in Fulton Market, where several people were eating, and his order was refused on the ground that they were not cooking anything at the time. In a Cedar Street restaurant "the waiter threw napkin, knife, fork, plate, food, etc., at me as if I were a wild animal and he was afraid of being bitten"; and when he paid his bill the proprietor told him that, although he personally had no objections to serving a negro, his customers didn't like it. He patronized a Broadway restaurant several times until the proprietor told him that his white guests made complaints. Lately he has been on a trip to the South, and, after observing the freedom with which whites and blacks seemed to mingle in work and in conversation on the train and at the stations, he said to a negro friend, "Really, I believe that in some respects there is more color prejudice in the North than in the South." His friend agreed with him, and he was a man entitled to speak with authority upon this subject, for he is the pastor of a church in Georgetown, S. C., and has travelled in the North, where he was "subjected to numberless insults by men who keep hotels and restaurants."

Bishop Paddock of Massachusetts has been making inquisition into the incomes of his clergy, and announced the results of his study in his recent Convention address. The Bishop says that, his object being to know the sum total of each minister's regular income from settled ministerial work, he has taken into account the annual value of rectories where they exist, and the missionary stipends, as well as the salaries paid by parishes. The result of the inquiry is not a flattering showing for a prosperous religious and intellectual community. Reports were received from 136 ministers (out of a total of about 190). The "average" clerical income in Massachusetts proves to be $1,627, but the often uselessness of averages appears from the fact that ninety, or just two-thirds of the number reporting, receive each less than $1,500, while forty-five, or one-third, receive less than $1,000. The average is brought up by the men at the top of the list, of whom twelve receive from $3,000 to "between $9,000 and $10,000." But there are only twenty seven in all who are paid more than $2,000. No one can doubt that these figures reveal a very insufficient provision even of decent living for men who not only by profession are scholars and gentlemen, but also are expected to have wives and families. Without touching upon the religious side of the matter, we must express our entire concurrence with Bishop Paddock's opinion, that the condition which his inquiries have disclosed shows the need of a higher and better public opinion in regard to the dignity of ideal pursuits, and the worthiness and desert of those who devote their lives to them.

We trust the failure of the strike on the Brooklyn Elevated Railroad will bring home to all concerned the lesson, that the time to demand arbitration is before the relation of employer and employed has been broken, because as long as it lasts the two parties are in business together and have claims of some sort on each other. A strike ends all relations, and generally converts the strikers into simple outside loafers, who are engaged in the somewhat ridiculous enterprise of trying to force a man to employ them on their own terms when he does not wish to employ them on any terms. We trust, too, it will bring home to men in the service of railroad companies the fact that business cannot be carried on if each man can give himself leave of absence without notice. The Southwestern strike began over the claim of a workman to go away on "Knights of Labor business" when he pleased, and to stay away as long as he pleased. The trouble in Brooklyn seems to have in part originated in the same way. An engine driver took himself off duty and sent word of it by a boy to the office, and the boy forgot to mention it. But a man who supposes that the business of transportation in a great city can be carried on in this way, is not only not fit to drive a locomotive, but hardly fit to take entire charge of a large peanut stand.

The annual meeting of the International Arbitration Association took place in London last week, under the most discouraging circumstances. That is, there has apparently never been a period in the world's history when so much of the talent of the race was devoted to making preparations for war, and when so many civilized men lived under arms, and when civilized nations seemed so little disposed to settle disputes by arbitration. Nor is there much probability of any change for the better until the world has been fully divided among the great nations and each is content with its boundaries. A good deal was done for peace when Italy was taken out of the list of territories to be fought for by France and Austria. But as long as the future of Holland and Belgium is uncertain, and as long as Turkey is in Europe and the fate of her possessions there undetermined, their huge armies will be kept on foot, no matter what they cost. Unhappily, too, the Franco-German war of

1870 was settled in a way which added one more disturbing agency to those already existing.

What makes the situation all the more unpromising is, that the questions which threaten to bring about war are not simple questions of property—that is, of the acquisition or loss of territory. They are questions of prestige or self-love. Each nation not simply insists on having this or that piece of territory, but on being thought by other nations able to perform certain military feats. The Germans are in arms, not simply to defend Alsace-Lorraine, but to prevent the world from thinking them incapable of thrashing the French; and the French are in arms and cheering for Boulanger, in order to awe the Germans and look terrible to the English. Between people in this state of mind arbitration is very difficult, because arbitrators have to work on defined claims or pretensions, while the claims and pretensions which keep modern armies on foot are not capable of definition. Trying to arbitrate between Germany and France, for instance, would be like trying to settle a difference of opinion between two men as to which was the more refined, gentlemanly, moral, or religious, or the more deserving of social respect and invitations to dinner, or the better fitted to handle money. Such disputes cannot be settled by third parties.

Mr. Francis Galton, whose studies of the laws of heredity drawn from his laborious collection of family records must be well remembered, has just printed in the *Fortnightly Review* the results of his investigation of the facts concerning what is familiarly called "temper," and particularly the proportions of good and bad-tempered persons in English domestic life, and the heredity of "temper." We cannot follow all the variations of Mr. Galton's research, or reproduce his ingenious calculations, but only note a few results. Perhaps it may be thought surprising that the proportion of good-tempered and bad-tempered persons is almost exactly equal. The first set of data which Mr. Galton tried gave the proportion of the good to the bad-tempered as 48 to 52, the second set as 47 to 53. There is little difference between the two sexes in the frequency of good and bad temper, but that little is in favor of the women, since about 45 men are recorded as good-tempered for every 55 who are bad, and conversely 55 women as good tempered for 45 who are bad. Of 1,368 children, 321 were good-tempered and 342 were bad, with 705 wanting special characteristics of temper. The good and the bad-tempered were thus equal again—the neutral or medium class being as numerous as the other two combined; results which Mr. Galton says bear emphatic testimony to the correct judgments of his compilers. As to the authority of these compilers or reporters, and the capacity of any observers to deal with the subject, he admits that "accurate discernment and designation of character is almost beyond the reach of any one, but, on the other hand, a rough knowledge and description of its prominent features is easily practicable"; and he rightly thinks that there can be little doubt of the value of "testimony of a member of a family who has seen and observed a person in his unguarded moments and under very varied circumstances for many years."

Mr. Galton is clear upon the important question of the heredity of temper; he says it is "as hereditary as any other quality":

> "I have forty-three cases where both parents are recorded as good-tempered, and twenty-five where they were both bad-tempered. Out of the children of the former, 30 per cent. were good-tempered and 10 per cent. bad; out of the latter, 4 per cent. were good, and 52 per cent. bad-tempered. This is emphatic testimony to the heredity of temper."

And he attempted, with still more success, to answer the converse question: Do good-tempered families of brothers and sisters have, on the whole, good-tempered ancestors, and bad-tempered families bad-tempered ones? A good-tempered family he defines for the purpose as one in which at least two members were good-tempered and none were bad, and a bad-tempered family as one in which at least two members were bad-tempered, whether or not any cases of good temper were said to be associated with them; and, as regards the ancestors, he takes the two parents and the uncles and aunts on both sides as the most trustworthy group. On this Mr. Galton says:

> "I have 46 good-tempered families, with an aggregate of 333 parents, uncles, and aunts; and 71 bad-tempered families, with 633 parents, uncles, and aunts. In the former group, 26 per cent. were good-tempered and 18 bad; in the latter group, 18 were good-tempered and 29 were bad, the remainder being neutral. More briefly, we may say that when the family is good-tempered as above defined, the number of good-tempered parents, uncles, and aunts exceeds that of the bad-tempered in the proportion of three to two; and that when the family is bad-tempered the proportions are exactly reversed."

We need scarcely remark that, as with those of the Commander of the *Cautious Clara*, the bearings of Mr. Galton's observation "lays in the application on it," especially by parents who may suspect themselves of bad temper.

Prof. Tyndall's frantic abuse of Gladstone adds one more to the list of illustrations we have already had recently of the danger to scientific men of venturing into the political arena. Political strife seems to have the same intoxicating and infuriating effect on them that it often seems to have on clergymen, and causes them to indulge in the same wild intemperance of language, and take the same very low view of the motives and character of antagonists. It does much to confirm the view taken by the enemies of Comte of the future of the world if it were governed on the Comtist plan by an advisory council of scientists. The habit of looking on themselves as the only real and disciplined seekers after truth gives them, even in politics and morals, a touch of infallibilist heat and bigotry. There are probably few educated men in England whose opinion on a political question is worth less than Prof. Tyndall's. It would be a shame to let it regulate even the retail apple trade; and yet he evidently thinks so much of it that he would feel justified in sending Gladstone, a politician of fifty years' experience, to jail as a "gamester" for differing with him on one of the most intricate subjects of modern politics.

An esteemed contemporary, called the *Tribune*, with much fulness of information and sentiment, recently addressed a homily to the French nation on "The French Holiday," apropos of the celebration of the anniversary of the taking of the Bastile. Why commemorate that bloody day, the French are asked, and not that on which "the Third Estate assembled in the Tennis-court at Versailles, and made their celebrated vow to defend their rights and liberties as representatives of the people"? The revolution of which the 14th of July was the opening scene "ushered in a period of extermination. It spared neither genius nor virtue. It was a revel of destroying forces." Then follows the detailed historical specification: "It condemned to slaughter Camille Desmoulins, Fouchet, and Brissot—the men of the 14th of July; then Vergniaud and the Girondists; and then Danton," etc. As this résumé of slaughter might be repeated by the same journal with still greater emphasis, two years hence, on the hundredth anniversary of the same day, we venture to recommend some slight changes in the wording, from chronological and other considerations. For Camille Desmoulins was not the first to be slaughtered, but died, with Danton, five months *after* the rest of the victims mentioned; Brissot was not a man of the 14th of July, but, like Vergniaud, a leader of the Girondists, and died with them; and Fouchet is a revolutionary character unknown to French history. There was such a revolutionist as Fouché, who did a great deal of slaughtering, but he was not slaughtered himself, for he survived the Revolution and the Empire, both of which he betrayed, and died in his bed.

The fate which has overtaken the "Old Catholics" in Geneva contains some grains of warning and instruction for the Catholic disciples of Father McGlynn. When the revolt against the Infallibilist decree of the Vatican Council took place in 1873, the enthusiasm of the rebels in Geneva was immense. Father Hyacinthe's lectures were attended by such crowds that the police had to issue tickets for them, and on one occasion issued as many as 32,000. The Government, too, by requiring an oath from the Catholic priests, managed to turn a good many of the Pope's adherents out of their churches and give them to the priests of the new school, and the salaries along with the churches. When Father Hyacinthe went away, however, and got married, the new or old church, whichever one pleases to call it, began to decline rapidly. The congregations died away, and the priests began to desert or seek reconciliation with the Pope. Two of them lately resigned on condition of receiving two years' salary. The churches are empty, and it is reported that two priests of country parishes used of late, in order to have a congregation at mass, to come into Geneva, collect a few friends and take them out by train, paying their expenses. The Government does not know what to do with the empty churches, as the attempt to separate Church and State made in 1880 was defeated by a large popular majority, and it does not like to back out of its war on the Papacy.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 13, to TUESDAY, July 19, 1887, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND, at the centennial celebration of the town of Clinton, N. Y., on July 13, responded to the toast, "Our Welcome Guest from the White House," with a brief speech, wherein he said: "That the office of President of the United States does represent the sovereignty of 60,000,000 of people is, to my mind, a statement full of solemnity, for this sovereignty I conceive to be the working-out or enforcement of the divine gift of a man to govern himself, and a manifestation of God's plans concerning the human race. . . . Watch well, then, this high office, the most precious possession of American citizenship. Demand for it the most complete devotion on the part of him to whose custody it may be intrusted, and protect it not less violently from unworthy assaults from without. Thus you will perform a sacred duty to yourselves, and to those who may follow you in the enjoyment of the freest institutions which heaven has ever vouchsafed to man." He subsequently made a visit to his brother, the Rev. William Cleveland, at Forestport, and went on an excursion to the Thousand Islands, and met the country people in a number of villages where he spent portions of his youth. On Saturday, while the special train with the President and his party was running thirty miles an hour on the Black River Railroad, between the villages of Lowville and Glendale, the rod connecting the driving wheels on the locomotive broke. The engineer, William Riley, was killed, and the fireman, Ira Perego, was badly hurt in his successful effort to manage the locomotive after the engineer's death. The train was stopped before any injury occurred to the cars.

Gov. Knott of Kentucky, as Chairman of the Louisville Industrial and Commercial Convention, has united with the authorities of Louisville and the Board of Trade of that city in extending an invitation to President Cleveland to visit Louisville on October 4.

The office of Consul-General and Secretary of Legation at Bogota has been offered to Mr. John G. Walker of Texas, and he has accepted it.

Mr. Allen G. Thurman, in a letter published at Columbus, O., July 14, said that he was "firmly resolved" not to accept the nomination for Governor if it should be offered to him by the Democratic Convention.

A State Convention of Prohibitionists met at Des Moines, Ia., July 15, and nominated a State ticket headed by V. G. Farnam for Governor. The resolutions call for a repeal of the "Pharmacy Law," a reduction of railroad fares to two and a half cents a mile, and the extension of the ballot to women.

At a Convention held at Huron, D. T., to further the project of admitting the southern part of the Territory into the Union, these declarations were made July 14: "We are unalterably opposed to admission as a whole. We declare for division on the seventh standard parallel. The Convention affirms the right of the people about to be admitted into the Union to designate their State boundaries, subject to modification by Congress with their consent. We protest against the tyranny of Congress in refusing admission, and appeal to the people of the Union for support."

A civil-service reform bill has been introduced in the New Hampshire Legislature. The only States that yet require appointments in their civil service to be made by competitive examinations are New York and Massachusetts.

The National Education Convention, composed chiefly of public school superintendents, in session at Chicago, approved the granting of national aid to public education, especially in the South.

Jacob Sharp, who was found guilty of bribing New York Aldermen in 1884 to grant him the franchise of the Broadway Railway, was sentenced on July 14 to four years' hard labor in prison and to pay a fine of $5,000. An application for a temporary stay of proceedings was granted.

Between July 9 and 17 forty-one new cases and five deaths from yellow fever were reported from Key West. The Board of Health published the following statement on the latter date: Total cases to date, 119; convalescent, 13; still sick, 44; new cases since yesterday, 2; discharged from hospital, 30; total deaths, 80.

A cyclone on July 16 blew down two hotels, a church, a number of dwellings, and the opera-house at Waupaca, Wis.

On Sunday, July 17, the thermometer at St. Louis registered 107°, at Chicago 102°, at Pittsburgh 101°, at Detroit 100°. At Philadelphia at two o'clock the heat was 102°. This was the warmest day but one in Philadelphia for thirty years. On July 8, 1876, the mercury went one degree higher. At Augusta, Ga., the thermometer registered 104°, and at Wheeling, W. Va., 108. There were many prostrations from heat in the larger cities. The most serious results reported were in Cincinnati. There the temperature was from 100° to 104°, and eighteen fatal cases of prostration were reported.

Information was received at San Francisco July 18 that the volcano of Akuton, on the island of Akuton, one of the Aleutian group, is in a state of eruption The natives report that eruptions have been almost constant since the middle of May.

The town of Roann, Indiana, on July 14 was attacked by a cloud of insects, resembling millers, so dense that lights had to be lighted. Business was suspended for a time, and bonfires were built, which drew the insects, and their bodies were soon piled up in great heaps around the fires. A few days before, St. Paul, Minn., had an exceedingly disagreeable visitation of insects, and the sidewalks were reported to be in several places inches deep with them.

Prof. David P. Todd of Amherst College, in charge of the eclipse expedition to Japan, has arrived at Yokohama safely with the outfit furnished him by the Navy Department.

Mr. J. P. C. Kennedy, an aged resident of Washington, who was Superintendent of the Census in 1850, was murdered on a street in that city July 13 by an insane man named Daly.

On July 15, Mr. Alfred B. Hill, Vice-President of the New York Stock Exchange, fell dead a few minutes after announcing from the rostrum the death on the preceding night of Mr. M. E. De Rivas, another member of the Exchange.

On July 19 R. M. T. Hunter died at his home in Essex County, Va. In 1847 he was elected United States Senator from Virginia, and he served until the beginning of the war. He was a prominent candidate for the Democratic Presidential nomination at Charleston in 1860. Uriel Crocker, the oldest publisher in New England, and a member of the old firm of Crocker & Brewster, died July 19.

FOREIGN.

A turbulent day was expected in Paris on the anniversary of the fall of the Bastile, July 14, and German residents were advised to keep in doors. But there were no serious breaches of the peace. Incidents like the following continue to show a considerable degree of Franco-German friction: July 14 a German resident of Caudry, France, wrote to a Mannheim journal that the anti-German feeling was such that he and other Germans narrowly escaped being killed, and that he and his countrymen were insulted in the streets daily. This letter provoked the German *Kreuz-Zeitung* to say, "France must be made to understand that there is a 'thus far and no further' in the matter," and the *Deutches Tageblatt* to publish verses reminding France that the German hand rests upon the sword. It was reported July 15 that Count von Münster, the German Ambassador at Paris, had remonstrated with M. Flourens against the violent attacks on Germany by the French Radical press, especially one article describing the German Embassy as a "nest of reptiles." Lord Lyons, the British Ambassador, also protested.

The bill drawn by Gen. Ferron, French Minister of War, adding to the number of regiments in the French Army and augmenting the strength of the companies of the present regiments, was passed by the Chamber of Deputies July 13.

The French Chamber of Deputies July 18 passed the Experimental Mobilization Bill. Gen. Ferron, Minister of War, explained that only 20,000 men would be employed in the experiment.

In a recent letter to M. Laur, a member of the Chamber of Deputies, thanking him for his friendship, Gen. Boulanger declared that he would do his duty despite the hatred and defection of former friends. It was sufficient for him to remain friendly with those who wish France respected, and who place their country above party intrigues. He himself had but one aim, and that was to proclaim to Frenchmen that they can and must raise their heads, and assume the only attitude becoming a great people. The letter caused a sensation in the Chamber of Deputies, and provoked excited comment.

It has been announced that the new Panama Canal loan will be opened in Paris and New York on July 26.

The deputation sent to inform Prince Ferdinand of his election as Prince of Bulgaria besought him to proceed to Sofia to assume the throne, and to consult the Powers as ruler. The military element at Sofia was reported July 14 to be somewhat turbulent, and to have demanded the resignation of Petroff, the new Minister of War. The Sobranye refused to accept the resignations of the Regents, who tendered them on the ground that their mission was completed as soon as the Sobranye had elected a Prince, and they decided to remain in office pending the action of the Powers respecting the election. On the 15th, Prince Ferdinand received the deputation and said: "If I should follow my heart's impulse, I would hasten to Bulgaria and put myself at the head of the nation. But the Prince elected ruler of Bulgaria must respect treaties. I hope to justify the Porte's confidence and obtain the consent of the Powers, and to regain in time Russia's sympathy, to which Bulgaria owes her freedom." On the 16th the decision of Russia was made known, that while there is no personal objection to Prince Ferdinand as ruler of Bulgaria, Russia declines to accept the decision of the present Sobranye. Germany, Austria, and Italy replied that they would accept any solution of the question which was based on the Berlin Treaty.

In an interview with a newspaper correspondent July 17, Prince Ferdinand is reported to have said that he had not decided whether he would go to St. Petersburg to personally request Russia's recognition of his election to the Bulgarian throne. He would not allow himself to be enticed into taking any course that would be likely further to estrange Russia and Bulgaria. He said he was disappointed that Prince Alexander of Battenberg, the late ruler of Bulgaria, had omitted to congratulate him on his election to the vacant throne. King Milan of Servia, in an interview with the same correspondent, expressed the belief that Russia would never sanction the occupancy of the Bulgarian throne by Prince Ferdinand.

A large number of foreigners owning real estate in the Baltic provinces of Russia have petitioned to become Russian subjects, in order not to forfeit their proprietary rights in consequence of the recent ukase against ownership of land by foreigners. It has been reported from Berlin that Russia has ordered all

the frontier merchants to dismiss German clerks whom they may have in their employ by September.

There are other incidents which show a certain friction between Russia and Germany. An anti-German pamphlet entitled 'Waiting for War,' purporting to be the diary of a diplomatist, has been issued in St. Petersburg. The Berlin *Post* charges the Czar's Government with covertly giving its assent to attacks on Germany, and it asks: "Ought we to make this an official matter and hold Russia responsible for such publication?"

On July 10 a band of religious fanatics tried to murder the Grand Duchess Elizabeth, the wife of the Grand Duke Constantin, son of the Grand Duke bearing the same name, who is the uncle of the Czar, because the lady, who is a Lutheran, refused to become a member of the Greek Church. A previous attempt to kill her is reported.

The German police are reported to have discovered documents which gave evidence of a Socialist plot to murder Emperor William of Germany while journeying to Gastein on the night of July 16. In consequence of a rumor that slips of paper had been found in several places through which the imperial train would pass, endorsed, "To-night, at about midnight, the Emperor's train passes. Be ready!" a special train was despatched before the Emperor's. The route from Mayence to Darmstadt was lined with police and gendarmes, and both trains passed safely.

The latest report regarding the condition of the Crown Prince of Germany is that his throat affection is being rapidly cured. Dr. Mackenzie thinks that no further operation will be necessary. After visiting Ems, the Crown Prince will go to the Riviera to pass the autumn.

Alfred Krupp, the famous German gunmaker, died at his residence, near Essen, July 15.

The Irish Crimes Bill passed its second reading in the House of Lords July 15, and on the next evening was passed in committee.

The Crimes Bill passed its third reading in the House of Lords July 18. The House of Commons went formally in a body to the House of Lords the next day, where the royal assent was given to the bill, and it was thus made the law of the realm.

The amendment to the Irish Land Bill, that it be rejected, was lost in the House of Commons July 15, and the bill passed its second reading. Lord Randolph Churchill opposed its vital features, and the Government met the Opposition so far as to promise that they would drop the bankruptcy clauses and close the door of ejectment by civil process, which they had left open to the landlords. Notice of 130 amendments had been presented on July 16.

The British Cabinet discussed the amendments to the Land Bill offered by the Liberal-Unionists July 18, and the Marquis of Salisbury informed a Tory meeting at the Carlton Club that the differences between the Liberal-Unionists and the Government regarding the Land Bill had been satisfactorily adjusted, concessions having been made which removed the chief objections that had been entertained by Mr. Chamberlain and his friends.

Mr. Gladstone made occasion on July 18 to write that the Liberals have carried nine-tenths of the beneficial laws on all great subjects. This, he contends, powerfully accredits the Liberal claim to popular support. The Liberals have suffered mainly from their own successes. Many electors are moved more by a sense of grievance than by cordial love of improvement. When their grievance is removed they lapse and again become Conservatives. Hence the Liberals have recruited for the Tories. If the Tories had had their way, there would have been revolution in England long ago. The Unionists are laboring, however honestly and unconsciously, to disunite the English and Irish peoples.

The Parliamentary election in the Basingstoke Division of Hampshire to fill the vacancy caused by the elevation to the peerage of Mr. Booth, Conservative, was held July 19. Mr. Jeffreys, Conservative, was elected, receiving 3,158 votes against 2,426 for Mr. Eve, Liberal, but the Conservative vote shows a falling off of 500 and the Liberal vote a gain of 100, as compared with the election of 1885. In the election for member for the Brixton Division of Lambeth, Mr. Carmarthen (Conservative) received 3,307 votes, and Mr. Hill (Gladstonian) 2,569. At the last election Mr. Baggallay (Conservative) polled 3,300 votes, and Mr. Cookson (Home-Ruler) 1,886. And at the election in the Hornsey Division of Middlesex, Mr. Stephens (Conservative) polled 4,476 votes against 2,488 for Mr. Bottomley (Gladstonian). At the last election at Hornsey, Sir J. McGarel Hogg (Conservative) was returned without opposition; at the last but one, however, the Liberal vote was larger than on Tuesday.

Michael Davitt, in a speech about the unresisted evictions at Coolgraney July 15, complained of the passiveness of the people, who, he said, were able only to shout. He urged resistance in defence of their homesteads.

More evictions at Coolgraney, Ireland, were made July 18. Many spectators were present, including Messrs. Dillon, Redmond, Crilly, Davitt, and Mr. Brennan of Providence, R. I. Twenty policemen and a military guard assisted in the eviction of several tenants. Subsequently a meeting was held, at which Mr. Dillon congratulated the tenants upon the fact that they had the backing of the whole national organization and the support of all civilized peoples. Mr. Brennan, the American, urged unity among Irishmen and obedience to Mr. Parnell and the Irish Parliamentary party. He promised that America would send the "sinews of war" as long as the struggle in Ireland continued, and until victory was achieved

Mr. Redmond, Nationalist member of Parliament, speaking at Coolgraney, July 18, said he deeply respected Mr. Davitt's service, but regretted his speech advising resistance to eviction, which amounted to a charge that was little short of folly against the advice given by the Irish leaders, and a charge of cowardice against the people. The tenants ought not to engage in an unequal struggle against the bayonets of their enemies. Mr. Dillon also on the same day thanked the people of Coolgraney for their admirable adherence to the plan of campaign, but he was unable to refrain from expressing regret at Mr. Davitt's speech. Archbishop Walsh of Dublin is endeavoring to induce the Government to suspend further evictions in Ireland until the Land Bill has been passed by Parliament. He suggests that a conference on the subject be held by the leaders of the various parties.

Mgr. Persico, the Papal Envoy to Ireland, on Sunday dedicated a chapel at Wicklow. He said that since he had been in Ireland he had been inspired with admiration for the people, in whose breasts he believed patriotism and reverence for the Catholic faith were deeply rooted.

Prof. John Tyndall published a statement in London July 14 that he had received numerous letters from all parts of America on the Irish home-rule question, and that they all recommend the utmost resistance to Mr. Gladstone's policy. "Inasmuch," Prof. Tyndall wrote, "as a desperate gamester, miscalled a statesman, has chosen to invoke ignorant foreign opinion against the instructed opinion of his own countrymen, it is worth showing that American opinion is not entirely on his side."

Sir James Fergusson, Parliamentary Secretary for the Foreign Office, reported to the House of Commons July 15 that the Egyptian Convention had not been ratified by Turkey, and that Sir Henry Drummond Wolff, the special envoy having the matter in charge, had been ordered home from Constantinople.

It was reported on July 18 that the Grand Vizier had resigned because of a violent publication inspired by the Sultan, wherein the Grand Vizier, the Cabinet, and the whole administration were reproached in order to excite public indignation against them, and thus cover the Sultan's own responsibility in connection with the Egyptian convention.

A meeting of the International Arbitration Association was held in London July 13, over which Sir Wilfrid Lawson presided. The Secretary's report expressed a hope for the formation of a commission to consider the advisability of creating an Anglo-American arbitration tribunal. Mr. David Dudley Field, in moving approval of a petition to Parliament in favor of the creation of such a tribunal, said that Americans had had enough of war, and that, although England paid dearly for the Geneva arbitration, the result brought more honor than the greatest military victory could have secured.

One hundred members of the House of Commons have formed a committee to endeavor to cheapen the postal and telegraph charges between the mother country and the colonies.

In a despatch from Rome July 15, it was reported that the Pope, conversing with an American Archbishop, recently said: "Dr. McGlynn lost his best opportunity by not coming to Rome while Cardinal Gibbons was here. He would have seen that the Church, by not condemning the Knights of Labor, was the supporter of the many against the feudal system, whether the feudality is represented by slavery, territorial right, or modern capital."

By the explosion of a gunpowder magazine at Massowah on July 11, ten Italian soldiers were killed and seventy injured, and camp property worth $200,000 was destroyed.

The official health report of Santiago de Cuba for May shows that there were 338 cases of smallpox, 55 of which were fatal; 103 cases and 6 deaths of measles and scarlatina; 67 cases and 21 deaths of fever, including yellow fever; in all 1,067 cases and 171 deaths in a population of 40,000. Smallpox continued epidemic through June.

The President of Guatemala on June 29 issued a decree announcing that the Executive had assumed control of the country and suspended the action of the Constitution. The decree was signed by President Barillas and all his Ministers, and their explanation was that the legislative body had violated the Constitution and would ruin the credit of the State.

The latest information about the recent Hawaiian revolution was brought by the steamer which left Honolulu July 5, and arrived at San Francisco July 13. The new Ministry had assumed control, and a new Constitution was to be laid before the King on the day the steamship sailed. On July 4 there was such quiet that the day was peacefully celebrated by American residents. The United States Minister held a reception, which was attended by King Kalakaua and the members of his staff, and a ball was given in the evening. The new Ministry found that all the public funds had been exhausted. In addition to the regular revenue, all the postal savings bank deposits had disappeared, and the loan funds had been used to fill gaps in the revenue. The new Ministry, besides William L. Green, the Prime Minister, consists of Lorrina Thurston, Minister of the Interior, who was born of missionary parents in Honolulu in 1859, and was educated at Columbia College, New York; Godfrey Brown, Minister of Foreign Affairs, who was born in New York, and has been engaged in business in the United States and Honolulu; Clarence W. Ashford, Attorney-General, who was born in Port Hope, Ontario, in 1857, and was educated at Ann Arbor, Mich. Queen Kapiolani showed little concern when she heard of the revolution after she landed in this city from London. She immediately proceeded to San Francisco on her way homeward.

THE STATE-RIGHTS ISSUE SETTLED.

By far the most striking address brought out by the commencement season of 1887 was that delivered before the Law Alumni of Michigan University by Justice Samuel F. Miller of the United States Supreme Court. It was nothing less than an authoritative presentation, by the man in the United States most competent to speak with authority upon this point, of the important and as yet hardly recognized fact that the ancient State-rights issue in the politics of this country is finally settled.

Justice Miller is just completing his twenty-fifth year of service upon the Supreme bench, having been appointed by Lincoln in July, 1862, and, with the exception of Justice Field, he is the only survivor of that President's appointees to this bench. An original Republican, he has never wavered in his adhesion to the principles of that party, and he is thus, as the senior member of the highest court in length of service, in a peculiar degree the embodiment of the interpretation which that court has placed upon the Constitution during the past quarter of a century. His name will always be associated prominently with this record, from the circumstance that it fell to his lot to prepare a number of the most important decisions upon vital questions which were rendered during this period.

Justice Miller chose for his subject "The Supreme Court of the United States," and, although he did not expressly say so, there would seem to be no doubt that his theme was suggested by the recent death of his associate, the late Justice Woods, and the current discussion as to the filling of the vacancy. He began by tracing the early history of the tribunal, and proceeded to a comprehensive and lucid exposition of its most important decisions, and of their influence upon the development of the Government. The length of the address, which occupied about an hour and a half in the delivery, prevents even a reference in this article to many interesting and significant incidents of our judicial record that were presented. These must be dismissed with the remark that the full text should be read by every one who is interested in public affairs.

Coming down to the fundamental issue of the relations of the Federal Government to the States as settled by the Supreme Court since the close of the war and the adoption of the Constitutional amendments, Justice Miller traces the changes in public sentiment which have been reflected by the decisions of the court. "At the close of the civil war," he says, "there were many very wise and patriotic statesmen who had come to the conclusion that the powers left with the States in the original formation of the Constitution, by which they were enabled to combine and organize into a formidable confederacy for the overthrow of the Government and the destruction of the Union, had been the source of a protracted and terrible war, which was just terminated by the reëstablishment of the general Government in all its original powers. They therefore felt that in the amendments to the Constitution deemed necessary for the reconstruction of this Union (which, if broken, was not very much shattered), these powers of the States should be curtailed in their capacity to bring about another such catastrophe. Many of these men were in Congress when the resolutions for these amendments were adopted and proposed to the States for their ratification. The members of that body undoubtedly differed among themselves as to the effect to be attained and the manner in which it was to be accomplished by these three amendments." The first deliverance by the Supreme Court as to the scope of these amendments was given in what are known as the Louisiana slaughter-house cases. The Louisiana Legislature after the war passed an act regulating the business of slaughtering animals for food in New Orleans, and creating a corporation which was given a monopoly of the business. The New Orleans butchers considered this monopoly an invasion of their personal rights, and brought suit to enjoin the exercise of this authority by the corporation, the case being carried to the Supreme Court upon the ground that the exercise of such power by a State Legislature was forbidden by the Constitutional amendments. The conflicting opinions as to the scope of these amendments and as to the extent to which they had altered the ancient relations of the States to the Federal Government, were reflected in the opinions filed by the judges of the Supreme Court when the cases were decided. The majority, however, and therefore the Court, decided against the theory that the amendments had placed the States in subjection to the Federal Government. Justice Miller quotes the concluding sentences of this decision, which, after speaking of the fact that the civil war disclosed that the true danger to the perpetuity of the Union was in the capacity of the States to organize in resistance to the general Government, said:

> "Unquestionably this has given great force to the argument, and added largely to the number of those who believe in the necessity of a strong national Government. But, however pervading this sentiment, and however it may have contributed to the adoption of the amendments we have been considering, we do not see in those amendments any purpose to destroy the main features of the general system. Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States with powers for domestic and local government, including the regulation of civil rights—the rights of person and of property—was essential to the perfect working of our complex form of government, though they have thought proper to impose additional limitations on the States, and to confer additional power on that of the nation. But whatever fluctuations may be seen in the history of public opinion on this subject during the period of our national existence, we think it will be found that this court, so far as its functions required, has always held with a steady and an even hand the balance between State and Federal power; and we trust that such may continue to be the history of its relation to that subject so long as it shall have duties to perform which demand of it a construction of the Constitution or any of its parts."

Justice Miller says that, although there were intimations that this opinion would be reviewed and criticised unfavorably in the legislative branches of the Government, no such thing has occurred in the fifteen years which have elapsed since it was delivered, and he holds, quite justifiably, that "public sentiment, as found in the press and in the universal acquiescence which it received, accepted it with great unanimity." He adds these very striking words: "And while the question of the construction of these amendments, and particularly the fourteenth, has often been before the Supreme Court of the United States [notably in the decision declaring the Civil-Rights Act unconstitutional], no attempt to overrule or disregard this elementary decision of the effect of the three new Constitutional amendments upon the relations of the State Governments to the Federal Government has been made; and it may be considered now as settled that, with the exception of the specific provisions in them for the protection of the personal rights of the citizens and people of the United States, and the necessary restrictions upon the power of the States for that purpose, with the additions to the powers of the general Government to enforce those provisions, no substantial change has been made. The necessity of the great powers conceded by the Constitution originally to the Federal Government, and the equal necessity of the autonomy of the States and their power to regulate their domestic affairs, remain as the great features of our complex form of government."

When Justice Woods's death was announced, the Republican organs began to lament that a Democratic President would now have the chance to appoint a State-rights man. Justice Miller's address shows that the State-rights issue is settled, since nobody of any standing anywhere in the country dissents from the interpretation of the relations of the States and the Federal Government laid down by a Supreme Court which has pronounced "absurd" the theory on which the Civil-Rights Act, and all cognate attempts unduly to stretch national authority, were based. "The necessity of the autonomy of the States and their power to regulate their domestic affairs" have been established by a Republican Supreme Court, and there is no longer any issue between the two great parties on this long-disputed question.

THE REAPPEARANCE OF AN OLD BOSS.

Mr. A. R. Shepherd arrived on Sunday in Washington. The local newspapers, in advance of his coming, urged the citizens to receive him with the honors due the original author of all their prosperity. In this they are likely to receive a large measure of support from many of the present inhabitants. By one of those curious reactions to which public opinion is so liable, the very depravity of the Shepherd government is made to redound to the credit of its principal manager. When people now visit Washington and contrast its finely paved streets and tree-lined avenues with the mud roads and cobble-stone pavements of twenty years ago, they naturally associate the improvement with the name of the master-spirit in the Territorial Government under which it it was begun. Had Shepherd done his work in a reasonable, lawful, and effective manner, he would have taken his place among the large body of painstaking officials who have done their duty and been forgotten. But the very fact that he performed his functions in such a way as to call down universal condemnation and necessitate his legislation out of office, makes him the only man now remembered in connection with his work, and leads men to give him the credit due to others. In view of the fact that his friends, creditors, and

supporters will leave no stone unturned to award him public honors, and enable him to retrieve his shattered fortunes, it is worth while to inquire whether we ought to reverse the verdict of 1874 by which he was condemned and driven from office.

The now forgotten Territorial Government of 1874 was born of a desire on the part both of Congress and the President to make Washington a capital worthy of the nation. It comprised a Governor, Legislature, and a Board of Public Works. The first-named office has so completely passed into oblivion that few of our readers will remember that it was first filled by Mr. H. D. Cooke. The Legislature, elected principally by freedmen who flocked into Washington at the close of the war, is remembered only as a mob. The only branch which made an enduring name for itself was the Board of Public Works, of which Shepherd was Vice-President from the beginning, becoming President, ex-officio, when he succeeded Mr. Cooke in the office of Governor.

The recklessness with which the Board operated was something which it would be hard to parallel in any civilized country, and which it is impossible for us now to describe in detail. We shall refer only to two cardinal features of its policy, which explain both its failure at the time, and its subsequent success in attracting sympathy. The Government was a friend and patron such as the local press has never seen before or since. It advertised with a profusion which would be scarcely credible were it not authenticated by the records of investigating committees. New journals were established for the purpose of getting a share in the advertising, and, in at least one instance, the bill was paid when the Governor had no evidence (except the statement of the proprietor) that the journal had ever existed. The present tone of the Washington press affords the gratifying assurance that the sentiment of gratitude has not yet vanished from the human breast. The system of letting contracts was the most distinctive and memorable feature of the policy adopted by the Board of Public Works. So childlike was its simplicity that, had it been invented by a board of philosophers, practical men would not yet have forgotten to recall it as an example of the incapacity of that class to deal with public questions. The Board reasoned thus: We know that when work is let out to the lowest bidder, the latter is sure to be some one who cannot do the work honestly at the price he sets, and who expects to make himself good by slighting his job, deceiving or bribing the inspectors, and charging exorbitantly for extra items. Therefore let us have no advertising for bids. Let us ascertain for ourselves what it will cost to do each kind of work in the best manner, buying the best materials and hiring the best workmen at good wages. Let us add to this so liberal a margin of profit that the contractor shall have no temptation to slight his work, and then let us ourselves select true and honest men and give them the contracts at the established rates.

The result of this system was one that men of business sagacity ought to have foreseen. The Board was surrounded by a crowd of men of numerous trades and callings, backed by every kind of influence, all eager for contracts and clamoring for recognition. The true and honest man was the one who could make himself most strongly felt and loudly heard. When he got the contract and left the presence of the Board, his place as petitioner might be taken by a rival armed with evidence to show that he was not the true and honest man the Board had taken him to be. His contract was therefore in danger of being revoked, and the only way to save himself was to commence work under it. So he immediately hired a gang of men to tear up the street he had agreed to improve, and render it impassable. Having "commenced work" he was insured against an arbitrary revocation of his contract, which then became a valuable franchise, readily salable to his less fortunate competitors, and valued according to the scale of prices and the chances of getting the official inspector to judge the work charitably. The original contracts were thus sold out in detail, or "sublet," to the men who offered the most advantageous terms, and thus the work was finally done in the same way as if it had been awarded to the lowest bidder in the first place. Moreover, it paid a contractor better to get more contracts to sell out than it did to do his work, and thus the streets were often kept unfinished for a year or more. To this system was mainly due the failure of the whole plan.

After three years of abuses, a large body of citizens and property-owners and several Congressmen demanded an investigation of the new Government. All the advantages were on the side of the defence. It had possession of the papers necessary to the prosecution; it enlisted the earnest support of President Grant; and it had a jury the majority of which were its own political friends. But the proofs of reckless mismanagement were so irresistible that the investigating committee had to make an adverse report, and Congress had to abolish the Territorial Government and organize a new one. The nomination of Shepherd as a member of the latter was rejected by the Senate with only five dissenting votes.

The state of things with which the new Government was confronted reminds one of the bequests frequently made by profligate monarchs of the dark ages to their successors. The District had incurred, during the brief reign of the Shepherd Government, a debt which, measured per capita, was about double that incurred by the country during the whole civil war. For all this little was to be shown but wreck and ruin. Miles of expensive pavements, laid in districts where there was no travel, were in some districts beginning to decay before being used. In others they had been so broken up by the combined effect of travel and weather as to render the streets in which they were laid impassable. Every kind of imposition had been practised upon the Board of Public Works. Pretended asphalt pavements disintegrated faster than they could be repaired. Long reaches of wooden pavement had been "treated" by patented methods to prevent decay; but they went to ruin as fast as the others. After the immense sums which had been expended in improving the streets, the latter were, taking a general average, no better than before Shepherd had begun his work. A crowd of creditors were clamorous for the money due them from a bankrupt treasury. Contracts had been so loosely drawn and awarded, and had been farmed out in so many ways, that it was difficult to determine the rights and obligations of the various parties to them. There was but one source of relief, and Congress, as in honor bound, came to the rescue by making appropriations for improvements corresponding to the value of the real estate which the general Government owned in the District. Members of the Corps of Engineers were detailed from the army to superintend the whole work of street improvement. The result of twelve years of honest effort is the Washington of to-day.

No doubt many good men are led to take a charitable view of the part which Shepherd acted, from a feeling that his condemnation was based on purely technical grounds, and that his successors have done nothing more than carry out plans which he would have executed had he been left in charge. We have shown how little ground there is for this view; but we hold that, even if we accepted it, every honor awarded to him is a blow at public morality. Before commencing his public career he was an energetic, not to say reckless man of business, who was accumulating a rather precarious fortune by erecting buildings with borrowed money. He entertained a supreme contempt for the slow and routine business methods prescribed by Treasury officials, and when he came into power he conducted the public business in the same adventurous spirit which distinguished his own. We may even concede him the credit of having seen the end from the beginning. We cannot for a moment suppose that a man of sense would have driven his cart into such a slough had he not felt assured that the Congressional Hercules would put a shoulder to the wheel. Now, this is precisely the kind of shrewd political management which the public are too prone to condone. Congress is asked to promote or endorse an innocent-looking scheme, which is to be so managed that continually increasing appropriations are necessary, and thus the Government is entrapped into doing what it would not have done had the whole plan been laid before it. We believe that the liberal policy of Congress towards the District of Columbia during the last ten years needed no such pressure as that of the wreck of 1874 to insure its inception; but even if it did, it was too dearly bought at such a sacrifice of public morality as that involved in an endorsement of the Shepherd régime.

THE PROPOSED CENTRAL AMERICAN FEDERATION.

STEPHENS, in the preface to his 'Incidents of Travel,' referred to the then latest news from Central America, and expressed the belief that the civil wars of which he had been a witness were for ever over, and that the "republic of Central America would now assume her place among the nations." He doubtless had in mind the convention for reorganizing the republic, decreed in 1841, irregularly in session for a year or two, issuing finally in the "Pacto de Chinandega," which from the start was a dead letter, the prelude to

new and fiercer wars and complete disruption of the confederation. There would seem to be some analogy between the sanguine hopes of Stephens, a half-century ago, and those aroused by the congress of plenipotentiaries from the Central American States which began its work last January. That the issue will be equally disappointing, it would be rash to affirm; but a review of the efforts made during the last sixty years to consolidate the provinces of Central America is not reassuring.

Certainly no convention since 1826 has awakened anything like the enthusiasm and expectation which were evoked by the Congress of Panama. Called at the suggestion of Bolívar himself, it was awaited by many eminent men in Europe and America with sentiments not badly expressed by the Abbé de Pradt, who wrote: "The Congress of Panama will be one of the greatest events of our times, and its effects will be felt to the remotest posterity." It proved to be, however, a ridiculous abortion. The impatient spirit of Bolívar speedily became disgusted with the grandiloquent and impracticable deliverances of the congress, and said that it resembled "the Greek lunatic who wanted to direct from a rock the sailing of ships. Its power will be but a shadow, and its decrees mere counsels." Actual confederation of the five provinces existed, in name, from 1825 to 1839. That period was one of almost ceaseless disorder, of frequent civil wars, of constantly recurring insurrections, of incessant wrangling between rival chiefs, of violence and intrigue. Owing partly to the impossibility of reconciling conflicting interests in a central government, partly to the growing power and ambition of Guatemala, which early aspired after the primacy among the five States, the nominal union fell to the ground in 1839-40, and has never since been reconstructed. The attempts made later to revive it cannot spring from a remembrance of its success—for it had none—but are rather due to a sentiment which the old federation vainly sought to realize—a desire for cutting a greater figure in the world than is possible for five petty and quarrelling States; a vague survival of the dream of universal brotherhood which was a part of the revolutionary spirit of the opening century, together with a real perception of the advantages which would come from a genuine union. The name of Barrios is inseparably connected with the plan of Central American unification, as urged from 1871 to 1885. Bending his first efforts to effect a union by conference and diplomacy, after the failure of his diet of 1876 he came more and more to look to the sword as the means of consolidation, and went to his death in the assault on Chalchuapa, less than two months after his arrogant decree of February 28, 1885, practically appointing himself dictator of Central America.

To the initiative of his successor, President Barillas, was due the latest gathering of delegates from the five republics in session in Guatemala from the 20th of January to the 15th of February of this year. The value of the results arrived at by this Congress has been estimated, for the most part, on the basis of the somewhat effusive representations of the importance of their action made by the plenipotentiaries themselves. A better way is to examine the results at first hand. The diet agreed upon three instruments: a treaty of peace, friendship, and commerce; a treaty relating to extradition, and a consular convention. The first of these alone is of any importance as bearing on the question of federation. Of its thirty-two articles, eleven refer to the relations of the republics to each other, and the rights of citizens of one in the territory of another. Arbitration is made obligatory as a first step in settling international difficulties; the different republics solemnly bind themselves not to interfere in each other's affairs; the independence and territory of each are to be sacred; a citizen of one republic is to have all the rights of a citizen of another under whose jurisdiction he may happen to be, provided he makes a declaration of his desire to have them; a citizen of one republic shall not be subject in another to military service or to forced loans. Article 12 provides that, after September 15, 1890, commerce between the republics, by land or water, shall be entirely free, with the important exception that a product taxed in domestic trade may be equally taxed in foreign trade. Navigation is made wholly free. The legal instruments of one republic are to be valid in every other. Articles 20-23 establish the right of literary property, arrange for postal reciprocity and for uniform telegraph charges. Article 24 proposes, "in order that respect for human life may become a principle of Central American law," the abolition of capital punishment. The remaining articles provide for uniform money, weights and measures, and for a meeting of an international congress every two years to revise treaties and "discuss subjects of general interest"; oblige the different governments to make their policy as uniform as possible, "so as to give them more respectability before all the nations"; set forth the proper steps to be taken in the ratification of the treaty; and express the hope that, by the time of the meeting of the congress in 1890, the obstacles which now exist to a political union of Central America may be removed.

It cannot be doubted that if this treaty were to be ratified and put into execution, it would be of great political and social advantage to a distracted region of our hemisphere, and would tend directly to promote an ultimate union of the Central American republics. But the lack of those countries has never been excellent paper constitutions. Jealous officials and unscrupulous rulers, with an ignorant and hopeless population, have sufficed to bring the finest sentiments and best intentions to nothing. It is altogether likely that they will do so again. It must be remembered that the treaty has not yet been ratified by the respective republics. It may never be. It is already reported that the politicians of Honduras are at blows over it. Even if honestly accepted by all five States, there are such tremendous difficulties in the way of its execution that we think the pæans sung over it in various newspapers are as premature as were those sung over its predecessors of sixty and forty years ago.

THE FRENCH "REPUBLICAN SALOON."

THE French Senate last year appointed a committee of investigation to look into the effects of alcohol on the health and morals and wealth of the French people. But we must observe that when the French speak of "alcohol" they mean spirituous liquors simply. They do not mean beer or cider or light wines. It is therefore into the consumption of brandy, rum, gin, whiskey, and the like that the Senate Committee inquired. The report was presented to the Senate some three weeks ago, with a great speech from M. Claude. It is a large volume of 1,096 pages of close print, with twenty maps and twelve diagrams. It has created a great sensation in France, for it seems to show that Frenchmen are going down the same alcoholic slope which has been exciting so much alarm in Switzerland, in Belgium, in the Scandinavian countries, in England, in Germany, and in the United States. In other words, the French are frightened by the rapid growth of drunkenness in France, and there seems to be a general agreement that something must be done to arrest it.

Of course there has been raised there, in opposition to any meddling with the liquor traffic, the objection which does so much duty here, in the mouths of party demagogues and in the liquor press, that in a democratic country you cannot undertake to interfere with the choice of drinks of a man whom you allow to choose governors and legislators, and pass on amendments to the Constitution. If he is competent to decide who ought to rule the State, he is surely also competent to decide how much spirits he should consume at a sitting. This has been in many countries more or less of a bugbear to temperance advocates, but they are getting over it. They are all beginning to say that we must put up with inconsistency if we mean to save the race from being ruined by alcohol. Even M. Leroy-Beaulieu, who is a strong opponent of meddling legislation, admits, in discussing the Claude report in the *Économiste Français*, that we must in our day reconcile ourselves to the introduction of more and more of what the Germans call the "ethical sentiment" into our systems of taxation; that is, we must tax in order to make people good, as well as to pay the public expenses, although he foresees that moral taxation may be as much abused as sumptuary legislation ever was.

The French case against alcohol, as set forth in the report, closely resembles our own. It increases police expenses; in some towns in France it has made it necessary to double or triple the police force. It increases also the expenses of criminal justice: there were between 1881 and 1885 336,641 prosecutions for drunkenness, or an average of 67,328 a year, to say nothing of offences caused by drunkenness. It fills the hospitals and almshouses with all sorts of victims. From 1861 to 1865, for example, 10 per cent. of the lunatics in the Department asylums were brought there by alcohol. Between 1865 and 1870 20 per cent. were brought through alcohol. In 1876-80, the number of inmates of these asylums nearly doubled, and of these 15 per cent. were due to alcohol. In 1881-5, the number rose from 39,822 to 51,207, more than triple the number between 1861-5, and of these 7,387 were alcoholic, and it must be remembered that the French population has been almost stationary for half a

century, and that only those lunatics are charged to alcohol who have lost their faculties directly through their own drunkenness. No account is taken of those who lose it through the drunkenness of parents.

In some parts of France, the wine-growing regions of the south and centre, they drink hardly any spirits at all, but in the north and west they drink enormously, and are drinking more and more. If all France drank as these parts drink, France, instead of being seventh in the list of drinking nations, would probably stand at the head. Rouen is the greatest alcoholic place in the country. The average was about four gallons a head in 1884, and to make this average some men there must consume twelve, fifteen, or even twenty gallons of spirits per annum. There was a decree issued after the *Coup d'État* in 1851, forbidding the opening of drinking places (*cabarets*) without a special police permit. This was abolished in 1880 by way of "giving Republican saloons the protection to which they are entitled," as Sheridan Shook says. The effect was very remarkable. Between 1880 and 1885 the number of saloons increased by 40,000. Between 1873 and 1879 it had only increased by 8,000. The progress upwards, too, is now very steady. Every year sees the opportunities of taking a "petit grog" greatly multiplied.

The remedy which finds most favor in France, as in Switzerland and Sweden, is making liquor extremely dear, and diminishing the number of places in which it is sold. If our Prohibitionists would only settle down to this work, they would achieve great results In their attempt to banish liquor utterly from the haunts of men they are pursuing a will o' the wisp.

THE SITUATION IN ENGLAND.

Nothing can well be more variable and more interesting in its variableness than the surface of English politics. It seems to enter on a new and unexpected phase nearly every day. Two months ago the Liberals were plunged in the deepest despondency. The Tories were having everything their own way in Parliament. The support given to them by the Liberal Unionists on the Coercion Bill proved to be unbroken from first to last, and the bitterness and defiance in Chamberlain's and Hartington's and Goschen's speeches towards their old friends were daily deepening. The health of both Gladstone and Parnell, too, was exciting more or less anxiety, and it was confidently expected that the Jubilee ceremonial would have the effect of intensifying the Conservative and anti-Irish feeling in the English constituencies. It was, too, the general impression in Liberal circles in London that the articles in the *Times* on "Parnellism and Crime" had done much to dampen, in the provinces even, Liberal enthusiasm for the Irish cause.

Just at this juncture came the Spalding election, or rather the election for one division of Lincolnshire, an old Tory stronghold, which in fifty years has never sent a Liberal to Parliament. Lord Salisbury had made a peer of the sitting Tory member, and the vacancy had to be filled, and nobody in "society" doubted for a moment that it would be again filled by an old-fashioned Tory. To the astonishment of all England, the Tory candidate was routed, horse, foot, and dragoons. In a greatly increased vote, the Liberal majority was more than double what the Tory majority had been in 1886. This surprise was quickly followed by another. In the Tory constituency of North Paddington the Tory majority was cut down by one-half. Then came the election for the Tory borough of Coventry, where the Tory majority of last year was wiped out and a Liberal was returned.

The effect of the panic this produced in the Conservative ranks has been most curious. The possibility, and even probability, that London has during the past winter been repeating the huge mistake of 1879, about the opinion of the country at large, of course stares them in the face. Accordingly, Lord Randolph Churchill was one of the first to prepare for the coming storm, by throwing out hints that there was something wrong in the composition of the Ministry, by making a savage attack in the House on their Irish Land Bill, and finally by assailing his own creature, Mr. Mathews, the Home Secretary, on account of a police scandal which Mathews refused to investigate. The result has been that Mathews was condemned by a vote of the House, and will probably have to resign, and the Government have had to agree to abandon the provisions of their Land Bill by which a tenant to escape eviction would have to go into bankruptcy, and will probably also provide for that revision of the "judicial rents" which a commission of their own recommended last year, but which they contempuously rejected in the drafting of the bill. In fact, to sum up, the temper of the Liberal Unionists has become uncertain. It is no longer possible to count on their adhesion, and without their adhesion the Ministry cannot exist. Another defeat such as that sustained in the Mathews incident would probably lead to the resignation of the Cabinet or a dissolution of Parliament.

Another check received by the Government, and a very damaging one, has occurred in the matter of the evacuation of Egypt. Owing to the pressure which France has been exerting during the past year, to induce England to fix a time at which her exclusive occupation of Egypt would cease, Lord Salisbury came to the conclusion that something must be done, but he felt that it must not seem to be done in open deference to France, or in obedience to French dictation. Accordingly a special envoy was despatched to Constantinople early in the spring in the person of Sir Henry Drummond Wolff, a young baronet, whose sole title to the place was his having assisted Lord Randolph Churchill in forming "the party of four" who assiduously blackguarded Mr. Gladstone between 1880 and 1885, and his great need of money. After prolonged negotiations he succeeded in drafting a convention with the Porte under which England was to evacuate Egypt in three years, but was to have permission to occupy it again after that time in conjunction with the Turks in case the state of the country seemed to require it. This was unacceptable to the British public for two reasons. One was, that it recognized in a formal manner the suzerainty of the Porte over Egypt, and seemed to draw it out of the "innocuous desuetude" in which it has lain for fifty years. The other was, that it took the question of evacuating Egypt out of British hands—unnecessarily, too, as it seemed. But the crowning humiliation came when the Sultan, after the convention had been drawn up, refused to sign it. So Wolff has had to be recalled in a sort of disgrace after he has cost the country $135,000.

All these mishaps have put the political atmosphere into a highly electrical condition, in which every "bye election" acts like a clap of thunder. There were two of these on Tuesday, pointing the same way as those of Spalding, Coventry, and North Paddington.

THE FAMILY OF MONTAIGNE.

II.—HIS BROTHERS AND SISTERS.

It has been a disputed point whether Michel was or was not the eldest of his parents' children. The learned "Montaignologues" ("que dirait Montaigne, bon Dieu! d'un pareil mot forgé en son honneur?" cries Sainte-Beuve) Dr. Payen and M. Grün have, it now appears, laid undue weight on Montaigne's own statement when, in relation to his inheriting the malady of stone from his father, he says, "J'étois nay vingt-cinq ans et plus avant la maladie de mon père, le trois ème de ses enfants en rang de naissance." M. Malvezin proves unquestionably that Pierre de Montaigne (the father) was married in January, 1528; and as Michel was not born till February, 1533, his father could easily have had two elder children who lived but for a short time, and whose existence left no trace, but nevertheless counted "en rang de naissance." Michel from his earliest childhood was the eldest of the family, which consisted of Michel (1533), Thomas (1534), Pierre (1535), Jeanne (1536), Arnaud (1541), Leonor (1552), Marie (1554), Bertrand (1560); and they were all living when their father died — seventy-three years old—in 1568.

Thomas, who bore the title of Seigneur de Beauregard, has been made known to us by his brother in his letter to his father describing the death-bed of Étienne de La Boétie. He was one of the friends who tenderly watched by him during that memorable week of August, 1563. He was then twenty-nine years old, and he had embraced the new religious opinions of the Reformation, which made many proselytes in his native province of Guienne. The Maréchal de Montluc wrote, "Il n'y à ici enfant de famille qui n'ait voulu taster de cette viande." Étienne de La Boétie, as he lay dying, asked M. de Beauregard if he were willing he should disclose to him something he had on his heart to say to him. "And when," Montaigne says, "my brother had given him assurance, he went on thus: 'I swear to you that of all those who have undertaken the reformation of the Church, I have never thought that there has been one who has entered into it with better zeal, more entire, sincere, and simple affection than you.'" And he continued talking with him at some length, not to dissuade him from combating the imperfections of the Church, but to persuade him not to go to such extremities as to separate himself from his family. "My brother thanked him very much."

The next year Thomas de Montaigne married; but his wife soon died, leaving him childless; and a few years later he married Jacquette d'Arsac, the step-daughter of Étienne de La Boétie, who had stood at his side as he said farewell to his friend. This marriage gave him the title of

Sieur d'Arsac, by which Montaigne calls him when speaking (I, 30) of his having a piece of his land in Médoc buried under the sand thrown up by the sea: "ses rentes et domaines sont eschangez en pasquages bien maigres." He outlived his second wife and married a third. After the death of his brother Michel, he and his son claimed "la maison noble de Montaigne" against Michel's widow and daughter; but before the suit was decided they both died, and the heirs of Thomas being then only three daughters, there was no ground for a substitution demanded in favor of males as against females.

Pierre de Montaigne was Seigneur de La Brousse. It was he with whom Michel was travelling the day, during the civil wars, when he met "un gentilhomme de bonne façon . . . du party contraire au nostre" (II, 5). M. Malvezin states, we know not on what authority, that he lived quietly as a country gentleman on his estates in Périgord, and that, unlike Michel, he took pleasure "in hearing a hare scream in the teeth of his dogs." He died, unmarried, when about forty years old.

Jeanne de Montaigne, the eldest sister, married at nineteen M. de Lestonnac, a "conseiller." She, like her brother Thomas, became a Protestant, and she brought up her eldest daughter in that faith. But the daughter, after a time, not only returned to the Catholic Church, but was the foundress of a convent.

Arnaud, the next brother (le capitaine Saint-Martin), died, as we have seen, from an accident when a young man, but not so young as the Essays represent him. By a mistake of the printers, probably, his age, which was twenty-eight, is there given as twenty-three. And, since we mention one blunder of this kind, let us remark here another, and a more important one, in a letter from Montaigne to his wife, in which he is made to speak of their loss of a little girl "in the second *year* of her life." It should be the second *month* of her life. There were born to Montaigne six children, all daughters, but no one of them lived more than a few weeks save the second, Leonor, who grew up, married, and had children. The fact that the others but just existed renders somewhat unjustifiable the indignation that has been expressed at Montaigne's phrase (I, 40), "J'en ai perdu en nourrice deux ou trois, sinon sans regret, au moins sans fascherie."

But to return to "le capitaine Saint-Martin." Nothing is known of his youth save that he was educated, like Michel, at the Collège de Guienne; but its famous "principal," André Govéa, who had been Michel's master ("sans comparaison le plus grand principal de France," Montaigne declared, in the art of *acting* as in "toutes aultres parties de sa charge"), had left Bordeaux for the University of Coïmbre before Arnaud de Montaigne entered the College. Among M. Malvezin's documents is one showing that as early as 1537 Govéa's abilities were recognized by the city, and probably especially by Pierre Eyquem, for in that year, on the 24th of April, "en pleine jurade, Pey Ayquem, escuyer, seigneur de Montaigne, soubsmaire" (he was afterwards Mayor), "and the lords of the city, assembled at the sound of the bell, . . . have declared by the organ of the said lord, the sub-mayor, speaking to the sieur de Govéa, Principal of the College of Guienne, that before had been made a contract between the said De Govéa and the city, by which, among other things, the city was bound to obtain from the King our Sire in favor of the said de Govéa letters of naturalization; . . . the letters, dated in the month of January, 1536, signed within, Francis, and sealed with the great seal of green wax, hanging from cords of red and green . . . have been [now] given and delivered by the said sous-maire . . . to the said de Govéa, who 'les a prinses et acceptées et à iceux [seigneurs] et à ladicte ville randu graces et mercys.'"

When Arnaud de Montaigne was a boy of sixteen, he received from his paternal uncle, the Seigneur de Gaujac, some gift—we know not what, but the record exists of a "donation" to him when an "escholier, estudiant au Collège de Guienne." This uncle, "homme d'église," Montaigne speaks of in the essay "De la ressemblance des enfants aux pères"; and the name of his seigneury connects itself with the very earliest known member of the (collateral) ancestors of Montaigne, Ramon de Gaujac. This Ramon came from the little town of Gaujac in Médoc, and was known by its name, and only so known, when he established himself as a merchant at Bordeaux. He was already successful and rich when he married in 1420; and, dying childless, he made his nephew, the son of his sister, his heir, Ramon Eyquem, the great-grandfather of Michel de Montaigne. It was this Ramon Eyquem who purchased in 1477 "la maison noble de Montaigne"; and it is a curious indication of inaccuracy in Montaigne that he should say (in the essay on Vanity) that the Château de Montaigne is not only the place of his own birth, but "de la plus part de mes ancêtres," since only his father could have been born there. Montaigne's next sentence, too, contains another mistake—"ils y ont mis leur affection et *leur nom*"; the truth being that they took the name of Montaigne from this acquired "seigneurie"; and the name of Eyquem was only dropped by them after the death of Michel de Montaigne's father.

It was precisely the state of things that Montaigne himself eagerly deprecates, saying (I, 46), "It is a wretched custom and of very bad effect in our France, to call a man by the name of his estates and lordship, and the thing in the world which does most to confuse knowledge about families. A younger son of good family having had for his appanage an estate, by the name of which he has been known and honored, cannot well forsake it. Ten years after his death the estate belongs to a stranger who in turn takes its name; judge where we are as to knowledge of these men." That is just "where we are," or where we should be, as to knowledge of the Montaignes, if it were not for the legal papers M. Malvezin has unearthed. But he puts us all right, and even goes so far as to give us much information about the other Montaignes — the earlier Seigneurs de Montaigne—whose line ends in the "honneste home Guilhaume Duboys," who sold the "maison noble" to Ramon Eyquem. The whole of the passage in Montaigne, of which we just quoted a part, is curious in connection with his own ignorance about his own family.

Another phrase of exactly the same nature is found in the Ephemerides—the volume which took the place (as regards "inscriptions") of the family Bible in the Montaigne household, and the discovery of which in 1854 threw light on many disputed points. It is therein written by Montaigne's hand: "This day [June 18] 1568 died Pierre de Montaigne, my father, aged 72 years 3 months [another mistake!—it should be nine months, as, by another entry in the same book, also in Montaigne's handwriting, he is stated to have been born September 29, 1495]. . . . He was buried at Montaigne in the tomb of his ancestors." His "ancestors" must have been for the nonce simply his distant *predecessors;* since both his father and grandfather are known to have been buried at Bordeaux; his grandfather only living six months after buying Montaigne.

Of Montaigne's two younger sisters there is nothing to be told. They both married and both died.

Bertrand de Montaigne, the youngest of all the family, twenty-seven years younger than Michel, was Seigneur de Mattecolom. When he was twenty years old he accompanied Michel on his journey in Germany and Italy; and in one of the Essays (II, 27) Montaigne, writing of the battle-like duels of the day, says that he has "a domestic interest in the matter," and narrates how at Rome his brother was drawn into one of these "rencontres," and thereby got into prison, from which he was delivered "by a very speedy and solemn request from our King." It may be said, in passing, that the M. de Cazalis, who was another of Montaigne's companions on this journey, was probably his brother-in-law. Marie de Montaigne had married, nine months before, Bertrand de Cazalis. Bertrand de Montaigne married, we know, eleven years later; then he disappears from the stage—and it is time for the curtain to drop.

A SAINT OF THE TRENTINO.

TRENT, June, 1887.

IN walking through the Via Lunga, one's attention cannot but be arrested by a house with two circular reliefs and accompanying inscriptions. Having nothing better to do I looked and read, and found to my surprise that in this house, formerly a synagogue, was now the Chapel of St. Simon, who was martyred by evil-minded Jews for the purpose of their Passover in 1475. One relief represented the boy being strangled while his blood was drawn; the other showed his apotheosis. This was the first time in my experience that this legend of the Jews using the blood of a Christian child for their paschal rites had ever assumed so concrete a form, and my curiosity was greatly excited. *Prima facie* the story is, of course, absurd; but there must have been wicked Jews as well as wicked Christians; and at a time when the Jews were generally persecuted it would not be surprising if some of the more superstitious or fanatical occasionally retaliated. I have read the records of a Russian case of this kind where the crime seemed to me satisfactorily proved, although at the same time it is necessary to admit that it was in Russia, with a procedure very different from ours. Going back to an ecclesiastical book-shop, I inquired for an account of the martyrdom of St. Simon of Trent, and in explanation told of the house that I had just seen. A priest who was present, while he gave some references to authorities, said: "'Tis to our great shame that this is still believed." (I may say in parenthesis that I found here, for the moderate sum of five francs, a book the like of which I had been long wanting, and had searched for in vain in several large American libraries: 'Martirologio Romano dato in luce per ordine di Gregorio XIII, . . . aumentato e corretto da Benedetto XIV. Nuova edizione italiana. Torino, 1886.' 4to, pp. 245. It contains a complete list of the saints to the present time.)

Next, it was necessary to go to the Cathedral, a beautiful Romanesque building, and see the tomb of the militant Prince-Bishop, John Hinderbach, where, among other praises, the epitaph reads—

> "Et Divi templum condidit ipse Petri,
> In quo, damnatis Judaeis, Simonis ossa
> Sancta locat,"

not to speak of two pictures in which the baby saint appears. Then to the Church of St. Peter, where the blackened mummy of Saint Simon lies in a glass case on the altar of his chapel, while on the walls are Latin verses and pictures descriptive of the martyrdom, with a fine relief over the door. The Chapel was restored as late as 1885, but seemed generally deserted. After all, if the story be true, St. Simon has more right to his Chapel than many others in like case—the Holy Innocents, for example, who are commemorated even by the English Church; for, although unconsciously, he met his death on account of the

religion in which he was born. With considerable curiosity as to the origin of the legend, I spent the afternoon in the City Library, where the amiable librarian, Signor Francesco Ambrosi, the author of several interesting and useful books on the history of Trent, soon brought out a number of books, including the Memoranda on the subject of Bishop Hinderbach in the 'Monumenta Ecclesiæ Tridentinæ' (vol. iii, pt. 2, pp. 429-465. Tridenti, 1765), and a manuscript volume containing the original record of the investigation of De Sales, Bishop of Brixen. The case soon became plain.

For many years before the event in question, the Jews were settled in parts of the Trentino, were prosperous, lived on good terms with their neighbors, and had synagogues—in Trent, as it seems, on one of the chief streets. In the spring of 1475, late in Lent, a monk, named Bernardino Tomitano, afterwards beatified, came to preach at Trent, and, finding there no traces of the northern German heresies, took to heart the toleration accorded to the Jews, and told the men of Trent that "if they did not soon expel them, they would be forced to do so by their most infamous actions when they had with their own eyes seen these wretches feed on the flesh of their innocent children and satiate their thirst with Catholic blood" (Blengini, 'Vita del Beato Bernardino Tomitano,' Padova, 1710, p. 109). On Good Friday, March 24, Andrea Cerdo informed the authorities that his son Simon, an infant of two years old, had disappeared and could not be found. Search was made; the body of the child was found in a sewer, near the house of a Jew, and physicians testified that it had been bled to death. The whole town quickly became excited at this speedy fulfilment of Bernardino's prophecies. Many Jews were arrested, and, after the application of torture, most of them confessed the murder, saying that they had twisted a scarf round the boy's throat so that he could not scream, had held his hands and feet, and then drained him of his blood, which they had used in the preparation of the unleavened bread for the Passover.

Those Jews whose confession was thus extorted were put to death in most cruel ways. Some were dragged about the streets at the tails of horses, some were disembowelled or pinched with forceps; others were broken on the wheel or hanged; most were burned at the stake. A few, while asserting their innocence, renounced their faith rather than endure the torments, were baptized, and received Christian names. They were then made to invoke the intercession of the little martyr, and some professed to have received miraculous aid from him in answer to their prayers. Strangely enough, this very testimony was brought forward as an argument for the canonization of the boy Simon. This persecution lasted for weeks until the Jews were driven away from the Trentino. A few of them took refuge at Riva, where in the middle of the next century they were flourishing, and had a printing press, which not only printed many Hebrew books, but was found convenient for publishing the sermons and speeches of the members of the Council of Trent.

Meanwhile, Bishop Hinderbach was recommending his martyr to the neighboring princes and potentates, and sending his portrait to Venice, Verona, and Austria. Matters reached such a pass that on July 23 Pope Sixtus IV. asked the Bishop to stop further proceedings, while he sent a commissary, Bartolommeo Pajarino, the Bishop of Vintimiglia. For a time things went well, but the investigations of the commissary did not have the same result as those of the Prince Bishop. Ugly stories got about of the boy's body being put into the Jewish quarters by ill-disposed Christians. (Probably the child had fallen into the open sewer and been suffocated, as the place where its body was found was near to its own father's house, which was on the edge of the Jewish quarter.) Bishop Hinderbach got much excited, and accused everybody of being bought up by the Jews or influenced by them—the imperial authorities, the Patriarch of Venice, everybody at Verona, the cardinals at Rome, and especially the commissary, whose recall he earnestly demanded. He had much to say of a Jewish plot to poison him, and there is a long story of a priest who cut off his tongue with an erasing-knife rather than confess it. The Bishop was obstinate and a hard fighter, every one else was weary of the dispute, the Pope did not wish to offend him, and consequently in 1478 allowed temporarily and locally the invocation of the child Simon at the altars of Trent. Sixtus IV. afterwards confirmed this by a bull dated the kalends of January, 1481, and the little Simon was thus beatified.

There seems to be no bull or other evidence of the further steps for canonization, and it is doubtful whether it ever really took place. Proceedings of this kind were, however, often very irregular before the bull of Urban VIII. in 1634. Simon's name appears, nevertheless, in the martyrology above spoken of, for March 24, as follows: "At Trent the passion of the boy St. Simon, most cruelly killed by the Jews, who shone afterward by many miracles."

It is interesting to note that the first book printed at Trent was a little pamphlet by Mattia Tiberino, on the complete history of the passion and death of the Blessed Simon. This was printed by Albert Kune of Mayence, a travelling printer who came to Trent in 1476. Subsequently a priest from Vicenza, Leonardo Longo, who had learned the art of printing, established himself in Trent, and printed there in 1481 a pamphlet similar to that of Tiberino, and subsequently, in 1482, the 'Epigrams' of Tiberino on the same subject.

In what is unquestionably *Italia irredenta*, one is naturally interested in the question of the ultimate annexation of the Trentino to Italy. As all the inhabitants feel confident that this will come sooner or later, they engage in no premature agitation, and indulge only in mild literary, historical, and statistical disputes as to the rise and fall of German influence. There is no complication here, as in Istria and Trieste, in consequence of the fact that a third nationality, Slavic, outnumbers both Germans and Italians together. In the Trentino, with the exception of a few scattered villages, the population is thoroughly Italian. As nearly as can be ascertained, out of a population of about 341,000, there are only about 9,000 Germans. In Trent itself Italian is everywhere spoken, and the only German book-shop was a small place on the edge of the town, where one could procure religious pictures, almanacs, and German primers, catechisms, and elementary books. In Botzen—or Bolzano, as the Italians call it—Italian is much heard, especially in one quarter. Exactly where the linguistic frontier is, it is hard to say. Roughly speaking, it follows the boundary of the district, crossing the Adige about half-way between Trent and Botzen, and then running northward so as to include the Val di Sole and Val di Non on the west and the Val di Fiemme on the east. At the time of the Council of Trent, when German influence was strong, we find Angelo Massarello, the Secretary of the Council, in his curious diary, which is preserved in the library of Trent, saying, in a passage omitted in Döllinger's edition, under the date of Saturday, October 11, 1545:

"The said Aviso is a river which they say divides Italy from Germany, and is not very big, but impetuous by reason of coming from the great mountains near here. There is a wooden bridge over it, and near by a fine town called by its name, L'Aviso (Lavis). At this town the Italian speaking finishes, and people begin wholly to speak German, because from Verona and Vicenza to here people spoke partly Italian, partly German, but here the Italian is totally lost." E. S.

Correspondence.

WOMEN AT CAMBRIDGE.

To the Editor of The Nation:

Sir: Allow me to point out one or two inaccuracies in your brief paragraph last week on the position of women in the University of Cambridge.

In the last printed report of Newnham College, there appears the statement that the "Students of Newnham College are allowed to attend the lectures of the following University Professors and Readers and University and College Lecturers," followed by a list of ninety-three gentlemen, including such names as Profs. Skeat and Creighton and Mr. Edmund Gosse. In addition, lectures and individual coaching were given for Newnham by forty-two ladies and gentlemen. Evidently the University has no objections to the "mingling of young men and women in the classes."

The printed "Ordinances of the University of Cambridge" contain, among other regulations referring to the examination of women, the following:

"That female students who have fulfilled the conditions respecting length of residence and standing which members of the University are required to fulfil, be admitted to the Previous Examination and the Tripos Examinations."

This article says nothing about the admission of women to the "General" and the "Special" examinations, the passing of which entitles to the ordinary degree those men who do not aspire to the honors of the Triposes. I find nothing to indicate that women are admitted to these examinations, and I know nothing of any reason for excluding them.

That they are not, however, denied the opportunity for the "ordinary success of the pass examination," and that no fear of an "injurious strain upon their nerves" dominates the University authorities, is shown by the following extract from the "Ordinances" from which I have just quoted:

"That the examiners for a Tripos shall be at liberty to state, if the case be so, that a female student who has failed to satisfy them has, in their opinion, reached a standard equivalent to that required from members of the University for the ordinary B. A. degree."

The result is, that any young woman who feels she has little chance of securing Tripos honors, and who wishes a "pass" certificate, undergoes this severer test for the ordinary reward.

All the certificates (unlike those of the Harvard Annex, which are given by the Cambridge Society), are official University documents, "signed by the Vice-Chancellor, by the authority of the Chancellor, masters, and scholars of said University." As a record of scholarship and rank, then, they are as valuable as the degree would be. They do not, however, confer the privileges of a degree, the exercise of the University suffrage, the right to compete for and hold fellowships, etc. Indeed, I have always been told that degrees are not conferred because, in case they were, there is nothing in English law to prevent any woman who passes the necessary examinations with sufficient distinction from securing and enjoying those rewards of her scholarship now enjoyed by men under such circumstances. An Oxford lady was mentioned to me by name, who, with the collu-

sion of her father—a professor—wrote the papers of a competitive examination for scholarships in an Oxford college. Her papers were returned by the examiners, who were ignorant of her identitity, as the most successful. It was stated that there was nothing to prevent her claiming the scholarship and even the right of residence in the college, if she cared to push her claims so far.

The University library does not lend books to any undergraduates, and is open to them for study only during three afternoon hours five days in the week. Consequently, all students depend chiefly upon the libraries of their own colleges—Newnham and Girton students among the rest. Women students attend the lectures in the Cavendish Laboratory. Newnham and Girton each have a chemical laboratory, and share with each other in the facilities afforded by the Balfour Laboratory of Biology. H.

JULY 16, 1887.

TO THE EDITOR OF THE NATION:

SIR: Those who maintain that the splendid successes which some women have won at Cambridge this year, without detriment to their health, give ground for thinking that it would be safe to open the examination for pass-degrees to all women, are not guilty of the bad reasoning that you impute to them. They do not say that the same women who are not hurt by hard examinations would not be hurt by easier ones—it would be silly to waste time in saying anything so self-evident. Their argument, put in easy terms, is this: The severest tests which examiners can be found willing to put upon any men, have proved to be not too hard for some women. It is probable that there exist other women to whose mental and physical powers the next hardest kind of examination is pretty exactly adapted, and it is also probable that some of these will be the very women who attend at Girton and Newnham and do not go in for honors. College students in general are a picked class: it is not every hedgerow maiden who undertakes even the Cambridge and Oxford local examinations; and it would be a very queer break in the usual working of the probability curve if there were a few young women who were equal to the very hardest work that is offered to young men, and none who were equal to the next hardest.

This is not an absolutely conclusive argument, but it is reasoning of quite as good a sort as can usually be got at in practical affairs. It is always easy to maintain that nothing proves anything. This is a poor blind world at best, and very few of its transactions can be carried on by deductive logic. The best one can do is to treasure up and try to profit by whatever best fingerposts can be found that seem to point towards the roads of wisdom. L.

POVERTY AND ITS ALLEVIATION.

TO THE EDITOR OF THE NATION:

SIR: In a recent speech made at an anti poverty meeting, there was made mention of a poor widow who was found making shirts at forty-five cents a dozen. That the poorer class of sewing women are shockingly underpaid is no new discovery, nor that there is great need of a remedy for such a state of things. The vital question is, whether the so-called Anti-Poverty men, or others, are most likely to find this remedy.

The land confiscation scheme of these theorizers is, of course, as futile as it is dishonest. If seriously attempted, it would lead to a social convulsion in which numbers would perish by actual starvation. The business system by which immense masses of non-agricultural workers are supported in comfort, is very intricate, and, once deranged, could not again be got into working order till after great loss of life by famine had resulted. As a single example, no one would build, and what would become of the men in all the branches of the building trades, with absolutely no work and no prospect of any for an indefinite time?

That the labor of the poorer class of sewing women is underpaid arises largely from the overcrowding of great cities, in which large numbers of men find work, and, of those who marry and have families, a certain portion die leaving their widows quite destitute. Then at once among these unfortunates commences a desperate struggle for existence; pay, however insufficient, must be accepted, with starvation as its alternative. The trouble is that they are where they are not needed, and the remedy consists in removing them to where they are. That this is entirely practicable, with immense benefit, has been proved by the work of those societies who have occupied themselves with this undertaking.

The "Children's Aid Society" of Philadelphia is doing it upon quite a large scale, limited only by its financial means, the opportunity being apparently almost unlimited. The last report of the Society says on this point:

"Another branch of the work is the care given to keep mother and child together in cases where poverty or disgrace would suggest a separation. During the year, 302 were placed at service, each mother taking her child with her. This work has been found possible by reason of the great demand in country neighborhoods for unskilled household labor. *In spring and summer it has not been possible to fill the applications received; and any destitute mother, however ignorant or inefficient, is sure of a situation if she chooses to accept it.*"

The lines that I have italicized speak volumes. Let it be also considered what a difference there is in the prospects of the children growing up in the healthy country instead of the foul slums of a city.

As to the reception and the care extended to these waifs, the report says:

"The small weekly sum paid for the children's board is seldom proportionate to the care and affection bestowed on them. Frequently these little guests are objects of interest to the whole neighborhood, and, in ten cases, such children were tenderly nursed through severe attacks of illness by members of the households having care of them."

These last remarks relate more especially to the cases in which children are boarded out without their mothers, but they serve to show the spirit in which those who are sent to the country by the Society are met.

It does not seem necessary to draw a comparison between those who are engaged in this sort of work and those who descant on poverty before enthusiastic audiences, suggesting, as the true remedy, a general system of spoliation, and winding up by sending the hat round for contributions. But if we can judge by the relative amount of space and attention given to each by the daily press, the spoliation system should be by far the more valuable of the two. A large part of the success of all demagogues depends upon the gratuitous advertising done for them by the newspapers. M. C. L.

MRS. MALAPROP NOT DEAD.

TO THE EDITOR OF THE NATION:

SIR: It is delightful to find our old friend, Mrs. Malaprop, in full life and vigor, and at present residing in Boston. A few days ago she informed the readers of one of the most "cultured" of the newspapers of that city concerning a wedding-feast soon to be held, and assured them that the family intended "to make it a perfect epithalamium"—from the desire to celebrate not only their daughter's nuptials, but her recovery from illness.

This evening I recognize with pleasure her hand in a copy of verses in the same journal, which assert that "love and woe are there incarnadined"—that is, in "the heaving sea." It is evidently impossible for her quite to "illiterate" Shakspere from her memory. She used to quote "Hamlet" fluently, I remember; now it is "Macbeth": but it is a pity she forgets her own wisdom, that "these violent memories don't become a young woman." **

Notes.

D. APPLETON & Co. have in preparation a 'Guide to Southern California,' by Dr. Walter Lindley; 'Weather: A Popular Exposition of the Nature of Weather Changes from Day to Day,' by the Hon. Ralph Abercromby; 'Evolution in its Relation to Religious Thought,' by Prof. Joseph Le Conte; 'Our Heredity from God: Lectures on Evolution,' by the Rev. E. P. Powell; 'The Education of Man,' by Friedrich Froebel; 'The Lawyer, the Statesman, and the Soldier,' by George S. Boutwell; 'The Natural Resources of the United States,' by J. H. Patton; and these novels—'The Romance of a Canoness,' from the German of Paul Heyse; 'Thraldom,' by Julian Sturgis; and 'Red Spider,' by S. Baring-Gould.

Macmillan & Co. will publish on July 29 'Romantic Love and Personal Beauty: Their Development, Causal Relations, Historic and National Peculiarities,' by Henry T. Finck. There will be two issues—a London edition in two volumes, and a one-volume American edition in somewhat smaller type. A German translation is already in preparation. The object of the book is to trace the evolution of human beauty in all its details, under the influence of the four chief sources of beauty—Crossing, Hygiene, Mental Culture, and Romantic Love. The author sides with A. R. Wallace in holding, against Darwin, that the beauty of animals can be accounted for by *natural* selection, but endeavors to show that in human beauty more is due to *sexual* selection, especially since the birth of Romantic Love, about six hundred years ago. The book might also be described as a history of courtship, showing the evil results of Oriental and European chaperonage in retarding the civilizing advent of pre-matrimonial love.

'Bodyke: A Chapter in the History of Irish Landlordism,' by Henry Norman, just issued in England by T. Fisher Unwin, will have the American imprint of the Putnams. It consists principally of Mr. Norman's letters to the *Pall Mall Gazette* as special correspondent during the late evictions at Bodyke; but new chapters have been added which give the work both a permanent historical value, and an obvious effectiveness as a Gladstonian weapon. It is illustrated by eight sketches from instantaneous photographs by the author.

Dr. Daniel G. Brinton, Professor of American Archæology and Linguistics in the University of Pennsylvania, has in press a volume entitled 'Ancient Nahuatl Poetry,' containing a number of songs in the Aztec or Nahuatl language, with translations and notes. Most of these were composed before the Spanish conquest of Mexico.

Mr. A. L. Bancroft having sold to Mr. H. H. Bancroft his half interest in the corporation of A. L. Bancroft & Co., this concern will during the coming year maintain its name and business only in connection with its Music Department. Mr. Bancroft himself may possibly, a twelvemonth hence, resume the general business he now relinquishes.

Mr. Lowell's Chicago address did not fall on such unliterary ears as the papers would have us suppose, and a reply to it has been published, a

small volume, 'Richard the Third and the Primrose Criticism' (Chicago: A. C. McClurg & Co., 1887), in which the author takes up Shakspere's cause as if it were a very grievous thing for him to be deprived of the authorship of this play. The first part essays to "pulperize" Mr. Lowell by telling him how many men in the past have not held the same view, and detailing a few facts known to the merest dabbler in the history of the editions. It is a most unscholarly attack, and, either through ignorance or by design, suppresses the whole problem of the various hands concerned in the historical plays, while its style and the tone of its reflections upon Mr. Lowell are those of the literary "shyster." Its argument is made up about equally of insult and of smatterings of the commonest Shakspere knowledge, and the ignorance displayed in regard to the real matter in dispute is the more amusing because the author is utterly unaware of his inefficiency. The second and third parts of the book, which give some passages from the sources of the play, and some account of how great actors have played it, are without novelty, but also without the foolish and contumelious self-sufficiency which gives to the earlier portion the attraction of unconscious comedy.

A new volume takes its place on our table, among the books that are no books, in the first issue of 'Murphy's Consolidated Business Directory of New York, Boston, Philadelphia, and Baltimore' (Trenton, N. J.: The John L. Murphy Publishing Co.). Our mention of this work would naturally stop with the title, though we ought to add that it contains a Manufacturers' Register for the whole United States, the four cities just named excluded; that it is extremely well printed; and that our slight tests of it have shown accuracy in the compilation. We may, however, remark a social indication of some significance. Under the head of Laundries, those in New York are divided into Chinese and non-Chinese, the former being listed purely by addresses, without names. By this means, one sees at a glance that the Chinese establishments fill three and a half columns, and form something more than half of the whole. In Boston the Chinese names are duly given in their alphabetical place, and fill two columns out of two and a quarter. In Baltimore they fill one and a quarter columns out of one and a half. In Philadelphia, on the other hand, not a Chinese house is mentioned in this Directory, though we can hardly believe that none is to be found in that city.

The July number of the *New England Historical and Genealogical Register* possesses a very varied table of contents. Mr. Waters's "Genealogical Gleanings in England" are this time concerned with Convers, Willis, and Deane in particular, touching in the name last mentioned the family of the editor of the *Register*. Judge William A. Richardson furnishes a list of Harvard College alumni who have held the highest executive, legislative, diplomatic, and judicial stations, colonial, State, and national; and college presidencies. It is a very distinguished list; but the number, 471, even allowing for possible omissions (and we can supply one), seems small, especially when the earliest name on the list—George Downing—dates back to 1642. The pedigree of Ward of Suffolk and America (which includes Nathaniel Ward of Ipswich, Mass.), and the descendants of Edmund Weston of Duxbury, Mass., for five generations, are other matters of interest.

In the last *Bollettino*, for June 30, of the National Central Library in Florence, we find statistical tables of the publications of the Peninsula for 1886, from which it appears that 10,381 were in Italian, 201 in Latin, 101 in French, 23 in English, 15 in German, 5 in Spanish, and 4 in Greek and Armenian respectively. Not a single French, English, or German novel was reproduced in its own tongue; but 117 French novels (out of 211 French works) were translated into Italian, and only 8 novels from all other languages combined. In all, 335 foreign works were translated, the German following the French at a long interval with 42, and preceding the Latin (34), English (24), Greek (13), Spanish and Russian (4 each), Danish, Chinese, and Hindu (1 each).

Prof. Willard Fiske has about half prepared his bibliographical notice of Petrarch's 'De Remediis,' for which an unexpected amount of new material—particularly from Germany, Hungary, and Spain—has turned up, showing the popularity of these dialogues to have been a striking episode in literary history. Almost ready to print are two opusculi, one being a collection of two prose and three poetical inedited Icelandic versions of the Petrarch-Boccaccio 'Griselda,' none older than the seventeenth century; the other, an Icelandic rendering of Petrarch's 'Seven Penitential Psalms,' discovered last summer by Prof. Fiske in the Arna-Magnæan collection of MSS. at Copenhagen. It closely follows in time the Danish version of 1593. These two little pamphlets will as prettily unite the two main bibliographical passions of Prof. Fiske as Heine's poem unites the pine and the palm.

The *Gazette Archéologique*, founded by MM. J. de Witte and Fr. Lenormant, and recently edited by MM. J. de Witte and Robert de Lasteyrie, Professor of Archæology at the École des Chartes, is hereafter to be published under the supervision of M. Louis de Ronchaud, director of the Musées Nationaux and of the École du Louvre. The new editors are to be MM. E. Babelon and E. Molinier, both well known in what may be called artistic archæology. The sub title is also to be changed from "Recueil de monuments de l'antiquité et du moyen âge" to "Revue des musées nationaux."

M. Pierre de Nolhac is preparing for *Les Lettres et les Arts* a series of articles upon the palace of Versailles and the Trianons, to be abundantly and luxuriously illustrated. An 18mo volume upon the same subject, by M. Paul Bosq, is announced by Renouard.

Quantin is now publishing in weekly parts 'Les Environs de Paris.' The text is by M. Louis Barron, and the illustrations, of which there are to be 500, are by Fraipont. The work will consist of twenty-five livraisons, and, when completed, will make a large octavo volume.

Prof. Paul Passy of the Normal School of Paris has just published, as No. 26 of the Papers of the *Musée Pedagogique*, a report of the Philological Congress held in Stockholm in the summer of 1886. He was the official representative of France sent by the Minister of Education, just as he had been sent before to the United States and to Iceland. The Philological Congress of the North is a recent creation, due mainly to the efforts of Madvig and Wimmer, and is intended to be both a scientific and a social reunion of the philologists of Scandinavian countries. The first Congress met in Copenhagen in 1876, the second at Christiania in 1881, and the third as stated above. There were 235 members—99 Swedes, 56 Norwegians, 66 Danes, 3 Icelanders and 5 Finlanders, and 6 "foreigners," M. Passy being the only Frenchman. Its session lasted for four days, and in its various sections it discussed many interesting philological subjects. The Universities of Upsala and Lund, Christiania and Copenhagen, Frederickstadt in Norway, and the high schools and educational boards of all Scandinavia were fully represented, while the Bishop of Wisby and other great dignitaries took an active part in the practical questions discussed with great zeal. M. Passy is an ardent advocate of Phonetics, and much of his report is taken up with an account of the urgent pressure put upon the Congress, by those who share his zeal on this subject, to secure some endorsement of the plans of the phonetic teachers. He says candidly that the majority treated the subject with a sort of lofty indifference, admitting that there might be something in it; but he contends that his side had all the arguments, if the other side had all the votes.

The Deerfield Summer School of History and Romance (July 13–August 27) promises plenty of entertainment. Mr. Cable has already been heard on "Fiction as a Vehicle for Truth," and Mr. W. W. Newell on "The Study of Folk-Lore." Prof. J. K. Hosmer is to follow with his "Sir Harry Vane"; Mr. Justin Winsor, with "Benedict Arnold's Treason"; Mr. Nathan Haskell Dole, with "Russian Novelists and Count Tolstoi"; Mr. Charles Dudley Warner, with an essay on "Education"; Miss Alice C. Fletcher, with "The Indian Folk-Lore of America"; Prof. G. Stanley Hall, with "Psychic Research, or Thought Transference." And there are yet other papers, by men and women, that we have not space to enumerate.

It is historic truth to say that such a union of the two sexes in a public manner we owe to the special liberalizing of the American mind caused by the anti slavery movement and by the woman's-rights movement. This latter agitation is to celebrate its fortieth anniversary during the coming year at Washington, from March 25 to April 1. The convention will take the name of the International Council of Women, and its topics will not be confined to the political aspect of the elevation of woman, though it is summoned under the auspices of the National Woman Suffrage Association.

— Prof. Clark Murray calls attention in the July *Macmillan's* to the revival of the study of Berkeley, which, beginning with Prof. Ferrier's Essays, some forty years ago, is still continued by the researches and comments of Prof. Fraser, and has awakened new interest on the Continent in the works of the great idealist in English metaphysics. Prof. Murray's sketch is almost entirely biographical, and presents the three great enthusiasms of the philosopher: first for his metaphysical discovery, secondly for the Bermuda University for the Christianization of the New World, and thirdly for Tar-Water, as if they were the three stages of his life—as in a sense they were; but the essay gradually becomes altogether absorbed in the Bishop's personal character, and ends with an eloquent tribute to its charm and dignity—the beauty of virtue—in a corrupt and worldly age. Mr. H. D. Traill, in this same number, takes Mr. Freeman's recent sneer, that criticism on English literature is nowadays often only another name for "chatter about Shelley," as the text for a light and not badly-managed dialogue between a resident and a non-resident graduate of Oxford upon the usefulness of Chairs of Language and Literature at the University. There is a strong local tone in the article, but its protest against the excessive trifling with details and nonentities, which is a quality of literary criticism at present, and against which Mr. Freeman directed his remark, is one to be appreciated more widely and to be supported whenever there is opportunity. This time-wasting elaboration is an invasion of German indiscriminateness, and a sterile application of scientific method where it does not belong; it turns biographies into encyclopædias, and substitutes industry for taste as the chief qualification for the critical office. It is the death sentence, practically, of the æsthetic school of criticism in a true sense—that is, the school of those who have the eyes to see; and degrades criticism into a department of history. But Mr. Traill's attack is only a light paper pellet.

—Much profit and some entertainment is to be derived from a comparison of two of the recent publications of the American Economic Association. One of them, by Dr. Henry C. Adams, is entitled the "Relation of the State to Industrial Action." The other is an "Historical Sketch of the Finances of Pennsylvania," by T. K. Worthington, with an introduction by the well-known socialist, Dr. Ely. Dr. Adams's essay is of a purely speculative character. He informs us that there are three classes of industries, in the first of which an increase of capital brings a proportionate increase of product, in the second of which the ratio of product to capital diminishes as capital increases, while in the third every additional investment is followed by an enhanced rate of profit. Railroad stockholders will be astonished to learn that their investments have this desirable fecundity, while farmers must bear in mind that if they increase their capital they will diminish their rate of profit. One might suppose that there could not be too much capital endowed with the property of increasing with the speed of a geometrical ratio, but the author declares that we have twice as much railroad property in this country as we need. We find it difficult to share the satisfaction with which he announces his belief that this analysis renders a service of no little importance to English economy. Apparently, Dr. Adams agrees with Mr. George in thinking that everything of the nature of rent ought to be confiscated by the State. He lays it down that industrial enterprises under the control of our State legislatures would be conducted upon the principle of rendering the most efficient service at the least possible cost.

—Turning to the essay on the Finances of Pennsylvania, we find an extraordinarily apt, although apparently unintentional, refutation of Dr. Adams's theories. Mr. Worthington has investigated with much industry the history of the attempts of the State of Pennsylvania to relieve her subjects of the burden of investing their own capital. He shows us how the visionary schemes of theorists have worked when applied in practice. In Pennsylvania, if anywhere, we might expect that "internal improvements," even under State control, would have been productive. As a matter of fact, after expending nearly ninety million dollars and getting back in gross revenue about twenty-five million, the State was very glad to get rid of its property in 1858 for eleven million dollars, payable in the bonds of the purchasers. As the average net revenue from 1845 to 1855 had been less than $132,000 a year, it would have been for the advantage of the State to sell the public works for even less than one-sixth of their cost. The interest upon the debt contracted for the construction of these works had increased to over $2,000,000 yearly, a disgraceful default had been made in its payment, and, in the words of the author, "there is every reason to believe that the State works in Pennsylvania, during the last sixteen years of their history, were maintained as an instrument of political corruption." Nothing could be more instructive than Mr. Worthington's account of these transactions, and it is hard to say whether the facts that he presents, or the extracts from the speeches and messages of the public men of the time, are more telling. It is not surprising that Dr. Ely's introduction to an essay in which his pet theories come into most ruinous collision with hard facts, should be of a lugubrious character. He explains the failure of the State as due to its ignorance of proper methods of construction and management, to the absence of fixed principle in public authorities, to "the rise of private corporations and the ascendancy of the Manchester doctrine of do-nothingism," and to political corruption. Apparently he supposes that all these causes have ceased to operate in modern times.

—The popularity of Virgil during the Middle Ages and in more recent times is well known, thanks to Prof. Comparetti's charming book, and it is pleasant to learn that the memory of at least one other great Roman poet is still cherished among the Italian people. The poet to whom we refer is Ovid, and the traditions concerning him have been collected by A. De Nino into a little book entitled 'Ovidio nella Tradizione Popolare di Sulmona' (Casalbordino, 1886. 16mo, pp. vii, 63). Among the people, Ovid (in the dialect of the Abruzzi '*Viddie*) enjoys the reputation of a great magician, merchant, prophet, preacher, saint, and even paladin. In the capacity of the first (evidently a confusion with the Virgil legend), he guards the treasures supposed to be concealed in his villa, and many are the stories which the peasants tell of vain efforts to carry them off on the eve of the Annunciation. Ovid's rôle as merchant is connected with his journey to Athens and afterwards in Asia, and the people explain the *gutta cavat lapidem* by an observation of the poet on one of his journeys. The preaching of the poet is connected with a pulpit of curious workmanship which formerly stood in the church *della Tomba* in Sulmona. Like Virgil, Ovid is believed to have announced the coming of Christ. The poet is said to have been desirous of discovering the origin of God, and to have been converted by seeing a man (some say an apostle, or St. Joseph) dipping water with a little shell from the sea into a ditch. The same story, it will be remembered, is told of St. Augustine and his reflections on the Trinity. Finally, Ovid is said to have been a doughty warrior, and is associated in the popular fancy with the peers of Charlemagne. Signor De Nino has been able to collect many local traditions referring to Ovid, whose memory is often connected with that of Cicero (*Ciciarone d'Arpino*). It is interesting to find that the poet was remembered even in the coinage of his country. In the latter part of the fourteenth century Sulmona received the privilege of the mint, and struck silver money with the legend, R. KROLUS. T. (Rex Carolus tertius, *i. e.*, Charles of Durazzo, King of Naples), and in the middle the initials S. M. P. E., of the well-known *Sulmo mihi patria est* ('Tristia,' iv, 10). The municipality in the fifteenth century also employed the same motto on its seal, together with the bust of the poet.

—Another volume of the unpublished writings of Victor Hugo appeared early in June. It is neither drama nor verse, like its predecessors, 'Le Théâtre en liberté' and 'Le Fin de Satan,' but very good prose, and not as Hugoish as might have been expected. 'Choses vues' (Paris: Hetzel-Quantin; Boston: Schoenhof) is a collection of fragments, sometimes only a few lines in length, sometimes ten or twelve pages, written at various dates between 1838 and 1875. It is composed of personal recollections and conversations (those with Louis-Philippe, Béranger, and Villemain being very well worth reading and extremely curious as studies of the writer); of notes on events of the day, "L'Émeute du 12 mai 1838," "Les Funérailles de Napoléon," "La Mort du duc d'Orléans," "La Fuite de Louis-Philippe"; of narratives, sometimes very striking and dramatic, like the "Procès Teste et Cubières," or the judgment by the *proscrits* of Jersey in 1853 of "L'Espion Hubert." By the side of what is worth preserving there is much waste material, and, even in the best chapters, great need of careful revision and omission. "Choses vues? peut-être," says one of the clever Paris journalists, M. André Hallays of the *Débats*, "vues, mais non regardées; entendues, mais non écoutées." This is a fine and delicate criticism of the book, in which the author sees and hears as a poet, with the imagination, but expresses his impressions too often before they have been condensed and purified of their petty and personal elements by the flame of poetic inspiration. It is also true that in Victor Hugo's hands realities change and become unreal and even false, and that those whose actions and words he reports take on his own attitudes and language, and think and feel according to the laws which he himself submits to. This is so true that he sometimes seems to perceive it, and seeks to excuse it by saying that he is not repeating literally the words of those whose conversation he reports. A translation of this collection has just been published by Harper & Brothers.

— Five issues supplementary to the thirteenth edition of 'Brockhaus's Conversations-Lexikon' (New York: L. W. Schmidt), advance the work well into the letter F. A large part of the addenda to previous articles have reference to censuses which have been taken since the main work began to appear, or to scientific researches and political occurrences in the same period, as in the case of Africa, Asia, Australia, etc. In the latter category belong such fresh articles as Bacninh and German East African Company, and such continuations to date as Bulgaria (since 1882), Khartum, Elsass-Lothringen, etc. Noteworthy is the new discourse about emigration, in which it is correctly laid down that the state of this country has more influence on the movement at any given time than the state of Europe, and in which it is pointed out that Russia and Belgium gain by immigration more than they lose by emigration. France still ranks low among the nations that supply the New World's "unearned increment" of population—if we may so call it. The postscript on Banks and on Railways is important, and so is that on Berlin, and on the German military establishment (brought down to March 3). Something new had to be said about Bacteria, Cocaine, and Earthquakes, though no mention is made of that at Charleston. Bismarck's career is followed to the return of the new Parliament and the triumph of his military measures. Among the new biographical sketches are those of Edwin Arnold, Lord Brassey, James Bryce, Arthur Cayley, Lord Randolph Churchill (pron. "Tschörrtschill"), John Dillon, Barbey d'Aurevilly, Barodet, Bastien-Lepage, Brown-Séquard, Campenon, Sadi Carnot, Admiral Courbet; the sculptor, Hans Baur, the archæologist W. Dörpfeld, Emin Bey, who was born, seems, in 1840, and Cecchi, the Italian African explorer. The omission of Boulanger from the main work is now repaired with great particularity, and, among other interesting items, we find mentioned his representing the French Government with much tact at our Yorktown celebration in 1881. It is also not forgotten that at one of his own national festivals in Paris he rode a horse circus-trained to keep step to the music. This general is a month younger than President Cleveland, who also enters the Supplement by a clear right. Other new American names are Dr. George M. Beard and G. W. Cable; W. H. Dall is continued; and Mr. Beecher's death is recorded. The insertion for the first time of Beverly, Mass., must have a psychic connection with "the Beverly incident."

LECKY'S ENGLAND IN THE EIGHTEENTH CENTURY.—I.

A History of England in the Eighteenth Century. By William Edward Hartpole Lecky. Vols. V. and VI. London: Longmans; New York: Appletons. 1887.

LECKY occupies a peculiar position among the living writers of England. He stands forth

among them as the first historical essayist of the day.

The aim of this notice is to explain and justify this assertion; to show our readers why it is that Lecky is hardly an historian in the sense in which that expression can be applied to writers such as Macaulay, Freeman, Gardiner, or Stubbs, and why it is that, among the class of essayists, Lecky has claims to the very highest rank. The matter is worth insisting upon, because any mistake as to our author's true position is certain, in the long run, to produce an under-estimate both of his singular gifts and of his excellent work. His book, judged of as a systematic account of England during the eighteenth century, is open to criticisms of which no one, we suspect, would more readily admit the justice than Lecky himself. The same book, looked upon as what it is—a series of essays on remarkable features in the history of England during the eighteenth century—is above praise.

Let our readers consider, first, the negative side of our criticism on Lecky and his work. He can hardly be said to have produced a systematic and complete account of the age with which his volumes deal. In intellectual power, in literary art, in interest, and in insight, Lecky's 'History of England in the Eighteenth Century' is infinitely superior either to Lord Mahon's 'History of England' or to his 'Life of Pitt.' But a student who wished merely to learn the facts of English history for the period which the earlier writer's works cover, would find them a more useful manual than Lecky's six volumes. If his 'History of England,' indeed, be regarded as an attempt to record systematically the events of the times to which it refers, the book will inevitably be found unsatisfactory. It errs in the way both of defect and of excess. Many things which the reader may wish to learn, he will find are omitted, or at any rate touched upon but hastily. Nowhere, for example, will he discover such an account of the rebellion of 1745 as is provided by Lord Mahon or by Burton. Other topics are treated of with what the ordinary student may consider inordinate detail. The religious legislation of the Whigs, the effect of gin drinking, the Marriage Act of Lord Hardwicke, the religious revival, and the rise of Methodism are, to be sure, subjects full of importance and of interest. But any one who takes up Lecky's book under the idea that it is a "history," in the ordinary sense of that term, will be a good deal puzzled by the excessive prominence given to these and other subjects which lie rather on the by-paths than on the main road of English progress. No one, again, can doubt that by far the most important chapters in Lecky's work are those which deal with Ireland, and no one can also doubt that these chapters, of which every word is of value, are of such length as to spoil the literary symmetry of any work which should aim at being in reality what Lecky's book is in name—a history of England. If it were described as a 'History of Ireland during the Eighteenth Century, accompanied by reflections on contemporary events in England,' the description would hardly be a misnomer; but the accurate way of defining Lecky's work is to term it, as has been already suggested, a set of essays on English and Irish history during the eighteenth century.

The result of our reflections will be exactly the same if, instead of dwelling on the character of Lecky's book, we glance for a moment at his own gifts as an author. In several of the qualities which are essential to historians of the highest class, he is, it must be frankly admitted, deficient. He has little or nothing of that consummate power of narration which is, in truth, the rarest of all Macaulay's wonderful talents. Lecky has not that fatal skill in producing striking pictures by means of which Froude interested the world in volumes of historical, or, according to some critics, of unhistorical romance, which are certainly quite as remarkable for the confusion with which Froude tells his story as for the effectiveness with which he paints certain episodes of his tale. Nor does Lecky claim (except, indeed, as regards Irish history, and the exception is one which should be always borne in mind) to be one of those historical writers, such as Mr. Gardiner, whose forte lies in research. His conclusions rest mainly upon secondary rather than on primary evidence. Our meaning will be well understood by any one who reads with care Lecky's chapters on the history of France before and during the Revolutionary era. The system on which he has worked has clearly been to read the best modern writers upon the Revolution, such as Taine's 'Ancien Régime,' Chérest's 'La Chute de l'Ancien Régime,' De Tocqueville's 'Ancien Régime,' and the like. He has also studied the leading French writers of the eighteenth century, but he has not examined the mass of documents, old and new, which must be investigated by any one who undertakes to write about the French Revolution in the same manner in which Mr. Gardiner is writing about the Great Rebellion.

Let us not, however, be misunderstood. No blame whatever attaches to Lecky for his mode of working. It is a vain idea, and is likely, indeed, to become a dangerous delusion, that no man can write with advantage about past events who does not himself go back to the original authorities. This notion, should it once become current, would make it impossible for any man to utter any reflections upon (say) the French Revolution who had not spent years in a kind of research for which not one man in ten thousand has either the means or the time. It would, further, make absolutely futile the labors of men such as Taine or De Tocqueville: their toil would be thrown away if every follower were bound to verify their conclusions for himself. Lecky, in collecting together the conclusions arrived at by the writers who can speak with authority on the causes of the French Revolution, has done good service, and here, as throughout all his writings, he has exhibited admirable candor and admirable good sense in his mode of referring to his authorities. He could, by pursuing a common method of citation, have loaded his notes with references which, while they unduly magnified the writer's claim to speak from original documents, would have rendered it impossible for his readers to learn who were the authors on whom Lecky really relies, and whom an ordinary student would find it best to consult. Lecky's frequent and utterly unpretentious references to books to be found in ordinary libraries are a real boon to students in want of knowledge. Any one who wished, for example, to learn what the best of modern thinkers think about the history of France during the last century, could hardly do better than take Lecky's twentieth chapter and consult for himself the works referred to in our author's notes. A student who took this course would derive from Lecky's pages a kind of guidance equally unattainable from an essayist who, like Macaulay, gives in his essays no references whatever, and from an author who, like Buckle, crams the notes to the overgrown essays which he is pleased to call a history, with references that testify at once to the voracity of the writer's literary appetite and the scantiness of his historical judgment. But while the method adopted by Mr. Lecky is in its way worthy of praise, it is, we must bear in mind, the method of an essay writer, not of an historian. We come round, therefore, to the conclusion suggested by the nature of his work, that he is in reality an historical essayist.

When, however, it is clearly understood that Lecky writes essays on portions of history, and does not in reality produce, except as regards Ireland, anything like a complete historical work, the most has been said which any candid critic can feel called upon to say, not in detracting from the merit, but in defining the exact character, of Lecky's work. In his own style of composition (and it is work of a very high order) Lecky is a master. His easy and flowing style has contributed, no doubt, to his popularity, but is the least of his merits. He has a keen eye for the interesting and important features of his period. If he lacks that power of telling a story which is an historian's primary gift, he has the capacity for grouping together a mass of facts bearing on a given topic which is preëminently the talent of an essayist. There runs, moreover, a unity of thought through all the otherwise somewhat disconnected chapters of his history. Our author is, consciously or unconsciously, preoccupied throughout this book—as, indeed, in every work he has composed—with one theme, viz., the progress of opinion and of moral convictions. His 'Spirit of Rationalism in Europe' first made him widely known to the English public, and it is hardly an exaggeration to assert that the topic treated of in that book is in reality the topic which is treated of in the 'History of England in the Eighteenth Century.' If there be any exaggeration in this statement, it lies in this, that Lecky's 'Leaders of Irish Opinion, though little known till its author became famous from his treatise on 'Rationalism,' treats of Irish history, and that Lecky's interest in the development of beliefs has always been equalled by his keen interest in the history of Ireland. It is, however, characteristic of his genius that two apparently distinct lines of thought are with him blended together. Investigations into the history of Ireland are, in his mind, closely connected with the historical growth of those beliefs or ideas whose development makes up the history of opinion. Nor is it fanciful to conjecture that study of Irish history has enabled Lecky to perceive, and to make clear to his readers, how closely speculative dogmas at once influence and are influenced by the social and political facts which are the main subjects of historical investigation.

In any case, no one will do justice to Lecky's work who does not note the admirable skill with which he has brought together masses of facts illustrating aspects of the eighteenth century that are often forgotten, and especially those aspects of that age which illustrate the development of opinion. The result is, that there are at least a score of subjects about which far more may be learned from our author's pages than from the works of ordinary historians. Nowhere, for example, is there to be found a better account of the religious legislation of the Whigs. The subject includes the legal position during the eighteenth century of orthodox Dissenters, of Unitarians, of Jews, of Roman Catholics. No one can read our author's mode of treating it without acquiring not only much information which it is hard to acquire elsewhere, but also without coming to recognize the constantly forgotten fact that the true work of the eighteenth century was the abolition of religious persecution, and that the success with which, in Great Britain at least, the Whigs, in the clumsiest but yet in the most effective manner, made persecution impossible, is the main glory of their policy. Not a few critics on this side the water will question the soundness of the views put forward by Lecky with regard to the feelings prevalent in England and in America during the War of Independence. Yet persons who dissent from many of his conclusions will admit that few English writers have given, in a comparatively short

space, a better account of the contest between Great Britain and her colonies; that few persons have attempted to deal with a difficult subject in a fairer spirit; and that no one has done more than Lecky to bring into view aspects of the contest which, for one reason or another, are likely to be overlooked.

His chapters on French history, which form a considerable portion of his last two volumes, are, we must frankly avow, not, in our judgment, quite equal to the best part of his work. Speculations on the causes of the French Revolution deal with matter of such almost limitless extent that they do not admit of being compressed within the bounds of an essay. But here, as elsewhere, Lecky's skill in illustrating sides of a great subject which have received inadequate attention, is very noteworthy. His account of the struggle between "Parliaments" and the French Crown forces upon Englishmen ideas as to French history which are concealed from view both by the platitudes of Alison and the poetry or rhetoric of Carlyle. It is, for example, perfectly clear to any reader of Lecky that, very shortly before the outbreak of the Revolution, the French Crown appeared at any rate to have achieved a marked triumph in a conflict with the only power which had of recent times attempted to limit the royal authority. It becomes also clear that the Parliaments, with whose struggles against despotism Burke sympathized, had no real hold on the affection or veneration of the French people. The error is noteworthy, for it is merely an example of the mistake which vitiated Burke's views as to French affairs. Genius and insight showed him many things which were concealed from ordinary men; but his sympathy with what may be called aristocratic freedom made him misunderstand both the hatred of France for the *ancien régime*, and the true strength of the French Crown. If Louis XVI. could have become the leader of the people in the attack on the privileges of the *noblesse*, he might probably have ended his career as the most powerful of French monarchs. Lecky's statement that "the French Revolution, though undoubtedly prepared by causes which had been in operation for centuries, might still, within a very few years of the catastrophe, have been with no great difficulty averted," will strike many readers as paradoxical. Our own belief is that the words, taken in the sense in which our author uses them, are profoundly true. The past, in the case of nations, as of individuals, is of course irrevocable. In one sense, therefore, all speculations as to what might have been are vain; but the science of hypothetics, as it has been termed, has its legitimate sphere, and the assertion that the appearance of a remarkable ruler, or even of an energetic ruler, on the French throne could not have averted the destruction of the monarchy, is, be it remarked, at least as hypothetical an assertion as the conclusion that "If a Henry IV. or a Frederick the Great had then mounted the throne, or if Louis XVI. had found for his Minister a Richelieu or a Pitt, a Cavour or a Bismarck, France would never have drifted into anarchy"; and no one who studies our author's pages can deny that a good deal of evidence is given in support of what may sound a startling conclusion.

The essay, if we may use the expression, on which Lecky has bestowed, it may be suspected, the greatest labor, is that on the character of Pitt. He writes on this subject at considerable disadvantage, for it is impossible not to compare the opening chapter of Lecky's fifth volume with Macaulay's "William Pitt"—an article which a very severe critic of the historian has pronounced the best of Macaulay's Historical Essays. From such a comparison Lecky is certain in some respects to suffer; but we are by no means sure that the two writers, though at first sight differing greatly from each other in their mode of treating their subject, and in the conclusions at which they apparently arrive, do not really set off each other's merits, and at bottom suggest to the reader a very similar opinion as to Pitt's strength and Pitt's weakness. The conclusion they both come to (though the conclusion is expressed in very different words) is that Pitt was the greatest Parliamentary leader whom English history has produced. They both dwell on the same virtues and also on the same defects. Macaulay, after his manner, expresses his opinion of the great Minister in the form of exaggerated antithesis. His language may certainly be read—though we doubt whether this is the true reading—as expressing the belief that Pitt's later career was inconsistent with his career before the outbreak of the Revolution. Yet if we allow for the effect of Macaulay's style, it is pretty plain that he felt that, in all his course of action, Pitt was consistent with himself. "The charge of apostasy is grossly unjust. A man ought no more to be called an apostate because his opinions alter with the opinions of the great body of his contemporaries, than he ought to be called an Oriental traveller because he is always going round from west to east with the globe and everything that is upon it."

Lecky writes of Pitt, on the other hand, with studious moderation, and attempts with characteristic fairness to estimate with impartiality not only his character, but the results of his policy in the department of legislation, of finance, of foreign affairs. Lecky also perceives, what Macaulay often allows himself to forget, that no man whose character is worth study is ever radically inconsistent with himself; it is allowable to a satirist to resolve human nature into a series of antitheses, but not to an historian. Yet in the end Macaulay and Lecky arrive at the same result. The powers which made Pitt great in Parliament, involved or implied limitations which made him fail in achieving results adequate to the greatness of his position and the height of his ambition.

Though, further, in one sense the most resolute of men, he exhibited throughout life a readiness, very characteristic of the Parliamentary leader, to surrender even the great objects of his policy when either King or Parliament offered strenuous opposition. This trait is brought by Lecky into marked prominence. It is one which becomes of great consequence when we consider the policy which culminated in the Act of Union with Ireland. Meanwhile, few things are more valuable in our author's estimate of the great Minister than his reference to the judgment passed on Pitt by Coleridge. We must allow for the bias of party feeling, but when every allowance is made, the article in the *Morning Post* of 19th March, 1800, contains more criticism which is worth remembering than any analysis of Pitt's character with which we are acquainted:

"Not the *thing* on which he was speaking, but the praises to be gained by the speech, were present to his intuition. Hence he associated all the operations of his faculties with words, and his pleasures with the surprise excited by them. . . . He was always full grown; he had neither the promise nor the awkwardness of a growing intellect. . . . That revelry and that debauchery which are so often fatal to the powers of intellect, would probably have been serviceable to him; they would have given him a closer communion with realities, they would have induced a greater presentness to present objects."

This want of "presentness to present objects" is the weakness of the whole class of intellects which find their best representative in the genius of Pitt. It is no small service to the public that the greatest of living historical essayists should have directed attention to the subtlety of Coleridge's forgotten essay.

RECENT NOVELS.

The Yoke of the Thorah. By Sidney Luska. Cassell & Co.

The Revolution in Tanner's Lane. By Mark Rutherford. Edited by his Friend Reuben Shapcott. London: Trübner & Co.; New York: Putnams.

Zury: The Meanest Man in Spring County. A Novel of Western Life. By Joseph Kirkland. Boston: Houghton, Mifflin & Co.

Theophilus Trent. Old Times in the Oak Openings. By Benj. F. Taylor. Chicago: S. C. Griggs & Co.

Who is John Noman? By Charles Henry Beckett. Cassell & Co.

The Romance of a Letter. By Lowell Choate. Boston: D. Lothrop Co.

Juanita. A Romance of Real Life in Cuba Fifty Years Ago. By Mary Mann. Boston: D. Lothrop Co.

Lights and Shadows of a Life. By Madeleine Vinton Dahlgren. Boston: Ticknor & Co.

The Tragedy of Brinkwater. By Martha Livingston Moodey. Cassell & Co.

7 *to* 12. A Detective Story. By Anna Katharine Green. G. P. Putnam's Sons.

Forging the Fetters, and Other Stories. By Mrs. Alexander. Henry Holt & Co.

Between Whiles. By Helen Jackson. Boston: Roberts Bros.

A Humble Romance, and Other Stories. By Mary E. Wilkins. Harper & Bros.

Told at Tuxedo. By A. M. Emory. G. P. Putnam's Sons.

A Week Away from Time. Boston: Roberts Bros.

It would be hard to find two novels differing more in treatment, and at the same time producing a more similar effect, than 'The Yoke of the Thorah' and 'The Revolution in Tanner's Lane.' In both there is a study of character developing under the influence of strong tradition; further than this, however, no absolute resemblance can be pointed out. There are even absolute differences. Sidney Luska tells his story rapidly—sketching a bold design with a few bold strokes, sometimes passing a turning-point with a sentence, and sometimes, unfortunately, lingering for pages over a mood. He has been always, in his earlier novels, dangerously near sensationalism. In this one he has passed the line, and has probably settled the question as to what rank of authors he will eventually join. He still writes of the Jews and of New York city, but his attitude towards the former has apparently changed somewhat, and no one will now think of putting him on the same plane with George Eliot, or of confusing his interested curiosity and close observation with her sympathy and sentiment. We say his attitude has apparently changed; but we fancy that it is only in appearance, and that the baldly realistic picture of the Koch household, with all its vulgarity and wealth, even when placed beside the graceful, earnest one of Mrs. Peixada, marks only a natural transition from one to another phase. The real hope for Sidney Luska which one sees in this novel is this prospect of a widening horizon; for it is useless to try and disguise the fact that 'The Yoke of the Thorah' shows a distinct falling off from the writer's other novels in almost every particular. But, with a fuller recognition of the catholic breadth and true scope of fiction, one feels confident from the promise which this young writer has given, that he might—by avoiding cheap claptrap and jack-in-the-box sensationalism—do much better work than any which has yet come from his pen.

It is the feeling of disappointment with the author for not reaching the full height which, it seems to the reader, his capabilities might have enabled him to attain, that causes one involuntarily to compare 'The Revolution in Tanner's Lane' with 'The Yoke of the Thorah.' The leading character in each of the novels is a man whose love runs counter to his religion. Elias Bacharach, the young Jewish painter who believes in the law of his race, madly in love with a Gentile, and Zachariah Coleman, a hard-working printer and a dissenter, mildly, but just as surely, in love with a French girl who scoffs at religion and believes in nothing, are not just similar figures. Yet there is enough which is common to both situations to make a look at them together worth one's while. One wonders first what the result would have been had the writers changed themes; there is such a difference in the styles and methods of developing the stories—the one so full, so hurried, and impetuous, the other so slow and measured. In spite of the overrated authority for the dictum that neatness of style is no manly accomplishment, one cannot help seeing that here at least the style has counted for everything. Nor is it less obvious that the simplicity and unpretentiousness of Mark Rutherford, who, Pendennis-like, stands for the author, is better suited to the purposes of sustained narrative than the vehemence and simulated strength of Sidney Luska. The trouble is that neither has followed the golden mean; if the latter has made too much of his material, the former has made too little. But with all the discursive talk, the multiplicity of incidents and character, and the general diffuseness that make a reader's final feeling towards the 'Revolution in Tanner's Lane' one of disappointment, there is at the same time a breadth of view which is uncommon and praiseworthy. It is narrowed occasionally by sympathy for the lowly, for Lincoln's "common people"—a feeling which, however human it may be, however noble and unselfish the thoughts that give it rise, is just as warping as any other partisan sympathy.

A far different novel from either of these is Mr. Kirkland's story of Western life, 'Zury,' which is a history, very simply and effectively written, of the hardships undergone by the earlier settlers of Illinois. One cannot praise the work from an artistic standpoint, though abundant evidence of patient care and painstaking correction is not lacking; it covers too large a field to avoid giving the impression now and then of being fragmentary. A writer who endeavors to record a phase of modern life so important and far-reaching as the conquest of our great West for civilization, cannot be asked to quibble over analytical subtleties, or waste his words in rounding out the outlines of some character who may play a part in the story. Nor do we find fault with Mr. Kirkland for having recognized wherein lay the true value of his work, and shaping his means accordingly, but rather praise him for the clear-cut, truthful picture which he has given us. One who was not in Spring County when Zury was "niggering" logs, while Lincoln was yet a local politician and Chicago was in her infancy, cannot speak positively of the minor points in such a history; but the internal evidences that the writer knew his subject are plentiful and strong. The process of building up the West is still going on, and the pioneer will soon be crowding the base of the Rocky Mountains. There is only a small difference, we fancy, between the neighborhood which saw Zury's gradual growth from the log-house and the many cruel shifts of poverty to wealth and luxury, and the settlers who are to-day building their sod-houses or hovel-like "dug-outs" in Western Kansas and Nebraska. In both one can see the sorrowful effect which a constant struggle with nature for the mere privilege of living produces—the effect of hardening, coarsening, almost brutalizing the character. One knows that with the wealth and cities which are sure to come, will come also the finer qualities—finer even than endurance and physical courage; but the prospect of a sacrificed generation is therefore none the less gloomy.

Benjamin F. Taylor, who also chooses for his first novel the tempting environment of pioneer life, could study Mr. Kirkland's book with much advantage. 'Old Times in the Oak Openings' is little more than a succession of scenes without life, without human interest, and without the spirit of historical truth. Mr. Taylor has lost the true aspect of pioneer life through a sentimental feeling for the "good old times"—or else the settlers of Michigan had a much easier time of it than did those of Illinois—and has only succeeded in producing a set of clever sketches that are fitter for newspaper reminiscences than for fiction.

If it is disappointing to read a novel that lacks only a little of being entirely good, such as Mr. Kirkland's or Sidney Luska's, it is positively discouraging to read one like Mr. Beckett's 'Who is John Noman?' It is discouraging, that is, to those who have hoped that the business of writing fiction would be improved by getting into the hands of educated people. We have no doubt that Mr. Beckett's standard of literary excellence is high; he certainly shows himself to be acquainted with much of the best in a large range of literature, and in the first part of his story evinces an ability to write soberly and effectively. Up to the pages which introduce the blood and thunder, the horrible murder, the anarchists, and the impossible villain, he takes his reader with him easily enough. One's interest, curiosity, and sympathy are all aroused by the quaint figure of John Noman the youth, and his odd life on the mountain with his odd protector; and there was enough in the figure of John Noman the man, and in the situation which his story had developed, to have sustained one's interest to the end without resorting to the penny-dreadful style.

'The Romance of a Letter' is open to no such objection. It is mild enough for the most delicate nerves, and deals with incidents no more exciting than pleasant love affairs, picnics, and railroad blockades, with the harmless insanity of Dr. Carrol thrown in as a much-needed condiment. If one can avoid smiling at the naïveté of Mr. Choate, at the unconsciousness with which he gives expression to his views of life, and can forgive the recklessness with which he overrides the difficulties in the mechanism of his story, one will be able to read the book in a mood equally serious with that in which it was written. It is unfortunate for Mr. Cheate that the element of humor, which is so necessary an adjunct to a true conception of human nature, should only show itself fortuitously in his work, and when he himself evidently expects it least.

It is true that the element of humor is present in the affairs of life, even the most tragical, and there can be no real or elevating pleasure in reading a story so entirely sad and unrelieved as 'Juanita.' This romance of real life in Cuba fifty years ago, as one learns from an explanatory note, is a combination of fact and fiction, and was largely an outgrowth of Mrs. Mann's impressions of slavery in that island. It is published now after her death, when the reasons which so long kept it from the world no longer exist. One appreciates thoroughly the sorrowful indignation which the cruelties of slavery aroused in the writer, as well as the value of the book as the record of a contemporary observer. But, however timely its publication now may be, coming as it does so close upon the time fixed for the emancipation of the slaves in Cuba, one can only feel that the best time for its appearance has been gone for thirty years or more.

Mrs. Dahlgren's novel some readers have already met with in the pages of the *Brooklyn Magazine*. They will, no doubt, be glad to learn from the preface that the author has been assured by the editor that the story had met with such favor that the magazine was satisfied with its success. Mrs. Dahlgren also has known something of slavery at first hand; yet one could hardly imagine that she and Mrs. Mann had in mind the same institution. Mrs. Dahlgren seems chiefly exercised over the dangers of miscegenation, but writes with such extravagance that one is amused rather than impressed.

Any one who has read even a small amount of detective literature can premise with tolerable closeness what sort of entertainment awaits him between the covers of a book like 'The Tragedy of Brinkwater,' or '7 to 12.' Murders, robberies, clues, impossible coincidences, and all the stock in trade of this branch of the business of fiction writing are unsparingly used. It is to be regretted that there should be such a waste of talent and time simply to catch the wave of popularity which a few remarkable books of this kind have raised.

Mrs. Alexander's popularity is not so hard to understand. The present volume of her stories is a fair example of what Carlyle has expressed as constituting popularity in a man—the man who stands on our own level, or a hair's breadth higher, and shows us a truth which we can see without shifting our present intellectual position. There is no effort necessary to see the drift of these tales; virtue is rewarded and vice punished always at the end in the most satisfactory way. No doubt exists in the mind of the reader as to which characters are virtuous or the contrary; the sympathy and liking are all one way. When the element of interest, both in incidents and situations, is added to this delightful consistency of the characters, there is produced a style of story which one can read, if not with the highest pleasure, at least with something of harmless recreation and satisfaction.

The stories of Helen Jackson touch another chord. 'Between Whiles' is a collection of tales that, with the exception of the first and longest, have already been printed. And they very well stand the test of being half forgotten after a hasty reading in some magazine, and then, years afterward, being read again. In every case the memory of the story, almost as soon as the first sentence is read, comes back in all its entirety, the characters seem like old friends, and there is genuine pleasure in listening to their simple talk and breathing the wholesome odor of their surroundings. The first story, "The Inn of the Golden Pear," was left incomplete at the author's death, and one regretfully wonders what she would have made of the lives of Willan and Victorine. The few chapters which but finish what might be called the first episode are filled at once with strength and subtlety quite beyond anything else in the volume. In spite of the sudden infatuation of Willan, and the quaint romance of a bygone time that would serve ordinarily to give such a tale a tinge of unreality, there is a naturalness, a pervading sense of being close to life and nature, a vigor and grasp, that compels one's interest and admiration. But it is chiefly the purity, the elevation and gentle fervor which throughout these stories disclose their author at her best, and win the hearts of her warmest admirers.

There is but one objection to be made to 'A Humble Romance, and Other Stories': the stories are all too much alike. Here, again, one meets with old acquaintances from the magazines, and cannot but admit that, notwithstand-

ing their seeming commonplaceness, they are after all worth knowing. The humbleness of Mrs. Wilkin's character, until from meeting with it too constantly it becomes obtrusive, is quite an agreeable reaction from the high life that used to monopolize fiction. Yet one can grow tired of simplicity when it seems forced, full as readily as of impossible lords and ladies.

'Told at Tuxedo' and 'A Week Away from Time' are two examples of the futility of trying to fasten several short and separate stories together with an artificial thread, and, by means of this device, creating an additional and deeper interest in the tales themselves. Especially noticeable is the failure of such an effort when both the stories and the connecting narrative are of so slight a texture and worked out so fragmentarily as are the contents of the thin volume by "A. M. Emory." The way in which an interest in the book has been awakened reminds one of Warrington's manœuvring with the house of Bungay on behalf of "Walter Loraine." 'A Week Away from Time,' which appears without even a *nom de guerre* on the title-page, is somewhat better, inasmuch as there is visible a conscientious effort on the part of the author to attain to genuine excellence both of form and matter. With something more solid than sentimentality, with better models than the lightest of the French school of story-writers, one may expect much better work from this author.

New Lessons in Harmony. By John C. Fillmore. Philadelphia: T. Presser.

Manual of Counterpoint. By Dr. Th. Baker. New York: G. Schirmer.

Lectures on Musical Analysis. By H. C. Banister. London: George Bell & Sons.

Mr. J. C. Fillmore, who, a few years ago, wrote an interesting history of pianoforte music, deserves another word of commendation for attempting, in these 'New Lessons in Harmony,' to make the ideas of the greatest living musical theorist, Dr. Hugo Riemann, accessible to English readers. Mr. Fillmore has "for some time been convinced that the minor scale and minor harmony needed a radically new treatment, based on rational principles, and that the practice of the greatest writers of our time, such as Liszt and Wagner, needs to be accounted for in a much more thorough and satisfactory way, as regards tonality and modulation, than is done by any text-book on harmony heretofore published in English." As Dr. Riemann's work, on which this is based, is intended primarily for teachers, Mr. Fillmore wisely concluded to make the treatise his own by so rewriting it as to make it useful to students; and we must admit that we know no other work in which a musical student can learn so much about harmony in fifty pages of text and examples for exercise. The appendix contains a translation of Riemann's lecture on the "Nature of Harmony," a careful perusal of which will enable students to see clearly the drift of modern speculation in music.

Dr. Baker's 'Manual of Counterpoint' forms a sequel to Prof. Oscar Paul's 'Manual of Harmony,' which Dr. Baker translated a few years ago. He declares that "Prof. Paul is in no way responsible for any opinions herein advanced"; nevertheless, it follows in his lines, and the result is such that Prof. Paul may well be proud of his pupil's achievement. Counterpoint is one of the bitterest pills which those who wish to become creative musicians have to swallow. Dr. Baker, however, has done his best, by means of a clear style, accurate definitions, and the avoidance of over-pedantic rules, to sugar-coat this pill for the pupil. It is to be regretted, however, that he retained the cumbrous apparatus of four distinct clefs for the exercises and examples. The technics of musical composition are difficult enough without adding needless complications. The mediæval idea of art was to make it as technical and as difficult as possible; but the modern idea is different, recognizing the fact that human brain power is limited, and that all the attention claimed by non-essentials is lost for essentials.

If Prof. Banister's 'Lectures on Musical Analysis' had appeared about fifty years ago, they would have been timely and instructive. Like a large part of Grove's otherwise excellent 'Dictionary of Music and Musicians,' this treatise indicates that, to the older generation of English musicians and teachers, music came to an end with Beethoven and Mendelssohn. Schumann is but once mentioned in Dr. Banister's 370 pages, and Rubinstein, Liszt, Brahms, and Wagner not at all. And on the very first page he makes a statement which completely takes one's breath away: "A composer may originate beautiful ideas, and we then call him a *genius*; but he may not have had the training, or may not possess the *mastery* of his resources requisite to set forth those ideas in the strongest way. Chopin and Dussek—very different composers—were geniuses, but not masters." Chopin not a master! Chopin not able to set forth his ideas in the strongest way! and this the utterance of an English "Professor of Harmony, Counterpoint, and Composition at the Royal Normal College and Academy of Music for the Blind." The English have recently boasted much of their progress in the direction of becoming a musical nation, but this *ex-cathedra* utterance, we protest, shakes one's faith in the reality of it. It is, of course, not necessary to point out that Chopin is the greatest *master* of pianoforte style that ever lived; that, in fact, he created the modern pianoforte style, anticipating the latest improvements in that instrument, and that Schumann, Liszt, Rubinstein, Moszkowski, and all great modern piano composers have followed in the footsteps of Chopin, both in the treatment of the pianoforte and in the structure of their compositions. The piano of the modern romantic school is indeed an entirely different instrument from the piano of the classical school, and therefore calls for a different treatment and style; yet here, in the year of grace 1887, an English Rip Van Winkle thinks the proper way to teach pupils music is to analyze the antiquated artificial sonata form, ignoring all the more natural modern forms that have superseded the sonata on the principle of the survival of the fittest. It is just as if some botanical Rip Van Winkle were to set up a school in which he should teach the artificial Linnæan system.

It is, indeed, a favorite maxim with old music teachers that instruction should at any rate begin with these "classical" models; but this is just as absurd and misleading as it would be to begin to teach botany with the Linnæan system. What interests young pupils and awakens their enthusiasm is to "be in the swim," as it were, of modern music; and, constantly hearing it, they can but feel an aversion to the archaic sonata form; and music teachers, instead of repressing the eagerness of their pupils to throw over their Haydn and Mozart sonatas and take up Chopin and Schumann instead, should encourage it in every way. With Bach the case is different. He was much more modern in style and spirit than Mozart, or even the early Beethoven. And, to come back to Chopin, we say without hesitation that he was a greater *master* of style than Beethoven, and quite as great a genius. Schumann has a clever dig somewhere at the pedants of the Banister variety: "Taste, indeed," he writes of Chopin, "we must concede him, of the finest quality; but of course that is nothing for the theorists; they only search for (forbidden) fifths, and get angry whenever they don't find any. But they could learn many things from Chopin, and above all how to write fifths." "He is and remains the boldest and noblest poet of the time," he writes elsewhere. And in another passage—the most prophetic Schumann ever wrote—he attributes to Florestan (*i. e.*, himself) "the somewhat paradoxical assertion that 'in Beethoven's "Leonora" overture there is more *future* than in his symphonies'—words which might be more properly applied to Chopin's nocturne in G minor, *in which I can see a terrible declaration of war against a whole past.*"

Duelling Days in the Army. By William Douglas, late 10th Royal Hussars. London: Ward & Downey; New York: Scribner & Welford. 1887.

The author tells us that "duelling is practically dead in England," but he leaves the reader to infer that we are behind the British in doing away with the evil, saying in his preface that "although Colonel Cash of the American Army fought and killed Colonel Shannon of the same service a year or two ago, the practice may be said to be almost as defunct, even in the Southern States of America, as at home with ourselves." The "American Army" is about as indefinite as the European army, or the Asiatic army, but if the author means the Army of the United States of America, we should like him to present his proofs that Col. Cash of that army fought and killed Col. Shannon of that service a year or two ago. We have no recollection of any such occurrence. Duelling in our army has been prohibited under severe penalties by our articles of war ever since their adoption, and has long been practically unknown to the service. It never was as prevalent in our army as out of it.

Our author has not arranged his stories in the order in which the duels took place, nor, in fact, in any order. They are told without any account of the spirit of the times in which the events occurred, and therefore produce the effect of a lecture illustrated by stereopticon views—*with the lecture left out.* It is, however, mentioned incidentally that in 1697 a man, duly tried by the civil authorities and found guilty of "coining false money," was sentenced to die by being "thrown alive into a cauldron of boiling oil." It is true that duelling is a relic of barbarism, but it is hardly worth while to moralize upon the barbarity of it until the makers of civil law get a long way in advance of boiling men to death in oil for counterfeiting.

In some instances the author's grammar is bad, and in some the language is too English for us. For example, we find (p. 117) "although very stringent orders against challenging or carrying a challenge *has*, as a rule, existed in the British army for many years, yet these orders . . ."; page 170, "people in those days were, *we expect*, quite as considerate of themselves," etc.; page 171, "but it was an *awfully* cowardly one," etc.; page 243, "where punch galore came on after supper, and songs and glees bore *famously* its company." But independently of the way these tales are told, it is a question whether they should have been gathered together in cold type. Surely the British army cannot read them without a pang. The author depicts duelling as a common practice for a long time in the British army, not only resorted to in defence of men's so-called honor, but enforced upon officers by their companions for the mere purpose of making the assailed prove that he was not a coward. The pistol and bowie-knife days of our Arkansas and Texas frontiers never much surpassed the brutality that, as appears from this book, has prevailed among the officers of the British army.

Of course, in a book written by an Englishman, relating in any way to the army, the Duke of

Wellington must figure. In this book, his Grace appears far better as principal in a duel with Lord Winchelsea than as commander-in-chief, administering justice between two of his subordinates in a case growing out of a challenge. Perhaps justice, from a republican point of view, could hardly be expected, as one of the parties was a lord with the rank of cornet, and the other only a gentleman and an officer with the rank of captain. The facts as given are as follows: Lord George Bentinck was cornet in the Ninth Lancers, but, being the son of a duke, "considered that military discipline could never be intended for such as he." He exacted "the utmost reverence from his subordinates," but "objected to pay any respect to his own superiors in the service." Capt. Kerr, who commanded the troop to which Lord George belonged, "was as gallant a soldier as ever drew sword, and a thorough gentleman." "The Captain did his best to teach the young cornet his duty, but his Lordship seemed to feel a pleasure in going quite against the expressed wishes of his Captain," and finally, when on duty upon a field-day, publicly insulted the Captain for correcting him, saying, "Captain Kerr ventures to say on parade that which he dares not repeat off it." According to the usages of the time and the army, this was unbearable; and, lest he be sent to coventry as a coward, Capt. Kerr, when off duty, in due form demanded satisfaction. His Lordship, however, when brought to the scratch, backed out, and the Captain, seeing no other recourse, posted the sprig of nobility as a coward. And now the result. Capt. Kerr, who was only a commoner, an officer, and a gentleman, who had been publicly insulted by his military subordinate on parade, was cashiered by a British court-martial; while the noble dastard who committed the real offence went scot-free. All of this occurred only about fifty years ago, we are assured, under the Duke of Wellington's administration of the British army.

The author says: "There can, in our opinion, be little doubt that, had the man who gave the insult not been the son of a duke, he would have been sent to coventry, and eventually obliged to leave the service." Then, apparently alarmed at his own boldness of speech in a matter touching the aristocracy of England, he falls at once into the apologetic vein, and adds: "We somehow fancy that the Duke of Wellington, who was the commander-in-chief at the time, and who was by no means averse to duelling, would have, in a year or so, reinstated Capt. Kerr to his former position in the army. But, unfortunately, in less than six months poor Kerr died." If the Duke could have reinstated Capt. Kerr, he could have prevented the shameful wrong done to that officer.

La Puissance des Ténèbres. Drame en cinq actes par le Comte Léon Tolstoï. Traduit du russe par Neyroud. Paris: Nouvelle Librairie Parisienne. 1887. 12mo, pp. 239.

THOSE who believed that Count Leo Tolstoi had entirely abandoned literature, must have been startled at a recent telegram that a drama, recently written by him, called "The Power of Darkness," had been forbidden the Russian stage. But the nature of Count Tolstoi is so artistic that, in spite of all that he does and says, in spite of denials and avowals, it was evident that sooner or later he would return to literature, his nature's only true expression. He may work in the fields or make shoes of an evening, but he *must* write. Once before now he has abjured the world and all that gives the world its savor. Twenty-five years ago he retired to Yásnaya Polyána, and devoted himself to educating his peasants, teaching them himself. He forswore novels, and wrote nothing but educational articles and accounts of his school, or short stories for children, all of which fill the fourth volume of his collected works. But in the course of time his duty ended, for he had acted solely from a conviction of duty; his peasants, or at least all the children and all who showed any glimmer of intelligence, were versed in the elements. Children could not be born fast enough to be taught, and literature and the pursuit of game—the Count's great passion—assumed their rights. He produced immediately 'War and Peace' and 'Anna Karénina.' In the present case it is only the form of the return to literature which is astonishing. No one expected a drama, especially after the very powerful, though painful, sketch, 'The Death of Ivan Ilitch,' which was begun in 1884 and finished in 1886. Despite the statement that the publication and sale of this drama have been forbidden in Russia, it appears in the twelfth volume of Tolstoi's works (Moscow edition) as written in 1886, with the title of "The Power of Darkness; or, Once his claws stick fast, every small bird's done for"—the alternative title being drawn from an old Russian proverb. The bird-lime here is sin, and the little bird is the amiable but weak peasant Nikita, still sympathetic, notwithstanding his one great failing, who is hurried from crime to crime, till he expiates all by repentance, public confession, and self-surrender to punishment. As a drama this work, with all its strength, has great faults; as a picture of peasant life, it is in details of conversation and character very lifelike, and we fear only too true morally in its representation of faults and follies. The horrors are, however, too great, for in the first four acts we have two seductions, adultery, incest, robbery, murder, infanticide, with attempt at suicide in the fifth. It is only the dialogue that makes it tolerable. And this lively dialogue, full of proverbs, quaint turns, and picturesque expressions, is exactly what has not been rendered in the French translation, which is so colorless and insipid—skipping as it does the difficulties—as to give a very slight impression of the immense power of the original. Even in its French form, the drama is unfit for representation, and it is impossible to wonder at its being prohibited at St. Petersburg.

As a rule, English or German is far better than French for translating stories of Russian peasants or of Russian middle-class life. Here the character of the religious Akim, a man after the author's own heart, is completely spoiled by the French version of his hesitancies and repetitions—hard enough, it is true, to render into any language, but still possible in English. On the other hand, stories of Russian high life, like 'War and Peace' and 'Anna Karénina,' seem more natural in French than in English, because the characters might have spoken French habitually instead of Russian. In reading a French translation, even though it may really be inferior to an English rendering, one who has lived in Russia has no effort in representing to himself the scene as real and lifelike.

Apropos of these novels, recent translators have committed a little fault (which annoys the reader), owing, perhaps, to a want of personal acquaintance with Russian society. While the Russians give their family names a feminine gender in Russian, they never decline them when transliterating them into a foreign language. Thus, they would always say in French or English "Madam Karénin" and not "Karénina." The Poles, on the contrary, who use Roman characters, retain the feminine ending on their cards.

It ought to be mentioned, as an evidence of the care with which Tolstoi's works have been edited, apparently by some member of his family, that a *variant* is printed of four scenes in the fourth act of "The Power of Darkness." The same thing has been done in some other cases, and notably in the fragment of "The Decembrists," where two variants are given.

Here and There in Yucatan. Miscellanies. By Alice D. LePlongeon. J. W. Bouton. 1887.

THIS little book may be deemed a supplement of personal narrative and chatty disquisition, appended to the writer's more important work on 'Yucatan: Its Ancient Palaces and Modern Cities.' It is a collection of articles which have been contributed to various periodicals by the accomplished authoress, and which she has been induced by "the request of friends" to bring together for preservation. It must be said that the request has been better justified than is usual in such demonstrations of friendly partiality. The sketches, though slight, have the merit of conveying much interesting information in a sprightly and attractive style. They relate, for the most part, not to the mainland of the peninsula, but to the outlying islands, which Dr. and Mrs. Le Plongeon visited in the course of their indefatigable researches. We learn much about the turtle-catchers, the salt-gatherers, the tobacco-growers, and other occupants of the picturesque islands of Mugeres and Cozumel, off the eastern coast of Yucatan. There are some descriptions of ancient buildings and other monuments of the former Indian civilization, and some curious narratives of piratical adventures and searches for hidden treasures.

A brief but striking account is given of the Caribs of British Honduras, who still, it is said, retain the habit of sacrificing and, perhaps, of devouring a child in their religious orgies, and, nevertheless, have the repute of being "very honest and harmless, but great drunkards." We are also told of a pigmy people who formerly dwelt along the western coast of the peninsula, and whose existence seems to be proved by the discovery of houses and temples suited for occupants and worshippers less than four feet high. Some of these diminutive creatures are said still to live in the recesses of British Honduras; and the authoress had from an old woodcutter a precise and seemingly truthful account of a visit made by himself and others in 1825 to their place of abode, and the actual capture of one of them, a girl about eighteen years old and not quite three feet high, who afterwards escaped from her captors.

There is a chapter on "the lost literature of the Mayas," repeating the well-known story of the destruction by the fanatical Spanish priests of the many books in which the natives had embodied, in their hieroglyphics—perhaps partly alphabetical—what they had retained of the learning and wisdom of their ancestors. While the narrative, as here told, will renew the reader's regret at this irreparable loss, it cannot fail to inspire him with some alarm at the attempt which is to be made to partly supply it. A few of the Maya books, or codices, as they are now termed, have been rescued, and one of them, the celebrated Codex Troano, is undergoing translation by Dr. Le Plongeon, whose superiority to all other investigators in this line is naturally and laudably assumed by the faithful partner of his labors. The wild vagaries of interpretation with which that other estimable and untiring archæologist, the Abbé Brasseur de Bourbourg, disfigured his otherwise valuable works on Central America, are to be repeated, and perhaps even exaggerated.

Dr. Le Plongeon, we are told, finds that this "Troano manuscript" is mainly "a work on geology and ethnology." Its author "appears to have had a knowledge of the various strata of which the crust of our planet is composed, for he has painted them of different colors." There are also "records of cataclysms by which the face of

the earth has more than once been changed." And we are further assured that "the story of the disappearance of a great island, Plato's Atlantis, in the Atlantic Ocean," is confirmed by this amazing authority. The news will be a delight to Mr. Ignatius Donnelly, and a source of dismay to other students of American archæology, who had hoped that we were well rid of this preposterous cataclysmic nonsense. It would be unfair, however, to judge either the writings of Mrs. Le Plongeon or the researches of the learned and worthy Doctor by these unlucky attempts at the unriddling of mysteries in which the best intellects are apt to be muddled.

The present work, saving perhaps a few rather flimsy disquisitions near the end, will be found a thoroughly readable volume, with much in it of novel and instructive, and with some stories of exploring trials and hardships, stoutly borne, which add not a little to our respect for the heroine and hero of the narrative.

The Nibelungen Lied, or Lay of the Nibelung. Translated from the German by Alfred G. Foster-Barham. Macmillan & Co. 1887.

THE revival, both in Germany and in countries foreign to it, of interest in the mythology involved in the great German epic and in the operas of Wagner's "Nibelungen-Ring" has awakened a desire in England and America for fresh literature upon this subject. A few readers with philological aims are eager for the old texts of the *Lied* and of the earlier MSS. upon the same themes; others, especially students of general literature, would prefer the nearest English equivalent for the original epic; while perhaps a far greater number desire an easy, popular version of the story, with some hints upon its ethnological bearings and its literary merits.

The press has begun to meet these requisitions upon it, and Carlyle's reproach that his race knew the 'Nibelungen Lied' only by name, bids fair soon to cease to be true. Mr. Foster-Barham's translation will undoubtedly contribute its quota to bring this about. Yet his work looks more like a good grade of literary amusement than like a well-directed effort to satisfy any public demand, or to promote the general culture. The philologist finds not a word for him, the translator not having so much as informed him from what text he has made his version. Nor is the mythology or the romance of the subject made clearer than the *Lied* itself makes them. This translation preserves the matter and method of the rhapsodist, made a little more coherent by the unknown middle-age poet, but obscured by traditions, customs, and historical correspondences, which are so unfamiliar that the mere substitution of English words in the Middle-High-German poem "brings over" to us but half of what the epic originally conveyed to those who were living in the atmosphere of its mythology, and who from infancy had listened to fragments of its story.

The literary form of the poem realized in English seems to have been the full aim of the translator. He has given us the thirty-nine "adventures" of the original, and has approximately copied the verse and the strophe, though the peculiarity of the extra foot in every fourth line Mr. Foster-Barham has quietly dropped from his metre. Yet his lines will not read smoothly, even at their best, except to those who carefully observe the cæsural pauses. German publishers often print this epic with a conspicuous break in the midst of the lines, to assist the reading. English readers have still greater need of this help.

A metrical version of the "Nibelungen Lied" is an undertaking full of difficulty for the translator; and the critic may be forced to say the work has been well done, even though he can easily raise well-grounded objections to many of the English lines. Such is the case with this translation. The diction is pleasant, the version is free and loose—and, perhaps, necessarily so. But the translation should be more complete. It is not fair to expect all English readers to know, or to have the means of translating, such words as *Degen*, *Ritter*, and *Recke*, both singular and plural forms. Nor does the great metrical convenience of *Fiedel*, *Fiedelmann*, *Fiedelere*, and *Fiedelspieler* justify thrusting these terms upon total strangers to them. "Nibelungen" has been mistaken for the genitive singular in the translation of the title of the poem. Wagner's title, "Der Ring des Nibelungen," may have led to this error.

Germany.

PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, French, and other branches. Summer resort for seabathing. Fine surroundings. Isle of Rügern. University of Greifswald. For circulars address PROF. J. M. CROW, Ph.D. Grinnell, Iowa.

CATALOG NO. 23, BEING "ODDS and ends" from the "Literary Junk Shop" of A. S. Clark, 34 Park Row, N. Y., now ready.

August Atlantic,

Ready to-morrow, contains:

PERSONAL CHARACTERISTICS OF CHARLES READE.
By E. H. HOUSE.

THE GROWTH OF MATERIALISM.
By GEORGE FREDERIC PARSONS,
Author of "The Saloon in Politics."

THE SPELL OF THE RUSSIAN WRITERS.
By HARRIET WATERS PRESTON.

TWO YEARS WITH OLD HICKORY.
By THOMAS H. CLAY.

Continuations of Serials by
DR. HOLMES, MRS. OLIPHANT, MR. ALDRICH, MR. CRAWFORD.
Other Essays, Poems, Contributors' Club, etc. 35 cents a number; $1.00 a year.

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 East 17th St., New York.

Sidney Luska's last and best Romance,

"A LAND OF LOVE,"

Appears complete in LIPPINCOTT'S MAGAZINE for August. Also

"Is the Base-Ball Player a Chattel?"

An attack by John M. Ward [New York Ball Club] on the methods of the League and the Association; and articles by Edgar Fawcett, Edith M. Thomas, Mrs. Bloomfield Moore, H. H. Boyesen, etc.

For sale by all newsdealers, price, 25 cents.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

*SCHOOL BOOKS IN FOREIGN LAN*guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

Swiss Stories for children and those who love children.

From the German of Mme. Spyri by Lucy Wheelock.

Simplest of stories told with the least exhibition of art, as if the writer's only purpose were to touch and teach her children. But let the honest soul that delights in the innocent frankness of childhood stop midway in one if he can!

At the bookstores to-day, $1.

D. LOTHROP COMPANY,
Franklin and Hawley Sts., Boston.

"None of the extant systems so simplify and minimize the task of the learner."—ST. PAUL PIONEER PRESS.

GERMAN SIMPLIFIED.

An eminently practical new method for learning the German language. Edition for self-instruction, in 12 numbers (with keys), at 10 cents each; school edition (without keys), bound in cloth, $1.25. For sale by all booksellers. Sent, postpaid, on receipt of price, by Prof. A. Knoflach, 140 Nassau St., New York. Prospectus free

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York.
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

TALES BEFORE SUPPER.

Translated from the French of Gautier and Merimee, by MYNDART VERELST (the translator of the 'After-Dinner Stories from Balzac'), and preceded by an introduction from Mr. Edgar Saltus. Paper, 50 cents. Cloth, $1.25. These tales are regarded as the masterpieces of their respective authors. Published by
BRENTANO, 5 Union Square.
For sale by all booksellers.

The Nation.

NEW YORK, THURSDAY, JULY 28, 1887.

The Week.

THE Civil-Service Reform Association of Baltimore deserves thanks for its decision to make a formal presentation to the President of the facts regarding the shameless disobedience, both of the Civil-Service Law and of the Executive order against interference by office-holders in politics, committed by Eugene Higgins, Appointment Clerk of the Treasury Department; Morris A. Thomas, Indian Agent; Naval Officer Rasin, and sundry other Federal office holders at the Democratic primaries in Baltimore last week. There appears to be no dispute that these men neglected the work which they are paid by the taxpayers for doing, and devoted themselves to superintending the operations of the heelers employed by the Gorman ring to capture the primaries by fraud, intimidation, and every other disreputable device known to politics. As we understand it, no attempt is made to deny that Higgins & Co. did what is here charged against them; indeed, Higgins is quoted as openly boasting of his achievements after he had returned to Washington. The temperance lecturer likes to have his "horrible example" to show the terrible consequences of the vice which he condemns. A civil-service-reform President in like manner may have thought that a display of the spoils system in its most odious form in some conspicuous place like Baltimore might, by contrast with the application of the merit system elsewhere, form the most effective object-lesson which could be set before the country. But we must submit that by this time the lesson has been taught, to everybody capable of learning it, that the spoils system, as permitted in Maryland, does not pay as a political investment. Every sensible politician sees that the Administration is the weaker, and the chances of the Democratic party in the next campaign the poorer, for the favor shown to Gorman in Maryland. There is no need of further instruction. Besides, even the "horrible example" cannot be permitted to break the law in order to show that it is better policy for other people to obey it.

The story of the appointment of Harvey, the Treasury clerk who has just been convicted of forgery and sentenced to twelve years' imprisonment, is a most extraordinary one. It appears that his business character was very bad before he applied for the place, being a notorious "bilk" at his place of residence, and that it was because no one would trust him that he sought it. Nevertheless, a large number of respectable men—lawyers, judges, merchants, and politicians, beginning with Mr. Samuel J. Randall—warmly recommended him, showing that they either did not know anything about him, or did not think a bad character a disqualification for a Government office. He was appointed, too, in spite of the protests of Messrs. Curtin and Storm, both Democratic Congressmen, and one of them from Harvey's district. After his appointment, formal charges of swindling and general bad reputation were made against him by Mr. E. G. Scott of Wilkesbarre, and referred to the Internal Revenue Collector, Mr. Staples, at that place, for examination. He let Harvey know what was going on, and Harvey told him it was all right, that the charges were referred to him because Mr. Manning wanted to have him "vindicated." Staples told this in a letter of extreme naïveté to the Treasury Department, and asked if it was true, and, receiving no answer, actually investigated on the assumption that it was true! He accordingly wrote a report which is one of the curiosities of official literature, showing that, although Harvey's reputation was bad, it was not "irretrievably bad," and that, although he had been a Republican, he had not been a "bitter Republican," and that, although he had swindled now and then, he had always swindled under extenuating circumstances, and that he would doubtless avail himself of the opportunities of self-reformation offered by the Treasury. Accordingly, although Scott renewed his charges, Harvey kept his place, did not reform, and finally forged.

Capt. "Mike" Cregan's speech to his supporters on Friday night is one of the most instructive political documents we have had for a long time. It bears about the same relation to most of the political oratory of the day that a well-cooked tenderloin steak bears to water gruel. It was full of nutriment for students of politics, and especially for those who have difficulty in understanding Republican politics in New York and do not care to go to the primaries in order to learn. Few people, for instance, know what the duties and powers of a Boy are in the Republican Machine. Well, Mike explained this in a sort of object-lesson by calling his meeting. Thousands of intelligent men in this city doubtless suppose that a Republican Boy derives his powers from the Republican County Committee, and therefore expected that Mike, when formally dis-boyed by the Committee—that is, expelled from it and from his district leadership—would fade into obscurity and nothingness. This is of course a most natural supposition. It is what one would find in all the political dictionaries and manuals under the head of "Boy" or "Local Politics." It is the view doubtless taught in the colleges in lectures on the Rice case. But yet it is fundamentally wrong, showing that, as Prof. Huxley says, nothing scientific can be learned out of books. You must actually see, or even, if possible, handle, the thing you seek to know about. To know the precise nature of a Boy's functions and powers, you must see him doing Boy's work, and hear him explaining it as he goes along. This opportunity, which does not present itself once in ten years, Mike offered to students on Friday. The tapping of two kegs of beer for the meeting at Mike's expense after he had concluded, is something we do not approve of and will not seek to palliate. But Mike's course in uncovering the springs of power and taking huge draughts therefrom in the presence of the public, must commend itself to every lover of courage and fair play. The Republican Committee has undoubtedly attempted, in dis-boying him, to inflict a grievous wrong on the people in Mike's district, and his exposure of the real nature and probable consequences of the attempt do him great credit, and will doubtless bear fruit.

There are signs that some of the Grand Army men recognize the danger threatened to their organization by the antics of such men as Fairchild and Tuttle. Harrow Post of Mount Vernon, Ind., held a meeting on Saturday night, and unanimously adopted resolutions which might well serve as a model for other posts. After a preamble, reciting that the President had accepted an invitation to be present at the National Encampment in St. Louis, and had been induced to withdraw his acceptance "by reason of disloyal and threatening language by certain individuals, who claim that there is not enough room in the city of St. Louis for the President and the G. A. R. to be there at the same time," it was resolved that "it is the opinion of the members of this post that all individuals whose language and acts contributed to this result, if members of the Grand Army of the Republic, are guilty of violating sections 4 and 5 of Article 6 of the rules and regulations of the order, which read as follows: 'Section 4, conduct unbecoming a soldier and a gentleman in his relation to the Grand Army of the Republic; section 5, conduct prejudicial to good order and discipline'; and they are further of the opinion that all said individuals whose acts caused or induced the Chief Executive of the nation to withdraw his acceptance of the invitation to be present at the said meeting of the National Encampment, are guilty of disloyalty, and are as reprehensible as were those who endeavored to prevent President-elect Lincoln from passing through Baltimore on his way to Washington for inauguration in 1861, and deserve like condemnation."

The *Evening Star* of Washington says that the papers of applicants for positions on the police force of that city indicate that most of them are persons of very limited education. The reason is interesting. A law was passed some twenty years ago restricting appointments to such places to those who had served in the army and navy of the United States and received an honorable discharge, the intent of which was to benefit the veterans of the war. This intent is now, and for some time has been, thwarted by a requirement that an appointee must be between twenty-two and thirty-eight years of age. The members of the Grand Army of the Republic have endeavored to remove or extend this age limitation, in order that the original intent might be carried out; but fortunately they have not succeeded in doing so. It is plain that a design of this kind must sooner or later give way to weightier considerations. It may

be conceded that the act of Congress was a proper one at the time, but it cannot be questioned that the protection of life and property at the capital of the nation demanded its virtual nullification just as soon as the survivors of the war had passed the vigor of their early manhood; and it is to be regretted that the act was not then repealed. The police force is now, by reason of the existence of this law, recruited from the army and navy, which consists, "as a rule, of those who are unable, for lack of training, to obtain mechanical or professional employment," and yet, by reason of the existencee of an age qualification, those for whom the law was enacted are not benefited. The consequence is, that it becomes more difficult each year to secure competent men for the positions, because more intelligence and skill are required as the city of Washington increases in size and importance, and the number of men of character and attainments who enlist in this time of peace in our army or navy, receive an honorable discharge, and take up their residence in the District of Columbia, grows smaller and smaller.

The movement among the drafted men who did not go to the war, but paid their own money for substitutes, for reimbursement at the public expense, ought to be hailed with joy by all persons who are alarmed about the Treasury surplus. But it appears to us that the movers are working on the wrong plan. They ought to present their claim to Congress, not to the Legislature or the County Supervisors. The local communities are almost certain to reject the claim, but if it were offered as an amendment to a pension bill, or a bill for equalizing currency with gold, or some other measure for reducing the surplus, it would have a very fair prospect of success. It is a very commendable feature of the plan that the substitute-buyers demand interest from the date of payment, because that will reduce the surplus more effectually than mere repayment of the principal. The only thing wanting to make the measure popular is an amendment paying the same amount to the drafted men who went in person as to those who went by proxy. Why not?

A new argument against reducing the tariff in order to reduce the Treasury surplus is having a fine run in the protectionist newspapers. It is that a reduction of duties commonly leads to increased importations and thus to additional revenue. How absurd, then, to expect to reduce the surplus in that way! Our esteemed contemporary the *Tribune* closed one of its solemn articles on the shortcomings of the Administration the other day with this admonition. We venture to suggest that if such an article as wool should be relieved of tax altogether, the increased importations would not add anything to the receipts of the Government. It is quite certain that the Treasury surplus is not derived from the free list. Therefore we may avoid the disaster so much apprehended by the *Tribune* and its imitators by simply enlarging the free list. There never was so grand an opportunity to emancipate industry since the United States became an independent nation as the present. By removing the taxes from lumber, ores, salt, wool, and other raw materials and chemicals, the Treasury surplus would be sensibly cut down, and the shackles of many industries removed. But this is what Mr. Randall calls "cutting to the quick and drawing blood." Some man has an iron mine, or a copper mine, or a timber forest, or some other gratuity of nature, in consideration of which the Government has granted him a license to charge 30 or 50 per cent. more than his products are worth in a free market—that is, to "draw blood" from everybody who is obliged to buy his goods. But when it is proposed to curtail in some small degree the amount of nourishment that he may draw from the veins of his neighbors and customers, his screams are so terrible that his victims really believe that some desperate injustice is about to be done to him, whereas the only thing proposed is to restore to other people the right to be free from blood-suckers.

A handy illustration of the distressful effects of tariff meddling reaches us in the current number of the *Manufacturers' Record*, in which the Hon. William D. Kelley tells the people of the South how they have been afflicted by the closing of a mill for the manufacture of iron ties for baling cotton, situated at Helena, Ala., and owned by Rufus W. Cobb. In 1883 Congress, at the instance of Southern members, made some reduction in the duty on cotton ties, and this mill was closed. Cotton ties were more abundant and decidedly cheaper afterwards than before. They were paid for by the products of American industry, the Britisher not having the grace as yet to give them to us for nothing. The only difference was that the planter received say ten ties in exchange for a given amount of cotton where he got only nine before, and that Cobb did not manufacture them. Now, according to Kelley, it is a great calamity that the State of Alabama is not using up her coal and iron and getting nine cotton ties with a given amount of labor, when she can get ten just as easily, and save her coal and iron for some more profitable use. But a more disastrous chance was the lowering of the duty on iron-wire rods by the tariff of 1883, resulting in the importation of 164,962 tons last year for wire fencing. This, Mr. Kelley contends, was a great damage to the South, where barb-wire fences are in extensive use, for, although there is no lack of wire at lower prices than before, "the privilege of supplying the South with these rods and with cotton ties would have been a boon to the people of the whole section." The Southerners considered the boon to consist in *having* the fences and the ties, while Mr. Kelley thinks that it consists in *making* them. Both parties might be satisfied by passing a law to pay the Cobbs and the Kelleys a fair price out of the public treasury for making wire rods and ties, and leaving other people free to buy those articles where they can get the most for their money. In this way we should be burning our coal and melting our iron and sweating over our furnaces with the desired ardor, and at the same time not preventing any farmer or planter from making the best bargain that he can for himself. Another advantage of this plan would be that we should know just how much it costs us in the way of bonus to consume prematurely and unnecessarily certain gifts of nature that are not unlimited in amount and that can never be replaced. Under the protective system we are quite in the dark as to the amount of the bonus. As regards the duty on wire rods, we believe that the mishap which Judge Kelley deplores came about through an untimely quarrel and grab game among the Northern manufacturers themselves, and that the Southern Congressmen had little or nothing to do with it.

The Ohio Democratic platform bears detailed examination better than such timber usually does. Aside from the "hearty and unqualified endorsement" of President Cleveland's Administration, and the demand for tariff reduction in preference to the abolition of the whiskey tax, two planks merit especial praise. After the usual amount of the regulation "flapdoodle" about labor and capital, comes this plain and strong declaration: "We demand speedy punishment of all persons inciting riot and revolution against republican institutions." Equally plain, strong, and commendable is this deliverance: "We demand the fullest safeguards for the ballot-box, the punishment of all who seek to corrupt it, and the enactment of a law making it a felony for corporations, capitalists, and employers to intimidate or attempt to control the political action of their employees."

The agitation of coöperative enterprises among the Knights of Labor is opening their eyes to the great truth that "business is business." Mr. Powderly has just issued a pronunciamiento on the subject, in which he explains that "to supersede the wage system by the introduction of the coöperative industrial system always has been the goal of the efforts of our order," justifies the plan of requiring a compulsory assessment of 24 cents a year upon every member to secure money for operations in this line, and adds: "This system of managing the funds cannot be called democratic, it is true, but democracy is out of place in business, which is simply a matter of dollars for those interested. There is no room in cooperative management for sentiment, or for the rule of the majority, which has little feeling of responsibility, especially when the individuals have only a small financial interest at stake." If it were a "capitalist" who talked in this strain, Mr. Powderly would be filled with contempt for his heartlessness; but it is what the average labor reformer is fond of calling "God's truth," and it may do some good to have it preached from such a source.

The difficulties of organizing a national labor party in this country multiply, as the most prominent leaders array themselves in opposition to each other on vital questions. There is the burning issue of the tariff, on which a labor party must take a pronounced stand. Shall it follow Henry George and demand free trade, or adopt Powderly's belief in protection? Then again as to immigration: Shall it endorse Powderly's notion of placing restrictions upon the coming of the "pauper

laborers" of Europe in order to keep up wages in this country, or hold with George, in his Brooklyn speech on Sunday evening, that "this country could support in comfort the whole population of Europe"? These are some of the questions which will puzzle the delegates who try next year to construct a platform and select a candidate to represent the real views of "Labor."

The arrivals of immigrants at the half-dozen chief ports of the country, which always receive about 98 per cent. of the whole number, foot up 483,116 for the fiscal year ending June 30, 1887, against only 328,895 for the fiscal year ending with June, 1886. The most striking feature of the table is the great increase in the number from Italy (47,524 against 21,503), and from Russia, Finland, and Poland combined (36,887 against 21,706). Germany continues largely to surpass Ireland in the size of its contribution, sending 106,559 people to the United States last year, against only 68,130 from Ireland.

Dr. McGlynn has at last produced his plan for abolishing poverty, in answer to the question, "How does the Anti-Poverty Society propose to abolish poverty?" Here it is as given by him at a meeting in Irving Hall on Thursday night:

"How are we going to do it? None so blind as those who will not see. We are going to do it by talking to the voters, by persuading the voters to accept our ideas, by electing an Anti-Poverty majority to the Legislature and to Congress. In every future election we are to nominate candidates of our own, pledged to carry out our ideas, and we are to keep on reiterating our platform of principles."

The only criticism we should make on this as a plan is, that it has been, we fear, already fully tried, and has produced no effect on poverty in general. Unless the majority in the Legislature and in Congress is greatly belied, it is and has been composed for many years of anti-poverty men of the strictest views. They are all, or nearly all, uncompromising foes of Poverty in all its forms. We doubt if there is among them a single doughface, or man who would, if he could, pander to Poverty, or make terms with it of any sort. What will prevent their trying the McGlynn land scheme is not any partiality for Poverty, but fear that it may not succeed, or that it may distract too much attention from their own poverty to poverty in general, because we are bound to admit that their own poverty is their first concern. It is against it that they 'put in their best licks," as the poet says.

The most striking feature of the continued discussion of the question of Federal aid to Southern schools, which is provoked by Senator Blair's efforts to keep the scheme alive, is the development of opposition on the part of teachers in institutions for colored pupils in the South. A few weeks ago Gen. Armstrong, in his annual report as the principal of Hampton (Va.) Institute, admitted that he had changed his opinion on this subject and no longer favored the scheme of Federal aid, in view of the evidence that the South does not now need it. The July number of the *Bibliotheca Sacra* contains an article on the subject of Southern illiteracy by the Rev. W. E. C. Wright, Professor in Berea (Ky.) College—an institution which has done a great work in the education of the negroes—which opposes the project, and uses an argument often urged by us. "The most serious objection to this," says Prof. Wright, "is the fear that it would diminish, rather than increase, local exertions for the support of schools. Already the agitation of the measure is occasionally used as a reason for not increasing State funds. Southern candidates for Congress have been heard saying to their constituents, 'Your children have got to be educated. Would you rather pay for it yourselves, or have the nation pay for it?'" The intelligent opposition to the Blair bill of such men as Gen. Armstrong and Prof. Wright far outweighs the hasty endorsement of the project upon a partial presentation of the case by bodies like the recent National Educational Convention.

The temperance cause has suffered a terrible blow. Jeff Davis has come out, openly and unblushingly, in favor of it. The dastardly act was committed on Sunday, and is thus described in a special despatch from New Orleans to the *World*: "Jefferson Davis was at the Seashore Camp Ground, on the Gulf Coast, to-day, where Southern Methodists have had a religious encampment for the past ten days. Beauvoir, his home, is only a few miles distant. Each year he receives an invitation to attend, with his family. To-day, after Mrs. Sarah F. Chapin had made a rousing temperance speech, Mr. Davis approached her and said: 'I endorse every word you have uttered, and am heartily in sympathy with your great cause.' He left for home wearing the silver badge of the W. C. T. U., which Mrs. Chapin had pinned on his breast. His reception, as usual, was flattering and enthusiastic." When "traitors" and "unhung rebels" favor any cause, "loyal" people know that duty requires them to oppose it, and free rum must now command the support of all who are opposed to the return of the rebel flags and the dominance in this country of traitorous ideas. "The Republican saloonkeepers" of New York may rest assured, after this shameless performance on the part of the "arch-traitor," that they will get "the protection to which they are entitled."

The Baltimore and Ohio Railroad does not find it so easy to carry out its programme of entering New York by way of Staten Island. The principal feature of this project is a bridge across Arthur Kill from New Jersey, over which trains would pass direct to wharves on Staten Island, making the eastern terminus of what is to be one of the great trunk lines, on the water front of the State of New York instead of in New Jersey. Under such circumstances the building of the proposed bridge becomes of considerable importance to the latter State, and her legal authorities have determined that no railroad shall escape out of the State with its terminus through any lack of efforts on their part to prevent it. The New York and Baltimore Railroad Company was organized to build its road from Bound Brook to Staten Island, and an act of Congress was passed authorizing that road to construct a bridge across Arthur Kill from the State of New Jersey to the State of New York; but when work was actually begun, the Attorney-General for the State of New Jersey applied to the Court of Chancery of that State for an injunction, which was promptly granted. From this court the controversy has been removed to the United States Court. The question is, whether or not, in submitting to the General Government the right to regulate commerce, the States included the arbitrary right to establish means of carrying on commerce, or only surrendered the right to regulate the general commercial use of the means provided by nature, such as navigable waters, and those avenues of trade which, through the construction of roads and bridges, from time to time may be established by authority of the States. This, as stated by Mr. Justice Bradley, is a question of importance. It has not yet been definitely settled, and the decision will be awaited with considerable interest, both in its general bearing and in its application to the particular case of the Arthur Kill bridge.

The triumph just obtained by the Liberal party in Hungary, in the elections to the first quinquennial Parliament, is even greater than the warmest friends of the Tisza Cabinet, which that party has so long victoriously supported, could fairly have anticipated. With the exception of the extreme Left, or Independence party, which gained two seats, all fractions of the Opposition have been losers in the electoral contest, the Government candidates being successful in 259 out of 411 Hungarian districts, and thus achieving an almost two-thirds majority outside of the two-score representatives from Croatia, who are elected by the diet of that dependency of the crown of St. Stephen. In the simultaneous elections to that diet the success of the Government has even been more signal. In Hungary proper, including the Transylvanian districts, the anti-Magyar Nationalists, with the exception of the Transylvanian Saxons, everywhere succumbed or yielded to the pressure of the Government machine, sharpened according to localities and circumstances. The Anti-Semites lost a third of their number, including the notoriously corrupt and judicially branded Verhoday, while the father of their dwindling phalanx, the more honestly fanatical Istóczy, has been reëlected by a trifling majority. The influence of the Jews seems to have been felt everywhere in favor of their steadfast, though not over-zealous, protector, Tisza—especially in the non-Magyar portions of the kingdom, in which the national radicalism of the Independence party could play no part, and the uneducated peasantry was worked upon by officials, nobles, and the mercantile class. Tisza's strongest opponents were his own fellow-Calvinists of the Magyar race, among whom the recollections and political maxims of the Kossuth period, 1848-9, have survived with unabated vigor. What chiefly militated in his favor, outside of the not overscrupulously handled administrative machine, was the late success of the Austro-Hungarian policy, in which he coöperated with Kálnoky, in the imbroglio in the Balkan Peninsula, where the diplomacy of Russia, the dreaded foe of Hungary, was so decisively nonplussed,

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 20, to TUESDAY, July 26, 1887, inclusive.]

DOMESTIC.

THE Invitation Committee from St. Louis called on President Cleveland on Monday, and he promised to visit their city, probably in October. The movement to induce the President to visit Chicago this fall has proceeded so far that the Mayor has almost completed the committee of 200 provided for in the resolutions passed by the Council. Other Western cities are taking similar steps.

Secretary Whitney has appointed Capt. F. M. Ramsey, of the New York Navy-yard, chief of a Board who are directed to go on board of the new cruiser, the *Atlanta*, at Newport, and proceed to sea with her, for the purpose of putting her under a war test. At a trial of her big guns last week, the recoil tore up the deck and otherwise injured the vessel.

The gross increase of the receipts of thirteen of the largest post offices in this country for the last quarter over the same quarter of last year was $351,138. At this rate the gross receipts of the entire service for the last quarter of the fiscal year just closed will be about $12,000,000.

The attention of the Treasury authorities has been called to a cut of the new bullion certificate to be issued by the Western National Bank of this city, of which ex-Secretary Manning is President, and the inquiry has been made whether this certificate would share the fate of similar certificates if it should be used as the representative of money. One of the Treasury officials is quoted as saying, "I do not see how that certificate can be issued. It is the representative of money, that is clear. It may be called a warehouse certificate, but it nevertheless is undoubtedly to be used as a form of money certificate, and to pass current as such. It seems to me that it comes within the prohibition of the law."

Mr. Will A. Freret, the new Supervising Architect of the Treasury, was born in New Orleans in 1833. He studied his profession under John Communy, the well known civil engineer of the South, who had been educated in the Polytechnic School in Paris. Mr. Freret's first appointment was by Maj. Beauregard to rebuild the State University at Pineville. He served on the staff of Gen. Kirby Smith in the Kentucky campaign, and remained with him as Major of Engineers until the end of the war. He has devoted himself entirely to his profession since 1872.

Judge Wallace, in the United States Circuit Court in this city, has granted a permanent injunction to the American Bell Telephone Company against the Globe Telephone Company, to restrain the latter from infringing on the patent granted to Alexander Graham Bell on March 7, 1876. The Globe Company averred that they owned the patents of an Italian who claims that in 1849 or 1850, while at work in a machine shop at Havana, he discovered the manner of transmitting the tones of the voice by electricity. He came to this country and took up his residence at Staten Island, and for twenty-four years he says he has had his telephone in use in his house.

The New York Republican State Committee will meet at Saratoga on August 2 to call the State Convention.

The Ohio Democratic Convention last Wednesday nominated Thomas E. Powell, a prominent lawyer, for Governor, and a full ticket. The platform begins with the declaration that "The Democratic party of Ohio, in Convention assembled, proclaims its hearty and unqualified endorsement of the honest, patriotic, and economical Administration of President Cleveland." This was received with the greatest enthusiasm. On the tariff question it says: "We demand such judicious reduction of the present burdensome tariff as shall result in producing a revenue sufficient only to meet the expenses of an economical administration of the Government, the payment of liberal pensions to Union soldiers and sailors, and the payment of the interest and principal of the public debt." The platform demands "that all lands of the Government be held for actual settlers who are citizens of the United States, and for those who declare their intention to become such"; expresses sympathy with Ireland; favors "such restraints of the centralization and encroachment of corporate power as will bring the best possible protection to honest labor, and at the same time conserve the interests of honestly employed capital"; declares opposition to the importation of contract labor; demands "speedy punishment of all persons inciting riot and revolution against republican institutions," and also "the fullest safeguards for the ballot-box, the punishment of all who seek to corrupt it, and the enactment of a law making it a felony for corporations, capitalists, and employers to intimidate or attempt to control the political action of their employees"; and declares in favor of a proper regulation of the liquor traffic.

John L. Barbour, the well-known Democratic leader of Virginia, has declared that "the South stands at the President's back, to renominate him for another four years."

The Georgia House has passed a bill placing a tax of $10,000 upon every dealer in domestic wines and other intoxicants who deals therein to the exclusion of foreign wines, alcoholic and malt liquors. The necessity for the bill arose from the fact that the law under which 118 of the 137 counties of Georgia have become "dry" permits the sale of domestic wine. Under this law the State has been filled with wine rooms which sold the vilest compounds of wine and whiskey.

The great coke strike in Pennsylvania ended last week in the surrender of the strikers. When the strike began, four-fifths of the 11,000 men in the coke region had money of their own, but very few of them have enough money now to take them out of the district, if they wanted to leave. Their loss of wages is placed at $996,300.

The New York Board of Arbitration has been trying to settle the strike of the operatives of the Harmony Mills at Cohoes, but the mill officers refused to appear before the Board, one of them saying: "We have nothing to arbitrate. The help that are working for us are satisfied and have no grievances. We have nothing to do with people who, becoming dissatisfied, quit the mill and refused to return."

In the Convention of District Assembly No. 30, Knights of Labor, at Fall River last week, a resolution was adopted approving of the administration of General Master Workman Powderly, and instructing the delegates from District No. 30 to be sent to the Minneapolis Convention to vote for his reëlection. Gambrinus Assembly, Knights of Labor, of Milwaukee, 1,000 strong, has withdrawn from the order because of Mr. Powderly's sentiments on the temperance question. It is probable that the assembly composed of tight-barrel coopers will also withdraw for the same reason.

Mr. Robert Garrett printed a letter last week declaring that all the negotiations known as "the Baltimore and Ohio deal" are at an end. Henry S. Ives and George H. Stayner thereupon began two actions against President Garrett. It is understood that the object of one action will be to compel him to carry out the contract, which Messrs. Ives and Stayner claim that he made with them, by which he was to deliver to them a controlling interest in the Baltimore and Ohio Railroad, the Telegraph and the Express Companies, and the other action will be a suit for pecuniary damages alleged to be entailed upon them by Mr. Garrett's allegation that negotiations between him and them are off.

The Short Line Railroad through Maine is under way, and its construction is regarded by the Canadian press as one of the most important events in the history of the Canadian provinces. The road links the Grand Trunk with the Boston and Maine, extending the Sherbrooke branch to Lake Megantic, on the Maine border, and thence to Mattawamkeag, on the Boston and Maine Railroad line.

The San Francisco Chamber of Commerce has passed a resolution asking Congress "to offer such inducements that capital may be attracted to" the work of laying a cable to the Sandwich Islands.

Gen. Paine's new steel yacht *Volunteer*, which will probably race with the English yacht *Thistle*, on her trial trip from Boston last Thursday showed speeding qualities that were highly satisfactory.

In January last the German ship *Elizabeth* went ashore off the Virginia coast and was wrecked. The life-saving crew at Dan Neck Mills Station, Virginia, did their best to rescue the crew, but were only partly successful, while all the life-saving crew but two lost their lives, and their families were left destitute. The Treasury Department has received through the State Department a letter from the German Minister enclosing a check for $1,000 and a box containing two gold watches, with the statement that the Emperor of Germany appreciates the efforts of the American Life-Saving Service to rescue the German sailors, and, in token of that appreciation, sends $200 to the family of each of the five men who lost their lives, and a gold watch to each of the two survivors.

During a "Wild West" performance in a circus at Clinton, Ia., on Tuesday night of last week, one of the cowboys, in some unexplained way, used a revolver in the sham fight which was loaded with balls. Three persons in the audience were shot, and one is likely to die.

While a gang of Italian laborers were at work ballasting the tracks of the Erie Railroad Company near Hobokus, N. J., last Thursday, they stepped on the west track to avoid one train and were run into by an express train running the other way. Eleven of them were killed outright and five others were injured.

Miss Dorothea Lynde Dix, the well-known philanthropist, died last week at Trenton, N. J., aged eighty-two years. She was born in Worcester, Mass. Becoming an orphan in early life, the necessity for making her own living caused her to devote herself to teaching. She started a girls' school in Boston, which was very successful. In 1830 she inherited a small fortune, and in 1834 she gave up her school, and thenceforth she devoted her life to philanthropic work, particularly the care and treatment of the insane paupers and criminals. A long-cherished plan of hers for the permanent relief of the pauper insane was to obtain a Federal grant of 10,000,000 acres of land to the several States. The plan, however, was doomed to failure. She petitioned Congress for the grant in 1848 and again in 1850, and, after most arduous efforts on her part, Congress, in 1854, passed a bill granting 10,000,000 acres of land for that purpose. It was vetoed, however, by President Pierce. When the war broke out, Miss Dix was among the first to offer her services as a nurse. She arrived in Washington in April, 1861, and her first work as a nurse was done in ministering to the soldiers wounded by the mob in Baltimore. Later, Secretary Cameron appointed her Superintendent of Female Nurses, with entire control of their appointment and assignments to duty, and she was continued in that position by Secretary Stanton, holding it until some months after the close of the war.

Jennie Collins, the well-known founder of "Boffin's Bower" in Boston, died last Thursday. She first came before the public in the capacity of a lecturer. Soon after the war she took upon herself the duty of educating soldiers' boys. She was the founder of "Boffin's Bower," which was instituted soon after the great fire of 1872 in Boston, when so many working girls were thrown out of employ. Its principal object was to aid the girls of the city who have to work for a living.

John Taylor, President of the Mormon Church, died on Monday night, aged seventy-eight years. The place of his death is not known, he having been a fugitive from justice since March, 1885.

FOREIGN.

The passage of the Coercion Bill has been followed by the immediate proclaiming of every county in Ireland. In the House of Commons on Monday evening Mr. Morley asked what had happened to explain this, since the Government had assured the House that the law was as well obeyed in some parts of Ireland as in any part of Great Britain. Mr. Balfour replied that he had no reason to change his opinion on that point. What the Government had done was not to apply the whole Crimes Act to Ireland generally, but only the sub sections dealing with rioting, unlawful assemblies, and obstruction of police. In every case in which a county had been specially proclaimed, the proclamation had been issued because the Government believed in the actual existence of crime or intimidation.

Mr. Balfour has made an important explanation in the Commons of the changes the Government proposes to make in its Irish Land Bill. They are thus summarized: (1.) The right to proceed by writ of *fieri facias*, which has been called "the back door to evictions," is made subject to the discretion of the County Court Judge. (2.) With regard to the revision of judicial rents, the Land Court is instructed to devise a scale of revision based solely upon prices, which will vary according to the districts to which it is applied—that is, the Land Commission will fix the averages and arrange the districts according to agriculture and soil; the rent is to be fixed for three years. (3.) The Government is prepared to drop the bankruptcy clauses with reluctance. (4.) Leaseholders are excluded from the remedial legislation.

The conciliatory course of the Conservative leaders towards the Liberal Unionists has called forth emphatic protests from the Tory ranks. Mr. Agar Ellis, a typical Irish landlord, has said: "These amendments to the Land Act mean no more nor less than the cessation of rent in Ireland for three years. In a very short time the whole country will be in a state of chaos. There can be no business transactions where the most solemn undertakings are set at naught when the exigencies of place and party step in. I can see no reason why I should move a finger for this Government. They are bent on ruining my country, but so was Gladstone. I think he would do it quicker, and therefore more mercifully." The London *Times* calls on the Government to settle the National League at once by proclamation and have it all out before Parliament rises.

The London *World* announces positively that the Ministry will be reconstructed in November, Hartington becoming Prime Minister and Salisbury retaining the Foreign Office; and that Sir Henry James and several other prominent Unionists will join the new Government, and an important office be found for Sir Randolph Churchill—Mr. Chamberlain to be left out in the cold. The *Freeman's Journal* says the Government cannot hold together without Hartington.

A dinner was given in London last Wednesday night to Mr. Parnell and his colleagues by the advanced Liberal party. Mr. Parnell's speech was chiefly remarkable for his very emphatic repudiation of all methods of violence in the Irish movement. He dwelt upon the fact that crime in Ireland is decreasing, asserted his belief that, whatever wrong might be inflicted on the Irish people, they would be slow to retaliate, and declared that his countrymen would be fools were they to do anything to prejudice the splendid position they had attained by the aid of Mr. Gladstone and the Liberal party. It was noticeable that, in an extremely bitter article in the London *Times* the next morning, all reference to Mr. Parnell's repudiation of crime was carefully suppressed.

Mr. John Morley, in opening the Liberal Club at Hackney on Saturday night, said that the Government had waited half a year in passing a measure that was intended to suppress the National League, but directly they obtained it Lord Salisbury changed his attitude and said he would adopt the League's policy regarding rents in Ireland. Lord Salisbury, Mr. Goschen, and other Conservatives had contended that to interfere with rent contracts would be dishonest. It was useless now to say that they only meant to be dishonest for three years. They were deluding themselves if they thought the proposals dependent upon the passing of the Tory Land Purchase Bill would only be temporary. Were the Government likely to agree among themselves on a Land Purchase Bill when it was introduced, they would be obliged to frame a measure that would satisfy the Tory landlords on one hand and the English electors on the other. In February the Government promised a Land Purchase Bill which would settle the land question in Ireland. It was stated that the bill was nearly prepared. It would have been better to have introduced it instead of wasting time on the Coercion Bill, and then be compelled to deal with a temporary revision of rents.

The Marquis of Salisbury last Friday, replying to a deputation which called to urge the Government to take some action to protect British trade from the effects of foreign competition assisted by bounties, said it was impossible to speak too strongly of the injustice which the foreign bounty systems inflicted on British workmen. A European conference, he said, would soon consider the matter, and in the meantime he could only say that there were two ways for Englishmen to deal with their assailants in this contest. If reasoning failed, Englishmen might return the blow.

The Afghan boundary question has been settled. Russia receives the territory between the Kushk and the Murghab Rivers, accepting in return the English frontier line on the Oxus River, and renouncing her claims to districts to which she would have been entitled according to the terms of the arrangement of 1883. Russia obtains the whole pasture district between the rivers Kushk and Murghab. A despatch from St. Petersburg says it is reported there that the Amir of Afghanistan is discontented with the settlement, considering that too great concessions have been made to Russia.

The *République Française* of Paris, commenting on the Anglo-Turkish Egyptian Convention, pronounces it a masterpiece of duplicity, intended to transfer Egypt entirely to England. The *Journal des Débats* says: "We are as well disposed after the rejection of the convention as we were before to negotiate with England. We are ready to allow largely for the position into which accomplished facts and French mistakes have placed England. We are resolved to offer England complete guarantee that we do not think of taking any position on the Nile that she may vacate, but we are determined to maintain France's incontestable rights."

According to letters received from Bucharest, M. de Coutouly, the French Minister there, in a speech on the 14th inst., said that the French republic was preparing for a sanguinary struggle, which would be the more formidable the longer the outbreak was delayed, and he concluded by offering a toast to the health of the Russian Minister, M. Olossof, whereupon all present shouted, "Success to Russia, the friend of France."

Natives at Bombay report that Russia is secretly negotiating with the Governor of Yarkand, in Chinese Turkestan, for permission to pass troops across the country.

The Bulgarian question is still unsettled. According to a despatch from Pesth, M. Tutcheff, the President of the Sobranye, has publicly declared that Prince Ferdinand has grossly deceived the Bulgarians, and that he has been an instrument in the hands of Russia. It is the general opinion in Vienna that he will decline to occupy the throne. The new ministry, it is reported, will not at present venture to enter Sofia, fearing the opposition of the army. It is also reported that the troops intend to proclaim the independence of Bulgaria and Prince Alexander of Battenberg as King.

The Paris *Figaro* believes that the negotiations between Germany and the Vatican for the Germanization of Alsace-Lorraine have collapsed, the Pope refusing to forbid the use of French in the seminaries of the province.

Much military activity is reported at Metz. The enlarging of forts and evolutions of troops are proceeding constantly. Work is conducted at night by the aid of the electric light. The balloon department is experimenting with a view to trying the destructive effect of dynamite hurled down upon forts from a balloon.

The Frankfort Chamber of Commerce has sent a petition to the Government, asking aid to complete the construction of a canal from Antwerp to the Rhine. The Belgian part of the canal already exists. The Dutch section is half cut, and Germany has concluded a treaty with Holland for its completion.

M. de Lesseps presided at a meeting of the shareholders of the Panama Canal in Paris last Thursday. The annual report showed a decrease in the former confidence that the canal would be opened in 1889, but expressed a hope that a connection between the Atlantic and Pacific would then exist across the Isthmus of Panama, and that the works would be completed soon afterwards.

The Spanish Government has decided to abolish the Cuban export duties on sugar, molasses, and spirits. Gen. Salamanca has been appointed Captain-General of the island.

The members of the Catholic Congress at Lucca are signing a petition asking the Government to devote its attention to the question of a reconciliation of the Quirinal and Vatican. It is stated that the Pope approves the step.

The Pope has decided that there is no ground for Papal interference with the Knights of Labor question.

Reports of the death of Henry M. Stanley in Africa were recived in London last Thursday, but are not confirmed. One report was that he had been shot by the natives, and another that he had been drowned. Direct news has been received from him up to July 3. The latest reports brought from the interior by traders snow that Emin Bey was in good health in March, and was projecting an expedition to explore further the Kakibbi River, an immense stream which he discovered in September, rising in the Usongora Mountains and flowing into the southern part of Mwutan Nzige. It is thought that he may meet the Stanley expedition in Usongora. Mwanga still refused to grant him permission to leave the country, but he permitted messengers to obtain supplies for the expedition. Emin Bey had not heard of Stanley's mission.

A report has been received that a tribe friendly to Egypt attacked the Mahdists under Osman Digna, near Kassala, recently, and that heavy fighting ensued, during which 1,000 men were killed.

The Gentlemen of Scotland defeated the Canadian cricketers in England last week by ten wickets.

The rifle contest for the Kolapore Cup took place at Wimbledon, Eng., last week. The English team won the cup, with an aggregate score of 710. The Canadian team were second, with 663.

During last week several extensive forest fires raged at Harbor Grace Junction and other points near St. Johns, N. F. The fire at Harbor Grace Junction swept over a large area of country, destroying valuable timber lands. The buildings known as the headquarters of the Placentia Railway branch were burned, and other valuable property. Nothing was saved except a few of the engineers' instruments.

THE OHIO DEMOCRATS.

THE Democrats of Ohio are not usually accounted a promising variety of the genus, and they have not seemed to be improving in character since they discarded Mr. Pendleton for the leadership of the almighty dollar represented by the Paynes. The punishment that overtook them two years ago, and again last year, was none too severe for that wretched piece of business, although the heaviest blow fell upon the head of Gov. Hoadly, an able, estimable, and honorable man. The party needed a blighting disaster, and this it received in two successive campaigns where all the advantages of possession were on its own side. The State government passed into the hands of the Republicans in all its branches, and there it is most likely to remain, notwithstanding the very creditable action of the party at its Convention on Thursday.

The essence and vital part of the platform adopted by the Ohio Democrats is the first resolution, which reads as follows:

"The Democratic party of Ohio, in convention assembled, proclaims its hearty and unqualified endorsement of the honest, patriotic, and economical administration of President Cleveland. We demand such judicious reduction of the present burdensome tariff as shall result in producing a revenue sufficient only to meet the expenses of an economical administration of Government, the payment of liberal pensions to Union soldiers and sailors, and the payment of the interest and principal of the public debt; and if necessary, we favor such reduction of internal revenue, except on liquors, as will prevent the accumulation of a surplus in the National Treasury, and we denounce any attempt to abolish the tax on liquors for the purpose of keeping up the present unjust, unequal, and onerous tariff system."

There is no room to doubt that the endorsement of President Cleveland's Administration was as hearty and unqualified in fact as it appears to be on paper. If there was any doubt before that Mr. Cleveland would receive the vote of the State in the next National Democratic Convention, there can be none now. And if he receives that of Ohio, what Northern State is he likely to come short of? The opposition in New York cannot make head without some support from other States, and if Ohio cannot be counted on to back the pretensions of Gov. Hill, which one of the Northern delegations can be reckoned on? The influence of the Ohio Convention will be little less than decisive, in our opinion, in suppressing any revolt that may be brewing in New York, and in bringing this State as a unit to the support of Mr. Cleveland next year.

But the endorsement of President Cleveland is not the most significant part of the Ohio Democratic platform. The declaration against the repeal or reduction of the tax on liquors is of even more moment, since that has now become an issue of immediate and irrepressible interest. What is involved in it is, that if the tax on distilled and fermented liquors stands, the tariff *must be reduced*. How it shall be reduced is another question, but that something must be done to lessen the revenue from duties on imports is certain. The Ohio Democrats have generally followed the lead of Mr. Randall in tariff matters, and Mr. Randall has declared himself in favor of abolishing the whole internal-revenue system in order to avoid tariff reduction. In a recent letter to the St. Louis *Republican*, he reiterated his belief that the right way to reduce the surplus was to abolish excise taxes. These, he said, were "war taxes." "It has been," he continued, "the unvarying precedent of Democratic administrations under like circumstances to abolish the internal-revenue taxes just so soon as the necessities of war had rendered them unnecessary." Probably Mr. Randall's letter was written at this juncture in order to produce an effect in Ohio, but the effect cannot have been flattering to the author. The Ohio Democrats have declared as plainly as possible that they are no longer under Mr. Randall's lead.

If Mr. Randall cannot rely upon the Ohio Democrats in the coming session of Congress, it is hard to see where he may look for recruits. Those of Louisiana will naturally side with him in opposing any reduction of the sugar duties, but it is certain that if the whiskey tax stands, the sugar tax must fall in whole or in part. In his St. Louis letter Mr. Randall took pains to say that he was opposed to the crippling of any industry, no matter in what part of the Union it was situated. Of course he referred to Louisiana. The sugar industry of that State, always a cripple, is now more in need of crutches than ever before. Mr. Randall is accordingly committed against any reduction of the duties on that article. His allies in Ohio are committed by the necessities of the case to the contrary policy. An issue of vital and immediate and healthy interest is thus raised in the party. That it cannot be confined to one party is evident, since the Republicans must take sides also between whiskey and sugar. We observed a few days since that the Boston *Advertiser* had taken sides with whiskey. We notice now that the Boston *Journal* is the champion of sugar. There is room for high debate on both sides of the party line.

THE FACTS AS TO THE POST-OFFICES.

THE Republican organs of late have been publishing sundry lists of figures intended to show that there really has been a "clean sweep" in the offices since Mr. Cleveland became President. The most obvious comment upon these tables was that it was very odd, if they were correct, that there should be such bitter complaints as are still heard from Democratic spoilsmen about the great number of Republicans still retained in office. If the Republicans have all gone, one cannot understand why a Bourbon politician like ex-Congressman Seney should demand, as he did in his speech at the Ohio Democratic Convention last week, that "all Republicans remaining in office be promptly turned out and their places filled with honest and capable Democrats," and should condemn a system "that keeps Republicans in and Democrats out of the public service."

As to one department of the public service, and that the most important both in the number of offices which it controls and their nearness to the people, we are able to present the exact facts. Nearly half of all the places under the Federal Government are post-offices, the number of which now reaches the great total of 55,157. The changes in these offices for the fiscal year ending with June 30 have just been compiled, and we are able to compare them with the changes for each previous fiscal year back to the time when Grant became President in 1869. These figures afford an absolutely perfect basis for determining the extent to which partisanship has controlled the management of the Post-office Department.

Appointments as postmasters are made upon the deaths of incumbents; upon changes of names and sites; upon the establishment of new offices; upon resignations and the expirations of commissions; and upon removals and suspensions. The number of deaths does not vary greatly from year to year, being upon the average one in every hundred; and the appointments upon changes of names and sites are still fewer. These two classes may therefore be dismissed from consideration. The number of new offices depends upon the business development of the country, and should also be left out of the account.

"Few die and none resign," is a proverb so generally accepted that most people will be surprised to learn that under Republican administrations appointments upon resignations and the expirations of commissions never fell below 13 per cent. a year, and sometimes reached 16 per cent., as in 1882-83, or even 17 per cent., as in 1874-5. Almost all of these appointments are upon resignations, as the postmasters appointed by the President alone have a fixed term, and these constitute only four out of every hundred postmasters, the remaining ninety-six serving only at the pleasure of the Postmaster-General. When Mr. Hayes became President there were 37,345 post-offices, and during his term 23,283 appointments were made upon resignations and expirations of commissions, less than 2,000 of the 23,283 belonging to the latter of these two classes. Examination of the records shows that under Grant, Hayes, and Arthur the changes in offices upon resignations and expirations of commissions rose as high as 34 per cent. in the first two years of a new administration and never sank below 30 per cent. Under Mr. Cleveland, appointments of this sort have numbered 9,112 in the first fiscal year and 6,863 in the second, which amounts to a trifle over 31 per cent. of the whole number of offices when he became President (51,252 on June 30, 1885). It is thus obvious that, while there may have been a few compulsory resignations of postmasters who knew that they deserved removal and were pretty sure to get their deserts if they tried to hold on, the changes in this class of appointments, upon resignations and expirations of commission, have not been more numerous than has long been the average under Republican Presidents.

There remains the class of appointments upon removals and suspensions of the incumbents. The number of such changes in the first two years of a Republican administration was 1,881 out of 33,244 offices, or about 6 per cent., when Grant entered upon his second term; 1,306 out of 37,345, or above 3 per cent., in the first two years of Hayes; and 1,726 out of 44,512, or 4 per cent., in the first two years of Arthur. In other words, while the Republicans remained in power, from three to six per cent. of the postmasters were always removed in the first half of an administration. Under Cleveland, appointments upon removals and suspensions numbered 9,566 in the first fiscal year and 2,584 in the second

—a total of 12,150 out of 51,252 offices, or a little over 23 per cent. In other words, whereas, in the first two years under Republican Presidents, Hayes removed three Republican postmasters out of every hundred, Arthur four out of every hundred, and Grant six out of every hundred, Cleveland in the same period has removed twenty-three out of every hundred. It is of course fair to presume that Republican administrations removed Republican postmasters only for the good of the service, so that it may be taken for granted that in the first half of a Presidential term from three to six postmasters out of every hundred ought to be turned out without any reference to politics. Upon this assumption, the removals in two years under Cleveland, 23 per cent. of the whole number, are but 20 per cent. larger than were made in a corresponding period under Hayes, 19 per cent. larger than under Arthur, and only 17 per cent. larger than in the same space of Grant's second term. Upon the least favorable showing it would consequently appear, that not over 20 postmasters out of every 100 have been removed solely in order to put Democrats in the places of Republicans.

The salient feature of these figures is this: A Democratic President was inaugurated after his party had been for twenty-four years out of power, and found 51,252 post-offices which the Democratic motto, "To the victor belong the spoils," would have turned over summarily from Republican incumbents to Democrats. After two years of his administration it is found that he has removed only 23 out of every 100 of these Republicans, while experience shows that from 3 to 6 out of every 100 were removed by Republican Presidents in corresponding periods for the good of the service. Where a spoilsman might have made a "clean sweep" in three months, a President who believes in civil-service reform has removed less than one-quarter in two years. We do not understand that the most censorious Republican critic complains because Democrats have been appointed to newly established post-offices, or to offices made vacant by the death or resignation of the incumbents. The only grounds of criticism are that a number of Republicans holding offices filled by Presidential appointment, who deserved reappointment for faithful service and freedom from offensive partisanship, were not reappointed when their terms expired; and that holders of fourth-class offices have been removed for partisan reasons. As to the former class, every candid person must admit that there have been cases where the reform principle demanded a reappointment, but the number of such cases has been only a small proportion of the whole number of changes in the small class of Presidential post-offices. The real complaint of the organs, however, has been that there has been a virtually complete change in the post-offices of the country for political reasons since Mr. Cleveland became President. The sufficient answer to this charge is the showing from the official records that at the outside only twenty out of every hundred postmasters have been removed for what can be considered partisan reasons in two years; and that, supposing Democrats to have been selected in every case where appointments were made upon deaths, establishment of new offices, changes of names and sites, resignations, and expirations of commissions, and removals and suspensions, the total number of Democrats thus appointed in two years amounts to 36,771, while the total number of post-offices is now 55,157, so that more than one-third of the offices which were held by Republicans when Mr. Cleveland came in, are still held by Republicans. It only remains to add that nearly four-fifths of the removals and suspensions occurred during the first of the two years, and that the number of such changes during the last fiscal year—2,584—did not greatly exceed the number repeatedly reached in a year under Republican Presidents, as 1,021 under Arthur in 1881-2, and 1,045 under Grant in 1875-6. This indicates that for the past year such changes have been made in comparatively few cases except where the good of the service required them.

Civil-service reformers have found much to criticise and condemn in the Cleveland Administration, but those who have been most disappointed must confess that it has done a great work for the cause of reform when such a showing as this can be made for it.

HOW PENSIONS ARE "WORKED UP."

A CORRESPONDENT in a Western State sends us a little pamphlet, recently received by a physician of his town, which casts a flood of light upon the manner in which pensions are "worked up." It is entitled 'The Soldiers' Manual,' and is further described upon the title-page as "a hand-book of useful and reliable information, showing who are entitled to pensions, increase, bounty, pay, etc." The pamphlet is prepared and published by a firm of "general war-claim attorneys," whose names are given, and who have offices in Cleveland, Ohio, Chicago, Ill., Detroit, Mich., and Washington, D. C.

In general appearance the 'Manual' bears no little resemblance to the average patent-medicine almanac. In the character of its contents the resemblance also holds to a certain extent. The assurances of perfect cure for any known disease find here their counterpart, and there is the usual list of "testimonials" from people who have taken the remedy and certify that it is everything which is claimed for it. There is, however, one important difference. The patent-medicine almanac calls for the expenditure of money, and at best promises only a cure of disease. The 'Manual,' on the other hand, holds out to everybody the hope of a regular monthly allowance from the Federal Treasury for the remainder of his days—and all this at the trifling cost of a single fee to the agents who are employed.

The "Introduction" opens with a reference to the importance of the subject of soldiers' claims against the general Government; points out that many veterans with just claims have failed to get them allowed because they "have been groping about in the dark"; and magnanimously adds, "It is to supply this want, and to assist our old comrades in arms in procuring the aid provided by a generous nation, that this book is published." The suspicion of a selfish motive is frankly met by the declaration that "we offer no apology for the fact that at the same time we are pointing out the way by which a favorable settlement of claims can be secured, we call the attention of the public to our own business of prosecuting such claims," due stress being laid upon the affirmation that "not one claimant in twenty can properly fill out his own claim, and draft the necessary papers to establish the same." With the final statement that the book is made as full and definite as possible, "and whoever receives it may safely depend upon it that each and every statement herein contained, and the different definitions and constructions of law, are correct in every particular," the reader is introduced to fifteen pages packed full of information as to the ease with which money may be got out of the Treasury.

The embarrassment of riches renders selection a matter of difficulty, and we take a few sample morsels almost at random. Under the heading of "Invalid Pensions," the reader is informed that "there is no particular class of diseases upon which pensions are granted"; that "often a very slight gunshot or shell wound gives a soldier title"; that "the disabilities arising from disease, wounds, or injuries may be slight, and yet a rating will be made"; and finally, that "it often happens that in some kinds of obscure diseases no physical signs can be discerned, and yet, if the claimant presents such evidence as would satisfy the mind of a candid and impartial person that a pensionable disability does exist, a pension will be allowed at a rate proportionate to the degree of disability proved." The impression left upon the mind of any old soldier not now receiving a pension upon reading this department of the 'Manual,' must almost inevitably be that he is entitled to one, and that he had better begin efforts to get it. This impression is ingeniously cultivated by a request that he will send for a list of questions which an applicant must answer, and the statement that the agents "charge nothing for advice," so that it will not cost anything to make a trial.

The case of the man who now receives a pension but would like a larger one is next taken in hand. He is assured that "it often happens that the original allowance is fixed at too low a rate, by reason of the failure of the attorney to properly present the claim, or from other causes," but that "we address ourselves earnestly to supplying the deficiencies in the practice of others." Moreover, "as we devote our whole time and attention to the prosecution of claims, it would be a marvel if, with ordinary intelligence, we did not become expert in bringing out for our client's benefit the strong points in his case. To our long experience and devotion to our clients' interest," the impartial authors add, "may be attributed our success where others have failed." Suggestions as to the grounds upon which an increase may be asked follow, while later in the 'Manual' is given a most appetizing list of "a few increase pension claims recently allowed through the offices" of this firm, among which we note $4 a month to $16, $4 to $24, $4 to $50, $6 to $50, and $10 to $72.

The man whose claim has been rejected finds here encouragement. "A great many claims," says the 'Manual,' "are rejected by the De-

partment upon some technicality, and for various other reasons. But that doesn't end the matter by any means. A claim is not finally disposed of with us *until it is settled favorable to our client's interest.* Our long experience in the business enables us to handle rejected cases quite successfully where other attorneys have failed. Parties whose cases have been rejected should write to us at once." If worst comes to worst, and even with "us" as attorneys the claim is finally disposed of at the Department adversely to the claimant, "the only recourse is to secure a special act of Congress," and "we will undertake the prosecution of claims before Congress on satisfactory terms." This branch of the business explains the way in which so many unworthy private pension bills become laws—unless they encounter the obstacle of a Presidential veto.

Space will not permit further quotations from this interesting work; but to illustrate still more clearly the way in which business is sought, we must quote the letter, marked "Personal," which was addressed to the Western physician, and is doubtless a copy of a letter sent throughout the country by thousands: "Is there not among your numerous patients some soldier or seaman whose present disability is fairly traceable to his service, and who for that reason is entitled to a pension or an increase of pension? If so, you can do nothing that will be so fully appreciated by him as to refer him to our agency, where his claim is certain to be successfully prosecuted. The claims of the widows and orphans of deceased soldiers and seamen also receive at our hands diligent attention."

'The Soldiers' Manual' fully justifies President Cleveland in saying, in his veto of the Dependent Pension Bill: "It is sad, but nevertheless true, that already in the matter of procuring pensions there exists a widespread disregard of truth and good faith, *stimulated by those who as agents undertake to establish claims for pensions,* heedlessly entered upon by the expectant beneficiary, and encouraged or at least not condemned by those unwilling to obstruct a neighbor's plans." And, after glancing through this little book, every candid reader must agree with the President's further remark, in the same message, that "there can be no doubt that the race after the pensions offered by this bill would not only stimulate weakness and pretended incapacity for labor, but put a further premium on dishonesty and mendacity."

TRUSTS THAT SHOULD BE DISTRUSTED.

The movement in financial and industrial circles for the creation of "Trusts" has seemed to lag somewhat of late. The Cattle Trust, which was intended to embrace all the great ranges of the West, has been pretty much discredited, and the India Rubber Trust has not been able to get a fair start, although it is still under consideration. The Cotton-Seed Oil Trust, which was launched last year, has received a decided back-set since the publication of its financial statement. An attempt is now making to create a Straw Board Trust, but the prospects of success are extremely gloomy. A White Lead Trust was mooted in Wall Street some time ago; but as nothing has been heard of it for several months, it may be assumed that the weaker establishments in that branch of trade have not been able to persuade the stronger ones to divide losses with them. The latest Trust of which the public have any information is a Whiskey Trust, to be composed of all the distilleries in the West, to be capitalized at $10,000,000, and its stock to be listed if possible on the Exchanges of New York and Chicago.

We have explained in previous articles that these Trusts are illegal or extra-legal corporations, created for an anti-social purpose, *i. e.*, the establishment of monopolies. They are not immoral, but are extremely hazardous. Those who put their money into such Trusts have no assurance that they will ever see a dollar of it again. When men of business part with their property, they usually require something that they can take into court and offer as evidence of ownership, as, for example, a share of stock or a bond secured by mortgage. The certificate of a Trust is neither one nor the other. It is not even evidence of partnership, in the legal sense. If it were such, nobody would for a moment think of going into it, because partners are liable without limit for the debts of the firm, and in the case of a Trust partnership nobody is allowed any share in the management except the trustees. Any member of the firm, great or small, might be made bankrupt without knowing when or how.

A Trust of this sort is an attempt to suppress competition—that is, to create a monopoly in the supply of some indispensable article. As there are always some persons or corporations less favorably situated or less skilful than others, but who nevertheless can "demoralize" the market by gradually sinking their own or their creditors' capital, a proposition to bring all the producers into a common "pool," to regulate production by some central authority and to divide the profits of the trade among all the members, has a certain amount of plausibility. The Straw Board trade, whose annual meeting was recently held at Akron, Ohio, is now in a fit condition to be "Trusted." A correspondent sends us a statement of affairs of this branch of industry, from which it appears that the present production of straw board is about 50 per cent. greater than the country can use. The manufacturers are obliged to "take care of" about 120 tons of product per day. Taking care of it means preventing it from coming on the market and knocking the price down below the point of profit. The cheapest way to take care of the surplus is to prevent it from being made—that is, to shut down one-third of the mills temporarily, and support their proprietors in idleness. This might possibly be done for a time, longer or shorter; but the trouble of selecting the mills to be closed, and fixing the terms upon which they are to be closed, is very great. Nobody likes to discharge his hands and lose his place in the market, thus virtually effacing himself from the business world. On the other hand, no mill can run on two-thirds time and keep its hands together.

In this case, or in any other where "overproduction" is complained of, the temptation is strong to bring all the producers together and get them to an agreement to maintain prices. This can only be done by limiting the supply. If all would enter into the agreement and abide by it, and if no new experimenter should start in the same business, the end sought could be reached without the intervention of a Trust. In that case nobody would think of putting his property out of his own control and accepting an uncertain, nondescript paper certificate in place of it. But such agreements, as a general rule, will not be kept, in many cases cannot be, because the parties are driven by debts or other extraneous circumstances, to put more than their quota of goods upon the market. Moreover, there are always new comers who fancy that they can produce the article a little cheaper than the old ones. There are others who think that the "combine" are making too much money and are therefore fit subjects for blackmail. Such a state of trade, being wholly artificial, cannot last unless reinforced by absolutely despotic authority. The agreement not to produce more than the allotted amount breaks down, competition is resumed, and eventually the weaker, the least skilful, and the worst situated go down.

Those in the latter category are the ones who have most faith in the healing efficiency of a Trust which promises to supply the despotic authority needed to hold everybody up to the rules. Of course, if all the competitors in the trade pass the control of their property out of their own hands, remaining only as salaried managers, they are disabled from violating the rules. But the demand for the goods has not been increased, nor has the capacity to produce them been diminished. The same plant and the same number of persons, employers and employees, have to be remunerated. The spur of individual enterprise is taken away, together with the rewards of exceptional talent. But although the current of competition is dammed up for the time being, nothing can prevent new capital and labor from entering the field, as it will be pretty sure to do. If the Trust makes money, new enterprises will be started to force an entrance and share the profits. If it is not successful, it will be inferred that money is to be made by attacking the monopoly and breaking it down.

Probably a few experiments will be needed to convince the believers in Trusts that the law of competition is not to be circumvented. The only cure for overproduction is the rule which provides that slovens and incapables shall disappear, and the fittest survive. Trusts cannot prevent, although they may hinder and delay, its operation at the expense of the skilful and energetic, and to the detriment of society at large.

GEORGE ELIOT'S RELIGIOUS TRANSITION.

Two at least of the eminent reviewers whose pens were busy over Mr. Cross's Life of his wife, early in 1885, were greatly struck by the suddenness, as they esteemed it, of her abandonment of the religious beliefs in which she had been reared. "It is perfectly clear that she had all but made up her mind within those eleven days," said Mr. R. H. Hutton (in the *Contemporary Review* for March), referring to the Coventry visit, "to renounce Christianity." And Lord Acton (in the *Nineteenth Century* for March) spoke of the same period as a time of "acute crisis," "abrupt tran-

sition," and "sudden revolution," when "from Jonathan Edwards to Spinoza she went over at one step." Now, it would be singular indeed if George Eliot's life should have given the lie so completely to the one great teaching which she bent her genius to illustrate—the teaching, namely, that whim or fancied self-direction has little to do in the great changes of life, in comparison with the silent strength of causes long at work, and truly present even in a decision which seems wholly without foretokens. The irony of such an unconscious refutation of one's theories by one's practice is, of course, abstractly possible, and is no doubt often exhibited in biographies whose revelations about the writer's personality unwittingly rob his volumes of their chief value. But it would seem that even the meagre records of the first twenty-two years of George Eliot's life should have been enough to suggest, at least, those subtly developing forces of her mind which issued in their natural result, though to her kindred, friends, perhaps to herself, it seemed as if nothing in her life had pointed to it. To us, at any rate, the hints at the coming change are frequent in the pages which describe her foregoing life. They are worth examining, not only on the ground of the importance of anything which may help us to understand so rare a life and genius, but also, and much more, because George Eliot is, in a sort, a representative of many to whom similar changes of view, on similar subjects, have come and are coming increasingly, with the result, often, of a similar appearance of startling abruptness.

If the premonitions of the change are few, it is what should be expected from the slight material. Why so little is given us bearing on the time of George Eliot's religious transition, we do not yet know. Very possibly it was her own choice that it should be indicated only, not explained. Certainly in her later life she was reticent about this early experience—at least so far as taking the public into her confidence is concerned. That she refrained from portraying it recognizably in any of her works, just as she never allowed any light to be thrown by her novels upon her relations to Lewes, may go to show that she wished the one feature of her life, as the other, to remain in the shadow. We have her own early expression, "I do not attach much value to a disclosure of religious feelings," as a suggestion of a native shrinking from making a parade of such matters. At any rate, the truth is, that the whole account of the first momentous change in her life is extremely brief, counting both direct description and allusion; so that faint foregleams of an obscurely described event are all we can hope for.

On the side of natural endowment we can find abundant prevision of the translator of Strauss in the pietistic girl, Marian Evans, when we glance at her immense eagerness after knowledge, and her remarkable power of acquirement and assimilation. Her teachers and schoolmates may have been surprised at her religious development, but it is evident that they were prepared for a display of strength and brilliance of intellect. Her school life gave ample promise of that. The glimpses given us of her range of reading and thought, in the years that followed, show a rapidly expanding mind and a deepening grasp. Her studies do not appear to have been highly systematic, or directed with great steadiness of aim, but for that very reason they made for mental freedom. The native play of her mind, feeling its own way, was less hampered than it would have been, even while achieving apparently larger results, if following definite and prescribed lines. In her case, as in so many others, "aimless reading" was more of a blessing than the peril it is often said to be. Doubtless the best way to produce a draught-horse, warranted to walk quietly in the beaten road, not to be restive under the bit, and never to jump a fence, is to subject him to "discipline" and "system"; but it takes wide ranging over fenceless prairies, free browsing in valley and on mountain, to develop the horse written of in the book of Job. It is clear, too, that George Eliot's thirst for knowledge was not a mere acquisitiveness. She early showed the philosophical trend of her mind. Not learning, but its results, she craved. What seems to have been a part of her instinctive genius in her creative writing - the ability, that is, to see into the causes of actions, to disentangle the complex of character—was undoubtedly cultivated by the motive and method of her early studies in history and literature—a search not after dates and dynasties, but historical movements, with their reasons; a desire to know not masterpieces, but national character revealed in them. Almost pathetic is that half-apologetic letter of hers in partial defence of novel-reading, and illustrative, too, of this side of her nature: "We should, I think, qualify ourselves to *understand* them" (allusions to characters of fiction, she means). There speaks a mind impatient of ignorance, eager to lay itself alongside the fact. George Eliot's power of acquirement, stimulated by insatiable desire, was sure to bring her into contact with writings broader than her sect; and her reflective spirit was certain to deal with them at last, not in frightened prejudice, but in a calm endeavor to understand.

There is evidence, also, that she had come into touch, partially at least, with ideas of exactly the kind to give her an unfelt push in the direction she afterwards followed deliberately, long before those "eleven days" to which Mr. Hutton restricts his view. That she had begun the reading of natural science as early as September, 1839, appears from a letter to Miss Lewis, of that date, in which she uses a scientific illustration—the earliest, perhaps, of the long series to be found in her writings. And the allusion is one of peculiar suggestiveness, since it is to the science of geology. Now the revolution of that science was being wrought in those very years by Lyell, whose 'Principles of Geology' appeared in 1830-3, his even more popular 'Elements' issuing from the press in 1838. To such a reader of his books as George Eliot must have been, the result of his method would have been to revolutionize not merely geology, but the whole world of thought. Take the sub-title of Lyell's 'Principles,' "An Attempt to Explain the Former Changes of the Earth's Surface by Reference to Causes now in Operation," and the very familiarity of the idea at present indicates how novel it was fifty years ago. It was a new method. More in that than in the details lay its value and power to widen the horizon of the mind. The easy short-cuts of the catastrophists, invoking a sort of miraculous agency to piece out their ignorance, had to give room for the truer conception of steady sequence and uniform causation. It was the true inductive spirit coming fully to the birth in that branch of science. Accepted and justified there, it inevitably would extend its jurisdiction over all departments of knowledge, as the only real organ of inquiry and discovery. And it happened that George Eliot soon came in contact with a writer applying, in some degree, this method of inquiry to the question of the origins of the Christian Church. In August, 1840, she read Isaac Taylor's 'Ancient Christianity and the Doctrines of the Oxford Tracts for the Times.' To a reader of to-day, the great effect of this book upon Miss Evans—so great that her aunt thought it chiefly responsible for "unsettling her views of Christianity"—seems almost unaccountable. Certainly nothing could have been further from the ardent Taylor's intention than to "unsettle" any one's belief, except that of the incipient Romanists in the Church of England. His book is tiresome reading now—verbose and quite too furious. Here, again, it was not so much what the writer aimed at or accomplished, as his method, which carried to a mind more philosophical than his own an influence greater than he was consciously exerting. His endeavor was to refute the Oxford appeal to antiquity by exposing antiquity. In place of the Oxford idea of the church of the first three centuries—a church miraculously guided, supernaturally pure, the model for all ages—Taylor showed that we must substitute a very different conception, a church more affected by heathenism, more worldly, more ignorant, more corrupt, than the church of the nineteenth century. Judged by modern standards, his book is decidedly defective; in its time it did its work. The shock that it would give to the ultra-evangelicalism of George Eliot's inherited religious beliefs we can easily see to have been great; its deeper suggestions to her reflective intellect we can imagine from the issue of those influences of which it appears to have been one of the most powerful.

Mr. Cross, then, would seem to have good reason for thinking that there was a "half-unconscious preparation" of George Eliot's mind for the Hennell and Bray teachings, long before she met those friends. If it had not been from them, it would have been from some others that she would have received, and that speedily, the last impulse needed to make her conscious of a severance from the faith of her fathers. Her mind was ripe for the change. The Hennell seed fell into prepared ground. It is clear that she had been for some time strenuously inquiring into the evidence for her religious beliefs, into the relation between belief and conduct. Some of the traditional arguments in support of her sect she had already found to be hollow, "the easily wielded weapons for morning-calling and evening-party controversialists." Especially dissatisfied had she become with the confident assertions of her religious teachers, to the effect that their particular beliefs were the only means to a virtuous life. "It appears to me," she writes, "that there is unfairness in arbitrarily selecting a train of circumstances and a set of characters as a development of a class of opinions. In this way we might make atheism appear wonderfully calculated to promote social happiness." To a mind in which such thoughts were fermenting came Mr. Hennell's 'Enquiry concerning the Origin of Christianity.' Lord Acton is more witty than wise in saying, "Between Hennell's 'Enquiry' and George Eliot's answer there is no proportion." Granted, if the answer were to that book alone. Granted, if the alternative is to regard that book as either very profound or valuable. Much of it is, of course, obsolete. Many of its positions were from the first untenable. But, admitting the wreck which has overtaken many of its arguments and criticisms, its standpoint and method remain, and will remain. It is a sober, thoughtful endeavor to explain facts naturally, by patient, inductive inquiry, rejecting the short and easy method of supernaturalism. It is the method of Lyell applied to the exploration and explanation of stratified religion. It is the spirit of Taylor at work in the first century, in the first thirty years of the first century, not limited to the sub-apostolical church. So, at least, must George Eliot have felt it. For her it was simply the last step in a path in which she had been long advancing. After this she was committed to the truth, and the truth alone. If she were to inquire at all, seek to know at all, she saw that she must use the same and only real method everywhere, in geology, in history, in religion. The great change for her consisted essentially in recognizing that. It was not so much a change in belief as in her conception of

the way of arriving at belief. Certainly she got far away from the peculiar views of the Hennells and Brays in her later life; yet it is not to be supposed that she ever abandoned the way of looking at the world which they helped her to form. That vision splendid is not easily forgotten or lost.

Even if one deny that the hints of the coming change, now adduced, amount to anything, and even if the whole process has to be imagined as begun and finished within Mr. Hutton's eleven days, he should have been the last man to have been so greatly surprised at the rapidity of such a spiritual transformation. He and his school are accustomed to speak about a spiritual phenomenon known as conversion. A change of view and of life more sweeping than that of George Eliot, they are accustomed to look upon as entirely normal, if labelled conversion, though it should be alleged to have taken place in eleven hours or eleven minutes. Doubtless such great changes of purpose do take place with this suddenness—as far as their coming to consciousness and to manifestation is concerned. It is of the nature of a spiritual transition to be thus sharply marked in appearance, new views of truth coming as in a flash, old things passing away like a dream. But Mr. Hutton is at fault in not seeing that the experience of George Eliot which astonishes him is strictly analogous to the experience of conversion which does not astonish him at all. As a critic, at any rate, he should have been able to forget his own convictions, for the moment, and not have argued that what would have been involved for him in such a change as came to George Eliot, must have been involved for her. "To me," he says, "the remarkable point is, that George Eliot felt herself relieved of a burden rather than robbed of a great spiritual mainstay by the change." Why "remarkable," except for the reason that he could not imagine the change to be anything but for the worse; could not think it

> "Shame! to stand in God's creation,
> And doubt truth's sufficiency"?

As a critic, whatever he might have done as an advocate, he should not have overlooked George Eliot's own testimony, found in her letter to Miss Hennell, two years later: "When the soul is just liberated from the wretched giant's bed of dogmas on which it has been racked and stretched ever since it began to think, there is a feeling of exultation and strong hope." Such language should have been enough to suggest to him, even if George Eliot's whole bearing during the time in question did not, that she had found, instead of losing, "a great spiritual mainstay."

Count Tolstoi has a suggestive remark, to the effect that the day after a great decision, of far-reaching character, the soul that has struggled its way to it thinks the choice might easily have turned the other way; that a year after, this seems doubtful; that ten years after, the choice is seen to have been inevitable. Such a decision can be "sudden" only in the sense that it must be referred to a certain date; no one but the dupe of a Hindu juggler can suppose that the flower bursts into bloom ten minutes after the seed is sown.

HUGO'S 'THINGS SEEN.'

PARIS, July 11, 1887.

THE literary executors of Victor Hugo have just issued a volume, a large volume, of his notes, under the name of 'Choses vues.' There is no preface to the volume. These "things seen" were seen between 1838 and 1875, and are arranged in a chronological, not in a logical, order. The publishers do not tell us if they chose from among other notes, if they will or will not publish other volumes. We must be content with the work as it is. It is evident that Hugo, if he did not keep a Journal, was in the habit of noting down some of his impressions, and of keeping a memorandum of some of his conversations with important people. These notes were taken as documents for future books. They have a literary form—some of them have a minuteness—which is not found in ordinary memoirs.

The mind of the great poet was, so to speak, photographic. When he is placed before an impressive scene, he reproduces it with a fulness, an exactness, truly extraordinary. No details, no contrast, no shade of color is lost. He sees everything and can remember everything. Read, for instance, the description of the Chapel of the Invalides, which received the remains of Napoleon, brought back from the island of St. Helena. Even Balzac cannot describe a room with greater minuteness. Hugo's description is, so to speak, an inventory. His eye was evidently as sensitive as the photographer's plate. His memory was tenacious, but he took the precaution, when he returned home, to fix his impressions. There are a thousand pages in 'Notre Dame de Paris,' in the 'Misérables,' which were manifestly written from such notes, taken after the long and careful observation of some object. There is in such pages a realism which stands in contrast with the natural vagueness of the poetic mind. There were, so to speak, two men in Hugo: one describes things like a naturalist or realist of the modern school, like a Zola; the other sees things as mere phantoms, as forms of some unknown invisible forces. In these 'Choses vues' we see the two men, and we see them at work preparing their task.

It would have been very interesting to have the note-book of Victor Hugo during the early part of his career, at the time when he held very royalistic opinions. His literary executors have strong political passions, and it is a pity they did not show us Hugo as he was when he wrote the 'Odes et Ballades,' in the spring of his extraordinary genius. We have also been deprived of the notes of 1830, a very important year, the year of the Revolution. All Victor Hugo says about this critical year is found in a conversation he had in 1843 with Royer-Collard, at the French Academy. Royer-Collard tells him that the Revolution of 1830 was caused entirely by Charles X.

"'It is said he had bad advisers. It is false—false. No one advised him. It has been said that he consulted Cardinal de la Farre, M. de Latil, M. de Polignac, his suite. Would to Heaven he had done so! None of those who surrounded him had lost their heads as completely as he did; none of them would have given him such bad advice as he gave himself. All those who surrounded the King—those who were called the courtiers—were wiser than himself.'

"M. Royer-Collard remained silent for a moment, then continued, with a sad smile, which he often assumed during the conversation:

"'Wiser—that is to say, less insane.'

"Another pause; then he added:

"'No, nobody advised him.'

"And after another pause:

"'And nothing advised him. He had always, from his youth upward, preserved his own identity. He was still the Comte d'Artois; he had not changed. Not to change, if one should live to be eighty years of age, that was the only quality which he valued. He called that having a *personality*. He said that since the Revolution there had been in France and in the era only two men, M. de La Fayette and himself. He esteemed M. de La Fayette.'"

The new volume has many interesting pages on King Louis Philippe. The King had made Victor Hugo a peer, at the solicitation of his son, the Duke of Orleans, and Hugo felt almost grateful to him. In the 'Misérables' there is a fine chapter on Louis Philippe, where he is called "un roi de grand jour." In a conversation with the King in September, 1844, there are some amusing details on the education of Louis Philippe and on Mme. de Genlis:

"King Louis Philippe said to me the other day, 'I was never in love but once in my life.'

"'And with whom, Sire?' 'With Madame de Genlis.' 'Ah, but she was your tutor.'

"The King laughed and replied:

"'As you say. And a strict tutor, I declare to you. She brought up my sister and myself quite ferociously. Getting up at six in the morning, summer and winter; fed upon milk, roast meats, and bread; never any luxuries, never any sweetmeats; plenty of work and no play. It was she who accustomed me to sleep upon boards. She made me learn a great variety of manual work; thanks to her I can work a little at every trade, including that of a barber-surgeon. I bleed my man like *Figaro*. I am a cabinet-maker, a groom, a mason, a blacksmith. She was systematic and severe. From a very little boy I was afraid of her; I was a weak, lazy, and cowardly boy; I was afraid of mice! She made me a tolerably bold man, with some amount of spirit. As I grew up I perceived that she was very pretty. I knew not what possessed me when she was present. I was in love and did not know it. She, who was an adept in the matter, understood and guessed what it was at once. She used me very badly. It was at the time when she was intimate with Mirabeau. She constantly said to me, "Come, now, Monsieur de Chartres, you great booby, why are you always at my skirts?" She was thirty-six years of age, I was seventeen.'"

Mme. de Genlis saw her pupil on the throne, and died three months after the Revolution of July. She merely said of his elevation, "I am very glad of it." She was always in money difficulties, being very free-handed and extravagant. She had adopted two children, Pamela and Casimir, merely because they were handsome. During the emigration Mme. de Genlis went to London with Mme. Adelaide and Pamela. These ladies had very little money, and lived in lodgings.

"It was winter time. Really, Monsieur Hugo, they did not dine every day. The tidbits were for Pamela. My poor sister sighed, and was the victim, the Cinderella. That is just how it was. My sister and Pamela, in order to economize the wretched hundred louis, slept in the same room. There were two beds, but only one blanket. My sister had it at first, but one evening Madame de Genlis said to her, 'You are well and strong; Pamela is very cold—I have put the blanket on her bed.' My sister was annoyed, but dared not rebel; she contented herself with shivering every night. However, my sister and myself loved Madame de Genlis."

Both Mme. Adelaide and the King visited her till the last days of her life, and always showed her much respect and deference.

Victor Hugo evidently liked Louis Philippe, his simplicity, his earnestness. He found him "gay, affable, and fond of conversing." Sometimes, however, he found him sad. One evening, at Saint Cloud, the King told him to sit down by him on a sofa, and said to him:

"Monsieur Hugo [this was in 1844], I am misunderstood. I am said to be proud, I am said to be clever. That means that I am a traitor. It grieves me. I am simply an honest man. I go the straight road. Those who are acquainted with me know that I am not wanting in frankness. Thiers, when he was working with me, told me one day that we did not agree: 'Sire, you are proud, but I am prouder than you.' 'The proof that that is not so,' I replied, 'is that you tell me so.' M. de Talleyrand said to me one day, 'You will never make anything of Thiers, who, for all that, would be an excellent instrument. But he is one of those men who can only be used on condition of satisfying their requirements; and he will never be satisfied. The misfortune for himself, as well as for you, is that there is no longer any possibility of his being a Cardinal. Thiers is clever, but he has too much of the conceit of a self-made man. Guizot is better. He is a man of weight, a fulcrum; the species is a rare one, and I appreciate it."

One of Hugo's favorite preoccupations was capital punishment, and the state of mind of the people who suffer it. He was still young when he wrote 'Les derniers jours d'un Condamné.' The new volume is full of details on criminal trials. There are long notes on the

attempts made at various times on the life of Louis Philippe, by Fieschi, by Lecomte, by Joseph Henri (names now forgotten with the exception of the first). There are curious pages on the prisons of the men condemned to capital punishment; on the Duc de Praslin, one of Hugo's colleagues in the House of Peers, who killed his wife and poisoned himself in prison before his trial could take place. There are visits to the Conciergerie, which evidently furnished documents for the 'Misérables.' The general sentiment in all these notes on prisons and on criminals is the same: it is a feeling of pity, of indulgence, of forgiveness. This sentiment found an eloquent expression in the verses which Hugo sent to the Duchess of Orleans, when he asked for the pardon of a republican called Barbès, who had shot a policeman in cold blood in the streets. Alluding to the unfortunate death of the Duke of Orleans and to the age of the Comte de Paris, who was then an infant, he ended thus:

"Grâce au nom de la tombe! grâce au nom du berceau!"

Barbès was pardoned by Louis Philippe, at the request of the Duchess.

There are not many details on the littérateurs of the time. One day, however, Hugo meets Béranger: "a round red face; an eye full of vivacity; long gray hair; sixty years old and more; a good and smiling mouth; an old frock-coat; a large Quaker hat." They walked together a little while (it was in 1847), and Béranger complimented Hugo in these terms:

"'You have done well,' said Béranger to me, 'to be content with the popularity which one can regulate. I have a great deal of trouble to withdraw myself from the popularity which carries you with it. What slave is there like the man who has the misfortune to be popular in this fashion? Look at their Reformist banquets! They kill me! and I have the greatest difficulty in the world to avoid them. I make excuses: I am old, I have a bad digestion, I never dine out, I cannot alter my rule, etc. Bah! You owe it to yourself; a man like you must pay this forfeit, and a hundred others in the same way. I am exaggerating, eh? Nevertheless, one must smile and put the best face on it. Ah yes! but that is merely the part of a court jester. To amuse the prince, to amuse the people—the same thing. Where is the difference between the poet following the Court and the poet following the crowd? Marot in the sixteenth century, Béranger in the nineteenth; but, *mon cher*, it may be the same man! I do not consent to it. I lend myself to it as little as possible. They make a mistake about me. I am a man of opinion, and not of party. Oh, I hate their popularity. I am very much afraid that our poor Lamartine is going in for this popularity. I pity him. He will see what it is! Hugo, I have some common sense. I tell you, be content with the popularity you have; it is true, it is real.'"

He told how in 1829, when he was in prison for his songs, there was no reader of the Liberal papers who did not think he had a right to come and visit him in his prison:

"'Let us go and see Béranger.' They came. And I, who was in the mood to muse upon the silliness of poets, or was seeking for a refrain or a rhyme between the bars of my window, was obliged, instead of finding my verse, to receive my hosier!"

On their way, they arrived before the door of the Tuileries, where Victor Hugo was going, as it was the day of the French Academy:

"'Won't you go in?' said I to him.
"'O no, indeed—this is for you.'
"And he ran away."

Correspondence.

THE MAGIC WAND AGAIN.

To the Editor of The Nation:

Sir: I have been much interested in Mr. Stille's letter in the *Nation* of July 14, but the facts which have come under my observation do not seem consistent with his theory. I knew very little of the witch-hazel, and up to three years ago should, if I thought of it at all, have laughed at it as a folly and delusion. We wanted very much a well on our place, which is near the sea, rocky and barren. It is impossible to dig to the depth of more than two feet anywhere near our house without striking the ledge; and as any well must be drilled through the rock, it was hard to decide where to begin operations with no indication to guide us.

At the solicitation of a neighbor, we sent for a man of local reputation with the wand to examine our premises. We half laughed at ourselves for doing this at all; and, indeed, I am not ready now to say that I believe, but neither can I quite say that I disbelieve. He came, and we saw the bending of the twig in his hands. The man, whom I will call "T.," has no particular faith in the hazel. He says any bitter wood will produce the same results. He found water, or rather promise of water, in two places. In the spot nearer the house he said he should get it at a depth of from eighteen to twenty feet. We asked on what he based this estimate, and he said that on retreating from the place (say A) at which the twig, by pointing downward at a right angle with the surface, indicated the presence of water, it would turn at a constantly varying angle, always pointed to that place, till he reached a position at which it made the hypothenuse, or part of the hypothenuse, of an isosceles right-angled triangle; and the distance on the surface from A to that position showed this depth. Now, on your correspondent's theory, how would fatigue affect the position and motion of the hands, making the twig turn in a different direction when he retreated?

We let the matter drop at that time, but the next spring we corresponded with "T." He offered to dig the well on either of the spots he had marked, by the day or by the foot, at a certain price for either. We were very incredulous, and proposed to him to dig and drill at his own risk—to be paid a fixed sum if he succeeded, nothing if he failed. We hardly thought he would agree to this, but he accepted promptly, naming a comparatively moderate sum, which we were quite willing to pay could we have the water. In the course of the summer he came, bringing with him a man, two horses, a large machine for drilling, and a portable furnace. Various accidents to his machinery delayed him. Sometimes he had to send four miles for repairs—once, forty miles to replace a portion of his machine. Nothing really discouraged him. "T." was on the place more than two weeks, and it was impossible to doubt his entire belief in himself. His assistant had entire faith in him, said he had worked with him for two years, and had never known him to fail to find water where he had begun a well. At a depth of about five feet water began to come in. He said this was only the "light vein," which he always expected to precede the main flow, and went on with his drilling. At a depth of eighteen feet water began to come in freely. At something over nineteen feet he left off. We occupy the place only a few weeks in the year—less than three months—and the well has not yet borne the test of a long summer's use in a dry season; but the flow seems abundant.

"T." has since dug several wells in the vicinity—so far as I know, with success. I advance no theory, nor do I seek to combat any, but if I wanted another well and could get hold of "T.," I certainly should follow him and his wand. Of course a man who has spent many years in finding water will have a better knowledge where the water is likely to be found than the average man.

Your correspondent, if he has not already seen it, may be interested in the account in the "Proceedings of the Society for Psychical Research" of their investigation of the subject. Maine.

Notes.

George Routledge & Sons publish immediately Daudet's 'Belle Nivernaise' in the first English version of that amusing story; 'Happy Home Studies for the Young,' and 'Wide Awake Stories for the Young'; and a Life of Buffalo Bill, by Henry L. Williams.

T. Y. Crowell & Co. announce translations of Tolstoi's 'My Confession' and 'Que Faire (What to Do)?'

Benjamin & Bell have in press for speedy publication 'Sea-Spray; or, Facts and Fancies of a Yachtsman,' by S. G. W. Benjamin.

The publishers of Ignatius Donnelly's 'The Great Cryptogram; or, Lord Bacon's Cipher in the so-called Shakspere Plays,' will be R. S. Peale & Co., Chicago.

The Froebel Society, whose Secretary should be addressed at the office of the *Journal of Education*, 86 Fleet St., London, offers prizes to the amount of twenty guineas for the best essay on "The Ethical Teaching of Froebel, as gathered from his Works." Essays, not to exceed in length 7,500 words, must be forwarded as above, with a motto, the writer's name being enclosed in a sealed envelope, by November 1.

Mr. A. F. Bandelier, who has for many months been deep in Mexican historical archives, has returned to Santa Fé, bringing literal copies of more than 600 manuscripts, many of which were totally unknown.

G. P. Putnam's Sons have published the *Journal of Social Science* for June, containing the papers read at the General Meeting of the American Association at Saratoga last year, with the customary synopsis of proceedings and the programme of the meeting appointed at the same place for September 6-10, 1887.

We have received the Journal of the Shakspere Club of the University of North Carolina, containing a lecture and a paper and a record of proceedings—all showing a lively interest. Ladies are not admitted to membership, but the experiment of inviting them on special occasions has been tried with success. In the discussion of "Othello" we observe that the color question was brushed aside with a "Remember that, though a Moor, he was not a negro." Whether "Othello" has had its share of representation on the Southern stage, we can only conjecture.

From Charleston comes an agreeable little 'Historic Sketch of the Parish Church of St. Michael, in the Province of South Carolina,' by George S. Holmes. This edifice has suffered many indignities from man and the elements. Its bells were carried to London by the British in their evacuation of Charleston in 1782, but were recovered. In the civil war they were taken to Columbia for safety, and were burned with the city after Sherman's passage. The fragments were sent to London to be recast—by the successors of the original founders, "of the same amalgam, and in moulds made with the same trammels"—and had to pay duty on reëntering the country, though Congress finally made restitution. The church plate was destroyed or dispersed at the same time and place, and only partly recovered. The church, meantime, was all but knocked to pieces in the bombardment of Charleston, and plundered on the occupation—among other things, of a pulpit ornament, "I. H. S.," inlaid in ivory, restored by a Northern clergyman, who had "no place for them in his church." The cyclone of 1885 blew down several feet of the spire, and the earthquake a year later caused the steeple to set-

tle eight inches, besides doing other damage to the amount of thousands of dollars. Mr. Holmes's narrative is very minute, remarking the change from pounds to dollars in the church's accounts in 1803, and the disuse of the town-hall function of the church in 1832.

The twelfth volume of the Ninth Census contains the second part of Surgeon Billings's report on the Mortality and Vital Statistics of the United States, and is accompanied by a portfolio of plates and diagrams, though these are also freely used in the text. The loose plates in question display curves of survival and of expectation of life in sundry States and cities, with some British comparisons. A colored group-map of the United States, showing twenty-one grand physical divisions, forms the basis of the discussions of this volume. Thus, in the section on deaths from cancer, the group diagram proves the Southwest Central region to be most exempt for females, both white and black, and a reference to the map locates this region in Arkansas, Northern Louisiana, and Eastern Texas. There is also a general colored map for cancer, as well as for diphtheria (which is very thoroughly treated), consumption, heart-disease, the accidents of birth, etc., etc., from which the most curious and instructive conclusions are drawn at a glance. For instance, it appears that New England got so used to being "left out in the cold," in the old slavery days, that she can now point to the largest number of deaths from old age. It is graphically shown that May, June, and July are, in this country as in Europe, the suicidal months *par excellence*. No attempt has been made to construct a life-table for the United States as a whole, but this has been done for certain cities and for the States of Massachusetts and New Jersey. An excellent index guides the inquirer to any part of this admirable collection of statistics.

A paper on the Medical Mythology of Ireland, by Mr. James Mooney of the Bureau of Ethnology, read before the American Philosophical Society in April last, has been extracted as a pamphlet, and is a very curious and interesting study in folk-lore. These beliefs and customs are, as the author puts it, not "half-forgotten superstitions raked up out of the past," but are treated "as living realities, for such they are in fact." The influence of fairies, of the evil eye, of the blessed wells, and of miscellaneous charms, are illustrated by numerous examples, the witnesses or believers in the effects wrought being living Irish of to-day. We have no space to quote in detail these curiosities of superstition, of which many are peculiar to the Gaelic race, but some have their analogues among uncivilized people the world over. Doubtless persons seriously interested in such studies could procure copies from the author, by whom additions, corrections, and exchanges are desired.

In strong and strange contrast to the foregoing is 'A Brief Review of the Operations of the Home Department in connection with the Cholera Epidemic of the 18th year of Meiji (1885),' a scientific publication by the Government of Japan. It is a clear and concise account of the suppression of the epidemic imported in Nagasaki, and Mr. Nagayo Sensai, the Director of the Sanitary Bureau, is to be congratulated that this happy end was due to his intelligent sanitary measures being carried out, and especially to the inspection and quarantine being enforced, and, as he expresses it, "at the proper time." We believe Japan is the only nation where a sanitary bureau is a direct part of the central government, and we are in no position to speak patronizingly of a people whose interest in and regulation of the public health are so sagacious and effectual. The Report is beautifully illustrated by a colored map, and by many tables and graphic charts.

It is one of the hopeful signs for the physical and indeed the moral progress of the race that hygiene, that the way to live properly, is beginning to be carefully taught in the schools and probably to be discussed in the homes of youth. Many of the sins against life are those of ignorance; and when ignorance is dispelled, rectitude, corporeal and otherwise, is easier. As we have from time to time noticed in these columns, the new books on this subject are of every quality, those of the best order being few. But among the very best is Dr. E. M. Hunt's 'Principles of Hygiene' (Ivison, Blakeman, Taylor & Co.). However carelessly the subject may be taught by the use of such a volume as this, it is impossible that some valuable information should not be implanted, to grow, it may be, into a personal tree of life, redeeming what otherwise would be a physiological desert.

A large part of Dr. Hugo Erichsen's 'Cremation of the Dead' (Detroit: D. O. Haynes & Co.) is a jumbled recital of disjointed conditions wherein suicide by fire, punishment, sacrifice, and the irregular as well as systematic burning of the dead are confused. This is not history, and the author shows an imperfect appreciation of the gravity and importance of the subject in using these loose data as though they belonged to it. His desire (and a very praiseworthy one it is) is to spread the practice of cremation among the serious and influential classes; but these will not be inclined towards it by finding the original Topheth lying in the direct line of historical ascent, whether it was, as he suggests, a perpetual pyre for the disposal of the dead (Isaiah xxx, 33), or whether the valley of Hinnom acquired its notoriety as the place for the young "to pass through the fire to Molech" (2 Kings, xxiii, 10). The objection to cremation is almost entirely sentimental, and the association of discordant ideas should be carefully avoided. We fear this little volume, undignified in tone and tangled in method, although setting forth many indisputable truths as to its sanitary advantages over burial, will make few converts for the better way that is struggling for recognition.

"Thousands of young girls who, for various reasons, cannot ride in winter, have every summer within reach horses quite as good as the average of those at city riding-schools, but which they are never allowed to mount." In their interest Mr. Theodore H. Mead has, in 'Horsemanship for Women' (Harpers), prepared, on the basis of Baucher's 'Méthode d'Équitation,' an attractive and instructive little book. He is an enthusiast as to the intelligence of a horse, and he will probably arouse enthusiasm in the most of his readers, who, by closely following his simple directions, may have the double pleasure of teaching both their horses and themselves accomplishments hitherto unsuspected. It is probable that the author lays too much stress, as Baucher himself did, on the line of the head being perpendicular; but the general drift is in the right direction.

An excellent memoir of the late Dr. Jonathan Mason Warren of Boston, who died in 1867, has been prepared by Howard Payson Arnold and printed for private distribution. It is a somewhat tardy account of the third distinguished physician, in direct line, of that name and place; and, perhaps because it is belated, will be more welcomed by those who loved and respected its subject, and who may have feared that no competent biography would preserve his record for posterity.

The *Scottish Geographical Magazine* for July opens with an article on Japan by Mr. Russell Robertson, British Consul at Yokohama, and for twenty-five years a resident of the islands. It is packed closely with geographical and industrial facts, and fairly bristles with statistics. He refers especially to the enormous increase of the tea crop, the amount exported last year being 28,000,000 pounds, mostly to this country. There are 458 miles of railway in operation, and 7,000 miles of telegraph lines. The newspapers are numerous; one, the *Crier* (*Yomiuri Shimbun*), has an annual sale of 4,600,000 copies. Another British Consul, Mr. D. R. Peacock of Batum, contributes a paper on Upper Georgia, comprising the districts of Batum and Kars. He speaks despondently of the prospects of the country, the land barely sufficing to support its present small population. Referring to the ancient ruins, he says, "there is scarcely a valley or a hill where one does not discover the remains of either a fort or a church"; but there are no evidences of roads, canals, or public buildings belonging to the age of the builders of these ruins. Exception should be made, however, in favor of bridges, for there are some of stone still standing, "with one or several arches of remarkable durability as to workmanship, and of exquisite beauty in style." There is a slight sketch of Dr. Junker's travels, accompanied by a very striking portrait of the explorer.

The great work undertaken in 1855 by the late Francesco Cerroti (a remarkable example of Italian erudition and versatility), a 'Bibliografia di Roma,' is about to begin to be published in the year of his death, by Forzani & Co. of Rome. It will make four quarto volumes in double columns of admirable typography, the works enumerated being classified under six heads—the physical history of the city coming last. The titles are frequently accompanied by critical or analytical accounts of the contents. The price will be twenty lire per volume.

Among the official announcements of decorations that were to be conferred by the French Government on the national holiday, July 14, was the name of Louis-Marie-Julien Viaud, *lieutenant de vaisseau* of twenty years' service, thirteen of which were at sea. He was to receive the cross of Chevalier of the Legion of Honor, and is the author known under the name of Pierre Loti.

The new phase in the international novel is the publication in French of original works by American authors. Mr. F. Marion Crawford made a brilliant beginning with his 'Crucifix de Marzio,' in the *Nouvelle Revue*. How real a success this was, is shown by the publication immediately afterwards, in the *Journal des Débats*, of a new story by him, 'La Marchesa Carantoni,' which was begun about July 1.

—The *Atlantic* for August contains a very seasonable article upon Charles Reade, called out by the extraordinary memoir of him lately published. Its author, Mr. E. H. House, lived with Mr. Reade and Mrs. Seymour at various times between 1863 and 1873, "often for months together," and is well fitted to supply some of the corrections of which the memoir stands so sadly in need. He rightly thinks that the characterization of Reade from "the most authentic sources" is false and ridiculous. Incidentally he dwells upon Reade's fondness for Americans and upon his own Americanisms of manner, and upon all the more amiable and manly traits which were often so swallowed up in Reade's bumptiousness as to be almost incredible, so far as the public could judge. But after this attempt at a more discriminating and life-like portrait, he devotes his space to the two main points of Reade's relation to Mrs. Seymour and of his so-called plagiarisms. He confirms the statement that the attachment of Reade and Mrs. Seymour was a pure one; but his view of Reade's course when Mrs. Seymour decided to live with him, after her husband's death, differs widely from the biographer's. He thinks nothing was open to Reade but to marry her, and utterly rejects the defence offered that Reade could not

have afforded to give up his fellowships, and that Mrs. Seymour would have refused. "She would most assuredly have married him. . . . A few friends, and no others, knew what she suffered during the first years of the irregular connection. . . . It is certain at the time he did not realize the situation, nor did he weigh it conscientiously until the opportunity—possibly the vital necessity—for reparation had long gone by. . . . In any view his action was indefensible, and the attempt to justify or applaud it as a masterly manifestation of worldly wisdom inevitably transforms itself into the severest possible accusation against the object of the mistaken eulogy." Mr. House goes on to affirm, against the biographer, that Gerard and Margaret Brandt do parallel the relations of the novelist to Mrs. Seymour, on Reade's acknowledgment "to marry"; and generally he states that "in almost everything he has to say concerning this passage of Reade's history, the biographer is singularly at fault." Upon other points, too, he challenges the truthfulness of the memoir, especially in respect to Reade's plagiarisms, and on this subject declares the biographer guilty of "sheer ignorance," and of being unacquainted with Reade's 'The Eighth Commandment.' Reade simply used French material, for the right of reproducing which he had paid, without acknowledgment, and also extracted from old authors. He saw nothing wrong in it, or, as Mr. House says, "he lacked perception of certain principles which men of letters generally agree to accept as axioms." The article, which we have merely skimmed, is altogether admirable, and essential to an understanding of Reade's very difficult character.

—The first page of vol. xxii of the 'Encyclopædia Britannica,' ninth edition (New York: Scribners; Boston: Little, Brown & Co.), contains the beginning of a very valuable article on Siberia from the competent pen of Prince Peter Kropotkin, to whose leisure in a French prison the work owes already a considerable number of geographical sketches. As a geographer the Russian prince is as scrupulously careful as he is reckless as a writer of socialistic and revolutionary rhapsodies—such, for instance, as his 'Paroles d'un Révolté.' Even the section of the article referring to the exiles of Siberia shows the moderation of the scholar, instead of the heat of the partisan, and we are sorry that want of space prohibits our quoting here his highly interesting and, we believe, fully trustworthy statistics. On the other hand, it elicits a smile to observe how calmly the demolisher of state, religion, and society subsides into enumerating and partly describing forty-three rivers of Siberia, including such streams as "(8) the Uri . . ., (9) the Orkhon, (10) the Tchikoi (300 miles), (11) the Khilok (300), (12) the Uda (130), and (13) the Djida (200)." A little of this fondness for accuracy and minute details would have served better the authors of the more comprehensive geographico-historical articles "Spain" (upward of 70 pages) and "Sweden," the former of which manages to speak of the late Carlist war without mentioning a single commander, battlefield, stronghold, or event, and the latter to devote five long columns to the political history of the kingdom since the death of Charles XII. without naming a single actor besides the sovereigns (even Anckarstroëm, the assassin of Gustavus III., remains unnamed). More fully to characterize the proceeding first alluded to, let us add that the 'Britannica' contains no article or reference under the title of "Carlos" or "Don Carlos," "Carlism" or "Carlists," "Isabella II." or "Alfonso XII.," and that therefore the few colorless lines referred to are all that can be discovered in the Encyclopædia on the bloody struggle which shook Spain and shocked the world for four years. Let us, however, hasten to add that the collective value of the geographical and historical portions of the volume is enhanced by such contributions as Freeman's History of Sicily, Socin's "Sinai" and "Syria," Morfill's "Slavs," Prof. Keane's "Soudan," Kropotkin's "Syr-Daria," and the articles "Switzerland" (by three writers), "Sumatra," and "Syracuse." The biographical essays include lives of Adam and Sydney Smith, Smollett, Socrates, Sophocles, Spinoza, Dean Stanley, Steele, Swedenborg, and Sydney. Among the most important scientific articles are "Spectroscopy," "Steam Engine," "Stereoscope," "Strength of Materials," "Surgery," and "Surveying."

—'English History by Contemporary Writers' is a work edited by F. York Powell, whose ability as an historian is well known at Oxford. According to his announcement, the object of the series is similar to that edited by Zeller, Darsy, Luchaire, etc., in France. "It is planned not only for educational use, but for the general reader, and especially for all those to whom the original contemporary authorities are, for various reasons, difficult of access. To each well-defined period of our history is given a little volume made up of extracts from the chronicles, state papers, memoirs, and letters of the time, as also from other contemporary literature (foreign tongues being Englished), the whole arranged and chosen so as to give a living picture of the effect produced upon each generation by the political, religious, social, and intellectual movements in which it took part. . . . The chief aim of the series is to send the reader to the best original authorities, and so to bring him as close as may be to the mind and feelings of the times he is reading about." Each volume contains illustrations, a short account of the writers quoted, and various tables and summaries to facilitate reference. The first volume of the series is entitled 'Edward III. and his Wars, 1327-1360,' arranged and edited by W. J. Ashley, M. A. (London: D. Nutt, 1887, pp. 199). As the editor aims to give extracts illustrative not merely of "battles and campaigns," but likewise of "the life of the people" and "the development of the Constitution," we think that he has erred in wholly neglecting municipal and manorial history. The only town charter given (that to London on pp. 6-7) is not a typical one. But on the whole the difficult task of selection has been judiciously executed, and the narrative here presented may be read with instruction and pleasure both by the youth at school and by those familiar with the events of the period. Considering the excellence of the paper, typography, illustrations, and binding, no one can complain of the price of the book, namely, 1s. 6d.

—Three volumes have now appeared of Hachette's new series, "Les Grands Écrivains Français" (Boston: Schoenhof). To the 'Victor Cousin' of M. Jules Simon and the 'Mme. de Sévigné' of M. Gaston Boissier, with which it was begun, has been added the 'Montesquieu' of M. Albert Sorel. The occasion is perhaps a suitable one to warn the reader that he should not expect to find in these volumes biographies of the authors chosen, but rather, as the publishers announced in undertaking the series, studies upon the lives, the works, and the influence of the great writers of France. All the events in the life of Mme. de Sévigné which M. Boissier judges necessary for a full comprehension of "la femme, l'écrivain, et l'œuvre," upon the study of which he is about to enter, are given in about a dozen lines in the short preface to the volume. M. Jules Simon begins his 'Victor Cousin,' indeed, with a chapter of twenty-four pages called "La Biographie," but even in this he does not attempt to relate the life of Cousin. All the years from 1830 to 1848, for instance, the years of Cousin's highest political advancement and greatest influence, are here passed over in ten lines. But when the reader has finished either of these volumes, he must certainly lay it down with the feeling that he has been admitted into the intimate life of the great writer with whom he has been spending a few delightful hours in the most charming company, and that his knowledge of the author's position in literature, and of his influence in the world, is surprisingly enlarged and broadened. These little books are as charming externally as they are delightful to read. They are clearly and beautifully printed, in thin volumes of less than two hundred pages, with a delicate and sober cover that pleases the eye by its simplicity, and a portrait of the author which is the only thing for which the reader is not grateful. Their price is only two francs.

—M. Henri Gaidoz, the founder of the *Revue Celtique* and of *Mélusine*, has begun the publication, under the title of "Bibliotheca Mythica," of a collection which is to be composed of works upon the history of religions, mythology, traditions, and popular literature. The first volume to appear is 'La Rage et Saint-Hubert' (Paris: A. Picard). The subject has an interest of curiosity at the present time, but probably the experiments of M. Pasteur and the polemics of the friends and enemies of his methods will have a greater interest for most readers than the curious details of ancient popular superstitions and beliefs which M. Gaidoz has collected in his work. For the student of folk-lore in its various branches it will, however, have an interest apart from its special subject. M. Gaidoz is always interesting, whether he treats of the beliefs in regard to the supposed causes and cures for hydrophobia in classical or mediæval antiquity, or of the popular or religious remedies and practices of more recent times. The reader will probably follow him with the greatest interest when he examines the legend of Saint Hubert, and the various superstitious practices connected with the belief in his power to prevent or cure hydrophobia. The gradual development of the myth and its connection with the legends of other saints, and the confusion and substitution of Saint Hubert for one or another of these, is extremely curious and interesting as a study of popular beliefs and superstitions, and of the simplicity and credulity of the chroniclers or their equally surprising confidence in that of their readers. M. Gaidoz argues that in the case of Saint Hubert, and the various legends connected with the veneration for him and the belief in his miraculous healing powers which have developed during many centuries (the date of his death is given as 727), the myth has grown around the practices and as an explanation of them, and not that the legend has given rise to the practices and beliefs. M. Gaidoz relates, further, that the faith in these powers still exists, and that the ancient Church of Saint-Hubert-en-Ardenne, in the little Belgian town where the body of the Saint was finally buried in 825, and which is the centre of his influence, still has faithful believers who come to submit to the cure called *la taille*, a kind of inoculation which was practised there for centuries before that of M. Pasteur, consisting of the insertion into a little cut in the forehead of a fragment of the stole sent down from heaven by the Virgin when the Saint was consecrated Bishop of Liége in the seventh century. M. Gaidoz has himself visited the church and witnessed the operation of *la taille* performed there, and he describes it in detail. He adds that, sometimes, to make matters sure, the patients of M. Pasteur himself, after undergoing inoculation at the famous laboratory of the Rue d'Ulm, afterwards go to the Church of Saint-Hubert-en-Ardenne, and receive

from the priest there *la taille* with all the old religious ceremonies.

SAINT-SAËNS AS A CRITIC.

Harmonie et Mélodie. Par Camille Saint-Saëns. Troisième édition. Paris: Calmann Lévy.

NOTE that the title of this work is not 'Melody and Harmony,' but 'Harmony and Melody.' This at once indicates its keynote. Though it is made up of a collection of miscellaneous essays, such as the Wagner Festival at Bayreuth (1876); the Birmingham Festivals in England; Bach and Handel; Liszt and Berlioz; Offenbach; the French Concert Societies; the Resonance of Bells, etc., what underlies all these themes is the notion, which will strike the semi-musical public with surprise, that harmony is of greater importance in music than melody, though the latter, too, is indispensable. "What the illiterate in music call, not without contempt, 'accompaniments,' or, ironically, 'science,' is *the flesh and blood of music*, is, in a word, its substance." In an historic sense, continues Saint-Saëns, melody comes before harmony, for ancient music, like modern Oriental music, has only melody and rhythm. But in an æsthetic sense harmony, which (together with orchestration) constitutes the modern element in music, stands first. But the appreciation of harmony requires a high degree of musical culture; and as in most countries the majority of people have not attained that stage, it is natural that they should place more value on melody and rhythm (especially dance rhythm), which alone they are able to appreciate.

Unfortunately, a number of these semi-musical people have been clever *writers*, and have persuaded themselves and the public that not only are these more primitive elements of music superior to harmony, but that genius is manifested only in the creation of a new melody, whereas a new harmony is a mere matter of "reflection" which any talented student may command by means of study. This absurd notion greatly exasperates M. Saint-Saëns on account of its wide prevalence; and as he may be safely pronounced at once the most erudite and the most inspired musician France has ever produced, his retort is specially weighty:

"Beautiful melodies and beautiful harmonies are equally the product of inspiration; but who cannot see that it requires a much more powerfully organized brain to conceive beautiful harmonies? . . . Why is it that the men of genius who originate beautiful melodies are also the only ones who conceive beautiful harmonies, and that no mediocre professor and savant thought of writing, *e. g.*, the *Oro supplex et acclinis* of Mozart's 'Requiem,' which is nothing but a sequence of chords? . . . The power to create a complicated work will always be a mark of a superior organization. And in the same way the love of beautiful harmonies indicates a public which has arrived at a high degree of culture."

Both the public and the composers are demoralized by the efforts of these literary critics to prove that melody alone is art, and harmony mere "science." Were the public frankly told that their love of bare melody and simple rhythms indicates a crude musical taste, they might make an effort to learn to appreciate the subtle harmonies in superior compositions; but as it is, they remain in their ignorance and indifference, thus starving the poor composers who have the courage to write "harmonies" according to their convictions, notwithstanding the persistent advice of the literary critics that they should write only simple, unaccompanied, "inspired" melodies, and avoid "algebraic" and "chemical" harmonies. Stendhal was one of these literary critics who dabbled in music. He believed in melody for melody's sake, in the isolated "solo voice which one may enjoy at his ease like a sherbet," as Saint-Saëns sarcastically puts it. To what critical results this principle has led is shown in Stendhal's estimate of Beethoven, at which the veriest tyro in music will smile to-day: "When Beethoven and Mozart himself piled up their notes and ideas, when they searched for frequent and bizarre modulations, their erudite symphonies produced no effect; whereas, when they followed in the footsteps of Haydn, all hearts were touched."

M. Saint-Saëns might have easily quoted a hundred such judgments hurled (often by famous critics) against every composer who penetrated more deeply into the wilderness of undiscovered harmonies and modulations—the same regions where subsequently all composers gladly pitched their tents and the public followed with delight. And yet it seems that in musical history experience goes for nothing; and if to-day a composer should arise who dared to go beyond even Wagner in his modulations and discords, the Wagnerites would probably be the very first to throw stones and call him "algebraic" and "scientific." Indeed, something very like this has already happened. Franz Liszt was even bolder and more daring as a harmonist than Wagner; and it is well known that not a few thoroughbred Wagnerites underrate and even affect to despise Liszt as a composer. They admit that he is original in his harmonies and rhythms, but his melodic invention, they say, is scant, and therefore he is not a creative genius, but only a clever workman. Have we not here the same old story—the same undervaluation of the creative genius evinced by new harmonies, rhythms, and orchestration, in the conception of which Liszt was almost on a par with Wagner, although, it is true, he cannot be considered, like Wagner, one of the greatest melodists the world has ever seen, and has therefore achieved much less popularity?

One of the best chapters in M. Saint-Saëns's book is that devoted to Liszt. It includes admirable analyses of several of his symphonic poems, "so little known, and whose prospects appear to me so bright," and contains the best discussion of the vexed question of programme music which we remember to have ever seen. The French critic prophesies that ages after the memory of Liszt the pianist shall have faded, he will be admired as "the emancipator of instrumental music," the creator of the symphonic poem—a very aptly chosen title, indicating that while the orchestral apparatus of the symphony is retained (and enlarged), a poetic idea always underlies the work. The old fogies "who love above all things their little habits and the calm of their existence," violently resented the amalgamation of pure instrumental music with poetic and pictorial elements; but as long as the music itself is good, Saint-Saëns cannot see why there should be any objection to such a union. To the purely musical pleasures in this case the imagination adds others: "All the faculties of the soul are at once called into play, and in the same direction. I can see very well what art gains thereby, but cannot see what it loses." The spirit of the age demands programme music, and "the taste of the public, in France at any rate, has carried the artists in this direction"—as witness, *e. g.*, the symphonic poems of Saint-Saëns, some of which dispute the palm with Liszt's.

Between Liszt and Wagner, Saint-Saëns cannot see much in common except their method of constantly transforming a musical phrase rhythmically, so as to make it express in turn different shades of emotion. "In regard to style, and the employment of the different resources of harmony and instrumentation, they differ as widely as two contemporaneous authors belonging to the same school can differ." In Saint-Saëns's estimate of Wagner, one notes occasionally a desire to appeal to chauvinism, and a fear of the formidable rivalry of Richard of Bayreuth. Like other great French composers, Camille has had a hard and long struggle with fame, and it seems that difficulties additional were strewn in his way on account of his former enthusiastic advocacy of Wagner's genius. He was, in consequence of this, insulted as a "Wagnerite," and his enemies actually went so far as to represent him condemned, in punishment for something, *to listen to a Beethoven symphony*—him, the most ardent worshipper of classical music! This made Camille cautious, and in the preface to 'Harmonie et Mélodie' (dated 1885) he exclaims: "I admire the works of Richard Wagner profoundly, notwithstanding their *bizarrerie*. They are *supérieures* and powerful—that is enough for me. But I never was, am not now, nor will ever be of the Wagnerian religion." But now the Wagnerites accuse him of renouncing their master after profiting by his works. He retorts, however: "Not only do I not renounce him, but I pride myself on having studied him and profited thereby, as was my right and my desire." And in another place: "I have for a long time studied the works of Richard Wagner. I have found my greatest delight in these studies, and the performances of his works which I have attended have made a profound impression on me, which all the theories in the world will never make me forget or deny."

Nevertheless, he claims the right of expressing his disapproval of the [mythical] "Wagnerite" who insists that music begins and ends with Wagner; and in Wagner's works themselves he points out some details that do not please him, especially in the ethical and philosophic aspects of the plot—adding, however, with a frankness rare in a Frenchman, that he looks at these things from a French point of view, and that to a German they may appear in a different light. He says he would no longer, as he did in 1876, call the awakening of *Brünnhilde* (in "Siegfried") *un enchantement*, for the reason that the preceding scene is too long and the following one too languishing. "On the other hand, my admiration for 'Rheingold,' and for at least three-fourths of 'Tristan' and the 'Walküre,' has never ceased growing." And the sixty pages he devotes to the Nibelung Tetralogy constitute one of the most appreciative and fascinating accounts that have been given of the first Bayreuth festival. He notes as an important point that at Bayreuth the singer's voice is never drowned, thanks to the position of the invisible orchestra, and takes this opportunity to express his opinion of those who are continually denouncing Wagner's music as noisy—the same people who delight in the cymbals, drums, and cornets that make many other operas hideous: "It is certain that the least operetta makes more noise than 'Rheingold.'" As Saint-Saëns has the reputation of being the greatest living score-reader, the following is of special interest: "When one has read this score, when one has seen this marvellous jeweller's work, one has some difficulty in noting all the chasing relegated *au dernier plan* and sacrificed to the general effect. Wagner has imitated the mediæval artists, who sculptured a cathedral as they would have decorated furniture."

The great scene between *Siegmund* and *Sieglinde* in the "Walküre" causes the French critic's enthusiasm to bubble over in these words:

"Here nothing would have prevented the composer from writing an air and a duo in the traditional style; but no air, no duo, could have, from a theatrical point of view, the value of this monologue and this dialogue-scene. Melodic flowers of the most exquisite fragrance spring up at every step, and the orchestra, like a boundless ocean, rocks the two lovers on its magic waves. Here we have the theatre of the future; neither the opera nor the simple drama will ever rouse such deep emotions in the soul. If the composer had completely succeeded in no other scene but this, it would suffice to prove that his ideal is not an impracticable dream; the cause has been

heard. A thousand critics writing each a thousand lines a day for ten years would injure this work about as much as a child's breath would go towards overthrowing the pyramids of Egypt."

Of the fire scene in the same drama he says: "Here are harmonies which would not be approved in any conservatory; on reading the score, they seem impossible; on hearing it, they sound strange but delicious." "Siegfried" he calls the most original part of the Tetralogy. "Not only is this no longer opera, it is no longer the theatre; the spectator is transported to an entirely new world, *which music alone makes possible.*" And, finally, the "Götterdämmerung," in which the auditor "loses all sense of time as by a magic effect," and forgets to count the hours. "It is impossible to give the faintest idea of such music: it resembles no other." "The music triples the intensity of the feelings with which the characters are animated—that is all one can say to those who have not heard it." "From the elevation of the last act of 'Götterdämmerung' the whole work appears, in its almost supernatural grandeur, like the chain of the Alps seen from the summit of Mont Blanc."

No doubt these enthusiastic utterances helped to bring about the recent change of opinion in Paris regarding Wagner's music—a change which has been so complete that Saint-Saëns himself has become alarmed, and warns his countrymen, somewhat chauvinistically, against an intellectual and artistic German invasion and conquest. But if the accounts he incidentally gives of the present state of affairs in musical France be correct, such an invasion could do no harm. Even from unmusical England France could learn much in one department—that of vocal music. He speaks in terms of the warmest admiration of the chorus singing at the Birmingham festivals. True, he adds, Lamoureaux has shown that a French chorus can be trained to attain equal excellence, but in France such performances are spasmodic and not regular institutions, for the reason that "one does not find in France a sufficient number of amateurs who love music sufficiently to attend for a long time a regular series of rehearsals." One reason he gives why choral music is not more in favor is, that the attempts have been too generally made with the music of Handel, which owes much to its religious associations and can therefore never be so popular as in "Biblical" England. In orchestral music Paris is better off, and Saint-Saëns dwells on its most curious characteristic—the division of labor. One society cultivates modern German music, another devotes some attention to French works, while the Conservatory concerts are exclusively devoted to the classical composers, rarely going beyond Beethoven. "How many (French) composers," he exclaims, "have wished to see their names in this little programme, the size of a hand, and have died without this supreme satisfaction." "'We have searched in Schumann,' one of the members of the Society told me one day, 'but we found nothing.'" Lately, however, Schumann has been admitted and warmly applauded by the conservative audience.

The rôle of France in musical history has been, according to Saint-Saëns, to develop dramatic music. Not only have her own composers always paid special attention to dramatic realism, but the foreigners who won fame in Paris—Gluck, Spontini, Rossini, Meyerbeer—had to modify their style to suit French taste, and to their advantage. Among France's minor achievements in music he mentions the magnificent edition of Gluck's operas, prepared (with his assistance) by Mlle. Pelletan, whose erudition was as great as her enthusiasm, as Saint-Saëns found when they began their joint labor of revising and conjecturing. He also pays a warm tribute to another French woman of musical endowment, Mme. Holmès, whose "Argonautes" he analyzes at length and finds much to praise in it, not its least merit being that she does not attempt to deny her sex, like most female artists, "who seem anxious above all things to make us forget that they are women, and to show an exuberant virility, without thinking that it is precisely this anxiety which betrays the woman."

LECKY'S ENGLAND IN THE EIGHTEENTH CENTURY.—II.

A History of England in the Eighteenth Century. By William Edward Hartpole Lecky. Vols. V. and VI. London: Longmans; New York: Appletons. 1887.

EVERY one who looks at Lecky's last volumes will turn to the chapters on Ireland. Every reader of these chapters will put the book down with a sense of disappointment. That this should be so is no discredit to our author. His readers are disappointed because they want something which he deliberately refuses to give them. They require clear and dogmatic opinions about the course of Irish politics. Lecky refuses to dogmatize, and provides facts from which every one must draw his own conclusions. He refuses to play the part of a rhetorician, and therefore achieves no rhetorical successes. He tries to perform in all seriousness the duties of an historian, and therefore earns the gratitude only of that small class who care much for knowledge of the past, and who care little for the direct bearing of such knowledge on the controversies of the day. Lecky, indeed, is not one of those authors who think it a duty to keep their own opinions concealed; and if you compare his earliest with his latest writings on Ireland, you will probably come to the conclusion that recent Irish history may to a certain, though to a very slight, extent have affected his views of Irish politics in the eighteenth century. That this should be so is inevitable. To interpret the past in the light of the present is as legitimate a process as to interpret the events of to day by analyzing the causes whence they spring. What is absolutely certain is, that whether Lecky's views be or be not colored by political feeling, his one aim is to state, not his own opinions, but the facts on which these opinions rest, and that intelligent students find in our author's pages the data from which each man must form for himself his inferences as to the course of policy pursued by England towards Ireland during the last two decades of the eighteenth century. Our aim in this notice is to avoid as far as possible all contentious matter, and to point out two or three conclusions suggested by Lecky's work in which fair-minded Englishmen and Americans may, whatever be their views as to the present crisis in Irish affairs, acquiesce. Nor can any higher praise be given to our author than the acknowledgment that his pages may be consulted by Home-Rulers and Unionists alike, and that both Home-Rulers and Unionists may learn from his calm statements many truths from which they may each profit.

Three conclusions, at least, are suggested by Lecky which to an impartial critic seem hardly open to question.

First. The conduct towards Ireland pursued by the English Government between 1782 and 1793 was, whatever its intention, disastrous. To put the matter shortly, Pitt and Dundas entertained, according to Lecky, liberal, and in the main broad, views of Irish policy. Pitt's commercial ideas were very considerably in advance of his time. He had in religious matters no touch of bigotry. He was anxious to insure the material prosperity of Ireland, and was in no way averse to the policy of Catholic emancipation. The opposition on the part of George III. to concessions towards the Catholics had not, at the period with which we are concerned, made itself apparent; possibly it did not even exist. The views, however, of Pitt on all measures connected with the Catholics were in direct opposition to the opinions of the Irish Administration. Fitzgibbon was vehemently opposed to concessions which either involved or tended towards emancipation. Pitt's policy was thwarted by the Irish leaders who were most loyal to the English connection. The Castle, neither for the first nor the last time, triumphed, or rather achieved a kind of half triumph which was possibly in the long run of worse omen for England and for Ireland than would have been a complete victory of the party of reaction. The net result of the attitude adopted by the English Government, by the Castle, and by the Irish Opposition, was that the Catholics obtained the Parliamentary suffrage, but the Irish Parliament was not reformed; the Catholics were not given the full rights of citizens, and the very imperfect political arrangement known as Grattan's Constitution was not completed or revised so as to place the relations between England and Ireland on a durable basis. If it were the function of an historian—which happily it is not—to distribute praise and blame among the actors in the drama of history, his verdict might be that all parties were pretty nearly equally to blame. A more just verdict, however, is that the men on whom fate imposed the necessity of solving most difficult problems, acted in a way which, considering the state of their knowledge and feelings, was too natural to be blameworthy; and that they one and all can plead the excuse that the position with which they had to deal was one of intolerable, and it may be insuperable, difficulty.

Second. Grattan's Constitution was a piece of incomplete machinery which, as every one can now see, was all but unworkable. Under it Ireland was independent, but was not self-governed:

"There was, properly speaking, no Ministry in Ireland responsible to the Irish Parliament. The position of Irish Ministers was essentially different from the position of their colleagues in England. Ministerial power was mainly in the hands of the Lord-Lieutenant and of his Chief Secretary, and this latter functionary led the House of Commons, introduced for the most part Government business, and filled in Ireland a position at least as important as that of the Prime Minister in England. But the Lord-Lieutenant and the Chief Secretary were not politicians who had risen to prominence and leadership in the Irish Parliament. They were Englishmen, strangers to Ireland, appointed and instructed by English Ministers, and changed with each succeeding administration. The Irish Government was thus completely subordinated to the play of party government in England. An Irish administration which commanded the full confidence of the Irish Parliament, might at any moment be overthrown by a vote of the English Parliament on some purely Irish question."

Nor does Lecky's language represent the full extent of the constitutional difficulty. A ministry might, under the conditions of the Irish representation, command the confidence of the Irish Parliament, and yet not represent the opinion of even Protestant Ireland. And a government which represented Protestant opinion might grossly misrepresent the feeling of Irish Catholics. Hence arose the immediate need both for Parliamentary reform and for Catholic emancipation. But on neither of these points were the popular leaders agreed. Flood and Charlemont wished to employ the Volunteers for the purpose of forcing reform upon the Protestants. Neither Flood nor Charlemont was willing to emancipate the Catholics. Grattan dreaded the attempt to carry out a revolution by moral pressure supported in the last resort by armed force. He hoped that Parliament would reform itself, and wished to confer on Catholics all the rights of citizens. No one can blame patriots for hesitat-

ing between two equally dangerous policies. But no one, on the other hand, can blame the English Government for not taking the lead in carrying out a possibly beneficial revolution. If Parliament had been reformed, and the Catholics had been emancipated, under the influence of the English Ministry, the Parliamentary independence of Ireland, which was the corner-stone of Grattan's Constitution, would have been set at naught as truly as it was by passing the Act of Union; and during the period with which Lecky's last volume deals, every Protestant in Ireland was morbidly sensitive as to anything which even in name threatened the independence acquired in 1782. A Protestant minority had in that year achieved the independence of their country. It was hardly to be expected that a body animated by the sense of recent triumph would willingly sacrifice their own political supremacy. Neither the Emancipation Act of 1829 nor the Reform Bill of 1832 was carried by anything short of threatened revolution; and the annals of Ireland, as narrated by an impartial historian such as Lecky, give small reason to suppose that reforms which, even in England, were carried by violence, could, towards the end of the last century, have been carried out by pacific means in Ireland. The suggestion, indeed, which Lecky appears inclined to make, that Pitt, by acting cordially with Grattan, might have given Ireland a constitution better than that which passes by the name of Grattan, and far preferable to union with England unaccompanied by Catholic emancipation, may in one sense be sound. But it is of little worth. It assumes that Pitt was able to act in a way inconsistent with his own character and with his own position. Behind Pitt, be it remembered, stood George III.; behind George III. stood the people of Great Britain; and those who think that the personal bigotry of the King was the only hindrance to Catholic emancipation, forget the lesson of the Gordon riots. Turn the matter which way he will, the impartial observer is still compelled to come back to the conclusion that at the most critical period in Irish history no leader, either in England or Ireland, rose to the height of the occasion, and that the occasion, great as may seem its opportunities, possibly presented nothing to statesmanship but a problem to which there existed no satisfactory solution.

Third. Lecky brings out with a clearness which is very characteristic of his skill in treating of all matters connected with the growth of opinion, that towards the end of the last century thinkers no less than politicians, both in England and in Ireland, suffered from two sources of error from which their modern critics are free. They, many of them, believed that Roman Catholicism was a dying creed, and that enlightened men of all religious persuasions were gradually adopting one and the same theological tone; they looked for the reign of rational piety. They knew nothing, again, of revolutionary fanaticism; in other words, they had forgotten the lessons of the Reformation, they had not read the lessons of the French Revolution. In these matters we are all of us wiser than our grandfathers. We know that religious enthusiasm or bigotry is a force which is certainly not yet spent; we know that political fanaticism may rival theological bigotry both in its violence and in its cruelty. The ignorance of the generation who witnessed the attempt to combine the independence of Ireland with friendly relations towards Great Britain, led statesmen of high ambition and of great capacity to delay reform till the outbreak of the French Revolution made all reform an impossibility. It is characteristic of the calamitous course of Irish history that the religious movement which brought freedom and toleration to England, brought nothing but oppression and intolerance to Ireland, while the revolutionary storm which, with all its terrors, cleared the atmosphere of continental Europe, destroyed all hopes of basing Irish independence on the equality and the freedom of Irishmen.

RECENT NOVELS.

The Cœruleans. By H. S. Cunningham. Macmillan & Co.

A Lad's Love. By Arlo Bates. Boston: Roberts Brothers.

Daniele Cortis. By A. Fogazzaro. Translated from the Italian by Mrs. I. R. Tilton. Henry Holt & Co.

The Lilies of Florence. By George Sand. Translated from the French by Lew Vanderpoole. John W. Lovell Company.

Sebastopol. By Count Leo Tolstoi. Translated from the French by Frank D. Millet. Harper & Brothers.

Ivan Ilyitch, and Other Stories. By Count Lyof N. Tolstoi. Translated from the Russian by Nathan Haskell Dole. Thomas Y. Crowell & Co.

A THOROUGH acquaintance with official life in India, and with the existing problems of British rule in that country, added to a lively apprehension of an inevitable catastrophe in the near future to be brought about by the careless deeds of ignorant and presumptuous rulers, has inspired the author of 'The Cœruleans' with the theme for a clever picture of life in the East. Indian residents will probably not have much difficulty in putting real names to the vigorously sketched portraits of the inhabitants of Cœrulea, since every one of them is something more than a mere character for a novel. They are distinctly types. In spite of a trenchant style and plenty of humor, which is kept well in hand, the author does not seem wholly at ease, and in the beginning plans for a much larger work than is eventually presented. The gain in compactness is rather more than balanced by the sense of disappointment produced in the reader's mind at the manner in which all the characters finally elude his grasp after the preparation of remarkably solid foundations. Nevertheless, the book is extremely good, and it contains the promise of large possibilities for the writer in the future.

Of a much lighter calibre is Mr. Arlo Bates's 'A Lad's Love,' yet thoroughly suited to the requirements of a "summer book," to be perused by that product of American civilization known as the "summer girl." The author's well-known delicacy of touch could not be applied to a more appropriate subject than these seaside products, flirtation and love; and his picture (with the unimportant exception of the scenery, which is very felicitously handled) might apply to any resort on the Atlantic coast as well as to Campobello. The book should be scrupulously kept out of the hands of foreigners, since they might misunderstand the friendly relations existing between seventeen-year-old Phoebe and her beautiful and coquettish mother of five-and-thirty, who is more of a child than the daughter in the matter of feminine wiles, and hold it up to the universe as another frightful example of the ways of "young America."

A foreign political novel is, as a rule, rather hard reading to the average public in this country, unless, as in the stories of Lord Beaconsfield and of Anthony Trollope, the politics belong to a land of whose methods and problems a general, albeit superficial, knowledge is floating in the air, and also when the narrative is practically complete in itself, apart from the politics. The first of these conditions is not fulfilled by Fogazzaro's novel, 'Daniele Cortis,' which Mrs. Tilton has admirably translated from the Italian. The problem which here presented itself was whether the whole of the political part should be retained and the interest of the general reader, unacquainted with popular issues in Italy, should be diverted and wearied, or whether the politics should, to some extent, be sacrificed to the story. The translator has wisely chosen the latter course, and has very judiciously abridged what may be called the technical discussions. This renders the hero rather a shadowy figure, when regarded in the light of an ambitious statesman and a man of action, and it also produces a certain abruptness in the transitions of time and place, which would otherwise be rounded off by the record of his electioneering tactics. With that exception—an exception for which the reader will feel almost grateful after a perusal of what remains of the technical portion—the story is in every way excellent. It gives us a chapter in the life of a young Italian baroness, who is an ideally sweet but not weak character, and who has married in haste at an early age, to escape from the unpleasant general tone of her mother's house, which offends her taste and her moral sense. She finds, too late, that she has wedded a man in every way objectionable, and that her love is really given to her cousin, Daniele Cortis. Daniele, a clever and ambitious man of fine temper and principle, who is harassed with a discreditable mother, as well as with his hopeless passion for the Baroness, is capitally portrayed, though, in common with all the other characters in the book, he is left rather in the state of a sketch for a composition on a far larger scale. The story is well worked up to a dramatic crisis, which leaves the noble cousins, parted for ever, apparently by their own action, in as wretched a condition of mind as the most hard-hearted reader could desire.

The sixteen short stories which are published in translation from the MSS. left by the late George Sand, under the title of 'The Lilies of Florence,' hardly meet the expectations of the admirers of that great writer. Published anonymously, they would not evoke more than a passing comment in commendation of their smooth execution, and they would disappear from sight amid the host of excellent stories which are daily produced, skimmed, and tossed aside. The first tale, in particular, is fashioned on so antiquated a model that it positively startles the reader into a sudden consciousness of the change in literary fashions since the days when a lay figure of the romantic form was kept in every writer's skeleton-cupboard, and dressed up afresh for each requirement. The anatomy of this sort of skeleton becomes more visible through any drapery that may be contrived for it with every succeeding year. This pretty story may afford a temporary interest to people who are fond of seeing the minds of great writers in every phase, when experimenting as well as when at their best. It does not necessarily constitute a condemnation of these stories to say that the author's fame will not be increased by them. They would appear to better advantage singly, in periodical literature, where the translator—who seems to have done his work thoroughly well—states that there is a great demand for them.

Count Tolstoi's numerous admirers, who have already had a taste of his power in depicting all that is connected with war, will welcome the excellent translation from the French of his celebrated sketches of the siege of Sebastopol. His method in these earlier studies of the horrors of war is the same as in his battle scenes in 'War and Peace,' though less intricate and less developed in detail than in the later work. The various incidents of the siege which he selects in order to present it in its different aspects, though somewhat fragmentary in themselves, form a graphic whole which can never be forgotten by

any one who has once read it, and it must be read to be appreciated, since quotations are obviously impossible, and no outline of the plotless sheaf of impressions, apparently jotted down almost at random, can be given.

Even more interesting than this work of the great Russian writer's youth, from many points of view, is his latest contribution to popular and polite literature combined, which is presented to us in the translation from the Russian of the greater portion of the twelfth volume of his works, under the title of 'Ivan Ilyitch, and Other Stories.' The first story is, more accurately speaking, a psychological study of the illness and death of a typical Russian official, neither better nor worse than his fellows. This is the keynote to the whole study. Ivan Ilyitch was an average man, and was, if not precisely "conscious of his own rectitude" in the conceited sense of that phrase, yet conscious at least, like the publican, that he was not as bad as many others. To this admirably chosen starting-point, Count Tolstoi conducts us by a rapid yet vivid outline of Ivan Ilyitch's official career and his rather disappointing experience of married life. Just as success is beginning to crown his efforts to rise in the service, he injures himself by a fall while arranging his new abode in a manner to satisfy his querulous wife and his own aspirations for elegance. His injury develops slowly into a mysterious but incurable disease, and the analysis of his state of mind as he gradually loses hope, includes some of the subtlest work which the author has ever produced. Thenceforth, the undercurrent of "the average man" comes to the surface and permeates every thought of the sufferer. "I have done no special evil in my life: why should this happen to *me*?"—Ivan Ilyitch asks himself incessantly; and most readers will recognize the mood which the author has chosen to follow to its very end. This is, probably, the first time that a death-bed has been dissected from this particular point of view. Tortured by mental and bodily suffering, by the real or apparent neglect of his family, who are engaged in amusing themselves, and finding his only comfort in the presence of the healthy and cheerful young peasant who waits upon him, Ivan Ilyitch approaches the hour of death. Very nearly at the last moment he suddenly sees that his whole life has been conducted on a false basis, and, having acknowledged this, he dies, not cheerfully, not with resignation, but yet not in torment.

It is at this point that Count Tolstoi may be said to have shrunk from the responsibility which he has undertaken, in enunciating the theory that such a wholesale confession of mistake is all that is required to relieve pangs of the nature which he had previously depicted in such a forcible manner. It is possible that we are credited by the writer with a knowledge of his radical views on the question as to what is the proper mode of life, and that he means us to read between the lines at this point, and to supply the explanation for his abrupt conclusion by interpolating his theories of manual labor as opposed to all official and other service. But although this would furnish a more satisfactory ending, the difficulty about such a solution lies in the fact that the dying man is not allowed the time to develop a new theory of life to take the place of the rule by which he has lived wrongly. Though the morbid tone of this sketch will probably repel many readers, the fine touches of observation and the artistic workmanship throughout—with possibly the exception above noted—will atone for this in the opinion of readers at large.

With regard to the tales for the people which constitute the remainder of the volume, a wide range of opinion will probably prevail. While doing full justice to the ingenuity with which each separate tale is constructed to teach its own moral, and to the author's devotion to the task of instructing the peasants, it must be admitted that these stories would probably have escaped general notice had not the Count's reputation in a wholly different field of literature bestowed on them what must, in truth, be designated as a factitious value. Whether they fulfil the author's expectations may also properly be doubted, since a Russian publication has just stated that, while enthusiastic admirers declare that the penny edition of a certain one of them should sell by tens of thousands, the fact remains that great piles of it lay unsold in the shops. This refers, too, to the most popular and the most graceful of all, which is not included in this volume of translations, but which can be had separately, 'What People Live By.' Moreover, taken thus as a whole, they contradict each other in their morals to some extent—a fact which the cultivated reader may be permitted to observe, if it is not allowed to the peasants for whom they were written. The reader of the higher class may, perhaps, also be permitted to suggest that the higher classes need lessons as well as the lower, and that while the good effects of such a work as 'Anna Karénina' are probably a hundred-fold those of these tales, it is a pity that a man who can write a novel of that calibre should, in some measure at least, waste his gifts in experiments with the rough language of the people.

The translator has improved in this volume over his former work in that line, though he is still guilty of inaccuracies; such, for instance, as rendering the Eve of the Nativity of the Virgin (which falls on September 7-19) by "Christmas Eve." "The Three Mendicants," also, would be better as "hermits," in view of the fact that there are no so-called mendicant orders in Russia, and that the three men in question lived on a desert island where begging would have been a physical impossibility. Mr. Dole has not wholly mastered various idiomatic expressions, and the result is occasionally confusing. "Well—it will—let Vanka look out for me," for example, should read, ". . . enough of this" (*da budet*, etc.); and "You ought to be living and enjoying life, and 'climb the mountain,' should read, ". . . and rising in the world" (*v goru idti*). Mr. Dole still persists in rendering his translations hard to read by retaining as many Russian words as he possibly can—all of them unnecessary, it may be remarked, with the exception, perhaps, of "prokuror" and "vodka." There is no valid reason why *steward*, *boy*, *peasant*, *woman*, and so on, should be left in Russian to worry the reader, since the latter is, presumably, reading for pleasure, and not learning the language. If he could hear the inexpressibly ludicrous effect produced by a person not acquainted with Russian persistently pronouncing "babas" (women) *babies*, he would perhaps be converted from the error of his ways. In this connection, it may be remarked that, in adopting this system of retaining the Russian word, he falls into a fault which makes a Russian stare with amazement. He has to choose between giving the Russian plural, which would still further confuse the lay mind, and putting an English plural to a Russian singular. He selects the latter horn of the dilemma. Now and then he renders the rough original rougher by omitting the subject of the verb unnecessarily. On the whole, however, a very good idea of the style of the original can be gained. A comical feature of these stories lies in the way in which the author has revised them for a place in his works. For instance, in the tale called, 'Does a Man Need Much Land?' Count Tolstoi seems to have discovered that, in his penny edition for the peasants, he had been teaching the unhallowed doctrine that money is a desirable thing. The land is so fertile on the spot on the Volga, says the peasant, that "one muzhik was perfectly poor—came with his hands alone—and now he has six horses and three cows." In the penny edition the man cleared five thousand rubles! As the work of a remarkable man, this volume is of the greatest interest, and the story of 'Ivan the Fool' is not only particularly so, but amusing as well.

Australian Defences and New Guinea. Compiled from the papers of the late Sir Peter Scratchley. By C. K. Cooke. With an introductory memoir. Macmillan & Co. 1887. Pp. xii, 413. Maps, portrait, 8vo.

Pioneering in New Guinea. By James Chalmers. With a map and illustrations. London: Religious Tract Society. 1887. Pp. xii, 343, 8vo.

Gen. Scratchley was sent to Australia for the first time in 1860 to superintend the erection of defences in Victoria, in which duty he was actively employed over three years. In 1876 he returned as adviser to the different Australian governments as to the best methods of defending the colonies from foreign attacks. During the seven years in which he filled this position, he examined carefully all the important harbors on the Australian and New Zealand coasts, and at the same time diligently strove to increase the efficiency of the local forces. From his various minutes, reports, and plans, Mr. Kinloch Cooke has been able to give in a clear and concise form Sir Peter Scratchley's views, both upon the general subject of defence and upon the particular methods to be adopted in each colony. In these there will be found much that is applicable, not to Australia alone, but to any country having an extended seaboard to defend. It is to be noted that though Gen. Scratchley shows in every case the best possible means of defence, provided sufficient men and money were always available, he is careful to advise the adoption only of such measures as the financial conditions of the different colonies will warrant. While he seems to have considered every possible contingency connected with the attack by a foreign fleet, he entirely overlooks the possibility that this may be delivered with far greater suddenness and unexpectedness than formerly, through the decrease of the space required for the motive power. He argues constantly on the supposition that a hostile fleet or a swift cruiser, even from a European or American port, would need to coal before making an effective descent on the Australian coast. Sir Peter's suggestions in reference to recruiting the police from the militia, thereby increasing the efficiency of both forces and securing a trained reserve capable of active service in time of war, deserve particular attention.

In 1884 he was appointed Commissioner for New Guinea, and reached Port Moresby at the end of August the next year. The fall was spent in cruising along the coast, organizing the Government, and making the acquaintance of the various chiefs. He worked too hard, however, and, having contracted a jungle fever during a short excursion into the interior, died at sea December 2, 1885. Even in this short time he made a deep impression upon the missionaries and natives as a man who was "a true and loyal friend, and one in whose hands native interests were safe." In addition to a diary which Sir Peter kept during this time, Mr. Cooke gives a general account of English New Guinea, its condition and prospects. The history of the negotiations between Germany and the Foreign Office in reference to the annexation of the northern coast by the former Power is related at some length, and the dilatoriness and indecision of the latter severely condemned. While England took pos-

session of that part of the island adjacent to Australia simply to prevent any other Power from doing so, it is not impossible that it will in time prove a valuable colony. The soil is very fertile, and apparently especially adapted to the cultivation of spices. The natives, though in many respects savages of the lowest grade, are easily taught, and also show remarkable capacity for "mercantile ventures." From a single district, whose principal industry is the manufacture of pots, there goes annually a fleet of canoes manned by about 600 men, who "convey westwards, for about 200 miles, the large number of 30,000 pots, and bring back about 150 tons of sago." These pots are "entirely made by women. No machinery or rudimentary potter's wheel has come into use, but the women judge the size of the pots so accurately, and fashion them so deftly, that, though rude, they are admirably shaped." When finished, the trademark of the family is cut with a sharp shell, and during the process of firing they are colored with tannin, extracted from mangrove bark. Several excellent maps add to the value of this volume, but we regret the lack of an index.

Eastern New Guinea does not appear to be a very attractive place for travellers. A pestilential mangrove swamp lines the greater part of the coast, in which mosquitoes are so numerous that, to use a native's words, "their song in the night is loud as Rouna [a large waterfall]." The interior, so far as it has been explored, consists of a succession of steep mountain ranges, with many lofty peaks, culminating in Mt. Owen Stanley, 13,205 feet high, and clothed with an almost impenetrable jungle, in which the too adventurous explorer runs great risk of perishing from hunger. The natives are comparatively few in number. They suffer greatly from their continual tribal wars, as well as from infectious diseases, drought, and famine. Mission work among them has been very successful, not so much in the number of converts made as in the general elevation of the people, and the cultivation of peaceful relations between the different tribes. This success implies a sensible way of prosecuting the work. Native Polynesian Christians, after pursuing a course of instruction, are posted in the different villages as teachers, the work of the two or three English missionaries being chiefly that of supervision. In this manner a large part of the tribes inhabiting the southern coast of the British Protectorate has been reached by what has proved to be in reality a "Gospel of Peace."

It was while placing new teachers or preparing the way for their reception that the Rev. James Chalmers made the most of the journeys described in his book. He thus gained not only an intimate knowledge of the coast and the country adjacent, but also an extraordinary influence over the natives far and wide, so that, says a companion of the late Sir Peter Scratchley, "Strangers are asked if they know 'Tamate,' and, if so, are treated with kindness." He owes this influence partly to his powerful frame—the natives have a great admiration for large men, a fact not overlooked in the selection of teachers—but chiefly to his perfect fearlessness, his entire trust in them, and a winning kindliness of manner which the simple natives cannot resist, joined to a determination and independence of character which commands their respect. Though he writes without any literary grace of style, and his sketches are somewhat fragmentary and disconnected, thus making his book rather hard reading, yet one cannot go far in it without having a sincere respect for the author, and a hearty interest in the people among whom he has labored since 1878. His most entertaining chapter is that giving an account of one of the native "trading voyages," for the purpose of disposing of the pottery made by the women in the manner described above. While the women are at work, the men are equally busy in building the "lakatois" in which the pottery is to be transported to the western tribes. "Our lakatoi," says Mr. Chalmers, who was the first white man to accompany the natives on these voyages, "consisted of four large canoes lashed together, with good bulwarks made of leaves strongly bound together with mangrove saplings. We had two masts of mangrove, stepped on top of the canoes with stays and backstays of rattan cane. Our sails were made of mats, and shaped like the large crab-claw. Fore and aft were good-sized houses, made of wood, and packed full of pottery. Running right round was a platform two and a half feet wide. The canoes were full of pottery, and in the centre, between the masts, was a large crate also full." The crew consisted of thirty-four men and boys. After a six-days' rather perilous sail, the fleet of lakatois reached their place of destination, a noted cannibal tribe, living about two hundred miles west of Port Moresby. The method of selling the pottery (which is used chiefly in cooking, the natives knowing nothing of an oven) is as follows. Each man's stock, consisting in one case of seventy pieces, "is arranged on the beach, and into each two small pieces of wood are put, and, when finished, the owner returns along the row, takes one piece out, and the purchaser follows, taking the other. Both parties tie the tokens carefully up and put them away in a safe place; then the purchaser's family and friends come and carry away the pottery. When the time arrives for the lakatoi to return, the purchaser and all his friends set to work and get the sago required, one bundle of sago for each piece of wood. When the sago is finished, he sends for the Motuan, who enters the sago-house with his small parcel, counts the tokens and then counts the sago, and if all is right, he then carries them on board; if one or more bundles is short, there is a lively disturbance." Other chapters contain accounts of the manner in which the British Protectorate was proclaimed, Mr. Chalmers accompanying the naval officers in order to explain to the natives the meaning of the ceremonies connected with the raising of the flag. There is also a valuable series of answers by representatives of two of the principal tribes to questions concerning their habits, customs, and beliefs. The book is attractive in its appearance, having well-executed illustrations, an excellent map, and a good index.

Imaginary Portraits. By Walter Pater. Macmillan & Co. 1887.

THE four studies that make up this volume portray rather the times in which the scene of them is laid than the individuals who figure in them. In fact, they present certain historical phases of culture, moods of the human spirit. That subtle appreciation and the infinite number of small touches in the rendering of what he sees, which lie at the heart of Mr. Pater's literary individuality and give to his style its extraordinary distinction, lift the book out of the range of the common, and set it apart as unique with his other work, to the refined thoughtfulness of which we have heretofore endeavored to do some justice. But it does not in all respects reach the level of that stronger and richer, though not more elaborated, work; and the four studies, as between themselves, have very different degrees of success. One of them deals with the French taste of the early eighteenth century and the personal relation of Antony Watteau to it; a second sets forth the Bacchic and grotesque and physically morbid aspects of mediævalism at the first gleam of the Renaissance in a kind of moral fable of one Denys L'Auxerrois—a literary attempt at a new Donatello, and not so far below Hawthorne's as to fall into the incredible or the absurd; the third brings together in the person and circumstances of Sebastian Van Storck the curious contrast developed in the Low Countries of Spinozism with Dutch burgomasters' wives, the genre painters, and the practical struggle inch by inch for the ground to stand on; the fourth pictures in Duke Carl of Rosenmold a predecessor of Goethe in the passion for an illumination of Germany, much—to compare great things with small—as Browning found in Sordello a predecessor of Dante. These four points in the history of culture are all interesting, with fine backgrounds of color and of thought, and such as one would call "subjects made to his hand," were it not that Pater in a sense always creates his subject.

The first of these is so much the most highly finished and clearly made out as to leave the others far behind. It is in the main a criticism on Antony Watteau, told by means of extracts from the journal of a woman who knew and loved him from the opening of his genius, and in whose family he received his encouragement; but it is directly a criticism of Watteau's temperament rather than his works, and indirectly a view of the whole real meaning of that age as seen through art. It is all very simple, however. Only two lights are thrown on the painter—one, which shows him ironically indifferent to the luminous gayety in depicting which he was so easily master; the other, which reveals the impatient jealousy of genius in the presence of that talent which by industry comes so nigh to the same perfection. There is praise enough of his works—excellent, discriminating, definite praise. The sum of his doings Pater gives apparently in this extract:

"Himself really of the old time—that serious old time which is passing away, the impress of which he carries on his physiognomy—he dignifies by what in him is neither more nor less than a profound melancholy, the essential insignificance of what he *wills* to touch in all that; transforming its mere pettiness into grace. It looks certainly very graceful, fresh, animated, 'piquant,' as they love to say—yes! and withal, I repeat, perfectly pure, and may well congratulate itself on the loan of a fallacious grace not its own. For, in truth, Antony Watteau is still the mason's boy, and deals with that world under a fascination. . . . He will never overcome his early training; and these light things will possess for him always a kind of worth, as characterizing that impossible or forbidden world which the mason's boy saw through the closed gateways of the enchanted garden. Those trifling and petty graces, the *insignia* to him of that nobler world of aspiration and idea, even now that he is aware, as I conceive, of their true littleness, bring back to him, by the power of association, all the old magical exhilaration of his dream—his dream of a better world than the real one. There is the formula, as I apprehend, of his success—of his extraordinary hold on things so alien from himself. . . . Yes, the world profits by such reflection of its poor coarse self in one who renders all its caprices from the height of a Corneille."

Perhaps it is too much to ask that criticism so subtle as this should be accepted; it is almost too perfectly plausible. But it is enough if it be understood. One cannot condense Pater's work, however, or give any impression of its structural completeness, of its endless charm of detail, by bringing the traditional brick in the shape of a paragraph. Of the minor touches, nevertheless, let us spare space to mention the beautiful old age of Monseigneur le Prince de Cambrai, seen by a sidelight of the narrative, the almost dramatic vividness of the chance introduction of the story of 'Manon Lescaut,' then a new book, the imaginative pathos of the incident of the bird lost among the cathedral arches where it will beat its life out helplessly, and the glimpse of the Revolution to come which he affords us when, looking on some of Watteau's designs, the writer says:

"Only as I gaze upon those windless afternoons I find myself always saying to myself involuntarily, 'The evening will be a wet one.' The storm is always brooding through the massy splendor of the trees, above those sun-dried glades or lawns where delicate children may be trusted thinly clad; and the secular trees themselves will hardly outlast another generation."

None of the remaining three studies approach measurably near this of Watteau either in power or subtlety or purity. The new Donatello, as we named him above, or Denys L'Auxerrois, as Pater calls him, is a child of nature whose being gradually passes under the cloud of humanity, whose achievement is the building of the first organ, and whose death is a kind of martyrdom, a being torn limb from limb by the populace, who have perceived and come to fear and hate the daimonic power in his genius. The legend is perhaps too obviously managed, and too much is crowded into it for a single impersonation. The opening landscape is possibly the best of it.

So, in the next study (the contrast of the Low Dutch life with Spinozism in Sebastian Van Storck, who "abnegates" the fat and homely comforts, and endeavors to put himself in the way of absorption into the absolute), the landscape is the one thing successfully treated — "the standing force of pathos" existing in the very conditions of life there where man is "like a navigator when the sea was risen, like a shipwrecked mariner when it was retired." And that this was true so long ago as Pliny's time seems to cast a deeper misery upon the land. In the personal part of the story and in the thought history of it, the author is out of his own field. The heavy grossness of the circumstances and the incongruousness of the intellectual parts with the scene are too difficult matters for his hand—in the mass at least, for there are felicities in the detail.

In the last study, likewise, one finds lack of that substance in the midst of picturesqueness to which Pater has accustomed us, and the picturesqueness itself is of a somewhat rubbishy kind. The time was rubbishy, possibly the author would say in comment on the criticism; and it is of interest to observe that he sets up a defence for those poor people who go into raptures and enthusiasms over third-rate things: "The higher informing capacity, if it exist within, will mould an unpromising matter to itself; will realize itself by selection and the preference of the better in what is bad or indifferent, asserting its prerogative under the most unlikely conditions." Carl, he says, made "a really heroic effort of mind at a disadvantage," and put into his enthusiasm for Louis XIV. and the æsthetic achievements of that age what young France had felt for Francis I. and Da Vinci. This is of great comfort to the æsthetic class that has no access to the best and greatest, yet must feel strongly. To us, unfortunately, the essay in which it occurs seems to belong to the grade of Louis XIV. rather than of Francis I., and too clearly within hailing distance of Pater's feminine disciple, Vernon Lee. When a man's best is as good as Pater's, *noblesse oblige*—he must keep to it.

Margaret of Angoulême, Queen of Navarre. By A. Mary F. Robinson. [Famous Women.] Boston: Roberts Brothers. 1887. 12mo, pp. 316.

MARGARET of Angoulême well deserves a place in the list of "famous women," and she is fortunate in having as her biographer so accomplished a scholar and so agreeable a writer as Miss Robinson. This fascinating book gives a picture of a phase of the Reformation period which is little known, but is full of instruction. Margaret, sister of Francis I. and grandmother of Henry IV., was a potent influence in her day; from her Henry IV. inherited his Protestantism, and to her is largely due the preservation of whatever germs of the reformed religion survived in France. "Without her," says Miss Robinson (p. 315), "the noblest part of the Renaissance in France must have perished at the Inquisition stakes. She made learning possible, and secured for a time a relative freedom of thought. She taught respect for life in an age which only respected opinions."

Perhaps it could hardly be expected that a book of this character should pay much attention to historical geography and dynastic relations. But we have a right to expect careful and accurate statements, which, at any rate, shall not convey false impressions. Navarre, of which Margaret was Queen, was only an insignificant fragment of the mediæval kingdom of that name, and only an insignificant fragment of the dominions of the house of Albret. When, then, we are told (p. 120) of the marriage of Margaret to the young King of Navarre, and the kingdom to which he took his bride, and then read of "the capital of Nérac" and afterwards of "Pau, the southern capital," surely we may suppose that these were the capitals of this kingdom. No such thing: they were the capitals of his principal feudal dominions—Nérac of Albret, Pau of Béarn—provinces which had been annexed to Navarre by the marriage of their lord to its heiress, just as afterwards this bundle of territories was annexed to Bourbon by the marriage of Jeanne d'Albret to Antony of Bourbon. This is not a mere matter of names. The forces with which Henry of Navarre contended against the League were not those of his petty kingdom, but of the extensive French provinces, integral parts of France, of which he was the feudal lord.

The Autobiography of Edward, Lord Herbert of Cherbury. With Introduction, Notes, Appendices, and a continuation of the life. By Sidney L. Lee, B.A., Balliol College, Oxford. Scribner & Welford. 8vo, pp. lxiv and 369.

THE Life of Lord Herbert of Cherbury—"the first of our autobiographers," as he has been called—is so famous and important a work as to be well worthy of the elegant form in which it appears in this edition. In paper and typography it leaves nothing to be desired; the notes are useful and scholarly; while the introduction, continuation, and appendices give all the additional information which the reader is likely to need. Of direct historical information this book contains very little, being chiefly devoted to the personal and family affairs of the writer. We do not even find anything touching his perhaps more famous brother, George Herbert, except in the general account of the family. But as a picture of life in the court of James I., and the contemporary court of Louis XIII., the book possesses the highest value, being straightforward and candid, full of curious detail, and written in a graphic, entertaining style. In brief touches we have placed before us Maurice, Prince of Orange, the Duke of Luynes, the Duke of Buckingham, the Marquis Spinola, etc., but these distinguished men are not described or characterized with any minuteness. *Historical* interest—that is, as touching famous personages and events—the book, as we have said, possesses comparatively little. But Lord Herbert of Cherbury—himself a distinguished man, the first of the English deists—is made a very real personage to us, and in his life we have the life of a nobleman of his time. Not of an average nobleman, for he was as much above the average in uprightness and general purity of character as in ability; but his life was that of his time. We should be afraid to say how many duels are recorded of him in these pages, and certainly many of them were upon very slender occasions.

The etched portraits are, two of the author (one when reposing after a duel), one of Queen Anne of Denmark, and one of the Count of Gondomar. Of this sumptuous edition only one thousand copies were printed—four hundred of them for the American market.

BOOKS OF THE WEEK.

Barbey d'Aurevilly, J. Les Philosophes et les Écrivains religieux. Paris: Frinzine; Boston: Schoenhof.
Goldsmith, Oliver. Selections from his Works. Boston: Chautauqua Press. 75 cents.

NEW YORK, THURSDAY, AUGUST 4, 1887.

The Week.

WHAT disposition shall be made of the surplus before the meeting of Congress, is a question that is asked in tones of anxiety by business men from day to day. The depression in Wall Street is largely due to apprehensions of tightness consequent upon the withdrawal of money which cannot be restored to the market in the usual way. Very much of this apprehension is unfounded, since any considerable stringency would put up the rate of interest and bring gold hither from Europe. Nevertheless, an ungrounded fear is often as deleterious as a real danger. The Secretary of the Treasury has three modes of disposing of the surplus in the interim between now and the meeting and action of Congress. He can deposit his money in such national banks as can give the security required by law. He can anticipate the next interest payment on the registered bonds. He can buy bonds in the open market. Between these three methods he can certainly carry the Treasury along for four or five months without cramping the money market, and we feel authorized to say that he will. But he cannot announce publicly what his methods will be without embarrassing himself, for if he should say that he intended to buy bonds in the open market he would put up the price on himself. That he will have to buy bonds more or less is the belief of experienced financiers, who know how small a sum the national banks can furnish bond security for to cover Treasury deposits. The alternative of paying interest in advance also has its limits. While the Secretary cannot advertise his methods beforehand, he can indicate his intention to keep his balance down to the usual amount, and this, we think, he might very properly do.

Senator Dawes made a speech before the American Paper Manufacturers' Association at Saratoga on Wednesday. It was all about the tariff, of course. The way to reduce the revenue, according to Mr. Dawes, is to repeal the taxes on tobacco and bank-note circulation and increase those on tin plates and on worsted goods. As these changes will not reduce the revenue sufficiently, Mr. Dawes would reduce the sugar duties one-half (except where the sugar is produced by slave labor), and compensate the Louisiana planters "with an equivalent bounty, pound for pound, on all the sugar raised on our own soil, *and let the foreign sugar pay the bounty.*" That is a happy thought. The American taxpayers can have no reasonable objection to a bounty paid by a foreigner. Let foreign sugar be heavily fined, and, if it refuses to pay the fine, let it be seized by the customs officers and imprisoned at hard labor. Having found ample means for paying bounties to the Louisiana planters without oppressing the American consumer, the Senator turned his attention to a book which he had lately received from England "bearing the imprimatur of the Cobden Club," from which he read the following extract:

"Let American farmers give their support to no candidate for a seat in the House of Representatives who does not pledge himself, if elected, to propose, or at least to vote for, a reduction of 5 per cent. every successive year on the import duties until the whole are abolished."

It is to be regretted that the Senator did not give the full title of this heinous work and the name of the author, or the date of its publication, or something by which the members of the Club in this country might identify it. We respectfully request that the Senator will supply this information, for although we consider the advice to the American farmer unexceptionable, having often given it in substantially the same terms ourselves, we have never seen it in any publication of the Cobden Club or in anything "bearing its imprimatur."

Senator Dawes's suggestion that his proposed bounty to our sugar-planters should be paid by foreign sugar ought to be extended to the two other classes whom he considers greatly injured by the tariff, viz., the tin-plate makers and the worsted manufacturers. Why not treat them in the same way as the sugar-planters —that is, instead of increasing the duty on tin plates and worsteds, vote them a bounty and let it be paid by foreign tin and foreign worsteds? In short, why not apply the principle generally, and let foreigners pay bounties to all the trades and all the people, according to their deserts? Foreign silk might be assigned to the silk-weavers, and foreign iron, salt, wool, lumber, chemicals, etc., to the producers of those articles, thus relieving the Treasury of the surplus effectually, and putting the foreigners under regular contribution to us. No doubt the foreigner would soon see through it and levy similar contributions on us, but we could avoid the tax by refusing to export any of our own products, and that, we all know, would be a good thing, because it would give us a home market for everything that we produce.

We are always refreshed by the sprightly essays of the Louisville *Courier-Journal* on grave themes of banking and finance. Accordingly, we have accepted as a piece of amiable pleasantry its denial of our statement that "the original law requiring a reserve of 25 per cent. against (national bank) circulation was long ago repealed, and no other fund to redeem circulation is required, except the 5 per cent. fund in the Treasury at Washington." Our authority for the statement was the volume issued by the authority of the Comptroller of the Currency, entitled 'The National Bank Act,' on page 55 of which we read:

"That section 31 of the National Bank Act be so amended that the several associations therein provided for shall not hereafter be required to keep on hand any amount of money whatever by reason of their respective circulations. . . . That every association organized, or to be organized, under the provisions of said act and of the several acts amendatory thereof, shall at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to 5 per centum of its circulation, to be held and used for the redemption of such circulation."

Our playful contemporary insists that there never was any law requiring a 25 per cent. redemption fund against the circulation of national banks, and that the present redemption fund is not 5 per cent. but 121 to 142 per cent. in Government bonds. Referring to page 26 of the book referred to, we find the repealed section, viz.:

"Every national-banking association in either of the following cities: Albany, Baltimore, Boston, Cincinnati, Chicago, Cleveland, Detroit, Louisville, Milwaukee, New Orleans, New York, Philadelphia, Pittsburgh, St. Louis, San Francisco, and Washington, shall at all times have on hand, in lawful money of the United States, an amount equal to at least 25 per centum of the aggregate amount of its notes in circulation, and its deposits; and every other association shall at all times have on hand in lawful money of the United States an amount equal to at least 15 per centum of the aggregate amount of its circulation and of its deposits."

Our fascinating friend evidently thinks that something important hinges on the fact that while the banks in the large cities were required to keep a redemption fund of 25 per cent., those in the smaller towns were required to keep only 15 per cent., although both requirements were long ago (to wit, June 20, 1874) repealed. The notion that the ultimate security for the bank-note and the redemption fund are the same thing is, of course, a mirthful conceit, as is also the statement of the *Courier-Journal* that "the English notes have no such security of course"; the fact being that all Bank of England notes not issued in exchange for bullion are issued on Government securities, exactly like our own.

The Blaine faction in Ohio have been pretty effectually extinguished for the time being by the Toledo Convention. As they had not the grace to join the Sherman forces and give to that "favorite son" the compliment of unanimous support in his own State, but insisted upon fighting to the last ditch, their defeat takes a somewhat impressive cast. Thus the main object of the Sherman resolution of endorsement, which was intended to have an effect in other States, is likely to be gained. It is now almost certain that Illinois and Indiana will follow Ohio. The voice of the latter State will be heard and listened to in the South. Although the Southern States are not expected to give many electoral votes, if any, to the Republican ticket, their votes in the national Convention count the same as any others, and the local politicians there are all the more susceptible to outside impressions since they have no public opinion at home to reckon with. Mr. Sherman has won a notable victory, and it will be well for Mr. Blaine to turn his steps homeward without delay if he would counteract the wave that the Toledo Convention has started.

Undoubtedly State pride contributed something to Mr. Sherman's triumph, but this alone could not have given him the decisive victory he gained. The Toledo Convention decisively put its foot on the blatherskites of the party. The nomination of Mr.

Blaine in 1884 was the great achievement of the "blowhards," the fellows who do the yelling, who answer every argument with a hurrah, who conceive that a campaign is to be won by torches, and bonfires, and cannonading, and Chinese lanterns. They were well represented by Judge West, the blind orator, as he is called, but more fitly designated as the blind leader of the blind, who at Chicago brought down the house by exclaiming: "We want a candidate who can win with or without the State of New York." This was equivalent to saying, "We want a candidate who can win whether he gets votes enough or not," but it was exactly the kind of nonsense to fill the Blaine crowd top full with enthusiasm, and to stretch their lungs to the widest limit.

Only the fact that he is now the Governor of a great State, and has been renominated for another term, while he aspires to still higher positions, could possibly command attention for such balderdash as the article in the *Forum* for August, in which Gov. Foraker attempts to "state some of the reasons why the Republican party should be restored to power in the administration of our national affairs." Not even his present position and his ambition for the future can induce one to give serious consideration to the bulk of what he writes. But, amid the mass of rubbish, there is one positive claim which merits attention. This is the demand that the Republican party shall be restored to power in order to secure a free ballot and a fair count in the South. Gov. Foraker attempts to meet the objection that the Republican party did not stop Southern "outrages" when it was in power, by the assertion that it has not been in power (in the sense of controlling the legislative branch of the Government as well as the Executive) since March 4, 1875; and that "the true situation was not comprehended long enough prior to that time to admit of either the country or the party becoming educated to the stern necessities of the case." Gov. Foraker's idea evidently is, that, if they were restored to power, the Republicans would be ready to pass in 1889 such measures as the "force bill," which a Republican Congress rejected early in 1875. The absurdity of his proposition is that he does not know that the Republican Supreme Court has declared unconstitutional the Kuklux Act, based upon the same principle as the "force bill," and that it is absolutely certain that it would promptly annul a "force bill" if Congress should ever be foolish enough to pass one.

Tuttle, the Grand Army patriot who threatened to insult the President if he went to St. Louis, because of the battle-flag order, continues to be exposed in a way that must be very painful to his Grand Army comrades. But he is nevertheless playing a very useful part in illustrating the condition of the organization. Any army, grand or otherwise, in which such scamps as he can get into places of prominence must be in a bad way and need reformation. The last bit of light let in on him is a transcript from the records of the Circuit Court in Madison, Iowa, showing that he pleaded the statute of limitations in a suit brought against him in 1876 by a firm named Rickey & Co., who carried on the hotel, restaurant, and liquor business in Natchez, Miss., in 1864, when Tuttle was in command there. He made them pay him $2,500 for permission to do so, which they sought to recover from him as blackmail in 1876. Tuttle did not deny the charge, but said the action was barred by the lapse of time. Does not this also deserve a shake or two of "palsy"?

The *Tribune* has found a new grievance touching the protection of American industry, which involves something very like fraud on our noble army of iron and steel-manufacturers. The Navy Department advertised for bids at the beginning of the present year for steel forgings and armor-plates, and the contract was awarded to the Bethlehem Iron Company of Pennsylvania, who had put in the lowest bid. Now it turns out that the Bethlehem Co. had a private agreement with a French firm, Schneider & Co., to transfer its own plant, or a portion of it, to this country, and to "bring its own force of brains, skill, and muscle to the Government job." This is held by the *Tribune* to be "an ambiguous method of encouraging American manufactures," and it calls for explanations from the Government and the Bethlehem Iron Works. The fact that the Government will get its work done 50 per cent. cheaper and 50 per cent. sooner than it otherwise would, is not disputed, but the fraud committed by the Bethlehem people is severely condemned. Probably the Bethlehem people would say, when brought to book, that they have always read in the protectionist bible that one of the great objects of the tariff is to bring new industries to the country and compel foreign capital to establish itself here. A large number of appropriate texts might be quoted to this purpose from the works of Horace Greeley and of Henry C. Carey. If these should not prove convincing, the Bethlehem people might ask the objectors, in the language of the late Mr. Tweed, "What are you going to do about it?"

Henry George appears to be rapidly "losing his grip." He was at Wheeling, W. Va., on Saturday, on the occasion of the annual labor demonstration, but his speech did not have sufficient attraction to draw the people from the dancing platform, lemonade booths, and bar to the grand stand; and while the crowd on the ground was estimated at from 12,000 to 15,000, the audience which listened to Mr. George did not reach 500 at any time. The common sense of the intelligent laboring man rates Mr. George's nostrum at its true value. As the *Intelligencer* says: "There are plenty of men in Wheeling who can tell Mr. George how they cured their poverty, made comfortable homes, and educated their children, and that by earning less in two months than he gets for a single speech abolishing poverty."

A long semi-official statement comes from Baltimore explaining the famous "Baltimore and Ohio deal" from the standpoint of the Baltimore dealer. It seems to have been called out by some unfavorable comments in the local press on Mr. Garrett's apparent intention to throw the railroad property, and accordingly the interests of Baltimore and Maryland, into a lottery from which anything might be drawn to the disadvantage of those who are most vitally concerned in the future management of the road. The explanation now offered is unsatisfactory upon this point. It amounts merely to a statement that, although Mr. Garrett intended to deliver to the Ives-Stayner syndicate a controlling interest in the railroad and telegraph, he intended to retain a large share in this controlling interest—how large a share, is not stated. Of course nobody will question Mr. Garrett's right to sell his property to the best bidder; but when he has sold it, or given an option on it, he ought to assume all indirect consequences of his action without flinching. The Baltimore and Ohio property in the hands of the Ives-Stayner syndicate might have been advantageous or otherwise to the city of Baltimore, but nothing in the explanation touches the criticism of the Baltimore *Sun* upon the intended "deal," that it afforded no guarantees to the commercial interests which the railroad was built to foster and protect. It is made sufficiently plain, however, that Mr. Garrett intends to hold on to the cash and the Cincinnati, Hamilton and Dayton preferred stock that Ives & Stayner put in his hands to bind the bargain.

Mr. Bourke Cockran and Mr. Parsons are much concerned about "clamor" in the case of Jacob Sharp. Their implicit definition of clamor is anything said by any person who has not Sharp's money in his pocket. Thus the public, which Sharp has wronged, and the newspapers as the mouthpiece of the public, concerned with the case only in the public interest as they are, must remain silent, or, if they say anything (about their own affair) it is "clamor." The theory of Mr. Cockran and Mr. Parsons seems to be borrowed from Roman Catholic theology: it is the principle of the *opus operatum* in full action. The touch of Sharp's ill-gotten money converts "clamor" into argument. The theological likeness is exactly completed by the fact that the change does not depend upon the mere amount of money. Application of the element in any quantity works the effect. Thus Mr. Cockran, who received, he says, "a much more moderate fee than he would ordinarily have expected," is as free from the vice of "clamor" as Mr. Parsons or the other counsel who may be paid liberally. The matter is one of curious interest for the sociologist.

The general dissatisfaction of all shades of Unionists with the situation in England has at last wrung from Lord Salisbury the admission that a dissolution of Parliament is possibly not far off. None of the explanations of the recent defeats at the "bye-elections" offered by the Conservative papers has been entirely satisfactory. They all try to avoid the conclusion that the voters have changed their minds about home rule; but there is nevertheless a widespread and uncomfortable suspicion that

this is the true meaning of the recent reverses, and it is naturally producing more or less demoralization in the ministerial ranks, and lessening their majorities in the House of Commons. There is, of course, only one cure for this, and that is an appeal to the country.

The systematic and persistent attacks of the press in Berlin on Russian securities has been followed by a sort of official attack in the city of Darmstadt, where all trustees of orphan estates have been summoned to make a statement to the courts of the amount and kind of Russians held by them. The crusade is believed to have deeper significance than mere retaliation for the anti-German commercial decrees lately put in force in Russia. It is argued that Germany can have no interest in depreciating the property of German citizens, and that it is no good retort to Russian decrees which have inflicted loss upon German manufacturers to inflict further losses upon German bondholders. The belief is now generally entertained that Russia is seeking to negotiate a war loan in Paris for purposes more or less opposed to German interests, and that the attacks upon her credit in Berlin are intended to frustrate this purpose. If this is Bismarck's aim, it has been so far successful that it has brought upon the Paris Bourse an avalanche of Russian securities from both Berlin and London, and has glutted the market in advance of the new loan. Any French investor who wants Russians can get them at lower rates than the new loan was intended to be offered at. This is a new method of capturing an enemy's ammunition before hostilities are declared, and is one not to be despised.

M. de Molinari proposes a league of neutrals, to be composed of the European countries which have most to lose by the wars of others, and which should associate themselves for the purpose of offering their combined armed assistance to any country wantonly threatened with war by another. The knowledge that such a united force was ready to aid any nation in such distress, M. de Molinari thinks would effectually prevent aggression. We doubt this effect even if the league could be made to work smoothly, as with one mind and will; but it never would so work. Who is to construe "wantonly"? Imagine England, Holland, Belgium, Denmark, and Switzerland, with native and acquired prejudices at work, and all under "pressure" more or less from without, endeavoring to agree whether France or Germany or Russia, etc., were "wantonly threatened" or threatening. Everything would depend on this, yet agreement would be practically impossible.

As is already known, the Panama Canal Company decided at its last meeting, held on July 21, to issue another loan of 500,000,000 francs at 440, or, deducting expenses, 432.39; so that what the company will receive in cash from the loan of 500,000,000 will be simply 216,195,000 francs, and the charges will amount to 21,500,000, or about 10 per cent. This is, in fact, for various reasons which we cannot enumerate here, an underestimate of the cost of the loan, whose issue affords M. Leroy-Beaulieu the text of a most interesting and instructive review, in the last number of the *Économiste Français*, of the promises and performances of the Company during the past six years, in which he marshals the facts with his usual cruel lucidity. In January, 1881, the Company was formed, and promised to make the Canal for 600,000,000 francs, or at an outside estimate 700,000,000, and it was to be open for traffic in from seven to eight years. Two months later, M. de Lesseps cut down the time by one year, and said the work would be finished in 1888. In July, 1883, the Executive Council announced that the period of organization had passed by, and of course the works were actively going on. In August, 1884, they declared that "nothing had occurred to shake their belief that the Canal would be finished in 1888," and they then proposed to tell in another part of the report how their promises on this point could be "mathematically fulfilled." The report of 1886 gave up 1888 as the date of the opening of the Canal and fixed it for 1889, again with mathematical exactitude, in this way: "With an average monthly excavation of 2,000,000 of cubic metres in 1887, of 3,000,000 in 1888, and the same for the first half of 1889, the Canal will be finished July 1 in that year." Suffice it to say that the excavations this year have fallen just 45 per cent. short of this estimate. And then excavation is only part of the work to be done, and perhaps the least troublesome.

Turning to the financial side of the enterprise, the picture, according to M. Leroy-Beaulieu, is still more gloomy. After the Company has got all the money it is now asking for, the sum total of the investment will be $233,162,774. The interest on this and other charges of every nature will amount to $18,594,044, and the Canal is still far from being finished. If the work lasts six years and a-half longer, it will take from 800,000,000 to 900,000,000 francs more, in mere interest and general expenses, which will make altogether a debt of about $400,000,000. But the work still to be done will probably cost not less than 1,000,000,000 francs, or $200,000,000, making in all $600,000,000. The average interest on this will be about 9 per cent., or $54,000,000. So that what with this, the ordinary expenses of administration and repairs, and the rent to the Colombian Government, the Canal will need to earn from $58,000,000 to $60,000,000 annually, to pay its fixed charges, before the shareholders get any dividend. "And this," M. Leroy-Beaulieu winds up by exclaiming, "is the frightful gulf into which the French people are casting their savings!"

The death of Michael Katkoff, editor of the *Moscow Gazette*, is a political event. Like Alexander Hertzen and Ivan Aksakoff, and more powerfully than they, he wielded a moral sway and public influence such as would seem hardly possible in a country ruled by the absolute will of an autocrat. Hertzen's activity was purely revolutionary and to a degree socialistic—anti-dynastic, and anti-national; his great engine was a clandestinely-circulated newspaper which his followers managed to slip into every cranny of the bureaucratic machine of government, in fact under the very eyes of Czar Nicholas himself; he was a journalistic conspirator. Aksakoff gained his hold upon his public by giving eloquent and philosophical utterance to the national prejudices and race fanaticisms of the Muscovite party. Katkoff, free from the dogmatism and enthusiasm of either, was, like both, possessed of an exceptional gift of persuasiveness, and was socially even better connected; full of combative vigor and ambition, by turns pliable and stubborn, and always vigilant in guarding his position, financial interests, and leadership. Educated at the universities of Moscow, Königsberg, and Berlin, he began his public activity as a professor of philosophy, but, chafing under Nicolaitic restriction, resigned his post at the Moscow University. The accession of Alexander II. opened for him a political career. As editor of the *Russki Viestnik*, he advocated broad reforms, and a constitutionalism modelled on the English pattern, but combated revolutionism and socialism with a vehemence and ability which rendered him a court favorite.

Katkoff's great opportunity was the Polish insurrection of 1863. Russia's pride had been keenly wounded by the Crimean war, but the emancipation of the serfs decreed by Alexander II., and the other liberal measures initiated by him, had inspired fresh hopes and opened wide vistas of freedom and greatness combined. These anticipations were nearly dashed by the insurrection, which, favored by France, Austria, and England, for a moment threatened to force Russia back beyond the Dnieper. In spite of this, Hertzen, true to his cosmopolitan radicalism, agitated in favor of the Poles. Katkoff, at the head of the *Moscow Gazette*, demolished that former idol of Liberal Russia. As the champion of the Russian idea and the Panslavic future, he goaded on the Government, roused the masses, and applauded the most heartless and sanguinary repression. When the storm was over, Katkoff was a journalistic dictator. He now turned toward the field of education, jointly with Leontieff, and began an agitation against the new liberal system of public instruction, in the interest of classicism, which ended in his triumph and more decided alienation from all modern ideas. He had completely slipped away from his former constitutionalism, and become a defender of autocracy, of Russification everywhere and *à tout prix*, of the sternest measures against Nihilism, of almost everything specifically Russian. His popularity declined, but his influence at court grew in proportion, especially under Alexander III., who, as a former pupil, bore him a personal affection. The *Moscow Gazette* thus enjoyed a freedom which was denied to any other journal, and which it used often in a manner worthy of a free press, and more often abused. Katkoff's last contests were, from chagrin at Russia's failure in Bulgaria, directed against M. de Giers, the Minister of Foreign Affairs, and against Prince Bismarck. He failed in both, and bitter disappointment has probably hastened his death.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 27, to TUESDAY, August 2, 1887, inclusive.]

DOMESTIC.

INVITATIONS to visit Western cities pour in on the President. He has had notice given that it will not be necessary for delegations to make the journey to Washington in the hot season to convey such invitations, as he will give those received by mail the same attention.

Five agents have just been appointed under the Dawes Bill to allot lands in severalty to the Indians. They are as follows: Henry R. West of Woodfield, O. (for the Yankton reservation, Dakota) was a Brigadier-General in the Union Army and has been connected with the Indian service. He is a practical surveyor. Michael C. Connelly of Illinois (for the Siletz reservation, Oregon) has had no connection with the Indian service, but is a practical surveyor, and is strongly recommended by prominent people in the State. Miss Alice C. Fletcher has had long and successful relations with the Indian Bureau. In 1883-4 she allotted the lands in severalty to all of the Omaha tribe, and the Indians and the Department were both well pleased with her services. She is now sent to the Winnebagoes, who have requested that she make the allotments to them. Isaiah Lightner (for the Sisseton reservation, Dakota) was for nine years the agent of the Santees, and is one of the best agents ever in the Indian service. He is an ex-Union soldier. James R. Howard (for the Crow reservation, Montana) has had much experience in Indian matters. He made allotments to the Crows last year, and his work satisfied the Indians and the Bureau. He is a practical surveyor.

The public-debt statement shows a reduction during July of $4,844,894.83. Total cash in the Treasury, $556,404,361.57.

The report of the Board of Naval Officers appointed to examine the *Atlanta*, and to ascertain the damage sustained during recent target practice, was received by the Secretary of the Navy on Monday. Secretary Whitney says the defects reported by the Board and the damage sustained by the ship are trifling as compared with those rumored to be discovered, and that they can be easily remedied.

Justice Bradley of the United States Supreme Court, sitting at Trenton, N. J., has dissolved the injunction in the case brought by the Attorney-General of New Jersey to prevent the Baltimore and Ohio Railroad Company from bridging the Arthur Kill to Staten Island, contrary to the will of the State authorities. He holds that the authority of Congress is paramount in such cases.

A petition was filed in the Federal Court at Salt Lake City on Saturday looking to the suppression of the Mormon Church. The United States is asked to disincorporate the Church and wind up its business. The petition alleges that the property is valued at $3,000,000, sets forth the law of Congress prohibiting any church from owning more than $50,000 worth of property, and the sections of the Edmunds-Tucker Law of 1887 providing for the disincorporation of the Church of Jesus Christ Latter-Day Saints, and asks the appointment of a receiver.

Joseph F. Smith, nephew of the original Joseph Smith, is "mentioned" as the probable successor of John Taylor in the Presidency of the Mormon Church.

The political event of the week was the State Convention of the Ohio Republicans at Toledo, and the contest therein over the question whether John Sherman should receive an endorsement as a Presidential candidate. The Blaine men fought against this, proposing several compromises, one of which was that Mr. Sherman should be satisfied with a generally laudatory resolution and the Presidency of the Convention. They were outvoted in the Committee on Resolutions, however, and the Convention "went wild" over the mention of Mr. Sherman's name. Gov. Foraker was renominated, and a long platform was adopted. The latter favors a protective tariff, and a higher duty on wool; views with alarm unrestricted immigration; says "the condition of the men who labor in the North cannot be maintained or improved so long as the men who labor in the South are wrongfully deprived of the rights and powers of American citizenship"; favors liberal pensions to the soldiers and sailors of the Union, adequate appropriations for the improvement of our national waterways, and national aid to education, and adds: "If too much revenue be collected to meet these and other public needs, we demand that the first step in the reduction thereof shall be the abolition of the internal tax upon American-grown tobacco." It favors the Civil Service Law and necessary additions thereto; condemns the President's vetoes of pension bills, and calls on Congress to pass liberal enactments pensioning the soldiers of the country, "that the helpless widows of dead soldiers, regardless of the cause of death, dependent parents, and disabled soldiers, shall receive the bounty of the nation they fought to save, and which they richly deserve."

The Sherman resolution was as follows: "Recognizing, as the Republicans of Ohio always have, the gifted and tried statesmen of the Republican party of other States, loyal and unfaltering in their devotion to the success of the organization in 1888 under whatever standard-bearer the Republican National Convention may select, they have just pride in the record and career of John Sherman as a member of the Republican party, and as a statesman of fidelity, large experience, and great ability. His career as a statesman began with the birth of the Republican party; he has grown and developed with the growth of that organization; his genius and patriotism are stamped upon the records of the party and the statutes and Constitution of the country; and believing that his nomination for the office of President would be wise and judicious, we respectfully present his name to the people of the United States as a candidate, and announce our hearty and cordial support of him for that office."

The Maryland Democratic Convention last week adopted resolutions endorsing the Administration of President Cleveland, urging the delegates in Congress to work for a reduction of taxation, opposing the introduction of foreign paupers and convicts, and favoring an election law embodying the features of the Tilden law and such other provisions as may be necessary to assure the purity of elections. One resolution says that while the party "upholds the President of the United States in his efforts to effect an honest and competent civil service, still it believes that the service should be composed of officers and employees who will not be antagonistic to the success of the Administration under which they serve, but are in sympathy with it; whose hearts are in their work, and who believe that upon the continued and just success of the Democratic party rest the safety and security of republican institutions and the liberties of the people." E. E. Jackson was nominated for Governor, William Pinkney Whyte for Attorney-General, and L. Victor Baughman, President of the Chesapeake and Ohio Canal, for Comptroller.

The Educational Committee of the Georgia House and Senate in joint session have reported in favor of the Glenn bill, which makes it a penalty for any teacher to teach a white child in a colored school, or a colored child in a white school, the schools being kept separate by a law of the State. Every white man voted for the bill, the two colored members of the Committee voting adversely. The bill was passed in the House on Tuesday by a vote of 124 to 2.

The order of Gen. C. S. Bentley, general manager of the International Military Encampment to be held at Chicago in October, that no colored troops would be admitted to the encampment, has aroused so much criticism that the managers of the company interested in the encampment, have adopted resolutions requesting the General to modify his decision, and he has done so.

Attorney-General O'Brien of this State has brought actions in the Supreme Court to oust Quarantine Commissioners Platt and Nichols from their offices.

The increase of deposits since January 1 in the savings banks of this city has been $8,000,000. The total increase in the State during the last six months will approximate $20,000,000.

The motion for a stay of execution in the case of Sharp, convicted of bribery in connection with the Broadway Railroad, was argued last week before Judge Potter of the Supreme Court of this State. His decision will probably not be delivered for several weeks.

Jerome L. Hill, recently a partner in a leading wholesale dry-goods house in this city, has defrauded the estate of his late partner, Wm. Lottimer, of which he was an executor, out of $250,000 in bonds which he pledged in Wall Street speculation. The estate claims the bonds, but the brokers who hold them will contest the claim.

The Citizens' Savings Bank of Leavenworth, Kans., has been ruined by R. P. Clements, its President, who has fled to Canada.

The protest of merchants of Boston against the discrimination against that city in freight rates from Chicago and the West has taken shape in three petitions of the Boston Chamber of Commerce to the Inter-State Commerce Commission. Two of the petitions allege discrimination on the part of the Lake Shore and Michigan Southern Railway Company; the third deals with the Lake Shore and Michigan Southern, the New York Central and Hudson River, and the Boston and Albany Railroad Companies combined.

The discontent among the Knights of Labor continues to manifest itself. The refusal of Grand Master Workman Powderly to grant a charter for the Ironworkers' National District in Pennsylvania has called out a threat to form a new labor organization.

A semi official account of the Baltimore and Ohio deal issued by John A. Hambleton & Co., the Baltimore bankers who have confidential relations with the Garretts, contains the following: "It was only proposed to sell a controlling interest in the stock of the Baltimore and Ohio, and of this majority Mr. Garrett would have held a large interest. In his negotiations with such astute financiers as Ives, Stayner & Co., Mr. Garrett has certainly shown his ability to compete with the best of them. So far he has much the best of the combine, as he holds $1,800,000 of Cincinnati, Hamilton and Dayton stock and $300,000 in cash, and no doubt will in proper time give a satisfactory explanation of the negotiations which apparently pointed to a change of management of the Baltimore and Ohio Company."

There is not a brewery in Vermont, and the Government only collected a tax of $1,225 last year for beer sold there.

Portland (Me.) fish merchants say: "We have instructed our captains to keep clear of the Canadian coast, not to fish within three miles of shore, and not to enter any but our own harbors. Should, however, a vessel be compelled by stress of weather to run into port, then she is not to remain there any longer than is necessary. We have informed our captains that we shall discharge any one of them found within a Canadian harbor." It was announced in Parliament on Monday evening that the British Government were hopeful of attaining a satisfactory settlement of the fisheries question at no distant date.

There had been 173 cases of yellow fever and 41 deaths at Key West to July 28.

Prince Devawongse, half-brother of the King of Siam, and the latter's special envoy to England on the occasion of the Queen's jubilee, arrived in this city on Sunday from Europe, with four sons of the King from nine to thirteen years of age. In company with the

Prince and his suite is the Marquis de Montri, the new Minister from Siam to the United States, Great Britain, The Hague, and Brussels, who is on his way to present his credentials to the Government at Washington.

The news of the death at Ceylon of Mrs. W. W. Howland, the oldest missionary in the active service of the American Board, has been received by cable.

FOREIGN.

In the debate on the Land Bill in the House of Commons last Wednesday night Mr. O'Doherty, Home-Ruler, member for North Donegal, moved, on behalf of Mr. Parnell, to limit to three years the clause providing for written notices of evictions instead of the present method, on the ground that the provisions of the clause would only be required until a land-purchase bill was passed. This caused much debate, but was defeated by a vote of 156 ayes to 221 nays.

In the debate on the Land Bill last Friday night Mr. Dillon said: "Irish members have been told that this clause (the fourth) will take away their stock in trade. There is no man more anxious than I to see my stock in trade disappear. To those opponents who believe that what is called the trade of an agitator is an agreeable one, I can only reply, I should be glad if we could exchange positions for a year, and then compare our views; for a more thankless, cruel, and weary form of life I trust it may never be my experience to discover."

Mr. Healy, one of the Irish members of Parliament, has been suspended for two weeks for unparliamentary language in the House. He said to a Conservative: "Come out, De Lisle, if you are a man. If you interrupt me again, I will break your neck."

Lord Salisbury, in a speech at Norwich last Wednesday evening, said that Mr. Morley had boasted that Liberal success was assured, but he doubted whether any political strength based upon the rotten relations existing between Gladstone and Parnell could be permanent. Mr. Gladstone had argued that the whole civilized world condemned England's policy. What had Mr. Gladstone to say to the fact that the whole civilized world condemned free trade? Anyhow, the Government's policy held the field. Mr. Gladstone, addressing the London Liberal Radical Union last Friday evening, said that at the last election the Unionists had a majority of only 76,000 in the whole country, and that if the Liberals reclaimed 150,000 votes, their strength in Parliament, now in the minority, would become a majority of 100. "Far from dismembering the empire," he said, "we intend to solidify it. The electors are rapidly and almost unanimously arriving at the right judgment. The question of retaining the Irish members in Westminster is still an open one, but it never will be allowed to interfere with the attainment of our object. When autonomy is gained, if Ulster desires severance from the rest of Ireland, the Liberal party will not stand in the way. This ought to be a conclusive answer to those who allege that the Liberals are indisposed to try the effect of a reunion. The Land Bill as amended confers vital and important benefits upon Ireland." Mr. Gladstone condemned the "plan of campaign," though the tenants, he said, were not as much to blame as those who drove them to adopt it.

Lord Salisbury, speaking at Norwich last week, warned the Conservative party to perpare for a possible dissolution of Parliament.

The Parliamentary election to fill the vacancy in the Forest of Dean division of Gloucestershire, caused by the retirement of Mr. Thomas Blake (Home Ruler), has resulted in a large increase in the Liberal vote. A prominent politician says: "This shows that the Liberal Unionists are returning to their allegiance."

At a Parliamentary bye-election in the Bridgeton division of Glasgow, August 2, Sir George O. Trevelyan, Liberal, received 4,654, and Evelyn Ashley, Conservative, 3,353 votes. The Home-Rule Liberal candidate at the last election received 4,364, and the Conservative candidate 3,567 votes. This Liberal gain is the severest blow yet given to the Conservatives, and it is thought that it will cause considerable modification of the Conservative programme.

A sign of the times is that an Irish landlord writes to the London *Times* under that signature, warning the Government that the feeling in favor of home rule is spreading among the Irish proprietors, and that if the Government persists in its present course, the landlords will be likely to remember Mr. Parnell's assurance to them that they would be better off under a national legislature than an alien one.

When Congressman P. A. Collins arrived last week at Belfast from Glasgow, his baggage was subjected to the most rigid examination, even the bottoms and sides of the trunks being sounded.

The Porte has decided to reopen the negotiations with England direct for the settlement of the Egyptian question. The object of the Porte is that the negotiations shall proceed without the other Powers being consulted.

The Italian Government has accepted England's offer to mediate between Italy and Abyssinia.

M. de Molinari, one of the well-known philanthropists and publicists of Paris, and an enthusiastic supporter of schemes of arbitration to settle national disputes, has published a pamphlet containing a project of an association for creating a so-called league of neutrals. His idea is that the countries which have most to lose by the wars of others, should associate themselves for the purpose of offering their combined armed assistance to any country which should be wantonly threatened with war by another. England he puts first, the others being Holland, Belgium, Denmark, and Switzerland. The armies of these countries in time of peace number nearly half a million, in time of war over a million men, and their combined naval power would be very great. Thus he says that in 1875 and in 1887 the league would have offered its force to France when she was threatened by Germany, effectually preventing Germany from making a hostile move. M. Molinari thinks that the knowledge that a tremendous united force was ready to be thrown into the scale against any nation declaring war, would ultimately render war in Europe impossible, and bring about a general disarmament.

Sig. Depretis, the Prime Minister of Italy, who died last Friday, was seventy-six years old. Throughout his busy life he was seldom free from the burden of grave public responsibility.

The Committee appointed to elaborate a scheme for the establishment of a Catholic university in America will hold a conference in Rome on August 7 to decide as to the location of the new institution.

The Belgian Chamber of Deputies, by a vote of 83 to 35, has rejected the proposal to extend the right of suffrage.

The Spanish Government has abolished the Cuban and Porto-Rican export duties on sugar, spirits, and honey. It is stated that France will join the Sugar Bounties Conference on the condition that the programme shall be previously formulated.

All the Swiss military commanders have, it is said, been ordered to pay the strictest attention to the effectiveness of the troops, in order to insure a proper working of the army in case of an outbreak of war in Europe.

Dr. Mackenzie reports that the growth in the German Crown Prince's throat is now so slight that he expects the trouble will soon cease altogether. The Prince's voice gains daily in strength, and his general health is excellent.

The *Journal de St.-Pétersbourg* says the crusade of the German press against Russian securities after the successful conversion of the land-mortgage obligation remains unexplained, the arguments of the German newspapers on the subject being ridiculous. The *Journal* challenges the Germans to show a single instance in which Russia instructed any banks to buy on Russian account bonds sold in Germany. The Frankfort *Zeitung* has advices from St. Petersburg which reaffirm the reports of the endeavor on the part of Russia to negotiate a loan in Paris. Other Russian advices refer to a proposal to promote the production of gold and arrest the depreciation of Russian paper. They also allude to a scheme to tax foreign commercial travellers doing business in Russia, and assert that this measure is directed principally against the Germans, who are the chief competitors of the Russians.

The St. Petersburg *Bourse Gazette* says that in addition to the 40,000,000 gold rubles directed by an imperial ukase to be taken from the working fund of the Imperial Bank to be devoted to the redemption of its debt, the bank is ordered by the ukase to realize 58,000,000 rubles on bonds of the Nobles Land Bank, 25,000,000 rubles on Russian rentes of the issue of 1884, 50,000,000 rubles on the issue of 1885, and 50,000,000 rubles on the issue of 1886.

An immense migration movement is proceeding in central Russia. Peasants and farmers are going in large numbers to western Siberia, where free pasture and arable lands abound. It is reported that the Government is about to stop the migration.

Michael Nikiforovitch Katkoff, editor of the Moscow *Gazette*, the most powerful imperial paper in Russia, died on Monday, aged 67.

Advices from Candahar state that the Amir of Afghanistan has caused a proclamation to be posted in the bazaar in that city, informing his subjects that the British Government is holding six infantry divisions, each consisting of nine regiments, with cavalry and artillery, in readiness to march into Afghanistan to suppress the revolt of the Amir's enemies in the interior. The proclamation adds: "I can suppress the Ghilzais without them, but they remain ready in case Russia takes advantage of the rebellion to invade the country." He warns Great Britain against permitting Ayub Khan to approach the frontiers. The opponents of the Amir explain that in issuing the proclamation the Amir is playing his last trump card, as he finds that the people value his alliance with England more than they value the Amir himself.

The city of Peshawur, in the northwestern part of India, in the Punjab, is infected with cholera of the worst type. Three hundred deaths from the disease occurred during the month of July.

The Shah of Persia will start in April upon a six months' tour of the industrial centres of Europe.

The *Petit Journal* of Paris says that ninety-four policemen of that city have handed to their superior officers silver watches which they found at their homes, each watch engraved with the words: "Souvenir Boulanger, July 7." An inquiry into the matter has been ordered. Gen. Ferron, Minister of War, has forwarded a circular to the different commanders of the army forbidding military bands to play Boulanger airs. Ex-Minister Ferry, having publicly styled Gen. Boulanger "the Saint-Arnaud of the *cafés chantants*," has been challenged to a duel and has accepted.

The *Tiempo* newspaper of the City of Mexico reopens its attacks upon Americans. It says that forty years have not been sufficient to extinguish the absorptionist views of the United States with regard to Mexico. It condemns what it terms "the vile conduct" of successive Administrations in Mexico since 1847 with regard to the United States, and asserts that the United States counts on the Mexican Central Railway as an avenue to Mexico, and that this road's management is altogether more favorable to American interests than to those of Mexico.

A DANGEROUS PARTY.

CIRCUMSTANCES lend unusual significance to the platform adopted by the Ohio Republican Convention last week. Senator Sherman was unanimously endorsed by the body as a candidate for President next year, and the platform was prepared under his supervision and to reflect his ideas. Senator Sherman has always been considered one of the most conservative leaders of the Republican party, and the platform upon which he wishes to appeal to the country in 1888 is therefore as moderate and "safe" as can possibly be expected from the national Convention next year.

The important features of this platform are two. In the first place, it makes extravagance the watchword of the party. Hitherto, political organizations have appealed for the support of voters on the ground that they would give the country an economical administration; and taxation has always been recognized as a necessary evil, which should be reduced to the lowest possible point. It was so with the Republican party in its early history. In 1868, for instance, the Republican national platform declared that "it is due to the labor of the nation that taxation should be equalized, and reduced as rapidly as the national faith will permit." Even so recently as 1884 the traditional belief, that unnecessary taxation was unjust and should be done away with, still held sway, and the Republican party in its national platform "pledged itself to reduce the surplus . . . by such methods as will relieve the taxpayer."

All this has been changed. The surplus, which even Republicans in 1884 admitted was unjustifiable and should be abolished, still remains, because all of the Republicans in Congress, except the Minnesota delegation and two or three stray New Englanders, refused even to permit consideration of a bill designed to do away with it. The taxpayer still needs to be relieved as much as the Republicans admitted that he did in 1884. But the managers of the party no longer regard him as deserving consideration, and no longer even make a pretence of promising economy in administration. On the contrary, they now propose to get rid of the surplus, not "by such methods as will relieve the taxpayer," but by so greatly increasing the running expenses of the Government that there will be no surplus left. Here is the leading plank of the platform:

> "We favor liberal pensions to the soldiers and sailors of the Union, adequate appropriations for the improvement of our national waterways, and national aid to education. If too much revenue be collected to meet these and other public needs, we demand that the first step in the reduction thereof shall be the abolition of the internal tax upon American-grown tobacco."

A subsequent resolution shows that the phrase "liberal pensions to the soldiers and sailors of the Union" covers such a measure as the Dependent Pension Bill, President Cleveland's righteous veto of which is condemned as "unjust and unmerited." It was shown during the discussion of this measure last winter that it involved an annual increase of probably at least $70,000,000 a year in the pension appropriations, which would go far towards using up the surplus. "Adequate appropriations for the improvement of our national waterways" can easily be run up to $20,000,000 or $25,000,000 a year. "National aid to education," according to the scheme of the Blair bill, will take $8,000,000 or $10,000,000 a year, and the New Hampshire Senator would be glad to mark up his figures 50 or 100 per cent. if the surplus were not being made away with fast enough. The evident expectation is, that, by these vast additions to the appropriations, the surplus will be entirely removed, for it is only as a vaguely possible alternative that the suggestion is made of abolishing the internal tax upon American-grown tobacco "if too much revenue be collected to meet these and other public needs." But it is quite safe to say that there would not be too much. When a party which fosters such men as Blair, advertises for proposals to get rid of the surplus for "public needs" which have never before been recognized, there will not be the slightest trouble or delay about its being accommodated. Baldly stated, the important plank of the Republican platform would read as follows:

> "Resolved, That we favor the most extravagant policy required to use up the surplus taxes unnecessarily collected."

But extravagance is not the only bad feature of the Republican policy, nor in some respects the worst. In order to get rid of the surplus without touching the tariff abuses, the party is ready to violate the Constitution and assail the system of a division of powers upon which the Government rests. "National aid to education" means not simply the appropriation of millions of dollars from the Federal Treasury to weaken the spirit of independence in the South, and demoralize the public-school system of that section. It means an encroachment upon State rights which is dangerous to the whole American system. If the Federal Government appropriates money for schools in the States, it must exercise supervision over its distribution, and it must thus interfere with their power to regulate their domestic affairs. This is not the view of a Mugwump. It is the view of Republicans of such eminence as Justice Miller of the United States Supreme Court and Senator Hawley of Connecticut. "The necessity of the great powers conceded by the Constitution originally to the Federal Government, and the equal necessity of the autonomy of the States and their power to regulate their domestic affairs," said Justice Miller in his Ann Arbor address, "remain as the great features of our complex form of Government." And Senator Hawley, speaking of this very scheme, said in his speech at Detroit on Washington's Birthday: "The tendency of the day is to go to the national Government for help in a hundred things. It is asked, for example, that it shall take charge in a very great measure of education, shall dedicate millions of dollars a year to the education of the children of the several States, it necessarily following that in a greater or less degree the Government shall intermeddle with the whole business. . . . This tendency towards a consolidation of the entire powers of Government is one of the strongest to-day, and one of those most dangerous to the Republican experiment, as our fathers understood it."

Extravagance and centralization—these are the promises which the Republican party makes in its Ohio State platform of 1887, and can be counted upon to make in its national platform of 1888. The drift that way is now too strong to be resisted. We do not forget that nearly all the leading Republican papers of the country endorsed the veto of the Dependent Pension Bill, but the Republican Congressmen voted solidly to override it, and the Republican managers have resolved to condemn it. We do not forget that Senator Hawley still makes a gallant fight against the centralizing tendencies of his party, but the managers count with confidence upon his eating his own words if they favor what he has repeatedly denounced as "most dangerous." We do not forget that the Minnesota Republicans are outspoken for tariff reform, and that there are many Republicans elsewhere who sympathize with them, but Minnesota is not a State taken into the account by the party managers, and the other Republican tariff-reformers are too scattered to accomplish anything. The men who favor extravagance and centralization are the men who control the party and dictate its policy.

THE ARTHUR KILL BRIDGE DECISION.

THE decision of the United States Circuit Court rendered by Mr. Justice Bradley at Trenton on Monday, if sustained by the Supreme Court of the United States, will settle one more of the many vexed questions that have arisen under the commerce clause of the Constitution. The State of New Jersey, with her extensive water-front, has always been naturally jealous that her citizens should reap full benefit from her geographical position. To her this position has been considered a birthright, and one of no little value, for from sales of her water-front alone, since 1856, she has realized $3,000,000 for the benefit of her common schools. The bridging of the Arthur Kill will diminish the value of New Jersey water-frontage in proportion to the capacity of the water-frontage of Staten Island, in the State of New York. It is against the transfer of the terminus of a great trunk line to the shores of an island in another State that New Jersey protests, but her pretensions are now held to be futile under the constitutional power vested in Congress to regulate commerce between the States.

The history of the growth and development of our inter-State law, from the first assertion of the right of Congress under constitutional provisions to regulate commerce, is of deep interest. The first case of moment arose when the State of New York, by its Legislature, granted a monopoly of the carrying trade by steamboats in the waters of New York. Here was an attempt to appropriate navigable thoroughfares which, at the present day and under the existing exposition of the laws, would find few, if any, supporters even among laymen. But, though the commerce of the country, as well as steam navigation, was then in its infancy, the case was of sufficient importance to call forth on both sides the efforts of the best lawyers of that day. The alleged sovereignty of the States was upheld by

arguments of great length and power, and the first authoritative decision on the extent and meaning of the power vested in Congress to regulate commerce was made by Chief-Justice Marshall in an elaborate and convincing opinion, settling for the future the equal right of all to the use of the navigable waters of the nation, subject only to such regulations as Congress might impose.

With increasing commerce came the necessity for greater facilities, and not the least among these was the erection of bridges across navigable waters. In 1836, Chief-Justice Savage of New York, having before him Marshall's opinion above referred to, in a case relating to a bridge across the Hudson River at Troy, used the following language:

"I think I may safely say that a power exists somewhere to erect bridges over waters which are navigable, if the wants of society require them, provided such bridges do not essentially injure the navigation of the waters which they cross. Such power certainly did exist in the State Legislature before the delegation of power to our Federal Government by the Federal Constitution. It is not pretended that such a power has been delegated to the general Government, or is conveyed under the power to regulate commerce and navigation; it remains, then, in the State Legislature, or it exists nowhere."

This language is particularly pertinent, as the Attorney-General of the United States took part in the argument of the case. There is little question as to what was the existing opinion of that day in relation to the powers of Congress in regulating commerce.

In the Wheeling Bridge case, which came later, a peculiar state of facts arose, and one step further in advance was taken by Congress in the assumption of power under the commercial clause of the Constitution. A bridge had been partly constructed over the Ohio River at Wheeling, under an act of the Legislature of the State of Virginia, when the United States courts were appealed to for an injunction restraining its construction, on the ground that it interfered with navigation. After an elaborate investigation of the subject, it was finally determined that it was an obstruction to the free navigation of the Ohio River. Congress then passed an act declaring the bridge to be a lawful structure, its interference with navigation to the contrary notwithstanding, in terms establishing it as a post-road, and the Supreme Court of the United States upheld this act as within the constitutional powers of Congress.

In a dissenting opinion in this case, Mr. Justice McLean used strong language against the asserted power of Congress, in declaring a bridge which had been adjudged a nuisance and an obstruction to navigation, a lawful structure. Mr. Justice McLean has been quoted as upholding the broadest construction for the commercial clause of the Constitution, but in this case he went slightly out of the way to say:

"If under the commercial power Congress may make bridges over navigable waters, it would be difficult to find any limitation of such a power. Turnpike roads, railroads, and canals might on the same principle be built by Congress. And if this be a constitutional power, it cannot be restricted or interfered with by any State regulation. So extravagant and absorbing a Federal power as this has rarely, if ever, been claimed by any one. It would in a great degree supersede the State governments by the tremendous authority and patronage it would exercise. But if the power be found in the Constitution, no principle is perceived by which it can be practically restricted. This dilemma leads us to the conclusion that it is not a constitutional power."

In this strong language he denies the existence in Congress of any power to construct bridges, and of course, as stated by Mr. Justice Field, to authorize their construction. These views of Mr. Justice McLean in 1855 do not appear to have met with any dissent from the other judges of the court as then constituted.

In 1881 the question came before the court in a shape somewhat different, in relation to the bridge across the Ohio River from Cincinnati to Newport in Kentucky. The bridge was built by authority of both States, and under the enabling act of Congress; but before its completion Congress passed a law directing that a different structure should be erected. On the matter coming before the Supreme Court, the power of Congress so to enact was sustained. Mr. Justice Matthews did not sit, and Justices Miller, Field, and Bradley wrote dissenting opinions. In this case there was no absolute assertion of the power of Congress to authorize the erection of bridges against the protest of a State, but Mr. Justice Field pointed out, in an able dissenting opinion, the departure from the law of the Wheeling Bridge case, and showed whither the centralization of power in Congress would lead. Speaking of the Wheeling Bridge, he says:

"The court held that it could be legalized, which amounts to no more than declaring that it should not thereafter be treated as interfering with the public right of navigation of the river, so far as that right was under the protection of Congress. This is a very different thing from asserting a power to declare that a structure, lawful when erected, and in no way interfering with the navigation of the river, is an unlawful structure."

He denies the power of Congress so to enact, and further says:

"Yet out of this assertion of a power to legalize a structure which, without such sanction, would be deemed an obstruction to navigation, has grown up the doctrine of an independent power in Congress to authorize the construction of bridges over navigable streams without the permission of the States, and to control them when constructed. In this we are furnished with a striking illustration of the facility with which power is assumed from expressions, loosely or inadvertently used, apparently recognizing its existence. From the use of the word *assent* to the erection of a bridge over a navigable river, or the declaring of one already erected a lawful structure, the transition has been easy and natural to the assumption of an affirmative power in Congress to authorize, independently of the action of the States, the construction of such bridges, and to control them. From the authorities cited and the reasons assigned, it is evident that Congress possesses no such power."

These vigorous protests of Mr. Justice Field have thus far had no effect on the majority of the court, and now the very power so vigorously denied by him has been definitely affirmed by the court at Trenton. The conclusion is, as stated by Mr. Justice Bradley, that in these matters "there are no States."

"*THE BRUTAL AND UNJUST DECREES OF PARTY.*"

THE Executive Committee of the Civil-Service Reform League of Chicago has prepared a report upon the operation of the Civil-Service Law in the Post-office and Custom-house of that city, to be submitted at the annual meeting of the National League at Newport this week. The chief points of this report we will briefly summarize. Mr. Judd assumed charge of the Post-office June 1, 1885, the number of employees covered by the Civil-Service Law being then about 800. Until May 4, 1886, the Examining Board always had at least one Republican member, but at that time he was removed and the Board became completely Democratic. As the removals and resignations among the employees covered by the Civil-Service Act increased rapidly after this change, the Secretary of the Civil-Service Reform League, June 26, 1886, wrote to Postmaster Judd for information as to the number of removals and resignations. Early in July Mr. Squires, the Assistant Postmaster, gave the League such a list. This list showed that while a Republican was on the Examining Board, that is to say, from June 1, 1885, to May 4, 1886, eighty-eight letter-carriers and ninety-eight clerks were appointed by Mr. Judd. The ninety-eight clerks represent so many removals or enforced resignations. The eighty-eight carriers appointed represent about fifty such removals and resignations, as thirty-five of the eighty-eight appointments represent additional carriers allowed the Post-office in the fall of 1885. During Mr. Judd's first year the removals and compulsory resignations numbered about 148, averaging nearly three per week. From May 4, 1886, when the change in the Examining Board rendered it wholly Democratic, to June 30, 1886, the list furnished by Mr. Squires shows that thirty-one clerks were removed and nine resigned, thirty-one letter-carriers were removed and one resigned—being seventy-two removals and resignations in eight weeks, making an average removal, counting the resignations as removals, of nine per week, or about three every two working days after the Board consisted of three Democrats, as against one every two working days when the Board had one Republican member.

Early in July, 1886, the Secretary of the League wrote to the United States Civil-Service Commission at Washington, asking further information as to the number of removals and resignations in the Post-office, and calling their attention to the fact that the Examining Board at the Post-office consisted of three Democrats, and that since this change the number of removals had greatly increased. The latter suggestion was promptly acted upon, the Examining Board being increased to five, and two Republicans appointed to fill the two new places. In the latter part of July the Commission sent lists of those persons appointed under the Civil-Service Act to places in the Post-office who had been removed, or who had resigned, from the time of Mr. Judd's appointment down to June 30, 1886; but not the total number of resignations and removals in the whole force of the classified service, whether appointed under the Civil-Service Law or not. Taking the information as it is, however, the lists showed that from the clerks appointed under the Civil-Service Law forty-six were removed or resigned, and from the carriers appointed under the law thirty-two were removed or resigned from the date that Mr. Judd took charge

as Postmaster, June 1, 1885, down to June 30, 1886, making seventy-eight in all, while there were 145 removals between these dates of clerks and carriers who were appointed before the Civil-Service Act went into operation.

The spirit in which the law was administered appears very clearly from the report of an interview which two members of the League had about August 1, 1886, with Mr. Wilbanks, the "working member" of the Examining Board. Mr. Wilbanks at first claimed that he was a thorough civil-service reformer and believed heartily in the law. But he immediately stated that he did not consider it a violation of the law to remove as many employees as he wished, no matter how faithful and efficient they were, provided their places were filled from those who had passed the examination. When asked whether the places made vacant by removals or resignations were not in all cases filled by Democrats, and whether there was not a prevailing opinion that none but Democrats need apply for the examination, he replied that he did not know the politics of the new employees, but he should be very glad if the opinion prevailed that none but Democrats need apply. When further asked if it was not a violation of the spirit of the law to remove a faithful and efficient employee, he replied that no one was ever hanged for violating the spirit of the law, and as long as the letter of the law was observed by him, which he claimed was the case, he thought he was all right.

Meanwhile the League had been prosecuting, under similar difficulties, an investigation into the administration of the law in the Custom-house under Mr. Seeberger, who became Collector on October 1, 1885. This showed that fourteen employees out of about sixty subject to the law were discharged or had resigned between Mr. Seeberger's appointment and June 30, 1886, and that 18 more resigned between the latter date and January 1, 1887. The character of these resignations is illustrated by the case of George A. Webster, the history of which is given in full. Webster passed a most creditable civil-service examination September 1, 1883, was appointed, without political influence and to his surprise, to a place in the Custom-house in March, 1884, and in February, 1885, was promoted and transferred to the Appraiser's division. His record as a clerk is conceded by all to have been most excellent. Nevertheless in January, 1887, his resignation was demanded. He immediately saw the Collector, and gives this account of the interview: "He (Seeberger) said in substance this: That he had not a word of complaint of my official conduct and ability; on the contrary, all conceded that they were excellent; but that, owing to the great pressure being brought to bear upon him, vacancies must be made; that 'you must remember that our party has been out of power for twenty-five years'; that I 'should be thankful for having been allowed to stay two years under a Democratic Administration.'" Webster then reported to his immediate superior, Appraiser Francis A. Hoffman, jr., "who said, in substance, that he expected this; that the law and customs regulations placed the entire control of appointment and removal with the Collector, instead of, as it should be, with the Appraiser; that he believed in civil-service reform in all its purity—that is, without a restraining law, he would, upon taking charge of any office, look only to the honesty and efficiency of the force, entirely ignoring the politics of the incumbents, and making removals for cause only; that from the high reputation of this office under Appraiser Ham, and from his own personal observation, he was satisfied that the force were more than ordinarily competent, honest, and efficient; that he was sorry to have me go, etc." Mr. Hoffman made an ineffectual effort to save Webster's head, and, after his failure, wrote this striking letter to him:

PORT OF CHICAGO, ILL., APPRAISER'S OFFICE, CHICAGO, January 14, 1887.—DEAR SIR: I desire to give expression to my high opinion of you as a man of integrity and capacity.

I regret exceedingly to be deprived hereafter of your valuable services as a bookkeeper and correspondent in this office. You have had my full confidence, and I shall at all times testify to your disinterested devotion to duty and absolutely unquestionable honesty. I deem you particularly suited for a position of trust; you will never betray one's confidence.

May you speedily find employment with some one who can appreciate your worth, where you will not be subjected to the vicissitudes of public life nor the brutal and unjust decrees of party.

Command me whenever I can serve your interests. It is the least I can offer to an honest and faithful employee of the Government.—Faithfully yours, FRANCIS A. HOFFMAN, JR.

The Civil-Service League presented Webster's case to the President, and he referred it to the Commissioners. Three months later two of the Commissioners, Messrs. Edgerton and Lyman, went to Chicago and made an investigation, the history of which is given at such length that we cannot present it in detail. No candid person, however, can read it without being very unfavorably impressed with the attitude of the Commissioners, who expressly disclaimed having anything to do with the spirit of the law, and seemed anxious to help the Collector to show that its letter had not been violated. No report has been made by the Commissioners, but their attitude left no doubt that they would sustain the Collector.

The report of the League concludes with a severe indictment of the Commissioners, and sums up the situation as to the Post-office and Custom-house thus:

"In other words, we may safely presume that since the appointment of Mr. Judd as Postmaster and Mr. Seeberger as Collector, almost the entire force of employees embraced in the classified service have been removed by them. Furthermore, we have yet to hear of a Republican who has been appointed from the eligible lists to a position in either Post-office or Custom-house by Mr. Judd or Mr. Seeberger. In fact, the opinion generally prevails that none but Democrats need apply for the examinations at the Post-office or Custom-house. Our belief is that most of the changes have been made in the classified service for the purpose of removing all Republicans and replacing them with Democrats, and we think that Mr. Hoffman, in his letter to Mr. Webster, clearly shows that the removals have been made in compliance with the demand of Democrats for the places."

No contrast could possibly be more marked than that between this showing as to the Chicago Post-office and Custom-house and the state of things in the Brooklyn and Boston Post-offices. All of these offices are controlled by strong Democrats, but the differences in management are as wide as could be imagined. The Brooklyn and Boston Post-offices are conducted as business institutions in the interest of the public; the Chicago offices are conducted in accordance with "the brutal and unjust decrees of party."

Two theories of party advantage, radically opposed to each other, are represented by Mr. Hendrix in Brooklyn and Gen. Corse in Boston, on the one hand; and by Mr. Judd and Mr. Seeberger in Chicago, on the other hand. All higher considerations aside, is there any sensible man who doubts which theory is the more likely to strengthen the Democratic party?

COMMISSIONER WRIGHT ON CONVICT LABOR.

MR. CARROLL D. WRIGHT, Commissioner of Labor of the United States, has made a report on the subject of convict labor in which he reaches the conclusion that the most desirable mode of employing prisoners is the public-account system, so modified that the labor performed shall be as little effective as possible. It results, of course, that the charge upon the taxpayers for their maintenance shall be correspondingly increased. That this charge may be eventually raised to the total cost of boarding and lodging the convicts is admitted, and a calculation is furnished that the extra tax would be not more than eight cents per capita on the whole population annually, or not more than twenty-nine cents on each $1,000 of taxable property. He holds that it would be in accordance with justice to have the prisons maintained entirely at the expense of the State treasuries, because "the present tax necessary to meet running expenses, so far as individual feeling or sentiment is concerned, is borne by the few engaged in the industries carried on in the prisons." This is a proposition which it is difficult to controvert, because it is not quite clear what is meant by it. If it means that the shoemakers not in prison pay the tax to support the shoemakers in prison, and that the honest coopers pay for the convict coopers, and so on, the statement is not a whit more true than it would be to say that the shoemakers in Worcester support the shoemakers in Lynn. The shoemakers in Worcester would get better wages for a time if there were no shoemakers in Lynn; but the fact of their getting better than average wages would draw others into the trade until the general equilibrum was restored. If the Commissioner means that the public charge for the support of convicts should be increased because a notion prevails among shoemakers, coopers, etc., that they are supporting convict shoemakers, coopers, etc., under the present system, although the fact is that the latter are supporting themselves, then the proposition is that a false sentiment should be accepted as a true one, and that the public should pay eight cents per capita per annum to give the former precedence over the latter.

Another dubious phrase in the Commissioner's argument is his statement of the objections to the plan which he favors. "The objection to this plan which has been proposed by many investigators and which is now under consideration," he says, "involves the aban-

donment of the idea that prisons must pay." Pay what? When we speak of a business as paying we generally mean paying a profit. But is that what is meant when people are talking about convict labor? The States are not regarded as money-making concerns at all; but if there were any branch of their necessary functions out of which they might reasonably obtain a net revenue, it is the penitentiary branch, seeing that the law-breakers put upon them the expenses of the police force and the criminal courts. In the very fitting language employed by Mr. C. F. Peck, the New York Labor Commissioner, "he who has to be restrained by force from transgressing the laws of society *must support himself by his own toil.*" This was Mr. Peck's opinion three years ago. We are not sure that Labor has not advanced beyond this position now, in which case Commissioner Peck has probably advanced also; but as the record stands, he holds a position contrary to that of Commissioner Wright and much more rational. He contends, throughout his report of 1884, that the work of the prisoners should be not merely onerous but remunerative, and in this respect he followed the thesis of Superintendent Pillsbury that non-productive labor merely for punishment is degrading and mischievous to the prisoner and unjust to the State.

Commissioner Wright's fallacy belongs to Bastiat's category of "That which is seen and that which is not seen." The competition of prison labor with free labor is that which is seen. It is very minute, being only 54-100 of 1 per cent. of the mechanical labor of the country, but it can be seen, and, what is more to the purpose, it can be heard from. That which is not seen is the fact that if every prisoner were turned into a skilled workman and an honest man, according to the hand-labor plan favored by the Commissioner, and then discharged, he would be 50 per cent. more of a competitor than he is now. Is it, or is it not, in the interest of Labor that there should be 64,000 criminals prowling about the country, committing depredations of all kinds? Would Labor be better off or worse off if all these criminals had learned honest trades and earned an honest living? If they had done so, they would have been competing effectively with all others. Not having followed honest trades, but having become a prey on the honest and laborious classes, and having been captured and locked up, they become for the first time what they ought to have been all the time, self-sustaining members of society. They have begun to compete—that is, to do what they ought to have done from the beginning, and what everybody says they ought to do when they come out of prison. So we have this economic conception presented to us, that if there were no criminal classes at all, it would still be for the interest of Labor to take say 64,000 able-bodied persons (with their own consent, of course) and put them in some wholesome retreat at public expense for an average term of five years, and, while not denying them employment altogether, yet taking good care that their work should not be productive.

Much stress is laid on the fact that prison labor competes unduly with particular trades —shoe-making, cooperage, stone-cutting, etc. In fact, the great bundle of sophisms that have been piled up on this subject had their starting-point here, particular trades insisting that an undue amount of prison labor was employed in competition with them. Hence the demand for diversity of industries in prisons. Commissioner Wright disposes of this half-way measure by saying that "whatever limit the law might put upon the number to be employed in any one industry, that number might be sufficient to kill a trade carried on by free labor" The only way to secure a diversity which shall not be harmful, in his opinion, is to put convicts at work on hand labor without the use of machinery, so arranged that the hand labor in the prisons shall compete only with machine labor outside. He considers this better than working a treadmill or turning a crank, because it gives mental occupation and to some extent teaches the use of tools. But why allow tools? A machine is only a superior kind of tool.

The report embraces some valuable statistical information. The portion which shows the financial results of the different systems of convict labor is especially interesting. The lease system shows a profit, and a pretty large one, for the seven Southern States that have adhered to it. Under the contract system, 65 per cent. of the running expenses of the prisons are paid by the proceeds of the labor performed in them. There are wide discrepancies between different institutions, even in the same State, the penitentiary at Joliet, Ill., paying a little more than expenses, while that at Chester shows a large deficit. In like manner the Sing Sing Penitentiary shows a large surplus, while that at Albany has a small deficit. The prisons under the public-account system yield 32 per cent. of their running expenses, and those under the piece-price system 23 per cent. Under the mixed system, 42 per cent. of running expenses is realized from the labor of the inmates. At Auburn and Elmira, N. Y., which are classed under the mixed system, a considerably higher percentage is attained.

Eleven reports of State investigations on the subject of convict labor are summarized in the volume. Most of these are on a higher plane of intelligence than Commissioner Wright's, and only one of them, that of California, is on a lower. The California Commissioner of Labor "touches bottom" with the plain declaration that "rather than that a system should be carried on under State control, tending to loss of employment or reduction of wages, the convicts of our State prisons should serve their terms in idleness." Mr. Wright himself, as Commissioner for Massachusetts in 1880, said:

> "We are strong in the belief that the very best reformatory results are to be reached through that system or that administration of prison affairs which makes our penal institutions self-supporting; and that, after a State has been compelled by the criminal conduct of an individual to put him under public guardianship, it has the indisputable right to say that he shall pay for the guardianship; and if, in doing so, the State encroaches in some slight degree on the fullest privileges of competition demanded by producers, it has as much right to a chance to make its institutions self-supporting as a manufacturer has to claim any particular trade or custom as his inalienable right."

This clear-sighted and wholesome statement is printed on page 335 of the present report. It suggests that the author has gained narrower views since he became a Commissioner on a larger scale. A State Bureau of Labor is most commonly an apparatus to give official circulation and sanction to the crudest conceptions of the trade-unions. The public had a right to expect something better from the National Bureau.

HOLIDAY EQUESTRIANS.

ABOUT this season, or a little later, it is not uncommon for people of both sexes who are fond of the saddle to start off on journeys on horseback, sometimes in couples, but sometimes in half-dozens or dozens. In probably nine cases out of ten, if there are ladies in the party, the excursion comes to an untimely end, owing either to one of the ladies "giving out"—that is, finding long days in the saddle too much for her—or to somebody's horse revealing an ample saddle gall on his back, or going dead lame. The cause is generally the same—want of exercise both on the part of the rider and the horse. Few women's horses get nearly exercise enough to keep them in working condition, and a long day or two on the road brings out a weakness of some kind. Moreover, as soon as a woman begins to feel fatigue in the saddle, unless she has very vigorous back muscles and a very good seat, she slides down towards her stirrup, and hangs on to the horn with her right knee, thus giving the horse's back a good side scrape with the saddle at every step. After a few hours of this, a fine raw place is apt to be developed which takes a fortnight or three weeks to heal, and the rider has to take to wheels or go home by the train.

Such excursions are probably more successfully carried out by our German fellow-citizens than anybody else, on those two-and-two processions which so often amuse the American public in the Park. They are generally excellent riders, though not of the English school, and so many of them have learned all they know of it in the army that they are familiar with most of the "wrinkles" and precautions which enable a man to get long marches out of a horse without damage. These rides are literally marches. They always move as a column of cavalry, and generally under a leader of some sort from whom they take the word of command. Their seat is strictly military, but some of them carry their hands nearly as high as their chins, the explanation of which we have more than once sought from German military men in vain, for the German army regulation puts the bridle hand, we believe, a hand's breadth above the pommel of the saddle.

About saddles for such excursions there is a monstrous deal of nonsense talked, owing to the belief of nearly everybody that the saddle he is accustomed to is the only rational saddle, and his way of riding the only rational way. In fact, saddles are almost as various in form and structure as the races of men who use horses, and so are styles of riding, and the man who dogmatizes about his own saddle and style runs the risk of being brought to shame. Nothing, for instance, can differ more from a cowboy's seat and saddle than a Cossack's or Turcoman's. The cowboy sits straight-legged on his

fork, in what is called "tongs on a wall" fashion, in a high peaked saddle, with his toes stuck out. The Cossack or Turcoman sits as flat as if he were in a chair, his leg forming a right angle at the knee and his feet exactly parallel with the horse's side. All three are superb riders, whether it be for sticking on, or getting over rough ground, or making long marches, or fighting, or running away. If you argued with a Turcoman that he ought not to sit in a flat saddle, with such short stirrups, but get a Whitman and stick his legs out, he would not laugh, because that is not his style, but he would inwardly set you down as an idiot besides being an infidel.

There is also much nonsense talked about the propriety or impropriety of rising or "bobbing up and down" in the saddle during the trot when making a journey, and occasionally a "True American" writes to the newspapers some sad drivel on the subject, as a protest against the Anglomaniac dudes who bob up and down on banged horses in the Park. But if you use an English saddle, it is simple cruelty to the horse not to rise in trotting on a long ride, especially in the case of a heavy weight. In an English saddle the rider sits well behind his stirrups, which are rather short, a fashion approaching closely to the Asiatic seat; and if he tries to sit close during the trot, he strikes the horse a catapultic blow at every stride, in the tenderest portion of the animal's back. When he rises, on the contrary, he descends gently, and he keeps his weight steady on the horse by throwing it into his stirrups, when his hinder parts are in the air. The principle of the thing is in fact illustrated by the jockey's practice of standing in his stirrups during a race, and the Cossacks or Arabs during a charge. In both cases what is sought is to avoid pounding the horse with a hundred-and-fifty-pound mallet, when the poor animal is trying to move in a regular trot or gallop.

In a military, or Mexican, or Whitman saddle the circumstances are wholly different. The rider almost stands straight-legged in his stirrups, when the horse is trotting, and keeps his weight on them, and at the same time accommodates himself to the horse's motion by an up-and-down spring of the foot. In other words, he has no occasion to rise, and does not come down on the horse with a bang. There is probably nothing about which wide observation is more necessary to make people talk sensibly than about horsemanship. Every nation which rides in the saddle has its own system, and for that nation its own bridles, saddles, bits, and seats are the best in the world. The man who sets about disputing this runs great risk, as we have said, of being brought to shame.

THE NEW ITALIAN PREMIER.

ITALY, July 13, 1887.

FRANCESCO CRISPI, actually Minister of the Interior, virtually Premier and Minister for Foreign Affairs during the long and dangerous illness of Depretis, is one of the few prominent survivors of the old Mazzinian school. Foremost among the promoters of the Sicilian revolution of the 12th of January, with The Constitution or Barricades for its programme, he stood faithfully to his guns when the Constitution sworn to and forsworn by King Bomba was defended and defeated on the barricades in 1849. Deputy, Secretary-General, and soldier during that year; a keen observer of men and events; taking nothing for granted, but deducing theories from facts, he came to the conclusion that only when the whole of Italy was united could any portion of it be free and independent, and for the next ten years devoted his constant energies to promote revolution in every portion of Italy, with Mazzini. At the same time, with Nicola Fabrizi, Rosalino Pilo, and a very few other Sicilians, he toiled to convert his brother islanders to the doctrine of unity, to the abjuration of their then universal desire for a separate government and a separate constitution. Banished from Genoa after the insurrection of Milan in February, 1852; expelled from Malta by the British Government in 1854, he passed the next five years of his life wandering in disguise between London, Paris, and Italy, one of the most formidable, invisible agents of the unitarian party. When, in 1859, the alliance between Piedmont and the Emperor of France was made known, he signed the Mazzinian protest against the alliance with the "murderer of Rome," the "man of the Second of December," with the proviso that, should Victor Emanuel head the Italian army against the Austrians, all the protesters would rally round his standard.

During 1859 neither Naples nor Sicily stirred; on the 22d of May Ferdinand Borbone died. The day after the armistice of Villafranca was signed, "Manuel Pareda, a merchant of the Argentine Republic—hair gray, chin shaved, no moustache, mutton-chop whiskers (so ran the passport)—left Dover for Calais, Paris, Marseilles, Genoa, touching Civitavecchia; was allowed by the police to land from the *Vatican* and thence depart in the same steamer for Naples; thence, with passport duly viséd, for Messina, arriving there on the 26th of July. From that date until the 30th of August Manuel Pareda, alias Francesco Crispi, scoured the island of Sicily, as a tourist seeing sights all day, by night meeting and organizing various committees, teaching the manufacture of Orsini bombs, combining for a simultaneous insurrection in all the principal cities on the 4th of October. It was not, however, till the 12th of May, 1860, that Garibaldi, with Crispi and the Thousand, landed at Marsala, and on the 13th proclaimed Victor Emanuel King of Italy. Garibaldi offered Crispi first the post of Minister of Finance, which he declined; then that of *procuratore generale*, Crispi being by profession an advocate—also declined. For some time Minister of the Interior, he rendered himself unpopular by introducing the conscription, saying that every Sicilian must become a soldier and help the Italians to free the entire country. Then a cabal was raised against him by the Moderates, who clamored for the immediate annexation of the island to Piedmont. "No," said Garibaldi and Crispi, "this is our basis of operations; we have to free Naples and Venice, and then crown Victor Emanuel King of Italy in Rome." From that moment—with the exception of Mazzini—Crispi and Bertani, who organized all the remaining expeditions of 1860, were the best calumniated men in Italy. When Garibaldi, after the conquest of Naples, retired to Caprera, no stone was left unturned by the Cavourian party to prevent Crispi's election as deputy to the first Italian Parliament. Not only were they unsuccessful, but, as his poverty would have prevented his residence at Turin, his electors subscribed for his maintenance until his rapid success as a lawyer rendered him independent.

From the moment Crispi took his place in the Chamber of Deputies and his oath to monarchy, he has never wavered in his allegiance. When, after Aspromonte, the Constitution was violated, Naples and Sicily placed in a state of siege, Deputies arrested, and unimaginable atrocities committed, Garibaldi, Nicotera, Saffi, and some twenty members of the extreme Left sent in their resignations. Crispi refused to do so, saying: "Venice and Rome have yet to be freed. We want the army. Victor Emanuel is the symbol of unity; if we can't have liberty and unity together, let us secure unity." In 1864 there befell Crispi what I fully believe to have been the greatest sorrow of his life, the total rupture with Mazzini. The transfer of the capital from Turin to Florence, with the pledge that the Italian Government would prevent any attack against the temporal possessions of the Pope, sounded like the renunciation of Rome. The Republican Unitarian party were up in arms, and called on the entire Left again to resign. No, said Crispi, "monarchy unites, the republic would divide us." Whispering tongues added words that Crispi had never spoken in public or in private. Mazzini believed them and never forgave; they never met again.

In 1866 Crispi was invited to enter the Ricasoli Ministry; in 1867, the Cabinet of which Rattazzi was Premier. He declined, saying: "We shall yet be Ministers of Italy, but with our own programme." Nevertheless, as the reporter on the *domicilio coatto* law, which empowered the Government to arrest and send to a fixed domicile vagabonds, camorrists, and brigands, he again incurred the hostility of the Liberals, nor was his friendship for and support of Rattazzi forgiven him. In 1870 Crispi, Bertani, Cairoli, and the entire Left (all the resigners had accepted reëlection except Saffi) saved Italy from a pro-French, anti-Prussian alliance and compelled monarchy to enter Rome. What was suspected and affirmed in the past is now a fact proved by the recent publication of the biography of Quintino Sella. King Victor had promised Louis Napoleon a hundred thousand Italian troops in case he should make war on the Rhine, and with the King stood the court and the old Cavourian Moderate party. Not Quintino Sella though, the unpopular Minister of Finance, the only Minister, perhaps, who could oppose the King without offending him. Sella, a strong, stalwart, still young man, had never shouldered a musket or unsheathed a sword for Italy, whereas Minghetti, Azeglio, on the contrary, had fought and been wounded. One day, writes Sella's biographer, "in the heat of dispute, King Victor said to Sella, 'I quite understand that to wage war courage is needed.' 'Yes,' said Sella, 'but more courage is needed to oppose your Majesty than to wage war.' To which the King, with proud, disdainful gesture: 'One sees clearly you belong to a race of cloth merchants [all Sella's family were cloth manufacturers].' 'True, your Majesty, I belong to cloth merchants who have always honored their signatures, whereas this time your Majesty would sign a bill which he is by no means sure to pay.'" The fate of Italy hung in the balance; the entire country clamored, To Rome, to Rome! Mazzini was a prisoner at Gaeta, Garibaldi blocked at Caprera, and this time every member of the Left, Crispi and Bertani at their head, declared that unless Rome was entered through negotiation or assault by monarchy, they would head the revolution and man the barricades. A meeting of the entire Left was held and a committee appointed, composed of Rattazzi, Crispi, Cairoli, Fabrizi, and Bertani, to draw up their final resolutions. Sella, uninvited, appeared in their midst, and pledged his word that Italy should enter Rome or that he would join the Opposition, and the Left consented to await the fulfilment of the promise, but *with ordered arms*.

Once Rome capital of united Italy, came the

real tug of war between the Right and the Left, you may really say between Conservatives and Progressists—war to the knife. But the mere fact of the entry into Rome left the handle of the knife in the hands of the Moderates, who for the next six years exercised actual despotism. At length in 1876 the Left came to power. Their advent was hailed as a victory, and a general millennium expected. Delusions, of course, followed, yet many items of the Liberal programme have been carried despite the desperate efforts of the Conservatives. Manhood suffrage is secured—all males of twenty-one who can write their own names are electors; the forced paper currency is abolished; abolished the terrible grist tax; diminished by one-third the tax on salt—yet no commercial or industrial crisis has followed; on the contrary, Italian *rente* is at par, and it is affirmed that the balance between income and expenditure is attained. The Italian Army, as I showed in a late letter, is virtually an army of citizens, as all able-bodied men between given ages are bound to serve in the ranks, youths destined for the priesthood not excluded.

Nevertheless, the tendency, under the Liberal régime, has been toward a general disorganization. The Massowah business brought affairs to a climax, and the position of Depretis, Premier since 1881, came virtually to this: "I have the confidence of the King and a floating majority in the House. If you leaders of the Left won't come to the rescue, I shall have to make terms with the Right or resign and advise the King to call a Conservative Cabinet." Long and serious were the consultations among the old leaders of the Left. A fresh alliance with Depretis was too repugnant to Cairoli; Nicotera hitherto has stood aloof; Crispi and Zanardelli agreed to join Depretis once more if he gave in his adhesion to the completion of their programme. This he did verbally; his illness, which must prove fatal at a not far distant period, had not left him the physical strength to resist. Zanardelli, as Minister of Grace and Justice, is a pledge to the country for the morality and strict legality of the Administration. Crispi, in less than three months, has carried through to completion more work than Depretis alone did in two years. First he set his face dead against the grant of a "provisional budget," compelling each department to present its respective accounts and estimates, have them examined by the House, voted and passed. Reconciliation with the Vatican at his advent was called "the question of the day." The way in which he treated it—admirably seconded by Zanardelli—shows how much he has gained by the last twenty-five years of parliamentary experience. The Conservatives came in hopes, the Liberals in a perfect panic, to hear how, when, and why the olive branch had been tendered from the Quirinal to the Vatican. Crispi paid a hearty tribute to Leo XIII., "that extraordinary man," but showed that Italy had nothing to offer in the way of reconciliation, seeing that she had never waged war with the Papacy as a spiritual power; that liberty was the order of the day; that as soon as Catholics availed themselves of the liberties guaranteed to all Italian citizens, the better it would be for themselves. He did not add—the better for Italy, nor does he think so: he takes purely constitutional ground: "Italy cannot yield one iota; she cannot restore the temporal power nor enlarge by an inch the territory over which the Pope has jurisdiction, because no single Italian could be compelled to become his temporal subject. Youths destined for the priesthood cannot be exempted from the conscription any more than other students. The Papal guarantees remain intact; personally, the Pope is as inviolable as the King himself. Catholics can become electors and elected when they choose. Once having taken their oath to the King of Italy, they can fight for their rights on legal grounds."

The Liberals in the House and throughout the country have pronounced their entire satisfaction with these declarations. The vast cleverness of Crispi has been shown in leaving all the onus of the reconciliation on the Pope and his adherents. When the Catholics avowedly and openly take part in political elections, as a compact, disciplined, and obedient legion, then will come the real battle, and we shall see Conservatives and Clericals join hands against the Liberals. This Crispi clearly foresees, and distinctly and rigidly, as is his custom, is pressing forward some of the most important points of the Liberal programme. He is preparing for a siege, arming and training future soldiers for a future battle-day. The three chief points are, the reform of the Senate; the reformation of the prefectures or provincial governors; the total exclusion of all *impiegati* (civil servants) from Parliament. Taking the last measure first, he states it simply thus: henceforward electors can choose any eligible citizen, whether he receive pay in any form from the Government or no; but when once his election is duly confirmed by the House, he must make his choice—remain a paid servant of the state, or become a political legislator. (A tenet of the Liberal faith not yet enunciated from the Ministerial bench is the remuneration of all deputies, so that men of talent and character who must work with their heads or hands in order to live, shall not be excluded from the national Parliament.)

The reform of the prefectures is considered by many as the axe laid at the root of the tree of electoral bribery and corruption; but a long experience and special studies of real Italian life convince me that its perfect consummation will require many more years than can be left to an old man's lifetime. Prefects are ostensibly provincial administrators—in fact, they are the political agents of the existing Government. Crispi, reiterating the pledge given by his party that the Government shall abstain from any sort of interference in the elections, has presented his bill, and obtained the sanction of the House for reducing prefects to their original office. By pensioning off inveterate sinners, inspiring less hardened offenders with due terror, and nominating new men to the vacant posts, he probably will succeed in preventing prefects from using their prefectural authority and power in favor of this party and against that; but Cavour's openly avowed theory that it is the right and the duty of Government to exercise its electoral influence, has taken such deep root in the hearts of mayors, municipal secretaries, and Government officials, that it will be next to impossible to uproot it.

With regard to the reform of the Senate, Crispi, in the blandest way, has requested the Senators to "reform themselves," and they blandly answer, We will try. It is well known that a Senate elected, and not nominated by the King, is an article of the Liberal creed; and to this we shall come if the Catholics and Conservatives do not join hands in time.

I should not have troubled your readers with so many details anent the new Minister of the Interior, did I not consider his advent at this especial moment as an event of extraordinary importance in the history of Italian monarchy. Crispi has never been a popular man, and has never sought popularity—he is more feared than loved; but he has had a fixed goal in view for the last five-and-twenty years, and has gone straightly and steadily towards it. The old proverb adapted, Set a *conspirator* to catch a *conspirator*, is applicable to him. The other day, his answer to Cavallotti, the leader of the extreme Left, illustrates his character: "We leave you a free press, full liberty of association. Say your say and do your worst. We don't fear you in the least, but don't mean to help you by making of you victims and martyrs. Mazzini was a man of genius and a man of order. A republic in his time was possible; with you it is impossible." Yet when a meeting in the Capitol was convoked, the head of the police prohibited it on the ground that it was against the law, which it is. If Crispi lives long enough, and no untoward events intervene, he will introduce his social reforms to ameliorate the condition of the working and peasant classes, availing himself for that purpose of the two billions of francs belonging to the *opere pie*, or charitable institutions, of Italy. Thus will the programme, The King and the People, be realized, and monarchy be fortified on a broad popular basis. It will be well, meanwhile, to remember the proverb, "'Twixt the cup and the lip." J. W. M.

JOTTINGS OF A SWISS TOURIST.

CHAMONIX, HAUTE-SAVOIE, July 17, 1887.

THE 14th of July, the anniversary of the capture and destruction of the Bastile, is kept as a national holiday throughout France, and was celebrated at Chamonix on Thursday last with as much enthusiasm as the most ardent adherent of the Republic could desire. The town was gay with flags, mottoes, and preparations for illumination. Before five o'clock in the morning a salvo of guns announced the commencement of the fête, and made many a tired traveller curse the Bastile and the French Republic. The firing of guns was kept up at irregular intervals during the day; the local band paraded through the village playing national airs; a public dinner and ball, admittance to which cost three and a half francs, took place in the evening. From 9 to 10 P. M. there were displays of fireworks in front of several of the hotels and of the *mairie*. On the various heights on each side of the valley bonfires were lit, or brilliant lights exhibited. At the Grands Mulets, six thousand feet above the village, and in the midst of snow and glaciers, a brilliant star-like light was exhibited for an hour. Fuel and combustibles are scarce and costly up there.

It was pleasant to an Irishman to see the enthusiasm of the people, and the evident attachment to their Government and institutions; but it surprises me to find among the inhabitants of this valley a very general contempt for their Swiss neighbors. They look down on them and their system of government. A peasant with whom I spent a pleasant hour on the Col de Voza, where he had a troop of sixteen cows, expressed very strongly what others have also said to me. He had had better opportunities of seeing the world than his neighbors; he had served in the Crimea, had been for a short time in New York, and had travelled through Switzerland as a cattle dealer. A French Catholic, he gave the highest praise to the Protestant Canton of Vaud. Of the Cantons of Valais, Grisons, and Berne, in which he had travelled, he said, "Ils manquent la civilisation; ils sont bruts." Manners, customs, dress were all found fault with. This man, like many others, officials and peasants, with whom I have chatted, maintained that the Swiss police and courts are lax and inefficient; that thefts, assaults, and sometimes murders are not punished; and that the Swiss papers omit to report many such outrages. This is probably a common complaint on the frontiers of adjoining states; it does not appear to be borne out by the official criminal statistics of Valais.

Tourists are of more importance to the Chamoniards than politics. But for the hotels and the annual invasion of travellers, Chamonix would be a place of no more importance than

many another mountain glen. Pen, pencil, paintbrush have all proved inadequate to convey any idea of its scenery. Accounts of ascensions, accidents, and adventures on the mountains have been wearisomely multiplied. Few travellers trouble themselves about the life, occupations, and interests of the inhabitants, or the local government and constitution of the valley. The commune comprises part of the valley of the Arve, about 12 miles in length, bounded on the north by a range reaching to a height of nearly 10,000 feet, and on the south separated from Italy by the *massif* of Mont Blanc, none of the passes across which are less than 1,200 feet in height. The Commune of Chamonix contains many other villages besides the group of hotels which is known to travellers as Chamonix, but its entire population is only 2,400. The Secretary of the Commune informs me that the head of almost every family resident is a landowner; there are not 20 residents who are not owners of at least a house and garden. In addition to his homestead, each citizen has a share in the extensive though generally poor pastures which belong to the Commune. On these common lands, all lying at a high altitude, sheep, goats, and cattle can be kept for about three months in the summer. The extensive forests belonging to the Commune are managed by the French Forest Department, and wood is sparingly supplied for a trifling charge to the citizens. In Switzerland, on the contrary, each commune manages its own woods; an allotment is made by the Communal Council every year to each citizen, generally without any charge. He thus obtains his fuel and sometimes more valuable timber for building without expense. The Commune of Chamonix has other resources besides its common lands. It has built hotels, taverns, and mountain cabins for travellers, the rents of which amount to about $8,000 a year. The excellent hotel of Montanvert, 3,000 feet above Chamonix, the inn at Pierre Pointue, the comfortable cabin at the Grands Mulets, have all been built by and belong to the Commune. The Communal Council, composed of sixteen members, is renewed every four years; the *maire*, chosen by the Council from among themselves, has two votes. There are many who are poor, but there is no pauperism—waifs and strays from Italy and Switzerland receive occasionally assistance from the "caisse des pauvres," which is also available for the few citizens who may, through fault or misfortune, become really destitute.

The demand for guides, drivers, muleteers has diverted a large section of the population from their natural occupations, and is said to be one cause of the decline in the price of agricultural land. The number of men calling themselves guides is nearly 250, but, though dignified by such a title, many of these men are merely muledrivers. The rules and charges of the guild of guides have been the subject of many complaints, not only by travellers, but by the hotel-keepers, who do not find the excessive charges for small excursions conducive to their interests. This week the hotel-keepers have forwarded a representation to the Prefect of the department, with the object of having some changes made in the rules and a diminution of the charges for some of the excursions. The rule which obliges a traveller to take, for all except the higher ascents, the guide who is "on turn," is particularly objectionable; it is not pleasant to spend a long day, or possibly several days, alone with a man who is not a pleasant companion as well as a good guide.

In connection with the periodical movements in advance and in retreat of the large glaciers, it is of interest to find that tradition, supported by some documentary evidence, relates that there was a time when the passes between Chamonix and Courmayeur, on the Italian side of Mont Blanc, were comparatively free from snow and ice. It appears that at one time the people of Courmayeur could leave their villages and reach Chamonix in time to attend the religious services there, making the passage in six or seven hours. The same journey now requires about eighteen hours, is impossible in bad weather, and is only attempted by parties of at least three persons, with the usual appliances of ropes, etc., to avoid the dangers of the glaciers. Traces of a road have been found, appearing from under the edge of the ice. The transit of the Alps by Hannibal's army may thus have been made under very different conditions from those which now exist. The parish of Courmayeur appears to have been some five hundred years ago a dependency of the ecclesiastical establishment at Chamonix, although now there is absolutely no communication between the two places, the passes being only traversed by Alpine climbers.

The most recent observations show that after a period of rapid retreat and diminution in size, the glaciers in the valley of Chamonix are again beginning to advance. The Glacier des Bossons descends to a level of not more than three thousand feet above the sea. During the last three years its lower extremity has advanced at the rate of fifty yards a year. A grotto cut out of the ice in May, 1886, about a quarter-mile from the extremity, has moved down for more than sixty yards, and has been replaced by another, which is also moving forwards. The other glaciers do not admit of the same very exact observations being taken, but they are distinctly advancing and increasing at their extremities in width and height. It would, however, take many years of advance at their present rate before they occupied the ground which, within the memory of living persons, they once covered.

A word must be said as to the Chamonix hotels, about twenty in number. They are clean, comfortable, many of them luxurious, and excessively cheap. Persons who wish to make a prolonged stay can live at the best of them—rooms, good meals, and attendance included—for a less cost than one often pays for a very ordinary dinner in Paris or London. In this respect the arrangements for the comfort of travellers contrast very favorably with those of the "Société des Guides."

Correspondence.

GEORGE ELIOT'S RELIGIOUS VIEWS.

To the Editor of The Nation:

Sir: In one respect the impression, which seems to have been generally taken from such meagre account as we have yet had of the influences in operation about George Eliot about the time of her change of religious views, has not rightly represented the real facts. Some twenty years since I had, in a letter from Miss Sara Hennell, some of whose books I had just then made a notice of in the *Christian Examiner*, an account which put the facts in their proper order. It was to the effect that all the free-thinking which was in vogue in the circle to which the Hennells belonged at the time that we come to know them in the history of George Eliot's life, originated with Mr. Bray, whom Caroline Hennell married. Miss Hennell's statement in her letter to me was, that after her sister's marriage to a gentleman who urged upon her free-thinking opinions, the brother, Charles Hennell, was called in to meet these opinions by a defence of the faith which they undermined, and that on attempting to do this, he found the case so different from what he had assumed it to be that, instead of pressing the defence of traditional faith, he undertook as complete a critical inquiry as was then practicable, and, as a result of investigations thus occasioned by his inability to answer Mr. Bray, came to conclusions which were a complete surrender to Mr. Bray—conclusions which he proceeded to embody in a book which substantially anticipated those of the great German heresiarch, Strauss, but which was itself anticipated by the opinions and conversation of Mr. Bray.

When our George Eliot wrote, November 13, 1841, that her mind had been for the last few days engaged on the inquiries which resulted in her change of faith, we have but to turn back to her previous letter of November 2 to see that with that date she entered upon close personal relations with Mr. and Mrs. Bray, having had a friend before this in Mrs. Pears, Mr. Bray's sister. Mr. Cross most unfortunately lugs into the place between the real facts of November 2 and those of November 13 an account of Mr. Charles Hennell's 'Inquiry' written by George Eliot eleven years later, and he as good as says that this book effected the conversion of the pupil of Mr. Bray, who, for all we know, may not have read the 'Inquiry' as early as this, but who had beyond a doubt come under the influence which had converted Caroline Hennell and Charles Hennell.

What was due, for a proper filling up of this passage in George Eliot's life, was an account of the real facts as to Mr. Bray and the close relation into which our George Eliot had come to him from November 2. A hint of the true state of things—the relation to Mr. Bray, not to Mr. Hennell's book—is given by George Eliot's reference to the sister of Mr. Bray as "my guardian angel," very soon after the conversion which I assume was wrought, as Mr. Hennell's was wrought, by the conversation of Mr. Bray. The only preparation which we need presume to have existed was that of George Eliot's nature as indicated by herself at this time. Two months before, she had written: "How should I love to have a thorough-going student with me, that we might read together"; and, shortly after, she said of herself, "Ivy-like as I am by nature." In these two aspects of her nature is the key to much which came later in her life, and certainly the key to her coming under the influence of Mr. Bray's conversation, as I assume that she did. It does not appear that Mrs. Pears, the sister of Mr. Bray, was one of his converts, but that she was very considerate in her treatment of the young lady who had yielded to the persuasions of her brother, because he was her brother and she could not blame as she might otherwise have done.

It may be added to what I have said of George Eliot's nature that she had been lately coming to the conclusion that character is the chief thing in religion, and that her mind had gained some glimpses of broad learning and faith before she met Mr. Bray in intimate converse; but these are common enough without constituting a preparation for such a surrender of faith as George Eliot suddenly made.

Edward C. Towne.

Cambridge.

MISSOURI'S TEST OF EXPERTS.

To the Editor of The Nation:

Sir: In one of the recent numbers of the *Nation* you point out an example of apparent introduction of opéra bouffe into real life. I can give you a real case of opéra bouffe in public affairs, and will do so for the benefit of such of your readers as have heard of the great State of Missouri, and who will like to know how they do things there.

An act of the General Assembly referring to mines and mining, inspection, management, safety, etc., was approved March 30, 1887. Section 12 of that act reads as follows: "Upon the recommendation of a Board of Examiners, to be appointed by the Commissioner of Labor Statistics and Inspection, to consist of two practicable [*sic*] miners, two operators, and one mining engineer, the Governor shall appoint an Inspector of Mines," etc. The law then goes on to describe the duties of the office, which is a purely technical one. I believe that it will be excusable if anybody understands the language of section 12 to refer to an examination of applicants by the Board of Examiners, in which examination they would have to show their qualification for the office. So far, all seems right and like a step in the right direction. But now the opéra bouffe.

In a public notice of May 4, the Commissioner of Labor states that "the Board of Examiners will meet for the purpose of examining *applications* of persons desiring to be recommended to the Governor for appointment as State Mine Inspector; that applications have to be accompanied with *recommendations* as to qualification," etc. This public notice interpreted the Missouri idea of a Board of Examiners for a technical office. Not the *applicants* were to be examined, but their *recommendations* as to qualification. The applicant with the longest string of recommendations and the most influential backing was the one best qualified for the office. W.

Sarcoxie, Mo., July 28, 1887.

THE MAGIC WAND.

To the Editor of The Nation:

Sir: The letter of your correspondent "Maine" is an admirable specimen of that widespread distaste for the restraints of inductive logic which makes theology, and political economy, and mind-cure, and many other subjects, such slippery ground for most of us weak mortals. The facts which have come under his observation may, indeed, be inconsistent with the theory that the witch-hazel's efficacy is a delusion, but certainly nothing contained in his letter is in the smallest degree inconsistent with that theory. "Maine" may know of cases in which people in his neighborhood attempted to pierce wells without resort to witch-hazel, and failed in consequence, but he doesn't mention any such case. What he tells us is that a man who uses witch-hazel, and who is in the habit of digging wells in the vicinity, finds a place where he says he shall strike water at a depth of some eighteen or twenty feet, and then does it. Nothing very startling in this, I am sure; and yet it is all there is in "Maine's" statement. The least we can ask before paying any attention to this phenomenon is a comparison with some attempt to get water without the aid of the magic wand. Of course in the meantime we are at liberty to hazard the shrewd conjecture that the liquid treasure was buried in other places besides the one which the conjurer discovered. F.

July 30, 1887.

Notes.

The *Forest and Stream* Publishing Co. will publish directly 'Steam Yachts and Launches,' by C. P. Kunhardt.

'The English Language: its Grammar, History, and Literature,' by Prof. J. M. D. Meiklejohn of the University of St. Andrews, Scotland, is nearly ready from the press of D. C. Heath & Co.

Mr. W. A. Clouston, whose 'Popular Tales and Fictions' we recently reviewed, is about to print privately a work of much interest to lovers of Oriental tales. It is entitled 'A Group of Eastern Romances and Stories,' and consists of translations of the following works: 'Fortune and Misfortune,' a Persian story-book of unknown date; 'The King and his Four Ministers,' a translation of the Tamil romance 'Alakesa Kathá,' one of the sporadic versions of the 'Sindibád' ('Seven Wise Masters') cycle; 'The Rose of Bakawali,' a Hindí version of an old Persian romance, from the French rendering of Garcin de Tassy; and, finally, 'Entertaining Stories,' from the same collection which furnishes 'Fortune and Misfortune,' and in which are found parallels to some of the *fabliaux* of the Trouvères and tales of the early Italian novelists. The work will be printed uniform with the same author's 'Book of Sindibád,' and will comprise from 500 to 600 pages. The impression is limited to 300 copies, crown 8vo, subscription price ten shillings and sixpence; and fifty large-paper copies (numbered), twenty-one shillings, including postage. Subscriptions may be sent to the editor at 233 Cambridge St., Glasgow.

Mr. Cecil Hampden Cutts Howard, 256 Tompkins Ave., Brooklyn, N. Y., invites subscriptions to a 'History of the Cutts Family,' now in preparation by himself. It will be illustrated with family portraits.

A Walt Whitman Society has been formed in Boston, at 125 West Chester Park, having for its object a weekly pension for the poet, "the promotion of his ideas of spiritual and social life in general, and the establishment of a library devoted to the literature of all nations and times"—translations strictly excluded. Mr. C. Sadakitshe Hartmann is the Director.

The Selden Society (formed to advance the knowledge of our legal history) announces that its first publication will be "a volume of Thirteenth-Century Pleas of the Crown from the Eyre Rolls, preserved in the Public Record Office, edited with a translation by Mr. F. W. Maitland, University Reader in English Law, Cambridge" [Eng.]. "Many of these criminal cases," it is added, "are very interesting, and they throw more light than cases of almost any other class on the manners and customs of the people." It is probable that this publication will also illustrate the early history of the jury. It will be issued to subscribers during the present year. If the number of subscribers is large enough, more than one volume will be issued. It is desired, for obvious reasons, to increase the membership of the Society as much as possible. Mr. Dove, the Hon. Secretary and Treasurer of the Society, explains, in the circular from which we have quoted, that "The annual subscription to the Society is one guinea, due on the 1st of January for the year then commencing. Members have no further liability of any kind. Each subscriber will receive a copy of all the publications for the year. A composition of twenty guineas is accepted in lieu of all annual subscriptions, constituting life membership from the date of composition. In the case of libraries and corporate bodies the privilege extends to a period of thirty years. Intending subscribers who have not yet paid their subscriptions are reminded that the subscription for 1887 is now due and should be paid: in America, to Prof. J. B. Thayer, Cambridge, Mass., who has kindly undertaken to receive all American subscriptions; in England, to myself."

'By the Way: An Idler's Diary' (Boston: Clarke & Carruth) is a variation upon the common book of quotations in that it is meant for the summer tourist, and is furnished with blank pages between the successive blocks of quotation, on which the "idler" will have an opportunity to record his (or her) own *pensées* or quatrains; but the selections are not such as to promise much inspiration.

Mr. W. J. Rolfe has added to his school classics a second Browning volume, edited jointly with Miss Hersey—'A Blot in the 'Scutcheon, and Other Dramas' (Harpers). The "other dramas" are "Colomba's Birthday" and "A Soul's Tragedy." The introduction is made up principally of extracts from other critics, and, in the most valuable portion, from Mr. Arthur Symons, whose excellent handbook was noticed by us some months ago. A letter from Lawrence Barrett is an interesting, but not very useful, addition to the body of criticism on Browning as a dramatist. The usual notes for pupils are placed at the end.

Irving's 'Knickerbocker' (in two volumes), and Shakspere's "Midsummer Night's Dream," eked out with Drayton's "Nymphidia" and fairy poems by Herrick, are the most recent numbers of Cassell's National Library—a series for the pocket in a double sense, being handy to carry and within everybody's means; the best "dime literature" yet published on so large a scale.

A List of Cadets admitted to the West Point Academy from its foundation to September 1, 1886 (and even, by a supplement to the alphabetical conspectus, to June 16, 1887), has just issued from the Government Printing Office. Names of graduates are distinguished by a full-face type, and there is a table showing by classes the promotion of graduates to the various arms of the service.

The second edition of Dr. Wm. Murrell's little work on 'Massage as a Mode of Treatment' (Philadelphia: Blakiston) should be both useful and interesting to physicians, inasmuch as it briefly but carefully describes a method of mechanical therapeutics that is constantly attracting more attention, but which is liable in uninstructed hands to be confused with the rubbing and shampooing of the gymnasium and the bath. Intelligent persons, themselves ill or having charge of invalids, might derive advantage from learning the classes of cases in which this method may appropriately be used, for where it is suitable it often is surprisingly efficacious, and that in directions which sometimes seem hopeless.

Dr. H. B. Adams contributes to the Johns Hopkins Studies in Historical and Political Science a paper on 'The Literature of Charities.' The title is hardly descriptive, as the author does not confine himself to his subject, but introduces a good many brief accounts of the modern attempts to elevate the poor. These form naturally the most interesting part of his paper, and it would perhaps have been as well if the whole of it had been devoted to this theme. Concerning the progress of these benevolent movements in England, he writes: "That country, in spite of its landlordism and class distinctions, is many years nearer the enlightenment of human selfishness, nearer the ultimate harmony of capital and labor, nearer the economic organization of Christian charity, nearer self-help and honest government than is our own country." The literature of charity is a comprehensive term as used by Dr. Adams, and includes the biographies of such men as Arnold, Maurice, Charles Kingsley, Robertson, Chalmers, as well as those of professional philanthropists like Lord Shaftesbury.

A select list of the early caricatures of George Cruikshank before he became a book illustrator is given by Mr. Harry Thornber in the *Manchester Quarterly* for July, with three reproductions, one being the powerful plate of the cavalry charge on the reform meeting held in St. Peter's Field, Manchester, August 16, 1819.

In the Milan *Perseveranza* of July 14, one may read the report of the jury on the first competition for the design of the new façade of the Duomo of that city, Some 400 designs were submitted by 120 architects of many nationalities. These, by the terms of the contest, were reduced

to fifteen, whose authors will now enter upon a second and final struggle for the great prize. An absolute majority of the jury decided every case of the elect, who were led by an Englishman, D. Brade, of Kendal. A German stood second, an Italian third, and the list embraced also one Russian and one Frenchman. Of the eight Italians who are to try again, six are Milanese, holding places from third to fifteenth. Prof. Carlo Ferrario offered five alternative designs. The jury was an international one, having two Germans on it and an Englishman (Alfred Waterhouse). Carlo Visconti was president, Camillo Boito secretary: and the historian, Cesare Cantù, was a member. The new conditions are very liberal, and promise the utmost scope for the designers. Twenty thousand dollars will reward the winner, and the same sum will be distributed among the fourteen who are unsuccessful.

In the July competition of sculptors for admission to the École des Beaux Arts, the honors were carried off by an American student. Of seventy-two competitors, twenty-six of whom are *anciens*, Mr. Edmund A. Stewardson of Philadelphia ranks No. 1, *avec le titre de premier*, a distinction that exempts its possessor from all future *concours de places*.

Le Livre for July, without having any salient article, is readable throughout. Mr. Rees's 'Pleasures of a Book-Worm' is made the text of pleasant discourse on "Bibliomania in England." There is another paper on the great German publishing-houses. A Shanghai correspondent offers some valuable additions to what M. Legouvé had to tell, in a former issue, of Eugene Sue. Among other things he remarks on the singular fact that, in his 'Wandering Jew,' Sue borrowed the names of some of his characters (including Rodin) from one of the Marquis de Sade's filthy novels. An admirable etching of Paul Lindau accompanies this number.

We have been tardy in acknowledging a fine political map of Eastern Africa on a large scale (1:8,000,000), published in Berlin by Dietrich Reimer. Its northern limit is Massowah. Stanley's route to Emin Bey, and the domain of the latter, are embraced in this very useful chart.

Dr. Junker's account of his travels in Central Africa shows him to possess not only the characteristics essential to success as an explorer—courage, tact, endurance, and enthusiasm—but also a singularly attractive, modest, and kindly disposition. Unassuming in personal appearance, he has the power of strongly attaching the natives to him, and gained such an influence over them that he was able several times to prevent wars between two hostile tribes, and on one occasion a native chief marched with a large force to rescue him from another who was thought to hold him captive. Two children, a slave girl of nine and a little boy of about the same age, accompanied him on all his journeys as far as Zanzibar. When furthest to the south, he fell in with the dwarfish race of the Akka, or Tikki Tikki, in their settlements. Notwithstanding these are perhaps the wildest of all the African races, two of them accompanied him for years, one finally falling into the hands of the Mahdi's people, together with his collections. Dr. Junker pays a high tribute to Lupton Bey for his long-continued resistance to the attacks of the rebels.

The long list of economical works by M. G. de Molinari has been swelled by the addition of 'Les Lois Naturelles de l'Économie Politique' (Paris: Guillaumin et Cie.). It is impossible to resist the charm of the lucid and eloquent statement of these laws, and the volume would very well serve as an introduction to the theory of the science. But it is quite too doctrinaire for the present day, and although it cannot be maintained that the "historical school" of economists have battered down quite as much of the work of their predecessors as they set out to, yet they have made à-priori methods temporarily unfashionable.

'Le Grand Monde,' the first volume of "La Société de Paris," has been issued with the imprint of the *Nouvelle Revue* (Boston: Schoenhof), although, unlike the similar works which have preceded it, it has not appeared, even in part, in the *Revue* itself. The personality of Comte Paul Vasili, the pretended Russian diplomat who signs these *Sociétés* of the various great European capitals, has never been very well maintained, and he is less of a reality than ever in the present volume. The *grand monde* of which he undertakes to write, with a pretence of forming a part of it too transparent for consideration, is as superficially described as was to have been expected. A familiarity with great names, and even with the relationships and external associations of famous aristocratic families, or the knowledge, so easily acquired, of the personal appearance and manners of an exclusive society which can be seen on a hundred public occasions, is not a sufficient foundation for an interesting or a valuable book, and 'Le Grand Monde' is neither. Succeeding volumes, on the republican, the literary, and the artistic societies of Paris, may possibly redeem the complete work from the mediocrity of the portion now published. That this series of *Sociétés* should have met with a certain amount of success in the European countries whose courts they attempt to picture, is not very surprising: but that they should be among the French books which are much sold in this country is at once surprising and saddening.

A curious Hebrew version of the 'Roman d'Alexandre' has just been published in Paris by M. Israel Lévi, and presented to the Academy of Inscriptions and Belles-Lettres at its session of July 1. A note in the proceedings of the Academy indicates that this Hebrew text is th translation of an Arab work of which the original is lost, and that this was itself the translation of a Latin version from the Greek of the Pseudo-Callisthenes. The value of the text will not depend upon the establishment of this series of transmigrations of the old Greek story, dear to the Middle Ages, from one of these languages into another, but upon what the text contains within itself to throw light upon the previous versions which no longer exist, whatever they may have been, and so upon that part of the history of mediæval popular literature relating to the connection of the early Greek romances with those of western Europe. This is a subject of which the sometimes extremely dry details have been made attractive by M. Paul Meyer in the second volume of his 'Alexandre le Grand dans la littérature française du moyen âge,' published last year (Paris: Vieweg; Boston: Schoenhof).

A great number of unpublished letters of Leibnitz have just been discovered in the Library of the University of Halle. These letters were among the books and papers of a professor of mathematics, named Pfaff, who, after the suppression of the University of Helmstadt in 1809, became a professor at Halle. He died there about 1830, and his friend, Prof. Gartz, endeavored to induce the University to purchase his library. As it was not considered of sufficient value, this was not done, and the books and papers composing it remained in the hands of Prof. Gartz until his death, when his own library, including that of his friend, was purchased by the University. It was packed away, and remained unexamined until very recently, when a request was made by some one at a distance to have some researches made in the library of Prof. Gartz. The discovery was then made, in a package of manuscripts which had not before been opened, of sixty hitherto unpublished letters in the handwriting of Leibnitz, as well as a great number of copies of other unpublished letters of the great philosopher. They are most of them addressed to professors in the University of Helmstadt, and are written some in Latin, some in French, some in German, and relate entirely to mathematical science. The letters have been placed in the hands of the well-known professor of philosophy in the University of Berlin, E. Zeller, to whom the Prussian Academy of Sciences had previously intrusted the editing of a complete edition of the works of Leibnitz.

—The August *Harper's* has a midsummer character, and offers an abundance of light reading upon topics ranging from the mildness of the Christian mosaics at Ravenna to the dime-novel ferocity of the Buccaneers of the Tortugas, and from grizzly-bear hunting to "hypnotic moralization"—but this last is hardly more than what is known in magazine literature as an "open letter." Mexico and Siberia are the foreign-travel limits, the Niagara River and Mobile the domestic; there are sketches and portraits of the Irish party in the Commons, and the history of the sail among the seafaring nations is patiently illustrated by some sixty-odd cuts. This is a really instructive series, and one learns from studying it how the ship grew to be what it is, better than by a more elaborate text. The reference of the author to one subject, of some special interest now, is brief and sharp. "It is to the Americans," he says, "that we are indebted for the centre-board or Una-boat—a sort of skimming-dish that has produced a large crop of second-rate amateur boat-sailors; in fact, these boats are so handy in smooth, shallow water, that they may be called the land-lubber's boat"—and there he makes an end.

—*Scribner's* shows no sign of the summer lassitude customary with the magazines at this season, and does not relax in its standard or fall short of its remarkable excellence. It has carefully refrained from literary sputter hitherto, and it seems equally determined to give us no literary slops. One can read this number for August without having to lay aside his thinking habits. The letters from Thackeray are light reading of the best kind, with a little extrinsic interest at the opening which is about Arthur Hallam's funeral services; and the letters of "the New York girl eighty years ago" come to a close with the writer's early death, but not before her situation and her qualities have begun to win upon the reader. In this instalment, too, there is a fine direct glimpse of Rufus King. The atmosphere of Holland, as seen by the artist, is as effectively touched in print by George Hitchcock's pen as by his pencil in the illustration; and what he writes helps indirectly to explain the curious fortunes of Dutch painting. Prof. Shaler continues his chapters of science by a very successful paper upon the general nature, the motions, and especially the storms of the atmosphere. The cuts in this article, especially those devoted to exhibiting the look and the comparative effects of tornado destruction, are very useful in realizing general facts to the eye. An article on handicraft is the last noticeable subject.

—All of the numerous articles on Russian literature which have appeared of late have been, avowedly or unavowedly, founded on 'Le Roman Russe' of M. E. M. de Vogüé. The prize article in that line, and the one which is likely to wear the prize for a long while to come—being "by merit raised to that bad eminence"—is that in the August *Atlantic*. Setting aside the errors in French which appropriately follow the remark that "nobody reads the Russian novel with gusto who does not also read French with ease," these are a few of the points which the careful reader will note: 'The Mémoires d'un Seigneur Russe' is not an "enlarged edition of the 'Récits

d'un Chasseur' under a more appropriate title." Both are tolerably inaccurate translations of 'The Journal of a Sportsman'; both contain precisely the same sketches; and the latter has, if anything, the advantage, so far as title is concerned. Turgeneff was not exiled to his estates for calling Gogol a "great man" until after the latter's death, when the offence occurred in connection with the obituary notice. 'Taras Bulba' is not "a powerful tragedy in verse," but in prose. What the writer means by "the stout old Emperor Nicholas, a giant indeed beside his puny (*chétif*) majesty of to-day," it is difficult to understand. *Chétif* is an adjective of physical attribute, and in size and strength Alexander III. compares not unfavorably with Nicholas. As to the writer's favorite adjective "old," it can only plunge the reader into despair. The Emperor Nicholas is "stout and old" at the age of thirty-nine; Dostoyevsky is "in his grim old age" at thirty-nine (1860), the date when Turgeneff wrote 'Fathers and Sons,' which was the cause of the misunderstanding between them, and was only fifty when he (Dostoyevsky) retorted with his own 'Devils.' Pushkin, "the old man," is introduced as making a remark "some time in the forties." Pushkin died in 1837, aged thirty-seven. The writer cherishes a hope that Count Tolstoi, at the age of fifty-nine (she calls it fifty-seven), has not said his last word in literature. Turgeneff did not reside out of Russia wholly on account of serfdom, nor from sentiment after that was abolished. There were family and other reasons. The 'Annals of a Dead House' was published several years, and more than once, in English, before 'Crime and Punishment,' thus controverting the statement that they were "given to the world in the wrong order." And so the writer trips (in the literal sense) gayly on. But her master-stroke is the foot-note anent 'Dead Souls,' which is absolutely incomprehensible. "The title 'Dead Souls,'" she says, "appears to me so much more remote from all the associations connoted by the original than even the French one, that I have preferred to stick to the latter." As both 'Âmes Mortes' and 'Dead Souls' are perfectly literal translations of the original title, and as the sense in all three cases is absolutely identical, this remark may serve as the riddle of the modern Sphinx. After the above-noted specimens, and especially as not a single fresh or original hint towards the understanding of "the spell of the Russian writers" is vouchsafed, the reader will be likely to echo the writer's summing up of her performance: "The impertinence of the attempt seems all the greater."

—'The Misrule of Henry III.,' 1235-1266, selected and arranged by the Rev. W. H. Hutton (London: D. Nutt. Pp. 162), belongs to the same series as Ashley's 'Edward III. and his Wars' ("English History by Contemporary Writers"). Excepting about eleven pages, it consists wholly of extracts from the writings of Matthew Paris. Some of these excerpts might well have been replaced by passages from other contemporary chroniclers—the Annals of Burton, Waverley, Dunstaple, Osney, etc.; and from the public records—the Statutes of the Realm, etc. Prefixed to the story of the crucifixion of a boy by the Jews in 1244, we find this editorial comment: "If the tale seems incredible, we may imagine how incredible the dynamite plots will seem 600 years hence" (p. 91). Mr. Hutton evidently believes these stories, though it is commonly supposed that the enlightened criticism of the nineteenth century had completely unniched such saints as Hugh of Lincoln. Even the church historian of 200 years ago rejects Mr. Hutton's narrow view. "In such cases," says Fuller, "weak proofs are of proof against rich offenders. We may well believe, if their persons were guilty of some of these faults, their estates were guilty of all the rest." The characterization of Matthew Paris on p. 150 ("In place of an almost colorless narrative, we have a series of brilliant historical criticisms," etc.) is borrowed almost verbatim from page 271 of Gardiner and Mullinger's 'Introduction to the Study of English History,' without any reference to the latter and without the use of quotation marks. Mr. Hutton's book is useful, but it scarcely gives us all that was promised in the prospectus of the series—"a living picture of the effect produced upon each generation by the political, religious, social, and intellectual movements in which it took part." It and the preceding volume will be issued in this country this month by the Messrs. Putnam, by a special arrangement with Mr. Nutt covering the entire series.

—Elme-Marie Caro of the Académie Française and the Académie des Sciences Morales et Politiques, Professor of Philosophy in the Faculty of Letters, and one of the most brilliant writers in the *Journal des Savants* and the *Revue des Deux Mondes*, died in Paris July 13, at the age of sixty-one. As a professor of philosophy and as a writer, M. Caro represented what is called the *école spiritualiste* in France, though it would not be true to say of him that he was merely a disciple of Cousin or a follower in his steps. He was always, as M. Gréard said of him in the most striking of the addresses made at the funeral ceremonies, a *moraliste militant*. He was not satisfied with stating his philosophic faith: he attacked what he considered to be the fatal errors of the present day—materialism, sensualism, pessimism: and he attacked them in their most famous representatives — Schopenhauer, Hartmann, Littré, Goethe, Leopardi. With remarkable clearness and eloquence, he was accustomed to present the doctrines of his adversaries in the most attractive and convincing manner, with all the resources of a polished and elegant writer and a persuasive orator, and then to point out their weaknesses and turn against them their own doctrines, with an ability as surprising as it was admirable. Of all arguments, metaphysical discussions are the least convincing; and it is not surprising that M. Caro, with all his charm of method and his exquisite finish of argument and of style, did not win over deserters from the camp of the enemy. His own followers were, however, numerous and enthusiastic. From his chair in the Sorbonne, for more than twenty years he preached a philosophy of which the fundamental doctrines were faith in God and in the human soul; and by means of it, in an age devoid of faith, he renewed the triumphs of the great academic orators of the Restoration, in the time when Cousin and Guizot and Villemain roused their audiences to an enthusiasm of admiration which we, in our calmer day and *milieu*, can scarcely comprehend when we read of it. Among M. Caro's admirers, none were more ardent than a certain feminine element—refined and delicate women of society, for whom the distinction and elegance of his style and the elevation and beauty of his sentiments and doctrines had a great charm. Malice, and perhaps envy, delighted to represent him as a lay director of souls, a "philosophe de dames" and nothing more. The occasion of his death has been seized upon to revive this legend, not only by those who know nothing of Caro as a lecturer or writer, but by some whose position at least should have restrained them. How unjust such judgments are, any one knows who has read the articles he has been in the habit of occasionally contributing to the *Revue des Deux Mondes*, or any of his works of philosophical criticism —the series, for instance, containing 'Le Matérialisme et la Science,' 'Le Positivisme et la Religion contemporaine,' 'Le Sensualisme dans la littérature,' 'Le Pessimisme au dix-neuvième siècle.'

RECENT POETRY.

THE men of science seem bent on revenging themselves upon rash poets like Goethe, who have trenched on their domain; or like Emerson, in whom Prof. Tyndall found so potent a stimulator of scientific impulse. If poets affect science, they seem to say, let that also invade poetry. The same thing was tried by the elder Darwin in his day, and it is curious to see how much alike, in successive centuries, are these gambols of the wise. Take, for instance, a passage like the following:

> "Forth of the elements she calls a few
> To wield for her an oligarchic rule—
> Dark Carbon, earthy and inert, awake!—
> Come, airy one, who, rushing to thy choice,
> Art sweet in glittering fountain, but, deceived
> By other contact, nursest liquid fire!—
> Come thou, her lover, god of flame be mine,
> Servant of life, but tyrant over death,
> And fellow-labourer of the glorious sun!—
> And, lastly, thou who feedest not the flame—
> Though they shall give to thee the name Azote,
> Wake and for ever bear the keys for me!
> She bids them rise and join their hands in one:
> Four genii are they of the lamp of life"

These lines are not taken, as might well be supposed, from the elder Darwin's 'Loves of the Plants,' but from page 44 of 'Scala Naturæ,' a blank-verse poem in five books, by Mr. John Cleland of Glasgow (Edinburgh: Douglas). The successive steps upon his ladder are as follows: (1) The Eternal; (2) Heaven and Earth; (3) The World of Flowers; (4) Life Served by Sense; (5) Sense Leading on to Thought. The whole is composed of solid reflection, put into neat sentences, divided correctly into blank-verse lengths, and without a trace of anything that the severest scientific brother could censure as poetic expression. We must admit that we have found it very heavy reading as verse, and would gladly see a few pages of it rendered neatly—it would not need much rendering—into conscious and avowed prose. There is more that is interesting in the work of another scientific man, George M. Minchin, M.A., Professor of Applied Mathematics in the Royal Engineering College at Cooper's Hill, England, who offers us a poem in quatrains, under the name of 'Naturæ Veritas' (Macmillan), which is supposed to represent a conversation held by a mortal with an inhabitant of the star Aldebaran. The theory developed is, that man's mind is not to be regarded as the measure of the universe; and the versification suggests Omar Khayyâm just remotely enough to be fatal, although there are some strong lines and fresh thoughts. One-half the little book is occupied by a prose prelude describing "Stellar Visits." Here the suggestion is of Stockton and Hale, but the touch is so incomparably less free and light than theirs as to make one quite indifferent to the "Houses of Insulation" by which criminals are instantly put to death in the star Beta Cygni, and the "Sacred Discharging Tongs" by which the comparative electricity and therefore the compatibility of two lovers are officially tested. On the whole, the poetic diversions of the scientific men of England can hardly be regarded as so successful as those of her "Retired Judge" who gives us in 'Bumblebee Bogo's Budget' (Macmillan) a good deal of excellent fooling.

Among the books of the months there are two volumes, both American, which are rich in out-of-door flavor. Readers of the earlier volumes of the *Atlantic Monthly* may recall a poem by a correspondent at the time unknown, the verses being entitled "John o' the Smithy." It was a contribution that thoroughly delighted the editor, Mr. James T. Fields, who was never weary of reciting its vigorous refrain:

"Down in the vale where the mavis sings,
And the brook is turning an old-time wheel,
From morning till night the anvil rings
Where John o' the Smithy is forging steel.
My lord rides out at the castle gate.
My lady is grand in bower and hall,
With men and maidens to cringe and wait,
But John o' the Smithy must pay for all."
(P. 61.

This hearty ring, and the rather foreign *dramatis personæ*, led readers to suppose that this poem was by some transplanted Yorkshireman; but he turned out, on the contrary, to be an American of the Americans and a woodsman among woodsmen. The title of his volume is 'Forest Runes,' by George W. Sears (Nessmuk) (*Forest and Stream* Publishing Co.). He was born, he tells us, in a cabin on the borders of Douglas Woods, in Massachusetts, near Nepmug Pond and Junkamaug Lake, and has "spent a large share of the summer months in the deep forests, and mostly alone, for fifty years." His face—that of a shrewd and weather-beaten man of sixty-four—looks out of the frontispiece; and his poetry is that of a simpler and more genuine Walt Whitman, that of a man who lives in the open air and speaks his mind. He is incomparably more modest withal, and says, in the prelude to one poem, "Inscribed to the memory of Uncle John Mayo, a Puritan freethinker. . . . If my lines were as good as the man, I could discount Milton." Never actually accomplishing that audacious feat, the author gives us fresh, strong, wayward pictures of man and nature, including some striking delineations of Brazilian life, such as show him to have penetrated remoter forests than those of North America. A more cultivated voice, and therefore more profound and penetrating, while not less hale and courageous, is that of Mr. O. C. Auringer, whose volume of poems called 'Scythe and Sword' (Boston: Lothrop), is inscribed to the Rev. Edward Eggleston. We have encountered no recent collection more full of bold description and of lyric phrases, the strength of which is drawn plainly from an out-door life.

He says finely in one place:

"Thou art the friend and comrade, Poesy,
For whom I suffer all things, still content,
If not in vain for thee my life is spent,
The share of heavenly light that fell on me.
Thou art my meat, my drink, my liberty,
Thou art my garb, thou art my tenement,
Wherein I hide all night from floods unpent,
From lightnings, winds, and scourgings of the sea."
(P. 64.)

Everywhere the author shows this vigor of phrase, as when, in his description of a giant balsam-fir tree, he says—

"The *meteor oriole*, of golden fame,
After all woods and orchards overflown,
Cools in thy ample cloud his heart of flame,
And plies the art so wondrously his own."
(P. 12.)

And, again, of the midnight sound among the trees:

"In the black midnight, hark! a cry, a shout,
As of a night-sea roaring unto sea!
The lightning and the storm have found thee out,
Thy giant kindred hold converse with thee."
(P. 13.)

With sometimes a slight lapse in form, there is a similar fertility of phrase and epithet everywhere, either taking the form of delicacy, as where he writes—

"That *wandering flower* of groves and fields,
The butterfly, *luxurious guest*" (p. 4),

or of strength, as when he greets the breezes in his "Wind Song,"

"Blow, stoutly blow,
Strong in thy heathen joy" (p. 7)

—the italics in all these cases being ours.

To show that rural or woodland life does not necessarily make a man a good poet, we might refer, by way of contrast, to 'Elsie's Wedding, and Other Poems,' by Jasper Barnett Cowdin (Brooklyn, N. Y.: D. S. Holmes). It is a little volume of rustic and domestic poetry, profusely illustrated, and the first verse of the Proem will perhaps give a sufficient impression of both verses and pictures:

"Born amid stirring events,
The breath of War shook my nest;
The glitering regiments
Animated my breast:
My soul to martial numbers
Moved down the adverse years;
The muse delayed my slumbers
With music and sweet tears."

We are requested to mention that the author is about to publish 'The Chasm-Flower, a Heart-Idyl.' We should think this exceedingly probable.

By far the most promising among recent volumes of poetry by women is that entitled somewhat fancifully, after Lowell, 'The Heart of the Weed' (Boston: Houghton, Mifflin & Co.). We count it as the work of a woman, partly by internal evidence, and partly because it has been generally attributed to Mrs. T. S. Perry of Boston, before known as the translator of a remarkable volume of Turgeneff's shorter pieces. The poems have a merit which will not allow their author to remain long unknown; for, although they are unequal, and have here and there a false cadence, they show power enough to set up a dozen of the current mediocrities. Take, for instance, these verses, addressed

"TO A FARMER ON THE DEATH OF HIS WIFE.

"Poor heart bereaved,
What can God give to thee
To compensate for what He took away?
Oft hast thou grieved;
But then she grieved with thee,
And now alone thou first feel'st sorrow's sway.

"All through the day
Shall Sorrow walk with thee;
While the slow oxen draw the heavy plough,
Thy lonely way
Of life thou seem'st to see
In the dark furrow that thou treadest now.

"When sinks the sun,
And homeward thou dost turn,
How sinks thy heart to see the closèd door!
Where is the one
For whom thy heart doth yearn?
Shall her smile bid thee welcome home no more?

"The dry leaves sigh
Beneath thy heavy tread;
The sunset's golden glow fades into night;
As thou draw'st nigh
The very house seems dead,
Nor greets thee with its wonted cheerful light."
(P. 64.)

Here is profound feeling rendered with absolute simplicity—not a false note, not a strained emphasis, nothing that might not be read at any farmhouse door and comprehended. Yet there is about it a sort of shadowy simplicity that makes this quiet strain, like some figure in Millet's paintings, a symbol of the very deepest human emotion. We would gladly quote, also, "I Listen to the Voices," and other fine poems. There is too much introspection, and too continuous a demand upon the reader for sympathy in untold sorrows; yet the promise of the little book is great.

Another work of promise, partly by reason of its exceeding brevity—only forty pages—is 'A Branch of May,' by Lizette Woodworth Reese (Baltimore: Cushings & Bailey). Here is much keen and sensitive observation, with a little archaic flavor that gives charm, as in the following:

"AFTER THE RAIN.

"Dripping the hollyhocks beneath the wall,
Their fires half-quenched, a smouldering red;
A shred of gold upon the grasses tall,
A butterfly is hanging dead.

"A sound of trickling waters, like a tune
Set to sweet words; a wind that blows
Wet boughs against a saffron sky; all June
Caught in the breath of one white rose." (P. 29.)

Compared with these fresh and original studies of nature and life, Mrs. Brotherton's 'Sailing of King Olof, and Other Poems' (Chicago: Kerr) seems a little artificial, and imitative now of Browning, now of Harte; nor can we find that "exquisite beauty of expression" which the publishers—like the publishers of all poets—too rashly claim. That epithet might better be bestowed on Mrs. Margaret J. Preston, with her 'Colonial Ballads, Sonnets, and Other Verse' (Houghton, Mifflin & Co.); and yet, after all, hers is a muse that seems never quite to reach the sacred fire. She comes nearer to it, nevertheless, than Mrs. A. D. T. Whitney, in whose 'Daffodils,' as in her previous 'Pansies,' there are many pleasing traits of feeling and observation, often marred by that constant spasmodic jerk at the end which is so annoying in the conversation of her prose heroines. This is seen, for instance, in the following:

"SPRING IN THE CITY.

"It is not much that makes me glad:
I hold more than I ever had.
The empty hand may farther reach,
And small sweet signs all beauty teach.

"I like the city in the spring;
It has a hint of everything.
Down in the yard I like to see
The budding of that single tree.

"The little sparrows on the shed,
The scrap of soft sky overhead,
The cat upon the sunny wall—
There's so much *meant* among them all."
(P. 54.)

Two collections of what is rather vaguely called Society Verse lie before us—the one called 'Hallo, My Fancy!' by Charles Henry Lüders and S. D. S., jr. (Philadelphia: McKay), and the other, 'Society Verse by American Writers,' selected by Ernest De Lancey Pierson (Benjamin & Bell). Of these two the former is by far the better, just as a single box of confectionery even from a second-rate establishment is apt to be more palatable than a tray furnished from all grades of sweetmeats and hawked through a railway car. The poets of both books celebrate tennis courts and Bar Harbor, and satirize the patient birds on Japanese screens; but the young Philadelphia wits have brought together some very pretty whims and fancies of their own from *Life* and *Puck* and other periodicals, while the larger ambition of Mr. Pierson has revealed some poverty of material. In order to fill out his prescribed space, he has to range from Aldrich to Mrs. Wilcox, and to include contributions as remote from Society Verse as the "Lo and Lu" of Miss Guiney; and though he prints some good things—as the "Rondeaux of the Four Cities," by Robert Grant—yet the general effect of the compilation is so vapid as to make one wish either that there might be no more Society, or that it might never hit upon another rhyme.

If we must have compilations, and if anything can justify the publication of three hundred pages of poor poetry by some five and twenty different authors, it is when their work is made an honest part of local history, as in 'The Poets and Poetry of Cecil County, Maryland,' collected and edited by George Johnston, author of the history of Cecil County (Elkton, Md.: the Author). Such a compilation at once assumes a modest but genuine interest: we see at a glance what class of themes occupied the rhymesters of a certain vicinity at a certain time; the treatment, the language, the very rhymes have a definite, though microscopic, historical value. It is difficult to take a strong interest in discriminating between the grade of genius seen in "David Scott (of John)" and that exhibited by "David Scott (of James)," or in being assured that Tobias and Zebulon Rudolph are brothers, and that Mrs. James McCormick and Mrs. Frank J. Darlington are cousins; but when we consider that the next great genius who is to delight the human race may be at this moment lying in a cradle in Cecil County, Maryland, and that every trifle in his ancestry or antecedents may yet be interesting, we can only wish that there were in every county in the United States as diligent and faithful a purveyor of poetry and genealogy as Mr. George Johnston.

Cecil County does not claim to have given birth to Dr. J. Dunbar Hylton, M.D., LL.D.; and his extraordinary lays, rivalling in length and diffuseness the once famous volumes of the Poughkeepsie Seer, now demand a Hylton Publishing Company at Palmyra, N. Y., to issue them. The latest is a stout octavo, recounting in three hundred pages of doggerel the tale of

'Artaloise, a Romance of King Arthur and Knights of the Round Table.' A brief sample of the argument will perhaps show what the poem itself must be: "The Second Day's Battle, The Fierceness of the Conflict, A Knight sheathed in White Armor rides up to the Roman Line that walled in the Prophet from Them. He breaks through it, drives his spear through the Prophet, and while he is in the act of Falling the Knight Cuts his Head off, and casts it up high in air to the view of all." And thus, in this high Roman fashion, cut and slash, the whole poem proceeds; and everything is undoubtedly exhibited "in view of all," whether it be the knight's prowess or the ladies' charms. The volume is preceded by a portrait and autograph of the author.

From legendary romances the transition is easy to historical plays; and of three or four recent works of this kind the first place should be given to 'Columbus, or a Hero of the New World,' by D. S. Preston (Putnams). It has the heaviness which it is so hard for such a drama to escape, and it is further weighed down by a melodramatic tableau at the end, with "the glorious images of Columbus, Washington, and Lincoln" grouped in the clouds; and furthermore by some rather cautious and restrained endorsements from eminent persons on the last pages. Nevertheless, it has some positive merits—careful study, sympathy, historic vigor, and everything but the poetic quality; of that there is hardly a trace. There is perhaps more of it in 'Wiclif, an Historical Drama' (Oxford: Thornton), a work which bears no author's name, but is attributed to an undergraduate of New College, Oxford. This has withal more of the fire of youth, but some of its inequality of development; this last drawback being yet more marked in the somewhat boyish verses which precede and follow, and in the preface. It is difficult to take very seriously a book which begins with the formal announcement, "There are three Principles in the World—Conservative, Destructive, Reformative. Each of these is good. Each fulfils a just and right part in the World-Soul." But this crude solemnity is not half so bad as the facetiousness of 'King James the First, an Historical Tragedy,' by James Graham (Macmillan), in which the heroic Catherine Douglas—she who barred the door with her arm—is constantly on the stage, filling it with the pert repartees of a waiting-maid. She rises to some dignity, to be sure, in the closing scene, but even that is too melodramatic and confusedly murderous. This is a fault which always attaches also to Michael Field's poetry, and in his (or her) 'Brutus Ultor' (London: Bell; New York: Holt) there is the same quality of excess. It is joined, however, with a dramatic strength unsurpassed in this age, and needing only that maturity which in this case seems to arrive very slowly. There is an oversucculent quality in all the work of this author, and there is a tendency to trenching on dangerous ground; and when a virtuous woman, as Lucretia, is introduced, her modesty is made so self-conscious as to be almost immodest. But for real power this short drama is unsurpassed by any of its author's previous writings.

None of Mr. Edward King's former literary achievements have prepared the reader for the elevation of tone and the sweet poetic treatment of his 'A Venetian Lover' (London: Kegan Paul). It is a blank-verse poem of love in Venice, the lovers being respectively Italian and American; and though it cannot be called great and is sometimes tame, yet it is an honest and worthy piece of literary work, while some of the subordinate poems introduced would be worthy an authorship more famous. This is especially true of the ballad of "Captain Loredan" (p. 49), for which we should be inclined to predict a place in the manuals of school oratory beside Browning's "Hervé Riel."

When a poet chooses his favorites among his own verses, the process has at least this value that, if it does not reveal to us his strength, it shows his weakness; we learn his limitations and have the key to his failures; and his own hand, it may be, writes the obituary of his fame. In the case of Mr. Swinburne ('Select Poems': Worthington) we are told, better than by volumes of criticism, why it is that his hold upon the public has long since visibly waned. It is because his grasp upon his own genius has grown weaker. The poems that touched the ear and the heart so powerfully—those which had a haunting quality and could not be dislodged from the memory of man—are not those in which the author himself now takes most delight. Perhaps they were accidental or exceptional in the development of his gift; or they represented what he might have been, had his character kept up to the level of his genius. The exquisite quality of "Before the Mirror," "Madonna Mia," and "These Many Years"—the noble strain of the tribute to Landor—the magnificent fire and movement of the "Song in Time of Order"—these could not have represented the habitual consciousness or even aspiration of the man. In the place of these he now offers us vast outflows of mere words, with scarcely a trace of living or permanent power; and he gives, as if in irony, a prominent place to that preposterously exaggerated ode to Victor Hugo in which he offers supreme homage to his idol, and puts the intellectual achievements of Plato and Shakspere below those of that wordy and theatrical Frenchman:

> "No speech, no voice, no thought,
> No love avails us aught
> For service of thanksgiving in his sight
> Who hath given us all for ever
> *Such gifts that man gave never*
> *So many and great since first Time's wings took flight.*
> *Man may not praise a spirit above*
> *Man's:* life and death shall praise him; we can only
> love." (P. 95.)

It is something, however, that the poet has left out of his selections not merely most of his power, but all of his prurience; in that respect he is clothed and in his right mind, and should all the rest of his volumes but this final one perish, posterity will be equally puzzled to know why he was so censured and why he was so praised.

SOME GERMAN WORKS.

Geschichte der Juden in England von den ältesten Zeiten bis zu ihrer Verbannung. Von Dr. S. Goldschmidt. Erster Theil, XI. und XII. Jahrhundert. Berlin: Rosenstein & Hildesheimer. 8vo, pp. vi, 76.

Die Entwickelung der ständigen Diplomatie vom fünfzehnten Jahrhundert bis zu den Beschlüssen von 1815 und 1818. Von Otto Kranske. Leipzig. Pp. 245.

Charakteristiken. Von Erich Schmidt. Berlin: Weidmann'sche Buchhandlung.

Credo. Gesammelte Aufsätze von Fritz Mauthner. Berlin: J. J. Heine.

THE history of the Jews in England during the Middle Ages is almost a *terra incognita*, although materials elucidating many phases of the subject are abundant and easily accessible. What neither Tovey in his 'Anglia Judaica' (Oxford, 1738) nor Margoliouth in his 'History of the Jews in Great Britain' (London, 1851) succeeded in accomplishing, Dr. Goldschmidt is now essaying. We welcome his book as an attempt to fill a much-felt want.

In the first chapter the author contends that there were Jews in England in Roman and Anglo-Saxon times. Here he differs from the more commonly accepted view advanced by Freeman, namely, that they did not come to England until after the Norman Conquest. But we think that Dr. Goldschmidt is correct, though there is not very much positive evidence to support his opinion. There can be little doubt, however, that the number of Jews in England was greatly increased by the Conquest. In chapters ii-iv the author shows how, being unmolested, they flourished under William I., William II., and Henry I.; how, during the reign of Stephen, they were for the first time accused of using the blood of Christian children at their Passover festival; how Henry II. favored them to such an extent that his reign "may be called the happiest period of Anglo-Jewish history"; and how under Richard I. the bloody drama began whose final act was the banishment of the Jews from England. The last chapter (pp. 59-76) is devoted to a consideration of the relation of the Jews to the crown and their general legal status. Many of the details on pp. 70-75 (fines for judicial favors, etc.) are just as applicable to Christians, and hence might have been omitted. The author himself says, on page 76, that, apart from the relation of the Jews to the King, who regarded them as his property, "they were legally on an equality with their Christian fellow-citizens."

To the author's credit it must be said that he is the first who has treated his subject in a scholarly way; he generally goes to contemporary sources and critically sifts his evidence. But a wider and more intimate acquaintance with those sources would have enabled him to do his work more thoroughly. For example, he justly emphasizes the value of the Great Rolls of the Pipe (pp. 53, 59), evidently regarding them as the principal source for the study of the social history of the Jews in England during the Middle Ages. Nevertheless, he has used only the extracts furnished by Madox and the two small volumes edited by Hunter for the old Record Commission. He seems to be unaware of the existence of the Pipe Roll Society, which since 1884 has been publishing these records. But inasmuch as only a few of the latter have been printed, the historian of the Jews in England ought to investigate the originals in the Public Record Office. As the sources for the history of the Jews during the thirteenth century are far more numerous, and are, in part, scattered about in hidden works, the defect just mentioned will doubtless be very much accentuated in the forthcoming second part of Dr. Goldschmidt's work, unless he goes to England and devotes considerable time to research. The book is greatly marred by very many verbal errors, most of which seem to be merely typographical (such as "Torey" for Tovey, "dies" for "das," "wie" for "im," "Daris" for Davis, "carly" for early, pp. v, vi). The author states that he was unable to correct the proof-sheets during the progress of the work through the press.

The second volume on our list is one of a series of monographs published under the general title of "Staats und socialwissenschaftliche Forschungen," edited by Gustav Schmoller, the celebrated political economist of Berlin. In the attempt to handle an immense subject in small compass, much is necessarily left unsaid. The book might well be called a history of the beginnings of permanent diplomacy; for only the beginnings under any branch are treated at any length. The style is exceedingly prosaic, as the writer confines himself for the most part to the baldest relation of facts, without attempting any discussion of the grounds on which permanent diplomacy has been built up, or of its merits and defects. Nevertheless its aim to give a general view of the subject is laudable, and an abundance of footnotes point the way to further investigation.

With a few remarks on the various theories in vogue concerning the time and place of origin of permanent diplomacy, and passing quickly over the early examples of sending ambassadors,

who returned home on the accomplishment of the particular purpose for which they had been deputed, our author takes up the more minute study of the rise of permanent embassies at the various courts of Europe. He finds the system already fully developed among the several Italian states as early as the middle of the fifteenth century, but is unable to discover its rise. Here is one of the numerous cases where a part of the world reflects the history and condition of the whole. These petty states, with their constant intercourse, their manifold quarrels and peace-makings, learned from experience that it was better to employ permanent representatives than to send a special one for each particular negotiation. So was it later with the great Powers. So long as each land was divided up into numerous feudal estates and so occupied with its own affairs as to have neither time nor desire to enter into friendly relations with the others, there was no need of mutual representation at the various centres of political life. With the rise of international coalitions, however—occurring, too, at the period when commerce was greatly multiplying the points of contact—there was perceived the need of closer relations between the respective governments. Sometimes men were employed whose sole duty it was to keep their monarchs informed of the doings of the people, and especially of the court, to which they were sent; sometimes business men, already settled in a foreign country, were appointed to look after their government's interests and attend to any diplomatic business that might arise in the country where they were dwelling. The oldest post, of a truly diplomatic character, which has had a continuous existence is that of Spain in England, which can be traced back to 1489. It was not till the end of the sixteenth century that the system was extended to the kingdoms of the north of Europe.

A new institution, growing out of a practical want, acquires its permanent form but slowly, and this was preëminently the case with regard to the rank and title of diplomatic representatives. At first each court gave its representatives the title that pleased itself best, and claimed for its agents the first rank, *i. e.*, a rank equal to that of any of the representatives of other Powers at the same court. Later, each diplomatist received a whole string of titles to insure his receiving attention due his rank. Louis XIV. called his representatives at the Congress of Nimeguen (1679) "ambassadors extraordinary and ministers plenipotentiary," and thus introduced the abbreviated title which has become practically universal for diplomats of the first rank. The titles and degrees now in use were definitely settled in the Vienna Congress of 1815 and that of Aix-la-Chapelle in 1818, and are as follows: 1, ambassador; 2, envoy extraordinary and minister plenipotentiary; 3, minister resident; 4, chargé d'affaires. In this connection the writer speaks of the United States, and, remarking that we never send ambassadors, says he is unable to learn whether this proceeds from motives of economy or because it is thought that the sending of ambassadors is inconsistent with a republican form of government. In a foot-note he makes the mistake of thinking that all our representatives bearing the same title receive the same salary.

In a volume of nearly five hundred closely-printed octavo pages, Prof. Erich Schmidt has gathered together the minor productions of a decade's vigorous literary activity. The essays number in all twenty-five, the most of them being reprints from well-known German periodicals, and all of them being in their authors' chosen line of historical criticism and literary portraiture. The first two articles, "Faust in the Sixteenth Century" and "The Discovery of Nürnberg," take us back to the period of the Reformation; and the last three are devoted respectively to "Berthold Auerbach," "Theodor Storm," and "The Ways and Aims of German Literary History." The intervening majority of the essays deal with themes taken from the classical period of German letters. Half-a-dozen belong to the category of Goethe literature; among these, the best are studies upon "Frau Rath Goethe" and "Frau von Stein." Another bears the strange-looking title, "Goethe und O ferul." A letter written by Goethe to his friend Salzmann in 1771 closes thus: "Der arme O-ferul jammert mich. Er war eine treue Seele." Further on in the same correspondence the same individual is referred to as "O-Ferol." Of course the *Goethe-Forscher* have not failed to wonder who this person was, and how he came by such an inscrutable nickname. Schmidt reports that, in turning over the leaves of the matriculation-book of the old University of Strassburg, he found, under date of October 12, 1770, the entry, "Fridericus Wilhelmus ô Feral Dresdensis"—"which," says he, "seems to point to an Irish origin." To which we agree, and add that O'Farrell, or something of the sort, would point that way still more clearly.

Among the remaining miscellaneous essays we note as of especial merit an elaborate study of Heinrich von Kleist, the poet who came so near to being the first of German dramatists. Very readable also is the essay, here published for the first time, upon Bürger's "Lenore." In this the critic traces the history of Bürger's ballad-making, and is enabled to take us into the poet's workshop by printing a hitherto unknown manuscript of the "Lenore." The text thus given occupies a sort of intermediate ground between the first rough conception of the ballad and the form in which it has become known to the world. It is copiously annotated by Boie, and Boie's suggestions have passed under the eye of the poet and been utilized in giving the poem its final form. As an essayist Schmidt is learned and acute. He has great powers of historical analysis, and his style is less ponderous than that of the most of his countrymen.

Herr Mauthner has observed that *credo* may mean either "it is my unalterable conviction" or "I am rather inclined to think"; he therefore sees in the Latin verb a happy title for a collection of essays containing a mass of miscellaneous opinions of both kinds. The "essays" number forty or more in the space of three hundred pages, and read for the most part like newspaper articles of a rather high grade. Some of them are serious and argumentative, others humorous or satirical. They range over a great variety of topics, but keep clear of religion and politics. Some of the author's "beliefs"—we cannot undertake to say, and he himself seldom tells us, under which one of the aforementioned rubrics any particular opinion belongs—are as follows: That the archæological novel as produced by Georg Ebers is a bad novel, and the dramatization of it a bad drama; that the present age is suffering from an excess of music, both in public and in private places; that the German people read too much and too indiscriminately; that the theatre is not and ought not to be a means of moral education, but should look to purely artistic effects, and so forth. The subject which the essayist seems to take the most seriously is that of reading for the people. He deplores, as writers in this country and in England are continually doing, the growing indifference of the many toward good literature. A library, he complains, has ceased to be a household necessity even in prosperous and intelligent families, its place having been usurped by the much more expensive and vastly less useful *Klimperkasten*. The blame for this condition of affairs he divides pretty evenly between the people themselves and their teachers. The latter have as yet failed in an important duty, that of separating the genuine from the spurious "classics." The professional teachers of all grades have a bad habit of styling an author "classical" when they only mean that he expired some time ago. It is time, Herr Mauthner thinks, to introduce in the interest of popular education somewhat sharper distinctions between writers who are classical by virtue of mere deadness, and those who are so by virtue of immortality. Among the former he places, for example, Klopstock. If something of this sort could be done by the tone-giving class, he thinks that the selection of a good domestic library would be less confusing and less difficult for the average family. Another and highly important influence in the growing alienation of the people from the best literature is the spirit of prudery, the spirit which taboos the immortal classics on account of their frankness in matters pertaining to sexual relations and at the same time extends an eager hand for the modern daily newspaper. Mauthner's reflections along these lines are interesting, but we do not think that he touches the bottom of the important question he discusses.

The History of Music. By Emil Naumann. Translated by F. Praeger and Edited by Sir F. A. Gore Ouseley. Cassell & Co.

SURELY the love of music in English-speaking countries must be growing rapidly if a publisher can be found ready to print a history of music in two large volumes comprising 1,132 pages, costing $10, and appealing by its character not so much to professionals as to the public at large. Naumann's history, though by no means an ideal text-book, was well worth translating, as it is perhaps the most readable of all general histories of this art. Though Naumann is less an original investigator than an industrious and clever compiler, he has views of his own which deserve attention. This is especially true in the period of mediæval music, while in his remarks on ancient music he occasionally comes to questionable conclusions, as in his attempts to prove the existence of harmony long before (as there are most weighty reasons for believing) its rudiments can have been known. He is also altogether too bold in harmonizing old melodies in modern style, and in adding various dynamic signs which we know were not heeded or cared for until a comparatively recent date; for it is notorious that Mozart's orchestra at Mannheim was the first that paid strict attention to even such a simple dynamic device as the *crescendo*. Another objection to Naumann's history is, that he gives too many unimportant biographic details about mediæval composers of the third and fourth rank. In periods where great geniuses are lacking, facts should be grouped around subjects, and not around names.

A unique feature of this work is the large number of illustrations and facsimiles of MSS. and other interesting documents. Some of the pictures, like Notre Dame of Paris and St. Mark's of Venice, seem out of place except as a help to making the book an ornament for the parlor table; but many of them are of extreme interest, and would be worth securing for their own sake, even if the text were less entertaining. Among these are illustrations of curious Egyptian, Greek, Chinese, mediæval, etc., musical instruments; facsimiles of the MS. of famous modern composers; numerous portraits; and illustrations of mediæval notation in the original colors, which facilitate the comprehension of this difficult subject. One of the most curious facsimiles is the original programme of Haydn's "Creation," in which the composer begs the audience, in case

they should feel inclined to show their approval of his music, not to interrupt the continuity of the numbers by applause; thus showing that other composers would have been glad to secure for their performances conditions similar to those which obtain at Bayreuth.

Like most of his predecessors, Herr Naumann entirely neglects the music of savages. This is to be regretted; for although primitive music may not be acceptable to our ears, it contains most of the elements of our art, and is capable of deeply moving the untutored savage, as many tourists have attested. In reading about the music of the ancient civilized nations, we are constantly struck by the similarity of the effects produced by ancient and modern music, though the means are so different. Those who laugh at the hypersentimental titles of modern popular songs and collections of songs ("Shower of Pearls," etc.), will be surprised to hear that in ancient Sanskrit music we find even theoretical works on music with such fanciful titles as "The Mirror of Melodies," "The Delights of Society," "The Sea of Emotions," etc.

In other ways does history repeat itself. Nothing is more noticeable in musical criticism of the day than the effort to stamp out the "star" system and diminish the honors paid to singers and players at the expense of the composers. Wagner led the critical current in this direction; but he had a predecessor who was no less a personage than Aristotle. During the period of the decadence of Greek art, Herr Naumann tells us, "the meretricious gained an ascendency and power almost incredible. The flautist Nicomachus (325 B. C.) was renowned as the possessor of the most valuable precious stones of Greece, which he had gained by his wonderful execution of florid passages" (*à la* Patti):

"It even became the fashion to erect statues to living bards, virtuosi, dancers, and actors, and it was in vain that Aristotle, Alexander's teacher, inveighed against the introduction of enervating keys and the supremacy of digital skill. Yet a still more extraordinary example of this one-sided adulation, exhibiting the effete taste of the rulers of nations, occurred in the year 300 B. C., when a temple was erected to the distinguished female flute-player Lamia, wherein was placed her statue, which, it is said, was regarded with a kind of divine veneration."

In speaking of Japanese music, the author becomes facetious: "It is said that formerly an ambassador, in addressing a foreign court to which he was accredited, did not speak, but sang his mission. 'Diplomatic notes,' therefore, acquired in Japan a double signification." This is the only conscious joke in the book; but in the second volume there is considerable unconscious humor. The author cannot emancipate himself from the German mania for sharp-cut and sweeping classifications. So he goes to work, with amusing *sang froid*, and divides all modern musicians into two groups. The first embraces all the great composers down to Beethoven, including Bach, Handel, Gluck, Mozart, and Haydn. These were "geniuses" and had "style," whereas all the composers after Beethoven, including Mendelssohn, Weber, Schubert, Schumann, Wagner, Chopin, etc., were only "talents," who had a "manner" in place of style!! But the reader must not for such an absurdity toss aside Herr Naumann's book. There is more bark than bite in his method. Having tickled his philosophical sense with this "broad generalization," the author practically ignores it, and discusses the merits of the modern composers who had only "talent" as if they had real "genius." And his biographies are full of details gathered from numerous sources, some of which are not readily accessible.

English music is treated in such a stepmotherly manner by Naumann that the editor of the English edition, Dr. Ouseley, felt called upon to add several chapters, in their appropriate places, on English music. These chapters are fully as good as anything else in the book. But the editor evidently wrote his foot-notes and comments on one part of the book before he had seen the whole; for on page 221 he accuses the author of ignoring an important old canonical composition, "Sumer is icumen in," and on page 286 he discovers that Naumann *has* mentioned it, and therefore has to apologize in a foot-note. The translation is well done, and we have not noticed any serious errors.

Ancient Legends, Mystic Charms, and Superstitions of Ireland. By Lady Wilde ("Speranza"). To which is appended a chapter on "The Ancient Races of Ireland," by the late Sir William Wilde. Boston: Ticknor & Co. 1887. 2 vols., 8vo, pp. vii, 280, 370.

It is a great relief, at the present moment, to pick up a book relating to Ireland and find that it does not deal with the political wrongs of that unfortunate island. There was a time when the mention of Erin evoked memories of light-footed fairies and the gruesome Banshee. There was reason to fear that they would vanish under the present régime, and Lady Wilde is entitled to our gratitude for preserving in the pages of her charming book these evanescent creations of the popular fancy. We have already had books dealing with Irish fairy tales, notably Kennedy's two works on the 'Legendary Fictions of the Irish Celts' (1866) and the 'Fireside Stories of Ireland' (1875), and many popular tales have immortalized Irish humor and given us glimpses of the strange superstitions of that naturally light-hearted people. But nothing so extensive and valuable as Lady Wilde's book has ever appeared on the subject, and she has conferred a favor upon the student as well as upon the general reader, who will find in her volumes a store of amusing tales, and, mingled with them, a mass of superstition of which before he probably had no idea.

It is impossible in our brief space to give an adequate idea of the richness of the work. Every variety of popular superstition is fully treated. Fairies in all their forms; festivals, marriage rites, the wake orgies; legends of animals, medical superstitions, legends of the saints, the holy wells—such are a few of the subjects of these volumes, while the more serious side of these studies is represented by sketches of the Irish past and Sir William Wilde's essay.

The volumes furnish plenty of food for reflection from all sorts of standpoints. The comparative mythologist will rejoice at a fresh supply of material for his theories, while the student of history will try to gain some better idea of the people from their superstitions. These are too firmly connected with the soil to be easily uprooted, but they sit very lightly upon the people when transplanted to our prosaic land, for example. Did any one ever hear an Irishman tell a fairy story in America, or evince any peculiar interest in the saints except on Sunday? We have looked through the book with interest to find some traces of race hostility, but have found almost none at all. There are few reminiscences of the earlier conflict. One legend says that "*Toberna-Dara* (the well of tears) was so called because it overflowed one time for a mile round from the tears of the Irish wives and mothers who came there to weep for their fallen kindred who had been slain in a battle, fighting against Cromwell's troopers of the English army."

Tales of the Caliph. By Al Arawiyeh. London: T. Fisher Unwin. 1887. 16mo, pp. 234.

The Caliph is, of course, Haroun Alrashchid, in whose "golden prime" the tales told in this little book are supposed to happen. We suspect that Al Arawiyeh's name will not be found in any dictionary of Arabic writers, nor can all that he relates have taken place at the date assigned his stories unless we attribute the prophetic gift to the luckless Almirvan, who looks through a magic tube and reveals to the curious Caliph the wonders of nineteenth-century invention. However, let this pass, our age not being so rich in creations of the imagination that we can afford to apply too strict a rule. He who can amuse us a brief half hour should have our gratitude.

The dozen stories of Oriental adventure and wonder are cleverly constructed, and told with unflagging interest. With the ruling passion of the present day, we have tried to detect the use of old *motifs*, but, with the exception of a charm which makes the bearer invisible, and the ointment which enables one to see through the walls of a house, we have found nothing old. Some of the new features are very ingenious, as the vegetable ivory in the story of "The Caliph and the Pirates," and the brush which, applied to the spine, produces temporary paralysis, in the tale of "The Caliph and the Slave Merchants."

The Essentials of Perspective, with illustrations drawn by the Author. By L. W. Miller, Principal of the School of Industrial Art of the Pennsylvania Museum, Philadelphia. Charles Scribner's Sons. 1887.

Mr. Miller has written a clever book, which comes near being a very good one. He has set himself to give, in untechnical language and without formality, the principles and processes which are important in the use of perspective, so far as a painter or an ordinary draughtsman needs to use it. In this he is trying what a dozen other writers have tried to do, with less intelligence and less knowledge than his; but he aims higher than most of his fellows in taking pains to set forth the underlying conceptions of perspective, and in wishing to make his learners rely more on these, and less on rules or tricks of construction, than is common in rudimentary treatises. His work deserves credit for this, especially for his independent way of presenting his subject, for not flinching before the bugbears of vanishing planes and oblique horizons, but showing their real simplicity and practical usefulness. He gives many interesting illustrations, in drawings which are not very interesting, of perspective effects in nature, of the lapses of painters who do not understand perspective, and of the happy uses to which those have put it who have understood it. He writes with a directness and animation which makes most of his book easy reading.

Where Mr. Miller fails is in underrating the difficulty of his task. His laying out of it is orderly enough, but the writing is from hand to mouth, as it were, as if the matter had never been carefully thought out in detail. Hence come want of steadiness and of proportion; explanations sometimes generous and sometimes scanty; carelessness of expression, with sometimes want of precision; obscurity, and occasional inaccuracy, and a general appearance of loose handling which is disagreeably out of keeping with the subject. It takes even more care to present such a subject well in its most concentrated form than to treat it *in extenso*. It should be remembered, too, that the essentials of it are not all that is essential to understanding it well. Beef may be boiled down till it is pretty poor food; and we fear that Mr. Miller's book is too condensed to be very digestible, or even quite intelligible, to a novice who reads it without a commentary. We doubt if Mr. Miller himself could understand what he has here set down if

he had not learned a good deal more than he has set down. Nevertheless, the book is one from which, with due help, learners may get better ideas of what perspective is than from the ordinary manuals, and which teachers may read with interest for the sake of its unhackneyed presentation.

The Growth of Freedom in the Balkan Peninsula. Notes of a Traveller in Montenegro, Bosnia, Servia, Bulgaria, and Greece. With historical and descriptive sketches of the people. By J. G. C. Minchin. With a map. London: J. Murray. Pp. xvi, 415, 8vo.

In this book, published at the close of last year, but still timely, the Eastern question is treated not from the point of view of the great Powers, but from that of the people of the Balkan States themselves. The author had exceptionally good opportunities for obtaining the information essential to such a task, having been till within a year or two Consul-General of Servia in London, and afterwards correspondent of the *Morning Advertiser* at Sofia. His opening chapters are upon Montenegro and Bosnia, countries which he visited as correspondent of the London *Times* in 1882. The grievances of the "occupied" provinces, the vexatious trade restrictions, the costs and delays of the law, the over-zealous propagandism of the Roman Catholics, which led to the insurrection in that year, are clearly stated, but it is only in an appendix that we learn that most of these causes of discontent have been partially remedied. The provinces are now substantially annexed, so far as trade with the rest of the empire is concerned. Railroads are being constructed, and a canal connecting the Danube with the Adriatic by means of the rivers Save, Bosna, and Narenta is projected. New courts for trivial causes have been established, and the whole class of officials is of a much higher character. The land question has been satisfactorily settled in a way "advantageous rather to the tenant than the landlord." Education has also made great progress, and though the religious strife still continues, the country is now quiet and "the condition of the peasants has vastly improved." A brief sketch of recent Servian history follows, in which Mr. Minchin dwells particularly upon the events preceding the late war with Bulgaria. While it should be remembered that he holds a brief, as it were, for Servia, it must be acknowledged that the reasons for her course, as he states them, are strong. The result, he affirms, even if she had been victorious, would have been substantially the same. Only, instead of the Austrian ambassador checking the advance of Prince Alexander, it would have been the Russian minister "who would have told King Milan that if he pressed his victory he would encounter, not Bulgarian, but Russian troops in front, while an Austrian army would occupy Servia in his rear. . . . It was, indeed, a game from which both players rose losers."

The political parties into which the people are divided, the Radical, the Liberal or Russian, and the Progressist or National party lately in power, as well as the principal men in each, are well described. It is noticeable that while Mr. Minchin rarely speaks of the King, yet he says confidently that the people as a whole are thoroughly loyal to him, the Russian party alone merely hinting "its preference for the Crown Prince with a Regency." The great obstacle to Servian progress is her commercial isolation. The country is rich in agricultural and mineral wealth, and her people have "a spirit of enterprise and industry. But they have been hampered hitherto by the lack of railways and of banks," as well as by the high tariffs of her neighbors. One of the last acts of the Bulgarian ministry before the war was to erect a protective barrier of high duties between the two countries which shut Servia off from all trade with Bulgaria. The only solution of this difficulty—one to which neither Austria nor Russia will peacefully consent—is to give Servia an outlet to the sea at Salonika. At present she finds no market in this direction, partly on account of the disturbed state of Macedonia, and partly from the persistent refusal of the Turks to build the sixty miles of road necessary to complete the railway communication between Belgrade and this port. One of Mr. Minchin's most interesting chapters is an account of a visit to Salonika, which had greatly prospered under the wise rule of Ghalib Pasha. But upon this and upon those relating to Greece we have not space to dwell.

The most valuable part of the work is that which narrates the recent events in Bulgaria. The dramatic story is told with great animation and fulness of detail, Mr. Minchin's information evidently being drawn from the most trustworthy sources. No one can read this account without having a higher opinion of Prince Alexander both as a man and as a ruler. The sketches of the Bulgarian leaders, especially that of Mutkuroff, the Gen. Monk of the Restoration, and the scene at the opening of the Sobranye in September, 1886, are exceedingly good. While the author evidently has less sympathy with the Bulgarians than with the Serbs, yet he does not fail to do justice to their patience, their strong patriotism, and their desire for progress. "The Bulgarian youth are not intelligent," said a foreign instructor in one of their schools, "but they wish to be intelligent." A large share of the credit for the present condition of education in the country, Mr. Minchin neglects to mention, is due to the influence of the American Roberts College at Constantinople. The statement that "it was not till 1865 that the Bulgarian translation of the Bible was begun," seems to be made in ignorance of the fact that the British and Foreign Bible Society published a translation of the whole Bible in 1864. The Turks are leaving the country, and their "villages in lovely districts of the Balkans can now be purchased for a mere song. A village (abandoned by its Turkish inhabitants) with 4,000 cultivated acres was sold for £1,600." Mr. Minchin's style is excellent, abounding in happy illustrations and striking images. In an appendix he gives various statistics, an abstract of the Berlin Treaty, and later information on some of the subjects discussed in the main body of the work. A good index adds much to its value. In closing, it should be said that though the author does not attempt to forecast the future of these States, he yet writes hopefully, believing that "the growth of freedom on the Balkans has been slow but sure."

The Lives of the Sheridans. By Percy Fitzgerald. 2 vols. London: Richard Bentley & Son; New York: Scribner & Welford.

Richard Brinsley Sheridan was unfortunate in his life, and he has been still more unfortunate in his biographers. First came a hasty compilation by a Dr. Watkins, who was a political opponent. Next came the perfunctory biography by Moore, who tired of his task before it was half done. Then came Prof. Smythe, whose gross violation of the laws of hospitality was sharply rebuked by Mrs. "Tom" Sheridan. Afterwards came Mrs. Oliphant with one of the poorest biographies of the nineteenth century. Now comes Mr. Percy Fitzgerald, who seems to hold a brief against the man whose life he is writing. Hero-worship may be carried too far; but if Mr. Elwyn hated Pope, he had best leave the editing of Pope's works to some one else; and if Mr. Fitzgerald thinks ill of Sheridan, he might have stayed his hand before he took up Sheridan's life. There was no loud call for a new biography, and Mr. Fitzgerald has not discovered any new material which justified telling again a thrice-told tale. But he is a bookmaker, incorrigible and indefatigable. Those who have read any of his books will know just what to expect in this last, and they will not be disappointed when they find contradictory inaccuracies, a bustling vivacity, a general slovenliness, and a most interesting subject. He has a nose for good subjects.

Twenty-five years ago Mrs. Norton announced a work having the same title as that before us, and no one could have written it better than Sheridan's brilliant granddaughter. As it is, the most valuable part of Mr. Fitzgerald's volumes is devoted to Mrs. Norton herself, in the preparation of which he has had the advantage of her correspondence with Lady Shelley; and from these characteristic letters abundant extracts are given. The account of another gifted member of this singularly gifted family, the late Sheridan Le Fanu, the novelist, is also welcome. The few pages given to Sheridan Knowles, the dramatist, are altogether inadequate. Nor is the treatment of "Tom" Sheridan or of the other children besides Mrs. Norton at all satisfactory. Mr. Fitzgerald does not seem to be aware that Mr. Richard Brinsley Sheridan, the grandson of the dramatist, is now living at Frampton Court in Dorsetshire (not "Frampton in Wiltshire," as it is here miscalled); and that he has there many original MSS., including that of the "School for Scandal," which were in Moore's hands, and which the present owner kindly showed to a recent American editor of Sheridan's comedies. We are glad to learn, however, that the original prompt-book of "The Rivals" is now in the library of the Garrick Club. It is with great surprise that we find (in a note to vol. i, p. 209) a list of Sheridan's plays in which "The Camp" is included, for surely even Mr. Fitzgerald has no right to forget that "The Camp" was written by Tickell. We may remark, also, on Mr. Fitzgerald's use of "costumier" for the English "costumer" (ii, p. 450). There are six steel engravings, a genealogy, and a meagre index.

Geological Studies; or, Elements of Geology. By Alexander Winchell, LL.D. Chicago: S. S. Griggs & Co. 1886.

In this interesting contribution to the list of textbooks on geology, the author has in certain important ways departed from the well-beaten path of his predecessors. Beginning with surface geology, he leads the student directly to the study of the glacial drift, using that deposit as a source of materials for teaching the elements of mineralogic geology. The idea is novel, as well as happy; the most considerable disadvantages of the method arise from the fact that in its structure and form the drift-sheet is extremely puzzling to students—to the old hands as well as to beginners—and from the fact that the deposit is not present in quite one-half the surface of this country. His plan, moreover, leads to the study of the elements of lithology and mineralogy, rather puzzling subjects, before the dynamic side of the science (one much more apt to captivate the beginner) is presented. Nevertheless, the order is logical and has much to commend it.

The remainder of the book is cast in the usual mould of geological manuals. The author, however, shows an intelligent care in the selection of examples from North American geology, rather than from the classic fields of the Old World. As is almost inevitable in books of this nature, many questionable points are stated with misleading affirmation. We find, for instance, that the

organic nature of Eozoön Canadense is assumed as unquestionable. This is not warranted in the present state of the discussion on that point. So, too, the extinction of the sun's heat within the period of 12,000,000 years must be regarded not as a demonstrated fact, but as an opinion based on certain data which may be extremely incomplete. Dr. Winchell has evidently felt the difficulty which every intelligent teacher of geology encounters—viz., that arising from the multifarious nature of the science. At every turn he found himself shut out of important divisions of his subject by the need of saying something about everything. So, for instance, Dr. James Croll's important hypothesis concerning the cause of glacial periods is left unexplained, though it affords one of the best matters for training the scientific imagination which can be found in the range of the science.

The truth is, that all our school treatises on geology attempt too much in essaying, as they do, to treat all the divisions of the science: they give the student the unenlivening elements of half-a-dozen sciences in a shape to afford him little enlargement of the understanding. The fact that scarce any of the masters of geologic science could pass an examination on any of our larger geological manuals, even on those they have written themselves, is evidence that too much is attempted. What we need for teaching geology to beginners is a small fraction of the matters which are commonly dealt with, and these carefully selected for their educational value, and systematically elaborated for that end. Even with such a treatise, geology will always be at a disadvantage as a subject for systematic school teaching; for school uses it is almost necessarily separated from demonstration in the field. Without this element of fact, gained in the field, it is impossible to use the science as an educational instrument in a profitable way. Dr. Winchell's book is a good specimen of its class, but it is unfortunate for education that our youth must enter the science by the thorny path of textbook teaching.

THE MIDSUMMER HOLIDAY

CENTURY.

As usual, the August CENTURY is rich in illustrations, and contains a great variety of articles, essays, poems, sketches, fiction, etc., making it a special holiday number.

Its opening paper, by F. Hopkinson Smith and J. B. Millet, with illustrations by George Wharton Edwards, and others, describes an excursion on the Raritan Canal, by a company of artists in search of the picturesque.

THE LINCOLN HISTORY presents an account, with extracts, of the Cooper Institute speech, and reviews, with illustrations, the John Brown raid and the Charleston Convention.

Joel Chandler Harris begins a three-part novelette, with full-page pictures by Kemble. Stockton's novel is continued, and a humorous sketch by Eva M. De Jarnette is given.

Other notable contents include a valuable economic paper by Edward Atkinson; "Our Kivigtok, by Gen. Greely, illustrated; "Songs of the War," by Brander Matthews and Julia Ward Howe; "Opposing Sherman's Advance to Atlanta," by Gen. Jos. E. Johnston, fully illustrated, as is also "Hood's Invasion of Tennessee," by Col. Henry Stone; an illustrated poem by James Whitcomb Riley; a hitherto unpublished letter from Gen. Grant on the Vicksburg Surrender; poems, etc., etc. Sold everywhere. Price, 35 cents.

THE CENTURY CO.

"We can cordially recommend this course of home study to our readers."—Brattleboro' Household.

GERMAN SIMPLIFIED.

An eminently practical new method for learning the German language. Edition for self-instruction, in 12 numbers (with keys), at 10 cents each; school edition (without keys), bound in cloth, $1.25. For sale by all booksellers. Sent, postpaid, on receipt of price, by Prof. A. Knoflach, 140 Nassau St., New York. Prospectus free.

Germany.

PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, French, and other branches. Summer resort for seabathing. Fine surroundings. Isle of Rügern, University of Greifswald. For circulars address PROF. J. M. CROW, Ph.D. Grinnell, Iowa.

The Nation.

NEW YORK, THURSDAY, AUGUST 11, 1887.

The Week.

THE platform of the Virginia Democrats on the debt question is, as the whole party's attitude has persistently been since the entire State succumbed to the demoralizing influence of Mahoneism, disgracefully wrong. It is interesting to see the Chairman of the Democratic State Committee, Mr. Barbour, appearing before the Convention, and declaring that while the dishonest Riddleberger settlement of 1883 must be adhered to, he is in favor of having the Federal Government assume a part of Virginia's debt burden. The arguments which he advanced in favor of this proposition are nearly or quite identical with those set forth by Mr. Blaine in his 'History,' and it is quite possible that it was from this source that Mr. Barbour drew them. On the question of repudiation, in fact, there is practically no difference in the attitude of the two parties in Virginia. Both are as hopelessly demoralized as they can be. The plank in the platform which is devoted to the tariff question is that fine old panacea for all social and industrial ills which has so long done duty in literature of this kind. It calls for a "revenue requisite for the support of the Federal Government by a tariff upon imports, limited to the necessities of Government economically administered, and so adjusted in its application as to prevent unequal burdens, encourage productive interests at home, the development of our material resources, and afford just compensation to labor, but not to foster monopolies." No human being can object to a tariff of that sort. It is the very one that the whole world has been in search of these many years.

The amount of comfort and hope which the Republican newspapers are getting out of the Kentucky election is so great that in some instances it amounts to an assumption that the fate of next year's Presidential contest has been settled in favor of the Republicans. It is claimed by one organ that a similar reduction of the Democratic majorities throughout the solid South would transfer Virginia, West Virginia, Tennessee, and North Carolina to the Republican column, giving the Republican Presidential candidate the benefit of their electoral votes, making, with Kentucky's, a total of 54, though the organ in its zeal says the total would be 64. This threatening break in the solid South is alleged to be due to the spread of protection sentiment, combined with the disgust of hungry Democratic place-hunters. And all the basis there is for this imposing edifice of hope is the fact that several thousands of the Democrats of Kentucky, knowing that their ticket was certain to be elected, did not take the trouble to go to the polls.

It will be some days before the exact dimensions of the majority against prohibition in Texas will be known, but, however large it may be, it does not mean the end of the agitation. The Prohibitionists are bent upon getting their theory incorporated in the Constitution, and they will not be discouraged by their present defeat. Meanwhile, the agitation is temporarily transferred to Tennessee, which holds a special election upon a similar amendment on the 29th of September. If the Prohibitionists had succeeded in Texas, there would, we fancy, have been little doubt of another victory in Tennessee; as it is, the chances are against them. Mississippi will very likely be the next scene of an amendment struggle, the recent Prohibition Convention in that State having resolved to seek from the next Legislature the submission of such an amendment.

We point out elsewhere that, if Georgia should pass the law making it a crime to teach white and black children together, she would only be half a century behind Connecticut in her legislation to break up the Prudence Crandall school for colored girls in that State. The Boston papers show that Georgia is only forty years behind Massachusetts in the arguments by which she justifies her proposal. In 1845 the School Committee of Boston, being petitioned to abolish the separate public schools for black children, refused, in a report which strikingly resembles that made by the committee of the Georgia Legislature which recommended the passage of the Glenn bill. "The distinction," they said, "is one of races, and not of colors merely. The distinction is one which an all-wise Creator has seen fit to establish. No legislation, no social customs, can efface this distinction." The committee also held that "the less the colored and white people become intermingled, the better it will be for both races," and advanced the other familiar arguments of the Southern whites. It was not until 1855 that the separate-school system was abolished in Massachusetts.

Mr. G. W. Curtis began his speech before the National Civil-Service Reform League at Newport with a quotation from Lincoln, in one of his debates with Senator Douglas in the year 1858: "With public sentiment nothing can fail; without it nothing can succeed." This maxim serves to explain to a large extent the failure of civil-service reform, if it has failed, under Mr. Cleveland. Public sentiment has not been up to the mark. It never is, in the beginning of any reform, for if it were up to the mark, the reform would be already accomplished. It would then be easier to be a reformer than not to be, just as it is easier now to be an anti-slavery man than a pro-slavery man, although it was not so when Lincoln debated with Douglas, and still less so when Garrison established the *Liberator*. It is the duty of those in high places, of those who have acquired large influence, to use their talents, their position, their influence to create so far as they may the public sentiment without which nothing can succeed. This may be done by both precept and example, but especially by example. The question is, whether President Cleveland's example has been upon the whole towards the creation and upholding of such a public sentiment. We think that it has been so, and in this view Mr. Curtis coincides. But Mr. Curtis insists upon the largest possible measure of adherence to right paths, and in this he is right. If the apostles are not firm and true, where shall the neophytes be found? If those who have to deal only with principles come short of the commandments, what chance will there be for those who are ever in close contact with the enemy? We do not say and we do not believe that there was any excuse for the appointment of such fellows as Higgins and Rasin in Baltimore, or for many other plain deviations from the path that the President laid down for himself before he assumed the reins of office; but we think that civil-service reform has gained more from Mr. Cleveland's Administration than from any other since the reform came to be talked of as a political issue, and we agree with Mr. Curtis's hopeful view for the future. And especially do we agree with him that the plain, unvarnished truth is the only tale that disciples of the civil-service reform can deliver to each other or to the country.

The Mayor's action in directing that the office of Chief of Bureau of Elections be placed within the competitive division of the civil service, is most commendable. It is universally admitted that this action is a deadly blow to John J. O'Brien's chances for reappointment. Not even his most devoted friends pretend that he could pass an examination for the place. He has held the office for three terms (nine years), and his doing so has been a public scandal. In 1884 he succeeded in getting the Republican Legislature to pass a special act exempting the Chief of the Bureau from the Civil Service Law, but it is held that this does not apply to his successor. O'Brien's term expired on the 13th instant, and his successor will have to be chosen by the Police Commissioners from the three applicants passing the highest examination. It is hinted that, since the Police Board is equally divided in politics, two members being Democrats, and two being not only Republicans but fellow-Boys with O'Brien, a deadlock will follow, and that thus O'Brien will hold over. There is some doubt about his being legally able to do this. It is greatly to be hoped that in some way the city will be rid of him. The impropriety of having the bureau which is in charge not only of the official election machinery, but of the election returns, in the hands of a man of O'Brien's character, is too obvious to need argument. His own party will no longer trust him with its campaign funds, yet it asks to have the city trust him with its election returns.

A grave defect in the management of the Signal Service is again exposed by the recent announcement that Sergt. Cole, who has been for six years in charge of the Boston office, had been unexpectedly and summarily

ordered to pack up and go to Portland, Me. Mr. Cole is a man of unusual natural qualifications for his work, who has devoted himself to its duties with the greatest assiduity, and won the respect and commendation, not only of the business community, but also of the scientists of Boston and Cambridge, who have been closely associated with him. His experience has rendered him capable of far better service than any new man could possibly render, and every consideration of the public interests dictates his retention in his present place as long as the Government can avail itself of his uncommon talents. That such a man should be subject to arbitrary removal and degradation—for the Portland office is both less important and less lucrative—shows the injustice of the anomalous system which places a service so essentially civil in its nature under the control of the War Department. The business exchanges of Boston and leading scientific men have interested themselves to secure a revocation of the order for Sergt. Cole's removal, and it is to be hoped that they may be successful. However the case turns out, it ought to result in strengthening the demand for a change in the relations of the Signal-Service Bureau, which shall put an end to the possibility of such outrages.

Senator Blair of New Hampshire is diligently engaged trying to "work up" public sentiment in favor of his educational subsidy scheme, and he has been very anxious to secure the endorsement of his own Legislature. Resolutions commending the scheme and urging Congress to pass it were accordingly introduced by one of his friends, with the expectation that they would be readily passed; but the Committee on National Affairs, after careful consideration of the subject, has decided, by a vote of seven to three, to recommend their indefinite postponement. This is a hopeful sign of a change of public sentiment since the character of the "Bill to Promote Mendicancy" has been exposed, and the wisest Southern educators have announced that they oppose further agitation of the subject.

The *Tribune* has been asking the opinion of Grand Army posts as to various pension questions, and among others as to whether they favor a service pension—that is, a pension to every soldier who served in the Union Army, whether he was at the front for four years or never got beyond the recruiting camp; whether he is now a millionaire or a tramp; whether he is vigorous or broken down in health. The replies show that the Grand Army is fast becoming unanimous in favoring this scheme, which was formally taken up by the State Encampment of Massachusetts three years ago. Among all the posts reporting we find but one which says "No" to the service-pension question—Frank Post of Greeley, Kan.—and unfortunately this post forfeits the credit which it might otherwise claim by favoring the wild scheme for an equalization of bounties, and the still wilder scheme of paying veterans now the difference between the value of greenbacks and gold during their term of service a quarter of a century ago. In most cases the replies state that the post is unanimous in favor of service pensions, these being some of the expressions used: "Unanimously yea"; "Yes 17, no 1"; "Yes, a clear vote"; "Yes, unanimously." "Not less than $8 a month" is the lowest sum proposed by any post, while the feeling appears to be growing in favor of $12 a month, and a post in Traver, Cal., wants $12.50 a month, or $150 a year for the rest of his life to every man who was mustered in. The *Tribune's* investigations leave no room for doubt that the Grand Army is already a machine for the procuring of pensions, and that it is fast becoming a machine for demanding pensions for every soldier, on the threat that "the soldier vote" shall be cast against any Congressman or President who opposes the scheme. The *Tribune* has done a great public service in bringing out these facts.

The determined attitude of the United Labor party against Socialism is creditable, but it is difficult to see where the line is to be drawn. If all advocates of socialistic doctrines are to be excluded from membership, how are Henry George and Dr. McGlynn to remain? Not only are their land theories pure Socialism, but the utterances of both men have at times been as thoroughly socialistic as those of any of the avowed Socialists whom Mr. George is expelling with so great a show of virtue. Indeed, Mr. George's nomination for Mayor originated in one of the worst hot-beds of Socialism which we have had here, the Central Labor Union, and it was from the same element that he drew his most active support in last year's campaign. Nothing, for example, could be more purely socialistic than McGlynn's well-known apology for killing the Czar, or his other declaration in favor of the assumption of all landed property by the State without a dollar of compensation to its owners. For George and McGlynn to turn Socialists out of their party is, in fact, as absurd as was the recent professed determination of McGlynn to bring suit against the Archbishop under the conspiracy law, on the ground that his excommunication amounted to a boycott. McGlynn apparently forgot for the moment that he belonged to a party which believes boycotting to be a sacred and inalienable right of every American citizen.

John Swinton has suspended the publication of the newspaper which he modestly named after himself, and the reason he gives is lack of support. He says he has sustained a heavy loss on every issue during the four years of its existence; that he "has been wrecked by this paper and in the labor associations, wherewith I have sunk tens of thousands of dollars, all of it out of my own pocket." This is a sad record for an apostle of Labor who started out with the avowed purpose of "Preparing the Way for the Establishment of the Natural Rights of Man: (1.) His Right to a Footing on the Earth; (2.) His Right to Labor; (3.) His Rights to the Fruits of His Work." The task was a self-imposed one, but was undertaken by Mr. Swinton with great enthusiasm and unbounded confidence. All that was necessary for its success was for Labor to come forward *en masse* and subscribe for the paper. This Labor declined to do. As weeks rolled on and the subscription list failed to swell, Mr. Swinton became more and more radical in his views on Labor. Some of his speeches were as socialistic and revolutionary as those of the most extreme German Socialists. At Labor's public meetings Mr. Swinton was received with uproarious applause, and there was hope that in time subscriptions to the paper would come in. But at this point Henry George appeared. Labor at once turned its back on Swinton and *Swinton's Paper*, and followed Henry George and his paper. The proposal to abolish poverty appears to have been more enticing than the proposals to establish the Rights of Man.

The "crank," Mooney, who attempted to set fire to the steamer *Queen* last week, had evidently been a close reader of the *Tribune* as well as the *Irish World*. He was an agent of some kind for the latter paper, and large bundles of it were found in his room. The language of his proclamation closely resembles that which both these Blaine organs are accustomed to use in their utterances concerning the course of the Cleveland Administration on the fisheries question. Both have repeatedly denounced the President and Secretary Bayard as too weak to use the powers conferred by the Retaliation Act of the last Congress, and have time and again spoken of the State Department as being more English than American in its sympathies. Mooney declares in his proclamation that the conduct of the Canadian officials towards American fishermen has been disgraceful and malicious, and that "there is no suitable means of redress which can be expected from any long-eared President associated with such a Cabinet, the majority of which are very extreme Anglomaniacs, and therefore more English than the English themselves." This is exactly in the tone of the comments of the Blaine press. We do not for a moment suppose that the Blaine editors had any idea of exciting anybody to burn a ship loaded with people, when they reeled off their ridiculous partisan tirades day after day; they were trying to gain votes by showing what a very different course would be followed if he were in the White House. But the danger of that kind of writing always is that some weak brained creature may take it in earnest, as Guiteau did, and as Mooney has done now.

The habits of the mackerel are not more remarkable than those of the gallant fisherman who pursue them. A few years ago these wanderers of the deep abandoned the three-mile limit and took to the broad ocean, with such unanimity and persistence that the fishermen said that they wanted nothing from Canada or Great Britain or anybody, and that they would be thankful if Congress would annul the Washington Treaty so far as they were concerned, and remit them to their rights under the Treaty of 1818. In this they were accommodated. But now the mackerel have changed their minds and run in shore again, the fishermen naturally following them. The right to fish within the three-mile

limit was conferred by the Washington Treaty, but was not included in that of 1818. To be caught fishing in those waters is to forfeit one's boats as well as one's catch. So when a couple of seining parties belonging to the schooners *French* and *Argonaut* were plying their vocation within a mile and a half of Prince Edward Island (according to the *Tribune's* report at the time of the occurrence), and when a Canadian cruiser went in pursuit of the seining parties, the schooners, although they were outside of the three-mile limit, made for home as fast as possible. Having arrived at Gloucester, they have reported to Capt. Babson, President of the Fishery Association, that their seining parties were at least four miles from shore, and that an excellent judge of distances has found other testimony which convinces him that the seizing of the seining parties of the *French* and *Argonaut* was a new outrage; for if they were really outside the three-mile limit, the Canadian cruiser had no right to molest them. Might it not be added that if they were outside the limit, the schooners to which they belonged had no right to abandon them to the enemy? Why does not the President of the Fishery Association give us his opinion of the two captains who had so little consideration for their own rights and their own men that they surrendered both without even making a protest against the seizure?

A great many inexplicable things happen in Wall Street, and one of the most common is a general fear of impending chaos at a time when the conditions of business, and earnings, and crops, and the foreign exchanges, and the money supply are all encouraging, so that nobody can put his finger on any general and wide-reaching fact that threatens the prosperity of the country. It is easily understood that "depression" results from the imagination of traders quite as often as from facts of an economical character; but when the street retires to a cave of gloom without any real cause it generally invents one, just as a hypochondriac sometimes imagines that a wart on his nose is the beginning of a cancer that is soon to terminate his life. Wall Street, being in a melancholy mood without good reason, found its wart in the Ives Stayner syndicate, and has been giving so much attention to the excrescence that it has been unable to see any considerable part of the heavens or the earth for some weeks. Whenever anybody asks why stocks go down, or why money is hoarded, or why new enterprises are not taken up, the answer is that everybody is waiting for the Ives-Stayner syndicate to carry out their "deal" or collapse. It seems to be considered immaterial which of the two alternatives happens, but until one of them does happen, everybody must clutch his pocketbook and hold his breath, and keep his eye on the Cincinnati, Hamilton and Dayton Railroad.

Now, what is the importance of the Cincinnati, Hamilton and Dayton Railroad to the money market, or to the stock market, or to any market having its nerve centre in Wall Street? What would be the consequence if this precious thing were carried off by witches in the night time and nothing left of it but a right of way? The common stock of the company is between three and four millions; there may be perhaps as much more of the preferred somewhere. We know that something less than $2,000,000 of the latter is in the hands of Mr. Robert Garrett, which he claims to hold as winnings in a game of forfeits played with Ives & Stayner, and that the latter have brought a suit to recover it. There may be some other small amounts of C., H. and D. preferred pledged for other "deals"; but when it is all reckoned up, it is such a wart, compared with the Ossa of general finance in Wall Street, that we can only wonder how it has come to fill so large a part of the field of view, and absorb the attention of so many people whose sense of perspective is commonly good. Probably the explanation is, that the human imagination is always most powerfully affected by the unseen and the unknown. An idea has got abroad that the Ives & Stayner syndicate have borrowed a lot of money on collaterals that cannot be realized on; but whether the amount so borrowed is a few millions, something near the value of the railroad regarded as an investment, or whether it is pretty much all the money not in the Sub-Treasury of the United States, is the question. Here is abundant room for play of the imagination. Here, probably, we find the importance attached to the doings of a pair of small financiers whom nobody knew six months ago.

The text of Jules Ferry's speech, at which Gen. Boulanger took such offence that he thought it fitting to challenge the former to fight a duel, has been variously reported by cable. It has now come to hand in the French papers, and we subjoin the passage which so effectively pricked the inflation of the ex-Minister of War:

> "If we are to believe these new patriots, patriotism is not only the monopoly of one party, but it is the exclusive property of certain groups, of certain sections, of the party; and all who do not think like them, all who refuse to substitute in the management of the greatest interests of the country the irresponsible impulse of mobs for the free and reflecting action of the constituted authorities, and all who do not adore their idols, and do not rush with them behind the chariot of a café-concert St. Arnaud—all these are classed indiscriminately as the party of the foreigner."

St. Arnaud was a promoter of the *Coup d'État* of Napoleon III.

Milan Obrenovitch's recent change of Ministry, abrupt, unexplained, and apparently unprovoked as it was, has been a perplexing puzzle to the political press of Europe. Why should a Servian King known to be odious to Russia, and under the protection of Austria-Hungary, suddenly dismiss an obsequious pro-Austrian Premier and replace him by the chief of the Russian party—a cunning statesman, repeatedly tried and found wanting in fidelity to the dynastic interests of his master—and that at the very moment when the Czar has turned his back in disgust on the Slavic States of the Balkan Peninsula? The theory that Ristitch, in order to return to power, had promised Milan to carry through the divorce of Queen Natalie, which his predecessor, Garashanin, had been loath to do, has found no support in what has since transpired; for the Queen, semi-Russian by parentage and wholly Russian in her sympathies, has been allowed to return from the Crimea—whither she had gone to lay her national and personal grievances before the Czar—to the court of the fickle Obrenovitch. Nor is Ristitch's ambition so low as to admit of a solution of the Belgrade mystery so derogatory to his character. An entirely different solution has finally been offered, though not avowedly, by King Milan himself, in an interview arranged with the Vienna correspondent of the London *Times*. It is this: His Majesty is anxious to unite with his Servian crown that of Bulgaria, and a new policy under the lead of Ristitch is to promote this object. The interview was a distinct announcement of the candidature. It was ably done, considering the difficulties of the case, for Prince Ferdinand of Coburg-Gotha has just been elected Prince of Bulgaria, and the Servian candidate less than two years ago wantonly assailed the independence of that country and was shamefully beaten.

The substitution of Ristitch for Garashanin, the King explained, did not signify a change in his relations to Austria-Hungary and Russia. He had hastened to Vienna to dissipate that false impression. His was a purely national policy: "Servia must become quite independent and self-supporting." Garashanin had to go because popularly suspected of subserviency to the Hapsburgs; Ristitch would avoid the suspicion of favoring bondage to the Romanoffs. But the Balkan States are too weak to guard their independence; their rulers, necessarily leaning upon one mighty empire or the other, fall victims of national discontent: "In Servia, Milosh deposed, Karageorgevitch deposed, and Michael assassinated; in Montenegro, Danilo assassinated; in Greece, Otho deposed; in Rumania, Prince Cuza deposed; in Bulgaria, Prince Alexander deposed"; he himself felt to be in danger—the difficulties of his position (he frankly admitted) being aggravated by serious domestic dissensions. As to Bulgaria, he did not believe that Prince Ferdinand's election would be sanctioned by the Czar, nor that Ferdinand would go to Bulgaria without the Czar's approval. The disagreement of the Powers portended anarchy for Bulgaria. The remedy for all these evils was "the creation of one powerful Balkanic State," which "would do more to keep Eastern Europe in peace than the existence of several small States." If he had been elected, "as a Slav sovereign he could not have refused the appeal of his Slav brethren." At the same time he would act in "close alliance with the Porte." All this is clear: King Milan is ambitious, unpopular, and unsafe, and therefore inclined to risk a new venture. Ristitch, equally ambitious and restless, is ready to serve him in it, even against Russia. The Slav banner is to be flung aloft, the Bulgarian Sobranye won by the prospect of aid against Russia, Austria-Hungary's friendly neutrality secured, and Turkey lulled into the belief that her suzerain rights over Bulgaria and Eastern Rumelia will be respected. The scheme is fine, but completely hollow,

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 3, to TUESDAY, August 9, 1887, inclusive.]

DOMESTIC.

SECRETARY FAIRCHILD of the Treasury on August 3 offered to anticipate the payment of interest on the 4 and 4½ per cent. bonds up to January 1, 1888, with a rebate of 2 per cent., and invited proposals for the sale to the Government of the 4½ per cent. bonds falling due in 1891, to be applied to the sinking fund.

At the election of State officers in Kentucky on August 1 the Democratic ticket, headed by Gen. S. B. Buckner, was elected by a reduced majority, which is computed to be somewhat less than 20,000 votes. At the election of members of the Utah Legislature on the same day a minority of non-Mormon candidates was elected. They made gains chiefly because of the disfranchisement by the Edmunds-Tucker act of the women. At the election in Texas on August 4 on several amendments to the State Constitution, chief of which was one prohibiting the manufacture and sale of liquors, the prohibitory amendment was defeated by a majority of more than 75,000 votes.

The resolutions adopted by the Virginia Democratic Convention August 4 pledge the "cordial support" of the party to President Cleveland's "wise, conservative, fearless, and honest Administration," demand the repeal of the internal-revenue system as a "relic of war," favor a tariff upon imports "limited to the necessities of the Government economically administered," with incidental protection, approve the refusal of the Legislature to accept the bondholders' proposition regarding the debt, endorse the Riddleberger plan of settlement, ask for compensation from Congress for territory ceded to the Federal Government and for loss of the territory included in West Virginia, favor State pensions for Confederate veterans, and approve Federal aid to education. Senator Daniel in a speech opposed civil service reform.

The Glenn bill, making the education of white and negro children in the same school a penal offence, was passed by the Georgia House of Representatives August 2, by a vote of 124 yeas and 2 nays. The nays were cast by the colored members. A meeting of colored men in Boston, August 3, adopted violent resolutions of indignation against the proposed law.

Two leaders of a party of men who lynched a negro were brought to trial at Edgefield C. H., S. C., but were acquitted August 5. These were the first men ever indicted in South Carolina for lynching, and no white man, it is reported, has ever been hanged in Edgefield County, though during the last thirteen years more than 120 murders have been committed there, most of them by whites.

Émile Riverre and John Larrien, prominent Creoles of New Orleans, fought a duel August 7 with short swords about an article in the French paper, *L'Opinion*, of which Riverre is editor. Larrien was slightly wounded.

S. B. Turner, a colored editor of Springfield, Ill., has caused the arrest, under the State Civil-Rights Act, of the proprietors of a restaurant who refused to serve meals to him and two colored friends. J. P. Haynes of Galveston, Tex., a colored student of Dartmouth College, has been appointed Demonstrator of Anatomy at that institution.

The Prohibitionists in Maryland nominated a full State ticket August 3, with S. Baldwin of Baltimore for Governor.

A member of the State Board of Health of Indiana has reported to the Board that the jails in Lawrence and Perry Counties are unfit for human habitation, that the poor-house of Lawrence County is in a horrible condition, and that the overseer takes the proceeds of the labor of all the inmates that he can hire to farmers at $1.75 per week. Young children are forced to sleep with old inmates who are afflicted with loathsome diseases. Other poor-houses and jails were found to be in a similar condition. Gov. Davis of Rhode Island has announced his intention to have the management of some of the State institutions at Cranston, about which complaint has been made, investigated.

A former warden of the Cook County (Ill.) Insane Asylum, four former members of the Board of County Commissioners, and seven members of the present Board, known as the Chicago "boodlers," on August 5 were found guilty of conspiracy to defraud the county by false pretences. The verdict fixes the punishment of four at a fine of $1,000 each, and of the others at two years' imprisonment in the penitentiary.

The Civil Service Reform League met at Newport August 2. Reports were made from forty associations. Mr. George William Curtis, the President, in his address summing up the progress of the reform, said: "But while we may believe, as I certainly believe, that the President is an upright magistrate, who, looking at the vast and complicated range of his duties as the Chief Executive of a great nation, has been unable to accomplish in this department of his duty all that he would have gladly done—while we may willingly acquit him of insincerity or indifference—we must yet be as just to ourselves as to him. It would be a great wrong to the cause of which the League is the authorized national representative if it did not plainly and emphatically declare that it does not regard the Administration, however worthy of respect and confidence for many reasons, as in any strict sense of the words a civil-service-reform Administration." In the resolutions, which have the same tone towards the President as Mr. Curtis's speech, the League renews its recommendations that the civil-service rules be extended, and declares that nominations made by the President should be discussed in open sessions of the Senate, and that all appointments and removals, with the reasons therefor, should be placed on public record.

Chief-Engineer George W. Melville, the Arctic explorer, has been promoted to be Chief of the Bureau of Steam Engineering in the Navy Department.

Wilford Woodruff, who is President of the Mormon Apostles, and has been in hiding for two years to escape prosecution under the Edmunds Act, has issued a proclamation assuming for the time the Presidency of the Mormon Church.

A company of "boomers" near Arkansas City, Kan., have announced their intention to march and take possession of the country known as Oklahoma, in Indian Territory. United States troops are near by to prevent such a movement.

A party of distinguished persons, including Senators Cameron, Vest, and Farwell, the Governors of Alaska and Montana, President Gilman of the Johns Hopkins University, and Miss Edwards of the Mount Holyoke Seminary, having made an excursion to Alaska, arrived at Tacoma, W. T., on their return on August 8.

Mrs. John Field of Philadelphia has presented a valuable collection of paintings, which was left by her husband, to Williams College.

August 3 Thomas J. Mooney, an Irishman, set fire to the British steamship *Queen*, lying at a pier in the Hudson River. When captured he had in his pocket a copy of a "proclamation" containing a diatribe against the English Government about the fisheries question, and announcing that all English ships in American ports are "liable to seizure, attack, or destruction from the 1st day of August, 1887, until the English Government shall make ample and suitable apology to the United States." Among his personal effects dangerous explosives were found.

There is an area of about 55,000 square miles in the Northwest extending from Madison, Wis., on the north, to Bloomington, Ill., on the south, and from Lake Michigan on the east to the Mississippi River on the west, where a destructive drought prevails. Crops are ruined and many cattle have perished.

A tornado on August 4 destroyed seventy-nine houses in the town of Millbrook, Kan., causing a loss of $68,000. The people are in great distress, and a relief committee has been organized to solicit aid for the families whose homes were swept away.

On August 7 the total number of cases of yellow fever that had been reported at Key West, Fla., was 221; deaths 45, cured 43, still sick 73.

The supply of natural gas near Albert Lea, Minn., is judged to be so extensive that a company has been organized to transport and to use it.

In a series of races off the Rhode Island and Massachusetts coasts by the New York Yacht Club, General Paine's new yacht, the *Volunteer*, has proved itself the fastest of those that were entered. The date for the first of the trial races for the *America's* cup has been fixed for September 13; if foggy, for September 14.

Among the noteworthy persons who died during the week were Joseph H. Rainey, the colored ex-Congressman, at his residence in Georgetown, S. C., on August 2; Allen Francis, U. S. Consul at St. Thomas, Ont., August 4, of injuries received in a recent railway disaster; the Rev. Eleazer Root of Jacksonville, Fla., for many years a prominent citizen of Wisconsin, and the first Superintendent of Public Instruction in that State; Amos Reed, at one time acting Governor of Utah, August 7, at his home near Branchville, Md., aged sixty-four years; George Essex Montifex Drummond, Viscount Forth, on August 4, in St. Luke's Hospital, in this city, where the British Consul lately sent him to be treated for consumption. The Viscount, who was left an orphan at an early age, was the grandson and heir of George Drummond, fourteenth Earl of Perth, Earl of Melfort, and bore the French titles of Duc de Melfort, Comte de Lussan, and Baron de Valrose. He was born September 3, 1856. When fifteen years old he eloped with a woman of twenty-one, the maid of his maternal grandmother, the Hon. Mrs. Capel. They came to America and lived in great poverty, doing manual labor in this city and on Long Island. His widow and a son survive him. On August 7 Alpheus Hardy, one of the most prominent and useful of the older merchants of Boston, died. Horace Abbott, one of the best-known iron manufacturers and at one time proprietor of the largest iron works in the country, died August 8 at Baltimore, aged eighty-one years. Gen. A. W. Doniphan, a veteran of the Mexican and of Indian wars, and one of the most prominent lawyers in Missouri, died at Richmond, Mo., August 8. Henry Hastings, a well-known Boston merchant who had controlled a large fleet of merchant vessels, died August 9.

FOREIGN.

In the British naval manœuvres on August 4 the commander of the fleet who was instructed to attack England outwitted the commander of the defensive fleet, made a dash at Falmouth, anchored unresisted in the harbor long enough to have destroyed the whole town, landed an army corps, then steamed up the Channel, ran the Straits of Dover, and got into the Thames, where he had seven hours during which he could have seized Woolwich and destroyed all the Thames shipping and burned London. This suggestive success of the attacking commander has provoked serious comment on the possibility of invasion by many of the English journals.

The bill to allow the construction of a tunnel under the English Channel, which was introduced in the House of Commons by Sir Edward Watkin, was rejected August 3 by a vote of 153 to 107.

The Land Bill passed through the committee stage in the House of Commons August 3, and passed its third reading two days later.

In reply to the question in the House of Commons, August 8, why the Government refused to submit a return showing the number of royal princes or persons allied to royalty by marriage who hold posts in the public service and draw money from the public funds, and how many officers have been passed over by such appointments, Mr. Smith replied that in the judgment of the Government such a return would be of an invidious character, and ought not to be granted.

A private conference of Liberal-Unionists was held August 4 in London to discuss means for checking the Gladstonian reaction. The speakers agreed in attributing their defeats partly to the enthusiasm and energy of the Home-Rulers in assisting the Gladstonian candidates, and partly to the want of united action on the part of Liberal-Unionists and Conservatives.

The Unionist members of Parliament gave a dinner to Lord Hartington August 5, over which Mr. Bright, who made a bitter anti-Gladstonian speech, presided. Lord Hartington intimated in his speech that he should join the Government during the recess of Parliament.

The statement of the claim in the case of Mr. Frank Hugh O'Donnell against the London *Times* for £50,000 damages for libel in its articles on "Parnellism and Crime," indicates that the leading Parnellites will be called to testify during the prosecution of the case.

A summons for perjury was issued on August 8 against the London policeman who arrested the young woman, Miss Cass, on the charge of being an improper character. A sensational trial is expected.

On the night of August 4, 4,000 employees of the English Midland Railway went on a strike. Freight traffic was partially suspended for several days.

The tribunal at Charleroi, Belgium, has awarded a manufacturer of glass $175,000 damages for the destruction of his works, which were burned during the labor riots at Jumet.

A loss estimated at nearly a half million pounds was caused by fire August 6 in Whiteley's large drapery and general stores and warehouses in Westbourne Grove and Queen's Road, Paddington, and several employees and firemen lost their lives.

At the village of Fotheringay, the scene of the execution of Mary Queen of Scots, many visitors witnessed a series of tableaux vivants by ladies of the neighborhood, on the occasion of the tercentenary of her death, depicting the chief scenes in her life.

The Crown Prince Frederick William of Germany underwent another operation in London August 4 by Dr. Mackenzie for the growth in his throat, with good results. His general health is excellent, and his voice is improving. The recurrence of the growth is the only alarming feature.

Emperor William and Emperor Francis Joseph met at Gastein August 6. They took a walk on Sunday, and later Emperor Francis Joseph paid a visit to Emperor William. At the end of half an hour they bade each other farewell, embracing at the top of the staircase. Emperor William remained on the balcony until Emperor Francis Joseph disappeared from view, the crowd in the street in the meanwhile cheering.

During the first half of 1887, 57,181 persons emigrated from Germany, as against 40,597 during the first half of 1886; 106 Government-aided emigrants sailed from Queenstown for Montreal August 6.

The one hundred and fiftieth anniversary of the founding of the University at Göttingen was celebrated August 7.

The German feeling against France continues to find expression in newspaper comment and in irritating incidents. The *Deutsches Tageblatt*, in an article headed "German-Baiting in France," says: "If these persecutions continue, and the French Government adopt corresponding measures, we should simply regard France as a barbarous, uncivilized nation, and should break off diplomatic relations, discontinue railway and postal intercourse, and throw out a line of military outposts. If the French play at war against us in time of peace, let us do the same thing." Thirty-eight French railroad employees residing at Avricourt, Lorraine, near the frontier of France, were recently expelled from the country. It was reported August 7 that Baron Billing, late French Ambassador to Sweden, while visiting friends in Alsace, was expelled from the province.

Nor do the relations between Germany and Russia become more conciliatory. The press of Moscow and St. Petersburg make the death of M. Katkoff the occasion of fresh outbursts of hatred towards Germany.

The *Kreuz-Zeitung* and other German journals attack the Danish Government for declaring the necessity of fortifying Copenhagen against Germany, and warn Denmark that an alliance between France and Russia might lead to the conviction that the annexation of Denmark to Germany was a maritime necessity.

The late Alfred Krupp bequeathed $250,000 for the benefit of his employees, and his son Friedrich has added $125,900 to the amount for the people of Essen. The Town Council of Essen has voted $15,000 for a statue of Alfred Krupp.

Prince Ferdinand, accompanied by his suite and the Bulgarian Foreign Minister, left Vienna for Bulgaria August 9.

On August 7 the remains of Katkoff were conveyed to Moscow from the place of his death, a distance of twenty miles, for interment. The coffin was borne alternately upon the shoulders of relatives of the dead editor, workmen, students from the University, members of the press, and peasantry. There were 300 carriages in line, and the priests and choristers were dressed in white, with silver embroidery. The priests bearing holy water blessed every village through which the procession passed, and at every church on the route services were held.

The wheat crop of France is good. It is estimated that the yield will amount to 110,000,000 hectolitres, against 105,000,000 in 1886. Russian harvest reports are satisfactory. At Vienna, August 6, the price of wheat was lower than it had before been for twenty three years. The British Director of Agriculture of the northwest provinces of India has issued a note on competition between Indian and American wheat. He says that India possesses means to compel America to withdraw her hostile tariffs and open her markets to British industry, but is burdened by higher railway freight charges, excessive handling, and apparently, though not really, inferior quality. He advises London merchants to use their influence with the railways.

The French Council of State has been discussing the rescinding of the excessive tariffs imposed in Cochin China, which have had the effect of stopping all trade and of increasing smuggling enormously.

M. Magnier, editor of the *Événement*, fought a duel with M. Reinach of the *République Française* August 6. The weapons used were swords, and M. Reinach was wounded. The seconds of Gen. Boulanger and M. Ferry have failed to agree on conditions upon which their principals could fight, and the contemplated duel between them has been abandoned.

The *République Française* (Paris) on August 4 published a despatch from Rome which said: "The Pope has decided to take part in the political elections, and has appointed a commission to canvass the clericals. He hopes to secure a strong party in the Chamber of Deputies, and to force the Quirinal to make concessions."

It has been officially announced that the King of Italy will not accept the resignation of his Ministry.

All the gondoliers in Venice have gone on a strike because a night service has been started on the Grand Canal. All the bakers also have gone on a strike, and the waiters in the hotels and cafés threaten to follow their example.

There were 604 deaths from cholera in Catania in July. The Government has forbidden the holding of public festivals.

The Federal Council of Switzerland has appealed to Swiss in all parts of the world to aid the sufferers from the recent disaster at Zug.

Advices from Henry M. Stanley have been received which report that on June 6 his expedition reached a point not far from the furthest point reached by him in 1883. Navigation was difficult and slow, because the boats were carrying all necessary supplies for Emin Pasha in addition to the supplies of the expedition.

Three Chinese of influence on August 7 started from Shanghai on a visit to Washington, having secured an imperial decree sanctioning the formation of a banking syndicate. A dozen American banks, it is reported, will advance the money. Li Hung Chang will be Chairman, with a joint American and Chinese management, and the first work to be undertaken will be a railway connecting Pekin and Tien-Tsin and Canton.

The Executive Committee of the Central Farmers' Institute of Ontario in a meeting at Toronto August 4 declared itself strongly in favor of unrestricted reciprocity with the United States, and decided to push the work of organization throughout the province.

The New England schooner *J. H. N. Perkins* has been seized by a Canadian sub-collector at Souris, Prince Edward's Island, on a charge of having shipped five men off the north side of the Island on July 30, and two men at Souris at a later time, within the forbidden limit. The Captain admitted having shipped four men as charged, but said that he supposed he was outside of the three-mile limit.

A company of Mormons from Salt Lake City have made application to the Canadian Government for homestead lands in the vicinity of Medicine Hat, Northwest Territory, with a view to forming a settlement.

The number of deaths from smallpox in Santiago de Cuba during the second half of June was 130, and during the first half of July 187.

The information brought by the *Zealandia*, which arrived at San Francisco August 7, from Honolulu July 30, is that further trouble may be expected in the Hawaiian Kingdom. Conservative men doubt the stability of the new Ministry, which was chosen by an armed revolutionary league, bound together by oath and acting in secret. The natives are dissatisfied because a practically prohibitory property qualification is laid on electors and is required of members of the Legislature. Nor are foreigners required to renounce allegiance to their Government before participating in Hawaiian politics. Some of the natives contend that King Kalakaua had no power to abrogate the Constitution. His sovereign rights were derived from it, and the right to abrogate or amend it was not one of these. Therefore, his act was absolutely lawless, and without excuse except that of physical terror of death at the hands of the men who now constitute his advisory council. Added to these troubles is a grave financial danger. Ex-Premier Gibson put a loan of $2,000,000 on the market, but the new Ministry will have nothing to do with the bonds and there is danger of repudiation. Prime Minister Green asserts that the bonds are worthless. The holders who are in danger of suffering loss are English investors. Queen Kapiolani arrived July 26.

SECRETARY FAIRCHILD'S CIRCULAR.

THE opinion of bankers and financiers in this city in reference to Secretary Fairchild's circular appears to be highly commendatory. The same opinion is reflected by the exchanges. A feeling of confidence has been exhibited in business circles which has been for a long time wanting, and which evidently nothing else could have supplied. It was in vain that crop prospects and railroad earnings and bank clearings were improving, and bankruptcies diminishing, so long as it appeared possible that the Treasury might absorb and lock up the money of the country, and thus blight the fairest fruits of the most promising business season. Much of the existing apprehension was unfounded. The possible evils were exaggerated. But for all practical purposes they might have been real and well grounded. The man who believes that a thunderstorm is coming will stay indoors. It may not come, but he will act as though it were coming. So, too, the man of business, however clear-sighted and however little superstitious he may be, will steer clear of any apprehended money stringency, arising from any cause or from no particular cause. He will do business from hand to mouth, and avoid anything that might expose him to disaster. It is of little importance to him whether the cash balance in the Treasury is larger or smaller than it was twelve months ago, in comparison with the question what the balance may be thirty, or sixty, or ninety days hence. If there is any doubt upon this point—if the operations of the Treasury are of a kind to draw money in large sums from business channels, and if the intentions of the Secretary regarding the surplus are veiled in mystery—he will cut all his undertakings and risks down to the minimum. He will hoard his own resources just in proportion as he imagines that the Secretary is hoarding his. And the two hoardings together may cause a panic.

To all men of the enterprising class the Secretary's circular is especially welcome, since it signifies to them that the Treasury is not to be a sinister factor in the money market, nor any factor at all so far as Mr. Fairchild can prevent. The difficulties of the situation are very considerable, but not insurmountable. The Secretary has no power to diminish his own income, but he can add to his outgo temporarily, and sufficiently to ward off present danger. He can anticipate his interest payments to an indefinite extent, and he can buy bonds in the open market at his own discretion. It is doubtful whether any large number of bondholders, except, perhaps, the national banks, will care to have their interest paid in advance if they have to accept it with a rebate, but they can be required to take it if it is offered to them in full. It is no loss to the Government to pay it without rebate, since there is no other use for the public money than to pay public obligations. Still, the Secretary would not be justified in paying the full interest in advance until he had tried the other way. We shall soon know whether the interest money is wanted in advance on the conditions named. The national banks, being in the money-lending business, may perhaps take their portion with the rebate. If they do, it will be because they can make it earn them more than 2 per cent. per annum.

When we turn to the Secretary's alternative measure, the purchase of 4½ per cent. bonds, we shall probably find that the offerings of bonds to the Government will be made at something above the current market rate. This, however, will be merely an every-day experience. When any large buyer comes into the market, whether for securities or for produce, he has to pay something above the current rate, and conversely every large seller has to accept something less than the current rate. Accordingly, if the Secretary should find signs of some speculation on his necessities, he need not hesitate on that account. There must be a reasonable limit to such speculation because the 4½ per cents have less than four years to run. All the premium that the present holders can ever realize they must get within that short space of time. Here again the Secretary would be justified in paying something more than a private person would pay, because he has no other investment for his money. A private person might use his surplus in a hundred ways. The Treasury can use its surplus only in paying debts. The purchase and cancellation of $1,000 of 4½ per cents stops the payment of about $180 in interest, saving that amount to the taxpayer. The present quotation of 4½ per cents is about 110. Any purchase at less than 118 is a saving to the Government. These bonds have so short a time to run that one would naturally look for considerable competition among sellers.

IMMIGRATION AGAIN.

THE Democratic platform of Virginia is unquestionably the most degrading public deliverance of the present year, but we would not stake much on the prediction that the Republican platform of the same State will not be a more disreputable one. Among the doctrines labelled Democratic by the followers of Thomas Jefferson is this:

> "We are unalterably opposed to the introduction of foreign pauper labor into this country, and we request the Congress of the United States to pass such laws as will prevent the immigration of such people who will become a burden upon the taxpayers of this country, or come in competition with honest American laborers."

It is easy to see what this means, for although the words "pauper labor" and "honest American laborers" are cunningly introduced, in order to convey the impression that only the pauper classes and the dishonest classes of foreign countries should be excluded, yet a careful reading shows that the intention is to exclude every class. This looks much like the Know-Nothingism of thirty years ago, but it is really something worse, and we do not believe that public sentiment, even of the artisan class, composed as it is largely of foreign-born citizens, is prepared to go that length. We think that the utmost that any large number of Americans, whatever their nativity, desire, is some effective discrimination between the good and the bad, the desirable and the undesirable, the thrifty and the unthrifty classes of immigrants; and the question is, how to make the discrimination.

It is a well-known fact that more than one European nation would be glad to diminish the emigration from its shores, or deflect it into channels where it would redound mainly to the interest of the mother country. The act of emigration implies a dissolution of all old political ties, and generally the acceptance of a new allegiance and new political relations. In the present political attitude of European countries to one another, this means a good deal. It means the loss each year of hundreds of thousands of able-bodied men—men who have been nurtured at great expense to the State, and trained for military service, men who are producers, and of even greater value economically than as soldiers. Germany, Italy, Austria, and even Russia would be very willing to retain the services of these men, as there is every reason to believe that, should war come, each nation would require all its resources to meet its competitors.

It would be strange, therefore, if in this situation the Government of the United States and those of Europe could not arrive at some understanding in which the wishes of each might at least in part be met. It would be impossible to prohibit migration, as the means of evading such a prohibition are too many, but we believe it is possible to devise some wholesome checks upon migration which would greatly improve the class of emigrants coming to this country. Furthermore, we believe that these checks could be more effectively applied in the countries whence the movement originates than in the customs ports of this country. The Boards of Emigration now acting under national legislation are confessedly incompetent to carry out the full intent of their institution, and such bungling legislation as the so-called labor reformers would apply, and of which the "contract-labor law" is a fair example, is decidedly mischievous, and in fact only aggravates the evils of an unrestricted immigration by excluding the most desirable class of workingmen—the skilled labor of Europe. How, then, can these checks be applied?

It seems to us that the consular service offers the proper machinery for an attempt to improve the quality of emigrants from their respective districts. The consul is on the spot; he knows the general character of the population of his district; he has, moreover, at hand sources of information that would enable him to decide a case in doubt. The most reasonable test would be one requiring the intending emigrant to obtain from the nearest American consul a sort of certificate which will be issued only when the consul is reasonably sure that the applicant is capable of self-support and intends to support himself and family. This, after all, is merely applying the general rules which are supposed to be enforced at the leading centres of immigration in this country, and it is certainly easier to apply them to a small number of emigrants in their own country than to bodies of three or four thousand landed at our wharves in one day. The rules to be applied in the issue of certificates must of necessity be general, and their enforcement would depend upon the energy and honesty of the consul; but, great as will be the differences in in-

terpretation that must arise, they will not entail so much mischief as the loose action of the Boards of Immigration in this country, necessary as these Boards are, and eager as they are to perform faithfully the duties imposed upon them.

We said that even the foreign governments might assist in this control of migration. In past years there have been indications of a wish on the part of some of the European governments to dispose of their vicious and incapable population by shipping them abroad. This wish, however opposed to the rules of comity and friendship recognized by international law, is, after all, a very natural one, and only the strong remonstrances of this Government have prevented its being carried into effect. "Every society," wrote Mr. Marcy in 1856, "possesses the undoubted right to determine who shall compose its members, and it is exercised by all nations both in peace and war"; and in 1872 Mr. Fish wrote positively that the Government of the United States "is not willing, and will not consent, to receive the pauper class of any community who may be sent, or may be assisted in their immigration, at the expense of Government or of municipal authorities." On one occasion, Austria checked an undesirable emigration of Mormons at the request of this Government.

Exactly how this participation of a foreign government in this plan for controlling emigration is to be exercised we will leave for future discussion. It is doubtful whether it would be necessary often to call upon a government for action, as the classes over which it has complete control—the chronic paupers, the insane, and the incapable—are already excluded from landing at our ports by positive statute. But it would be well to have such an agency to fall back upon should a special contingency requiring it arise. In the meanwhile, we think that the consular certificate or passport would be a step towards a proper solution of this intricate question. As the machinery exists, and can be put to work without expense, there is a fair field for a trial.

THE RACE ISSUE IN GEORGIA.

The lower branch of the Georgia Legislature has passed, with only two dissenting votes, what is known as the Glenn bill. The bill is entitled "A bill to regulate the manner of conducting educational institutions in this State, and provide penalties for the infraction of this act." It provides that no school, college, or other educational institution conducted for the education and training of colored people shall matriculate or receive as a pupil any white person; nor shall any school, college, or other educational institution conducted for the education of white people receive or matriculate any colored person as a pupil. Any teacher or manager controlling an institution violating this act shall, upon conviction, be punished under a section of the code providing as the penalty for misdemeanors a fine not exceeding $1,000, imprisonment not exceeding six months, or work in a chain-gang not exceeding twelve months—any or all in the discretion of the court. If the institution has a charter, not only the teachers, but the president, secretary, and trustees, who shall knowingly permit this act to be violated, are subject to indictment and similar punishment.

The act is aimed at the single institution in the State which has ever educated children of the two races together—the Atlanta University. This institution was founded by the American Missionary Association, shortly after the war, for the education of colored pupils, and is still chiefly supported by Northern benevolence, its only assistance from the State having been the allowance for some years past of half the $16,000 annual interest coming from its share of a national grant of public lands to the States for educational purposes. The University has never had a white pupil from a Georgian family, and the only white pupils are a half-dozen children of the professors and of a clergyman associated with the institution, who have been thus educated by their parents, partly from motives of convenience, as there is no other school in the vicinity, and partly from their desire to live up to their principles of disregarding the race line. No charge has ever been made that the professors have acted as proselyters in the cause of mixed education, and no evidence has ever been presented that their course was making mixed education so popular that native white parents were likely to imitate their example. The act simply means that if a professor in the Atlanta University teaches his own child in a class with a negro child, he may be sentenced to a year in the chain gang.

Georgia, like every other Southern State, and like many Northern States until recent years, has always maintained separate schools for the two races. The Constitution provides for "a thorough system of common schools," which "shall be free to all citizens of the State; but separate schools shall be provided for the white and colored races." In the existing condition of public sentiment on the race question throughout the South, public education could never have been established if the attempt had been made by force to bring the two races into the same school-room, and it would be overthrown in a moment if mixed schools were to be ordered now. The legality and the expediency of separate school systems are, therefore, not now in question. But it is one thing to provide that the races shall not mix in schools supported by public taxation, and quite another thing to declare that no school, however supported, shall teach whites and blacks together without subjecting everybody responsible for this policy to the risk of a year in the chain-gang. This is an outrage of the very worst sort, for which no defence that is even plausible has been made or can be made. It is simply an outburst of race prejudice in its most offensive form.

But much of the Northern comment upon this performance is quite beside the point. Many Republican papers talk as though this were a question of politics, and a matter for Congressional legislation; and appear to think that, if there were a Republican Administration at Washington, something would be done about it. A Connecticut organ, for example, has proposed to take the question of civil rights involved into Congress, and "appeal to the highest court in the land to have the law set aside." If the editor had read the decision of the Supreme Court declaring the Civil-Rights Act passed by Congress unconstitutional, he never would have made such a proposition. He would have learned that, in the opinion of the highest tribunal, Congress has no constitutional authority to interfere in the matter of civil rights unless a State passes legislation which denies to any of its citizens the equal protection of the laws. But the bill in question applies impartially to whites and blacks. If the teacher of a white school should receive a black pupil, he would incur precisely the same penalty as the teacher of a black school who should receive a white pupil. The State has the right to dictate that attendance upon schools shall be regulated according to sex, boys only going to one set of schools, and girls only to another; and, in like manner, it has the right to dictate that attendance shall be regulated according to color, provided that the limitations and penalties imposed upon white and black offenders against the law are the same, as is the case with the proposed law. The Glenn bill would undoubtedly be held constitutional if submitted to the Republican Supreme Court, and it may as well be accepted that Georgia has the legal right to pass it.

The real appeal in such a case as this Georgia one is not to Congress or to the Supreme Court, but to the popular conscience and sense of justice. A lesson may here be drawn from the history of Connecticut. In 1833 Miss Prudence Crandall, a young Quaker woman, announced her intention to throw open to colored pupils her private school in Canterbury, Conn. Town-meetings were promptly called to prevent the consummation of the outrage. The school having been opened, attempts were made to frighten the pupils away and to fine Miss Crandall for harboring them. An appeal was made to the Legislature, and that body passed an act prohibiting private schools for non-resident colored persons, and providing for the expulsion of the latter, the news of its passage being hailed by the ringing of the church bells in the town. Under this act Miss Crandall was arrested and temporarily imprisoned in the county jail, twice tried and convicted, and only escaped sentence upon a technicality. Meanwhile attempts had been made to starve out the young white woman and her colored pupils; the shopkeepers would not sell them a morsel of food; their well was filled with filth, and water from other sources refused; the physicians would not wait upon them; the village meeting-house was closed against them; carriage in the public conveyances was denied them, and friends were forbidden under heavy fines to visit them; their house was assailed with rotten eggs and stones, and finally was set on fire.

This happened in Connecticut only fifty years ago. A white woman can teach colored pupils in Connecticut to-day, but not because the people have been compelled to allow her to do so by Congress or court. It is because they have come to see the injustice and inhumanity of their ancestors. If Georgia is to outgrow her present intolerant disposition, it must be in the same way. And if Northern Republican papers are impatient at the prospect that this will take a long time, they must remember that it was not until the year 1887 that the Northern State of Ohio,

which had been controlled by the Republican party most of the time for thirty years, reached the point where her Legislature would abolish the last of the "black laws."

SOREL'S MONTESQUIEU.

PARIS, July 29, 1887.

I GAVE an analysis of Boissier's little volume on Mme. de Sévigné. I have now before me another volume of the same series, 'Montesquieu.' It is not an easy task to write anything original or new on the author of the 'Lettres Persanes' and the 'Esprit des Lois.' M. Albert Sorel, the author of this new volume in the "Grands Écrivains de la France," has made himself known by a work on 'Europe and the French Revolution,' now in course of publication. His mind is more turned on diplomatic and historical questions than on pure literature; he has occupied for some time a post in the French Foreign Office, is one of the officers of the French Senate and a professor in the École Libre des Sciences Politiques.

The family of Montesquieu adopted the Protestant reform in the sixteenth century, and returned to the Catholic religion at the time of the abjuration of Henri IV. Charles Louis, the future author of the 'Esprit des Lois,' was born January 18, 1689, near Bordeaux, at the château de la Brède. "His father," says M. Sorel, "had the aristocratic austerity of the Vaubans and the Catinats; his mother was pious; they were both nobles who made themselves of the people, partly from a sentiment of the duty of their rank, partly from a Christian feeling. At the moment when Charles Louis was born, a beggar came before the château; they kept him and made him the godfather of the child, in order that this godfather might remind him all his lifetime that the poor were his brothers." This might be called an education *à la* Rousseau before Rousseau. The pious and philanthropic mother did not nurse her child, however, but gave him to some peasants, who kept him three years. Charles Louis lost his mother at the age of seven, and was sent to the Oratoriens, at Juilly, where he remained seven years. This education in an ecclesiastical school, away from his family, did not develop his sensibility; strangely enough, it prepared him for incredulity. The education at Juilly was classical, and, it might be said, Roman; young Montesquieu wrote at the age of twenty an essay to prove that the ancient philosophers did not deserve damnation.

After his law studies, he was made *conseiller* of the *Parlement* of Bordeaux, and married Mlle. Jeanne de Lartigue, of Calvinistic origin. M. Sorel tells us that his wife "had more candor than beauty, more timidity than charm, more virtue than *agrément*." He adds that *Parlement* and family "occupied little place in his life; he spoke of both with respect, behaved towards both with decency," but that was all. "His activity drew him towards the great intellectual curiosity" (Renan introduced this use of the epithet great, *la grande curiosité, la grande culture*). Montesquieu first gave his attention to scientific subjects: he studied anatomy, botany, physics—it was the fashion. President de Brosses was also devoted to science. Montesquieu's excursion in the scientific domain was shorter, but it gave him a method, a certain power of observing and classifying.

The first object of his philosophical observation was French society at the time of the Regency of the Duke of Orleans. He described it in a light form in the 'Lettres Persanes' (in 1721). Two Persians, one gay and critical, the other thoughtful, write letters to their friends in Persia and describe what they see in France. This idea of Persia was borrowed from the work of a celebrated traveller, Chardin. As a novel, the 'Lettres Persanes' are a mere *pastiche;* as a social study, they are still worth reading. In one year there were four editions of the 'Lettres Persanes.'

Montesquieu, though he was blamed by many, became a member of the fashionable and literary society of Paris, a friend of Maurepas, of the Chevalier d'Aydie, of the Comte de Caylus. He saw familiarly Mme. de Tencin, Mme. de Lambert, Mme. Du Deffand. He won the good graces of Mme. de Prie, who reigned at Chantilly with the Duc de Bourbon. He never lost his heart to any woman. "The society of women," he writes somewhere, "spoils our manners and deforms our taste." He was of a very timid disposition, and he affected not to feel any passion. "I was," he says, "in my youth happy enough to attach myself to women by whom I thought myself beloved; as soon as I ceased to think so, I left them suddenly." It is said, however, that he conceived an unhappy passion for Marie Anne de Bourbon, the sister of the Duc de Bourbon, who was called Mlle. de Clermont. She had extraordinary beauty. The Duc d'Aumale has in his collections a life-size portrait of Mlle. de Clermont, by Nattier. She has in it the simple dress of a Naïad, being represented as the deity of the spring of "Sylvie," one of the springs of the Park of Chantilly. Montesquieu composed, in order to please this charming goddess, a little pagan poem, called the "Temple de Gnide"—a fastidious poem in prose, artificial, quite unworthy of him, which would be entirely forgotten if there had not been a fine edition of it, entirely engraved, with beautiful illustrations by Eisen. (This book has a necessary place among the *livres à figures* of the eighteenth century.) I confess that I have read the "Temple de Gnide" without finding in it "the argument in prose of an elegy of André Chénier's"; that I did not suspect that "Chénier had much read Montesquieu"; and that it never occurred to me that Montesquieu "had been touched by the reflection of a ray of light coming from Greece." After publishing it, Montesquieu presented himself to the French Academy. The King, who did not like the 'Lettres Persanes,' refused consent to his nomination, under the pretext that he did not live at the capital. Montesquieu sold his office of *président à mortier* at Bordeaux, and fixed himself in Paris. He was reëlected to the French Academy in 1729, and this time admitted.

He began soon afterwards a long journey in Europe: saw Germany, Austria, Hungary, Poland, Italy, England; he took notes for the 'Esprit des Lois.' But, while this great work was in preparation, he published the 'Considerations on the Causes of the Greatness and Decline of the Romans' (in 1734), and the 'Dialogue of Sylla and Eucrates' (in 1735). The 'Considerations' may be considered a model of what may be called philosophical history. The modern historical school somewhat despises this philosophy, believing in facts and documents, and draws no general conclusions: it is, so to speak, positivist—it does not believe in any final causes. Such works as Bossuet's 'Discours sur l'histoire universelle' are no longer considered as having any historical value. Montesquieu did not bring to the study of Rome and of the Latin writers the profound knowledge which characterizes a Mommsen; still, M. Sorel says "that, on the whole, the judgments of Montesquieu are just." He well understood the Roman civilization and the causes of its downfall. Modern historians care little for science, and many of them have good reasons for professing such indifference: it is not given to everybody to have the terse style of a Montesquieu. His picture of the world at the time of the Roman conquest, his analysis of the Roman genius, of the causes of the greatness of Rome, cannot be forgotten.

These 'Considerations' were an admirable preparation for the 'Esprit des Lois.' In this great work, Montesquieu undertook to analyze the various forms of government which are found in the history of mankind, to show their advantage and defects, to point out their relations with the race, the geography, the religion. Machiaval had done something of this kind in his 'Prince,' but nobody before him had treated the problem of the government of men in all its generality. This generality is found in the first sentence of the book, which is classical: "The laws, in their most extensive signification, are the necessary relations derived from the nature of things"—a definition so general that it can be applied to scientific as well as to social laws. The analysis of the various forms of government, into monarchical, oligarchic or aristocratic, and democratic, made by Montesquieu has become classical; the same may be said of his description of the English Government and its balance of powers. I will not dwell on these points, merely insisting a moment on the part which Montesquieu left to religion in his study of human societies. His mind was shut on the side of heaven; he was not an idealist. He introduces here and there a phrase on religion, for fear of the censorship and of the Sorbonne; but it is clear that these phrases are purely conventional. He does not formally exclude religion from the various elements which tend to constitute human society, but he gives it a subordinate place, after the army, after the political constitution, after the climate, after the geological nature of the soil, after trade, population, and police.

He is tolerant, of course, but his tolerance is mere indifference; the maximum of it is the Edict of Nantes. He dislikes religious propagandism, which he considers a cause of disturbance for the state, and which, in his opinion, ruins paternal authority in the family. His principles are thus summed up: "When you are master of receiving into a state a new religion or of not receiving it, do not allow its establishment; when it is established, tolerate it." He even goes so far as to show by what means a religion can be destroyed if its destruction is expedient for the state. He does not approve of violence and persecution, but says: "It is safer to attack a religion by favor, by the commodities of life, by the hope of fortune, not by an advertisement, but by what makes it forgotten; not by what excites indignation, but by what cools and calms people—by what excites other passions while the passions excited by religion remain silent. As a general rule, in matters of a change of religion, invitations are stronger than punishment." With such views, it is not to be wondered at if Montesquieu preferred a state religion, tempered by the indifference of many and the unbelief of a select few, as much preferable to the struggle of contending religions.

The 'Esprit des Lois' was printed in Geneva in 1748, in two quarto volumes. It bore no name, but everybody knew who the author was. The influence of this book can hardly be exaggerated. Voltaire was jealous of it; it inspired the men who tried in 1798 to establish a constitutional government in France; it is to be found in the diplomatic documents written at various times by Talleyrand; it inspired the works of Mme. de Staël, the 'Considerations on the French Revolution'; it inspired Tocqueville when he wrote his famous book on 'Democracy in America.' Sainte-Beuve has at various times criticised the 'Esprit des Lois'; he has reproached Montesquieu with placing humanity too high, with treating it too much like an abstraction, with

not making sufficient allowance for the natural depravity of the species. To use the modern phraseology, he considers that Montesquieu is too much of an optimist and not enough of a pessimist. Sainte-Beuve was clearly of the same mind as Paul Louis Courier, who said: "Of all the governments of men, the best is worth nothing." In history, Sainte-Beuve reproaches Montesquieu with giving too little place to the caprices of chance and to the follies of men; everything is too simple, and goes by rules in the 'Esprit des Lois'; accidents are ignored, and history follows a sort of high road. The criticism is just; "the law of nations" is still empirical; the economic laws are hardly yet understood; constitutional laws are no better than ordinary laws, though they are more difficult to change.

With all these restrictions, with all its imperfections and shortcomings, the 'Esprit des Lois' will nevertheless remain one of those great monuments of human thought with which every cultured mind must become acquainted. After so many political revolutions, it cannot give us the secret of our future, but it can teach us, at any rate, prudence and wisdom.

Correspondence.

THE ART OF HOUSE FURNISHING.

To the Editor of The Nation:

Sir: Will you allow me to call attention to a significant change in literature? A few years ago all the heroines in novels were in the habit of retiring into their boudoirs, and presumably the rest of the house was in possession of the men. Now it is the hero who retreats into his "den," and leaves the house actually in possession of the women.

I presume we all agree that a woman who requires a room to pout in, and a man who has to have a place to growl in, are equally uncomfortable members of both the family and the community. The pouting woman is evidently a thing of the past, for boudoirs no longer exist. What can we do to abolish dens? Dens will not disappear either from novels or houses until men are allowed equal rights in the furnishing of our drawing-rooms or parlors. Most rooms are too much cumbered up with bows of ribbons on chairs, and scarfs tied on sofas, and tea-cups on little tables, for a man, if he is more than a carpet-knight, to be comfortable in them long. I have a feminine love of ribbons, but I think they should adorn women and women's apartments, and not take possession of the rooms that are intended for the use of both men and women.

Give the womanly element to rooms by a table consecrated to flowers and sewing, but don't make it womanish with too much of what is called fancy work. In one thing I am masculine—I detest tidies and scarfs of pongee, and all things that are so lightly attached to the furniture that they persistently adhere to one's clothing. All rooms that are attractive look as if they were occupied, and there should be nothing in them that seriously interferes with comfort. If a room is to be furnished, let it have in it first the things that are required for daily use, and afterwards add the things that society is supposed to demand. The successful furnishing of a room depends quite as much on taste as it does on the length of one's purse, and of course it cannot be reduced to rule; but there are some faults that may be avoided if attention is called to them.

People of moderate means should avoid spending too much for chairs and tables. The eye rarely rests on the table, but it always looks at the things on the table. Tables are almost always too small for comfort or for beauty. Many a man's happiness is wrecked if he has no corner where he can pile up newspapers; and for some men to be three feet from an inkstand or a dictionary is as trying as to be twelve miles from a lemon. Therefore, have a large table, with writing materials and ample room for books and papers, and banish the bric-à-brac to shelves above the danger of being swept off by the garments of the passers-by. Avoid gilt in wall papers, and velvet and plush in carpets and furniture, if your rooms are small. These are only suited to large houses, and they vulgarize small ones. Don't attempt painted floors with rugs, unless you have plenty of servants to keep them in order, and remember that even then they require a multiplicity of the non-essentials of life to take off the bare look.

If possible, compare wall papers and carpets to see how they affect one another, and don't take it for granted that if they are pretty in themselves they will be pretty together.

Give rooms that open from one another decidedly different tones of color, that the eye may be rested by the change, and not have to look out the details of the change. If economy has to be practised, begin by leaving off the borders of carpets and the wide frieze from wall papers; they absorb money that can be used to better advantage elsewhere.

If you want to beautify a room, use it constantly, and the things that accumulate because they are wanted will give the room the character that it needs, which will be the reflection of your own.—Very sincerely, M. N. S.

New Bedford, August 8.

SYMPATHY WITH CRIME.

To the Editor of The Nation:

Sir: There is an unpleasant feature which characterizes the American daily press, and which is wholly peculiar to it, being found in the respectable papers of no European country: I mean a sort of underhand sympathy with crime. You shall read a very virtuous leading editorial in a very high-toned paper, being greatly edified thereby. This is written by the editor-in-chief; but, as you quickly discover, there is a wicked partner in the concern, and you shall presently find some small paragraphs detailing criminal news, put into shape by some one whose sympathies are evidently not with the victims. Often the very slang of the criminal classes is adopted in a manner indicating a charming familiarity therewith. This, perhaps, would not be so bad if it were not for the direct implication, necessarily involved, that the reader is also familiar with it and relishes hearing of exploits of "till-tapping" and "safe-cracking." One of the loveliest of these euphemisms is that which characterizes scoundrelly highwaymen as "road agents."

It is a curious proof of the extent to which this sort of thing has been carried, that even those among us who have the most cordial contempt for this sneaking sympathy with crime, have these expressions so constantly forced upon us by the daily papers that we are compelled to understand their meaning whether we will or no.

Is it not time for all our papers, except those which make no pretence of decency, to purge their columns from this sort of stuff? Once a beginning made in this way, we might hope for a gradual improvement, and in process of time find the sub-editor and reporter sympathizing with the victim instead of the victimizer.

M. C. L.

DIVINING-ROD LOGIC.

To the Editor of The Nation:

Sir: As a contribution on the above subject, I will state that several years ago an elderly witch-hazel conjurer, of some reputation, came to our office and proposed to convert us to his views by locating the under-floor positions of the water-pipes leading to faucets in our three rooms. He opened the faucets, as he required motion in the water to induce a corresponding current in the rod, and he successfully located the four pipes as they had been put in when the house was built. The points fixed by him corresponded also with the pipes in the floor of the next story below, and I ascertained that no water was running on the lower story.

Now, it so happened that one of our pipes had recently been moved to another position twenty feet away, and the witch-hazel crossed it repeatedly without giving any sign, while it had violent convulsions whenever it crossed the former location of the pipe. These convulsions could not well have been referred to the piping in the lower story, for the water on that story was not in motion.—Truly, etc.,

Fred. H. Smith, C. E.

Baltimore, Md., August 5, 1887.

Notes.

D. Lothrop & Co., Boston, publish a translation by Mrs. Edmands of De Vogüé's 'Russian Novelists.'

Geo. Routledge & Sons announce Kate Greenaway's 'Queen Victoria's Jubilee Garland,' printed in colors; and 'Stories of Persons and Places in Europe.'

Charles L. Webster & Co. add to their subscription books 'A Library of Wit and Humor,' mostly prepared by Mark Twain; and 'The Myths and Mois of the Hawaiian Islands,' by King Kalakaua, assisted by ex-Minister R. M. Daggett.

Thomas Whittaker has in press 'Living Voices of Living Men,' "a collection of practical sermons by representative bishops and clergy of the American Church."

'Pen and Ink: Essays on Subjects of More or Less Importance,' by Brander Matthews, is the title of a volume of literary papers to be issued in the fall by Charles Scribner's Sons.

'An Anthology of the Novels of the Century: Choice Readings from all the Best Novels of the Last Eighty Years,' edited, with critical and biographical notes, by Mr. H. T. Mackensie Bell, is announced for publication in London by Chatto & Windus.

Mr. J. Gleeson White is preparing for publication in Mr. Walter Scott's series of "Canterbury Poets" an anthology of the poems written in our language in the various romance forms, the *rondeau* and the *ballade* and their fellows, which have been abundant in the ten years since Mr. Austin Dobson introduced them to us. Mr. White's volume will appear in November. It will contain a full selection from the younger American poets.

Chapman & Hall announce a book which ought to be interesting, viz.: 'A History of Vagrants and Vagrancy and Beggars and Begging,' by Mr. C. J. Ribton Turner. It will have numerous illustrations.

The amusing novels written in collaboration by Mr. Walter Besant and the late James Rice are to have the honors of a library edition, to the first volume of which, 'Ready-Money Mortiboy,' will be prefixed an etched portrait of Mr. Rice, and an account of the partnership by the surviving partner.

By the middle of next month should appear the first number of the *Curio*, an illustrated monthly magazine of forty-eight pages quarto, devoted to Biography and Genealogy, Heraldry, Bookplates, Rare Books and Prints, Old Furniture

and Plate, etc., etc. The editor is Mr. E. DeV. Vermont, and the publisher Mr. R. W. Wright, at 6 Astor Place, New York city. Fiction is to have a place, beginning with Edgar Fawcett.

A triple number of the *Art Review* (New York: Geo. F. Kelly, 59 Carmine St.), to be issued this month, embraces May, June, and July, and will contain fifteen full-page copper photogravures.

The Albany *Law Journal* has published an index-digest of vols. 21-34 inclusive.

The Midsummer *Puck* is even more successful in its elaborate color-printing than was its elder, the Christmas *Puck*, and perhaps the letter-press is also improved. Certainly we recall nothing in the earlier publication as amusing and as delicate in its satire as "A Successful Failure," "written for Mr. Frank R. Stockton by H. C. Bunner." Some of the social drawings are also most humorous.

What is meant to be a piece of satirical *esprit* is put forth by Cassell & Co. with the title 'The Republic of the Future, or Socialism a Reality,' by Anna Bowman Dodd. It consists of seven letters from a Swedish nobleman, living in the twenty-first century, who recounts in them his travels among the inhabitants of New York, with the customs and the character of the people as they had been formed under a long-continued socialistic régime. The wonders of machinery play a large part; but most of the volume, which is no more than a brochure, is merely a carrying out into example of current notions that Socialism will result in dead levels, the equality of women with men in the State, the subjection of man, and the extinction of the nobler forms of love, and like propositions. These prophecies of the ruin to be wrought by "Socialism," one may observe, are identical with those which for many years were made concerning "Democracy." The mechanism and the phrases show a later date, but essentially the book belongs to a past age.

The latest issue in Mr. Wheatley's "Book-Lover's Library" (George J. Coombes) is a curious collectanea about the herbs, fruits and flowers, and the ornamental trees of England, under the title 'Gleanings in Old Garden Literature,' from the pen of W. Carew Hazlitt, whose 'Old Cookery Books,' in this same series, we have already had occasion to commend. For those who unite the tastes for gardening and for literature, this volume will be treasure-trove; and, in fact, as a kind of history of the cultivation of vegetables, the changes and ever-increasing variety of diet, with the views afforded of the tables of our forefathers, the volume serves to gather and compress a considerable amount of out-of-the-way information. On the ornamental side, one gets notices of famous gardens and some landscape gardeners; of the different fashions of the times, the arbors, the mazes, and the fruit-walls; and, throughout, the literary quality is never suffered to give way to a scientific or encyclopædic or historical method merely. The old books on gardening are catalogued, and some extracts are given; perhaps Bacon is allowed more than his due share of literary quotations. At the end there are a dozen or fifteen pages containing "A Short Account of Several Gardens near London, with Remarks on Some Particulars wherein they Excel or are Deficient, upon a View of Them in December, 1691," from an unpublished MS. by Gibson. We have found the volume one of the most entertaining of this very charming series. It should be added that its text hardly touches upon the present century, but is essentially antiquarian in subject-matter.

Mr. Thomas J. Morgan, Principal of the Rhode Island State Normal School, has collected in 'Educational Mosaics' (Boston: Silver, Rogers & Co.) passages from more or less famous writers upon the choice of studies, theories of instruction, and similar matters, together with a sprinkling of maxims and reflections kindred to the subject. There is no marked scheme or order in the arrangement of the extracts, which for the most part are from contemporary books, and represent the average ability and judgment of men who speak and write on the topic of education. The scales are kept even between the classics and the sciences, both of which are praised and discredited in turn; the elective system receives the same impartial treatment; the kindergarten, the trade-school, etc., are included with their older associates. Altogether, a catholic discretion has been exercised, and the volume may be described as a handy one to quote from for persons with poor memories and insufficient reading of their own.

We have received the second volume of Transactions and Reports of the Nebraska State Historical Society. Indian warfare and the contest over slavery are the subjects to which most space has been devoted; but many others, both of local and national importance, are treated. Several scarce county histories are reprinted, and there are the usual biographical notices.

It is perhaps not too late to mention a tasteful volume entitled 'Historical Sketch of the South Church (Reformed) of New York City' (A. D. F. Randolph & Co.). This church is the lineal descendant of that first set up by the Dutch in the Battery Fort in 1642. Its migrations in consequence of the growth of the city are illustrated by pictures of the several edifices from the beginning; and as these offer a curious study in architectural development, so the portraits of the pastors are interesting as successive types of clerical aspect. The little book belongs to the general history of New York.

The second annual issue of 'Poor's Directory of Railway Officials' (H. V. & H. W. Poor) shows a marked enlargement, the street-railroad system being now included; and the work is more than ever the best conspectus of the personnel of the great interest in question. From the list on page 371 it appears that twenty-nine States and Territories are now provided with railroad commissioners. Foreign railways on this continent south of the United States are described on pages 317-335. Bridge builders, car and rail manufacturers, and contractors come within the scope of this Directory.

We should hardly take so pessimistic a view of the race as "The world is chiefly filled up with sick folk," which we find to be the starting-point of Dr. Hanchett's 'Modern Domestic Medicine' (C. T. Hurlburt), and seems to be the excuse for that volume, and for its smaller 'Companion,' which is devoted to subjects not suitable for treatment in a family book. In his effort to be useful the author sets forth much excellent advice, but with it are some odd opinions, such as that woollen should never be worn next the skin until after the prime of life (p. 24), and that thousands have been killed directly or indirectly by overdosing with quinine (p. 241). The general tenets are those of the homœopathists.

An anonymous medical book for popular reading is doubly suspicious, but, as an exception to the rule, a cheap although well-printed little work on 'Accidents and Poisons, their Remedies and Antidotes,' published by Rand, McNally & Co., Chicago, is excellent. Truly, when an emergency happens, there is little time to consult books, but those fond of this style of literature will find themselves forearmed if they study its warning when there is time. Nearly a third of the book is occupied with general hygiene, and all its teaching is sound.

There is comparatively little new information given in the extracts from Emin Pasha's Diaries published in the July *Fortnightly Review*, but they are full of bright and picturesque descriptions of the country and people with whom he is placed, together with, at times, detailed accounts of important events. When first summoned to surrender by the Mahdi's lieutenant after the capture of Lupton Bey, he called a public meeting of his officials and laid the matter before them. Unanimously they voted to surrender, but Emin, though ostensibly yielding to their wishes, succeeded in maintaining his position. He is very confident that, so far as the upper Nile provinces are concerned, the Mahdi revolt was fomented only by and in the interest of the slave-dealers. There are many touching allusions to his deserted condition; and yet, when about to start on one of his tours of inspection, he is as joyful "as a schoolboy beginning his holidays." The singular modesty of the man is shown in the ardent wish that he might meet Dr. Junker again. "How thankfully," he continues, "would I have learnt from him out of the stores of his experience!" Very natural too is the passage in which he describes his first impulse on reaching a river, the Welle, whose waters flowed west, "to plunge into its roaring waters and be borne by them to the west." The diary closes with an entry dated January 12, 1885, his period of greatest despondency, and yet he does not give up hope: "I have some belief in my good star." The extracts are introduced by a short introduction by Miss Felkin, to whom they were sent, as letters.

From samples that have already appeared we should expect much entertainment and solid scientific instruction from 'Ergebnisse naturwissenschaftlicher Forschungen auf Ceylon in den Jahren 1884-'86,' by Drs. Paul and Fritz Sarasin (Wiesbaden: C. W. Kreidel; New York: Christern.) The work will appear in four volumes, the first two being occupied with the zoölogy, the third with the anthropology, and the fourth with a general description of the island, concerning which the authors' explorations were so extensive that they venture to believe they have something new to tell. These three divisions can be subscribed for separately. There will be numerous plates.

In place of a Society for Mutual Autopsy like that established by eminent men of science and of letters in Paris in 1876, Milan has an Instituzione Loria, which undertakes an autopsy for any physician or private family that desires it. The complaint is made that, for the study of the brain, too much neglect has been shown in furnishing a life-history of the subjects examined by this institution. The *Perseveranza* for July 12 reprints the constitution of the Paris society above named.

Calmann Lévy announces for immediate publication a work by Prince Napoleon, of which the title is 'Napoléon et ses détracteurs.'

M. Noël Valois has reprinted in a pamphlet of forty-two pages a paper first published in the *Annuaire-Bulletin* of the Société de l'Histoire de France, concerning the 'Privilège de Chalo-Saint-Mard.' This total exemption from all imposts enjoyed by the descendants of Eudes-le-Maire, called Chalo-Saint-Mard, went back, it was pretended, to 1191. M. Valois shows how the treasury and administration of the realm were the victims of a successful imposition in the matter from the time of Philippe VI. to that of Louis XV. For those who enjoy the skilful disentanglement of obscure historical complications, the pamphlet of M. Valois will be full of interest.

M. Léopold Delisle has republished from the *Gazette Archéologique* an important notice upon the 'Exemplaires royaux et princiers du Miroir historial' (Paris: A. Lévy). The vast compilation of universal history known under this name is the translation into French of the famous 'Speculum Historiale' of Vincent de Beauvais,

made by Jean du Vignay at the command of Jeanne of Burgundy, the first wife of Philip of Valois, King of France. M. Delisle proves that the translation was made in 1332 and 1333.

Plon & Nourrit have published 'Les Sophistes allemands et les Nihilistes russes,' by Th. Funck-Brentano, professor at the École Libre des Sciences Politiques. This house had already issued, in a similar 8vo volume by the same author, 'Les Sophistes grecs et les Sophistes contemporains.' They have just published an 18mo edition of 'Le Marquis de Grignan, petit-fils de Mme. de Sévigné,' by M. Frédéric Masson, which appeared in the 8vo form in 1881.

Hachette likewise has published an 18mo edition of Caro's 'Problèmes de morale sociale,' which first appeared in 1876; and Perrin, in the same convenient form, 'Henriette-Anne d'Angleterre, duchesse d'Orléans: Sa vie et sa correspondance avec son frère, Charles II.,' by the Comte de Baillon. The first edition, 8vo, appeared in 1885. The 18mo editions of the same author's 'Henriette-Marie de France, reine d'Angleterre,' and of his 'Lettres inédites de Henriette-Marie de France,' were published several years ago.

In aid of the Academy at Ashfield, Mass., a fair is to be held on August 24, 25, at which will be sold the 1884 one-volume Macmillan edition of Tennyson, the 1881 volume of Selections from Browning, the two-volume Matthew Arnold of 1881, and the two-volume Riverside Aldine edition of Lowell's 'Biglow Papers.' All these except the last have been specially and handsomely bound in morocco; each contains the autograph of the respective poet; and all except the Tennyson have, besides, a verse of the author's in his own hand. It is proposed to open these volumes to competitive offers by mail, which should be addressed to A. D. Flower, Ashfield.

—We subjoin an extract from a letter of Dr. Caspar René Gregory, dated Leipzig, July 11:

"I have been asked to prepare a course of lectures upon 'Religion in America,' or 'Church History in the United States of America,' and I hope in the course of a year or two to do so. A difficulty arises in the want of books. The library here, as well as the libraries in the other universities, have been and are more occupied with Continental questions, and their slender resources do not permit them to keep up with the German books. They could not make extensive purchases in this American line. The question has arisen whether, just as I, as an American, wish to put America duly on record here, so other Americans will not wish to put their literature, the material for the history of their religious organizations, in a foreign library where it will be appreciated, and where it will be at the service of every German professor who desires to approach these questions. The German university libraries send their books about at need, and Leipzig affords a good centre for massing this American literature. Even if I should not succeed in carrying out my plan, which of course would culminate in a text-book for American church history, the collection of books here would be ready for another worker. I may add that I have already given the library all of my own books which I could spare. Personally, I should be indebted to any one who would give me a note of books for the earlier literature. But where churches or men could send the books and the pamphlets pertaining to their special societies, they would do a service. Everything historical, statistical, doctrinal, and practical, would be wished for, from reports to single sermons. Many such pamphlets are destroyed in America because of the room they take up. Of course church newspapers in sets would be of peculiar value."

We are requested to add that the documents specified above may be sent to Dr. Gregory, at Leipzig, Liebigstrasse 9, iv, 1; or Prof. Joseph Henry Thayer of Cambridge, Mass., will gladly take charge of and forward any books or pamphlets intrusted to him for Dr. Gregory.

—The Midsummer *Century* has for its leader a decorative article, of which the illustrations are taken from the scenes of a Jersey canal. The text is cast in the half-familiar, half-Bohemian style of which some prominent art books set the example in the last holiday season, but it is not a style which bears repetition with much success, and is hardly worth cultivating by a new writer. The cuts display some clever management of the spaces, but in their effects scarcely equal Mr. F. Hopkinson Smith's usual sketches, and they do not deceive us into thinking that we possess a true corner of Holland in Jersey. Joel Chandler Harris begins a three-part story, "Azalia." The principal military paper is Gen. Joseph E. Johnston's account of his Georgia campaign before Sherman, in which he makes some unfavorable reflections upon Jeff Davis, places the whole responsibility for his own removal on the civil authorities, and "asserts" that if one of the other Lieutenant-Generals of his army instead of Hood had succeeded him in command, "Atlanta would have been held by the Army of Tennessee." The article is of interest for the illustration it gives of Davis's character, and of divisions in the Southern councils. The rest of the body of the number is taken up with the Lincoln biography and Mr. Atkinson's charts about wages, profits, and food. The Lincoln biography continues to degenerate into a wandering narrative about sundry things, not compact and comprehensive enough to be a history of the times, and not connecting personality closely enough with the events noted to have the interest of a biography. It is a succession of half-understood episodes. The figure of Lincoln is dwarfed by the method adopted, and even in such a critical point of his life as was the Douglas debates, and in such a commanding moment of interest as was the spread of his name through the nation, the authors have not had the ability to set forth their subject with its due power or anything approaching thereto. They write without the modesty of the historian who knows how much any man, or even two men, measure against so mighty a canvass, and they pronounce judgment as if their words were final, not only on Lincoln, but on the whole times in all their scope and intricacy of morals, events, and persons. The reader patiently waits for that original matter which is all that can now be hoped from the work. Mr. Atkinson summarizes his conclusions, of which the substance has been referred to heretofore, and, except for his curious attack on the conversion of corn into hogs, and his calculation that we waste enough fat and sugar to solve the question of housing the poor, his article is without any startling points. The discussion of the relation of gold and silver to the fall in prices is most worthy of attention, and the charts are as easy and convincing forms of argument as ever.

—Among the difficulties that beset those who seek to arrive at wise and just conclusions on the "woman question," not the least is our uncertainty as to the origin of such differences in physical and mental aptitudes as are exhibited by the two sexes to-day. Even if we knew to what degree these differences are due to essential natural requirements, and to what degree they have been developed by human institutions, this knowledge would, of course, by no means be conclusive with regard to the desirability of perpetuating some of these differences; still, it would serve to clear up the elements of the problem. Scientific men, or men assuming to speak in the name of science, have not seldom spoken contemptuously of the argument of Mill's 'Subjection of Women,' on the ground that he ignored the physiological causes which make women what they are, and attended only to the social causes; but it is certainly not too much to say that these critics have usually committed the far graver offence against science, of assuming a knowledge which science has not yet given us. A very interesting experimental investigation of the origin of a strictly physiological peculiarity of women is related in *Science* for August 5. It has been known ever since 1744 that the two sexes exhibit a decided difference in the mechanism of breathing; the breathing of males being chiefly effected by the diaphragm, that of females largely by the costal portion of the chest. It has been generally supposed that this restricted use of the diaphragm in females was "a peculiar reservation against the period of gestation, when the abdomen cannot allow of so free a descent of the diaphragm"; but Dr. Mays of Philadelphia, by a series of careful experiments upon eighty-two pure-blooded and half-breed Indian girls, has quite disproved this view, and made it highly probable that the peculiar type of breathing found in our females has been developed by "the constricting influence of dress around the abdomen." The full-blooded Indian girls were found in every instance to possess the strictly abdominal type of breathing, more or less divergence from this type being shown by those of mixed blood. Such a result cannot fail to suggest the danger of dogmatic attribution of sexual differences to inherent physiological necessities.

—The eleventh volume of Leslie Stephen's 'Dictionary of National Biography' (Macmillan) ends with Condell. The number of notables is smaller than in some of the previous volumes. Coleridge, who "alone among English writers is in the front rank as poet, as critic, and as philosopher," has a masterly notice from Mr. Stephen himself, and is judged of least import in the last-mentioned capacity. Cobden is naturally summed up by his biographer, John Morley. Other long articles are those on Lord Clive, Coke, Colenso (who is very sympathetically treated), Colet, and J. Payne Collier. The Shaksperian and other frauds of this singular man of letters are plainly set forth, and in literary matters he is alleged to have been apparently devoid of conscience. Among the army of Cliffords, the mathematician, William Kingdon Clifford, is fitly commemorated. It is curious to observe the failure to learn the origin or education of so recent and so popular a writer as Henry Cockton, author of 'Valentine Vox the Ventriloquist,' etc., though his son is living and would gladly furnish the knowledge he lacks concerning his pedigree. Cockton died before the day of the interviewer and the "personal" column. The number of Britons having more or less contact with this country is considerable, from settlers like Charles Clinton, grandfather of De Witt Clinton, or William Coddington, Governor of Rhode Island, or Cadwallader Colden, Lieutenant-Governor of New York, to temporary residents like Cobbett, or like Arthur Hugh Clough, who came very near being an American indeed. Mr. Stephen writes of this poet with a general judgment inclined to that which he quotes from Lowell regarding him. Thick as hops are the admirals who (not always with that rank, however) paid us professional visits in the Revolutionary war or in that of 1812—Cochrane, Cockburn (he who destroyed Washington), Codrington, Collier, Collingwood. We may add Admiral Coffin, a Boston boy, who entered the navy on the eve of the Revolution. Sir Henry Clinton is also found in this volume, and so is Sir A. Cockburn, of the *Alabama* Claims Commission.

—The July number of *Les Lettres et les Arts* (Chas. Scribner's Sons), like all the numbers of this *revue*, has a special character of its own. This time the prevailing tone is that of reminiscence. M. Désiré Nisard of the French Academy gives three extracts from his *mémoires inédits*, under the general title "Ægri Somnia." In

the second of these he compares the impression made upon Alfred de Vigny by Royer-Collard, in the visit he made to him as candidate for a vacant chair in the Academy, when the old philosopher and statesman wounded the vanity of the younger writer so deeply by his celebrated reply: "À mon âge je ne lis plus, je relis," with that which he received himself in a similar visit, when the old man did him the honor to talk of his own life and not of his visitor's writings. A delicate and charming portrait of M. Nisard, by E. Abot, and a reproduction of one of Royer-Collard, in the costume of the *incroyables* of his earlier life, illustrate this portion of the article and add to its value. Comte Armand de Pontmartin, who has also reached the age when everything is tinged with recollections of the past, gives a little sketch which hovers between fiction and reality: "La véritable auberge des Adrets." Baron d'Estournelles de Constant recalls "Un promenade autour de Tunis avant les embellissements du Protectorat." M. Maurice Tourneux, with his usual conciseness and clearness, and with that perfection in the selection and arrangement of materials with which he is gifted, has made of the long and serious article, "La Fédération du 14 Juillet 1790," not only the most important, but also the most interesting, paper of the number. Among the numerous documents of the period of which M. Tourneux makes use, is a certain "Avis aux confédérés," by a most unexpected patriot and moralist, the famous, or ill-famed, Restif de la Bretonne. This pamphlet of the moment, of which the general good sense is as applicable to the present time as it was to the days of universal peace and good-will a hundred years ago when it appeared, M. Tourneux calls, with justice, one of the most curious pages of "l'œuvre informe et parfois prodigieuse" of its author. He also speaks of it as not mentioned by any of the recent biographers of Restif. There is a charming little poem, by M. Armand Silvestre, "Floraison"; and M. Pierre d'Igny, in his serial, takes his young countess to London in June.

—The brilliant article of the number, however, is "L'Archipel," by M. Gaston Bergeret, in which this charming writer relates, with the delicacy and grace of his always subdued sarcasm, the conquest, the pacification, and the organization of a colony in the Indian Ocean. All that relates to the Governor of the islands and to the *commissaire général* who supplanted him, and especially to the delightful savage tribes, the Niazous, is exquisitely indicated, with the lightest of touches. The only exaggeration is in the really charming Miss Dolly Simpson, the daughter of the English missionary; but she is caricatured with such delicacy, there is such an exquisite vagueness about the real meaning of her not too idiomatic French, that it all passes without opposition, and the final situation is so supremely comic that the reader turns the last page in the most complete good understanding with the author, and gratitude to him for a half hour spent with such cheerful gayety.

—It is evident from the onslaught made on Prof. Friedrich Delitzsch, in the London *Academy* of July 23, in a review of the first fascicle of his 'Assyrian Dictionary,' that his recent veering around on what Orientalists call the Sumero-Accadian question has keenly nettled some of the orthodox students of the so-called pro-Chaldean, or pro-Semitic, cuneiform literary remains. We can imagine what the feelings of François Lenormant, author of the 'Études Accadiennes' and 'La Langue Primitive de la Chaldée,' would be if he had lived to see the most brilliant and most diligent Assyriologist of Germany deserting the camp of the Sumero-Accadists, and reinforcing the hitherto almost solitary post of the Frenchman's Parisian opponent, the "anti-Accadist," Joseph Halévy. And we are anxious to see what the impetuous Fritz Hommel, who, in his 'Die Semitischen Völker und Sprachen,' has poured out so much presumptuous learning and hair-splitting ingenuity on the "vorsemitische Kultur" of Babylonia, will have to say on this untoward turn in the Leipzig professor's Assyriological evolution. The story of this turn, gradually foreshadowed in various recent contributions to Assyriology, and now almost completed, is told in a very interesting way by Prof. Lyon of Cambridge in an extensive notice of the 'Assyrian Dictionary,' read before the American Oriental Society at its meeting in Boston in May last, and just published in its *Journal*. Some two years ago Delitzsch, after some guarded advances in the new direction, seized an opportunity "to recognize openly," as he wrote, "the high services of Halévy relating to the Sumero-Accadian question, above all to the question as to the existence of *original* Sumero-Accadian texts." It seemed to him "necessary to test anew, unbiassed in all details, this fundamentally important 'tradition' which has been delivered to us younger Assyriologists." Numerous remarks of the Dictionary show that, after doing a great deal of fresh testing, he is only one step removed from Halévy's tenet that the civilization of Mesopotamia was from its beginning distinctively Semitic—not borrowed, with its cuneiform system of writing, from a primitive race, Turanian or other, which preceded the Chaldeans; and that what was held by the Sumero-Accadists to be pro-Semitic literary remains, is only a hieratic way of writing Assyrian. It is needless to add that by the new accession Halévy's view, though considerably strengthened, is far from having become victorious, and that the old contest will only wax hotter. What is clearly shown is how shaky the ground is still on which the lofty Assyriological constructions of our time are being reared, and how much Delitzsch himself will have to revise and correct of what he has already announced as discovered and proved.

COLVIN'S KEATS.

Keats. By Sidney Colvin. [English Men of Letters Series.] Harper & Bros. 1887.

THE circumstances and general character of the life of Keats are already well known; the criticism of his works and of his temperament is abundant; little more remained for Mr. Colvin to do than to set down the result in a brief continuous narrative and to harmonize the features of the portrait. But each new writer brings something of his own, and in the case of one so individualized, so refined, and so self-confident as Mr. Colvin, this personal element in the work is bound to be very prominent. It first shows itself in a contemptuous reference to Leigh Hunt, and this tone of half-mocking, half-patronizing depreciation of that "writer of amiable memory and second-rate powers" is maintained throughout. It is much easier, no doubt, to tolerate Hunt's faults than to admit his merits, and to a later day the literary fashion of his cloth offers marks for ridicule, as is usual with fashions of all kinds once they are out of date; but he was the "man of taste" of his time, just as Mr. Colvin is of ours; one cannot help perceiving the points of resemblance in the literary type, though of course Mr. Colvin's taste is far purer, higher, and more exacting, in proportion as the culture of the time it is developed out of is richer and finer than that of the late Georgian age. This similarity, not between their characters and talents, but in their literary habit, points in certain ways the revolutions of "taste." There is a strain in Leigh Hunt, and in others besides Keats among his associates, of weakness, almost of pulpiness, which all the world is ready enough to condemn now. Thus, Mr. Colvin remarks of Hunt's "Rimini" that it has some "agreeable passages," but "for the rest the pleasant creature does but exaggerate in this poem the chief foible of his prose, redoubling his vivacious airs where they are least in place, and handling the great passions of the theme with a tea-party manner and vocabulary that are intolerable." A little later he goes on: "In matters of poetic feeling and fancy Keats and Hunt had not a little in common; both alike were given to 'luxuriating' somewhat effusively and fondly over the 'deliciousness' of whatever they liked in art, books, or nature." This is true, certainly, and hits off by emphasis the initial weakness of Keats, though it is somewhat too subtle a stroke to condemn it in Hunt rather than in the hero of the biography; and in the midst of the satiric and belittling sentences one remembers that "luxuriating over deliciousness" not unaptly describes the style of the æsthetic school now reigning about Oxford, and that in certain art criticisms Mr. Colvin himself is not altogether guiltless of it. Mr. Lowell went out of his way to say a good word for Hunt not long ago. Apart from his patriotic services and his books, not yet altogether dead, he had the distinction of pleasing through a long life an extraordinary variety of men of genius, and of being kindly regarded by them, from Shelley to Carlyle; and a biographer of Keats, whom he befriended, might fitly have spared the ridicule of him which is perhaps the most marked thing in this volume and the most inexcusable.

To come to Keats, the poetical legend about him is now fairly dissipated. He was not the bard killed by the reviewer. He was an English boy of the middle class, with much physical pugnacity and warm friendliness, and with courage and self-respect enough to make him ready to fight his way and take his fate. He was thoroughly ambitious, thoroughly sensitive, and he felt the weight of hostile criticism probably more than he confessed, and he seems to have shrunk into himself from the coldness of public indifference to his first works; but he had no thought of dying from the "article." Hereditary consumption seized him and killed him. A second part of the legend about him is less easily destroyed, but it is now fairly on the way to extinction—namely, the characterization of him as a sensuous poet without ideas. He had strong senses, of course; but he had also a growing mind, and was getting hold of the realities of thought and life with a strength and a width of vision in which alone is there any excuse for calling him, as Mr. Colvin does, "Shaksperian." There is little justice in the adjective, and it belongs to him only potentially, if at all; but in the thoughts of his letters there is often a maturity as marvellous as their felicity of phrase, and in "Hyperion" and in some of the odes there is more than the promise of intellectual power. His sense of style and his feeling for the color of words, together with his physical sensibility, count for much; but his clear and shining imagination, and that intellectual fire which is the centre of great poetry, were the prophecy of his immortality even then. No large portion of his verse is of the first order, but that third of it which really constitutes his fame, and is in its realm unique and perfect, gives, on analysis, imagination and thought as its constituent elements, equally with sensuousness of remarkable purity. Acquaintance and study only deepen the impression—which Mr. Colvin states, though he does not argue for it with anything like the total strength of his case—that in Keats English literature lost a poet of the life of man rather than of the shows of things. The growth and tendency of his mind and the bending of his conscious aim towards that issue are clear; whether the creative vision and the executive skill would

have been his in the grand proportion necessary for a great poet in that sphere, is hardly more than matter of speculation. But as it is a gain to character to know that he was not "snuffed out" by Lockhart, it is a still greater gain to find in him not the puerile idol of a sentimental sensuality, but a manly, natural fellow, in whom truth as well as beauty was a passion, and who was inspired poet enough to put man at the centre of all things.

Mr. Colvin, as has been said, presents this view of him, though he might have supported it better than he does. In point of the character to be ascribed to Keats, no one would find this biography lacking in essentials. He adopts, however, too broadly the theory of Arnold that Keats in his love was "passion's slave." One feels that Mr. Arnold objected to that less because of the fact, than because in his love-letters Keats expressed himself in what that eminent respectability considers an "underbred" way. The subject, with all its limiting and mitigating circumstances, need not detain us. In the criticism of Keats's works Mr. Colvin is less fortunate. Of general and illuminating criticism there is none at all. What there is is of the minute kind, as, for example, the fault he finds in the "Ode to a Nightingale": "By a breach of logic which is also, I think, a flaw in the poetry, he contrasts the transitoriness of human life, meaning the life of the individual, with the permanence of the song-bird's life, meaning the life of a type." This is just one of those plausible criticisms which are inapplicable because the magic of the poem keeps it outside of the mind while the poem is being read; and that is not really a fault in a poem which cannot be felt as a fault when it is being read. So, too, in the criticism with regard to the town that will be for ever "emptied of its folk," which readers will remember is one of the most charming passages of the "Ode on a Grecian Urn"—"In these lines there seems a dissonance, inasmuch as they speak of the arrest of life as though it were an infliction in the sphere of reality, and not merely, like the instances of such arrest given further back, a necessary condition in the sphere of art, having in that sphere its own compensations"; this is irrefragable, but it amounts to nothing. In other cases, as where he says:

"Neither is Milton a match for Keats in work like this:

> "Throughout all the isle
> There was no covert, no retired cave
> Unhaunted by the murmurous noise of waves,
> Though scarcely heard in many a green recess";

or where he condemns the lips that

> "poesied with hers in dewy rhyme"

as "an effusively false touch in the sugared taste not infrequent in his earliest verses"; or where he cites the fine lines,

> "Only the dreamer venoms all his days,
> Bearing more woe than all his sins deserve,"

as "a cry of the spirit vanquished by the flesh"—in all such cases we can only put a note of exclamation in the margin. The whole treatment of the works is too piecemeal and over-refined; the criticism lacks body, mass, comprehension, and is always pottering about the superficies of the poetry, the minor touches, the finish, the accidents of its imagery and movement, to the neglect of its substance.

On the whole, we are constrained to think that, bad as Leigh Hunt's poetry was at its worst, he was a better poetical critic than even Mr. Colvin. The latter's work in this branch of his subject by no means takes the place of the studies of others; one feels lacunæ in it everywhere. The sonnets, for example, are as inadequately represented in the total criticism as the wonderfully good letters in the biography itself. In the way of minute criticism, one point is made against Mr. Gosse which is worth mention. The latter has traced in "Endymion" the influence of the "Pharonnida" of Chamberlayne, upon which suggestion Mr. Colvin remarks that "there is nothing in his treatment of the measure for which precedent may not be found in the work of almost every poet who employed it during the half-century that followed its brilliant revival for the purposes of narrative poetry by Marlowe; . . . and to seek affinities for him among the tedious byways of provincial seventeenth-century verse seems quite superfluous." So it is, but "superfluousness" is a characteristic of much literary criticism in our time.

This Life, as is apparent, we cannot regard as a great success. It is much too good to be flawed as it is, and its excellent qualities only make one more irritated at its slips and failures. Owing to the shortness of Keats's life, the difficulty of writing it was great, and there seem to have been added difficulties due to ill-health. In all ways there is much to be pleaded in excuse; but the blemishes which have been dwelt upon do not seem to depend on any accidental circumstances surrounding its composition, or on the inherent slightness of the subject. It is, with all its faults, serviceable to the memory and truer understanding of Keats, and as such one welcomes it to a shelf where, among its companions of the same able series, it must be thought to hold a lower rank.

THE CONFEDERATE STATES NAVY.

History of the Confederate States Navy. By J. Thomas Scharf, A.M., LL.D. Rogers & Sherwood.

FEW men of this generation are cognizant of the gallant struggle that was made, during the four years of the civil war, by the officers of the Confederate Navy. They were beset by difficulties from which not only their opponents but their colleagues of the army were comparatively free. They entered upon the contest without the materials of warfare, and the state of the country was such that their deficiencies could never be properly supplied. At the outbreak of the war the United States, though far from being a great naval power, could bring into service some of the finest war ships in the world—the *Wabash* and her sister-frigates, sloops like the *Hartford* and *Richmond*, and side-wheelers like the *Mississippi* and *Powhatan*; while the fleet of the Confederacy was composed of the sunken *Merrimac*, a dozen or so of schooners belonging to the revenue marine and the lighthouse service, and a few small coasting steamers and river craft. The great commercial marine which furnished the navy of the Union with four hundred vessels and with nearly sixty thousand volunteer officers and sailors, belonged almost wholly to Northern seaports. Last of all, the want of workshops and shipyards, of skilled mechanics, and even of raw materials, made it impossible for the South to carry out anything more than a fragmentary plan of construction; while the Federal Government during the whole war was turning out new sloops, gunboats, double-enders, monitors, and river-ironclads, with a rapidity and completeness unprecedented in the annals of naval war.

The Confederate Navy, then, was composed not of ships or of seamen, but simply and wholly of a body of officers who, in accordance with the political views then prevalent at the South, had left the regular navy and attached themselves to the service of their States. The volunteers who joined their ranks were without naval experience—making such entries in their logs, says Capt. Parker, as, "The moon was over the port bow, and the wind was hard-a-starboard." They formed no material addition to the corps of regular officers. These latter carried with them the traditions of the service in which they had been bred, and of its collective ability they certainly represented a fully proportionate share. In the uncertainties of the political future, the Union officers moved at first with a hesitation that they would not have shown in a foreign war. The Southern officers, as might be expected, having once taken the revolutionary side, showed none of this uncertainty. The very desperateness of their situation seemed to arouse and stimulate all their energies.

With the imperfect means at their command, the efforts of the Confederate naval officers were necessarily confined to detached enterprises. During the whole four years they could never collect a fleet sufficient for harbor defence. Tattnall's flotilla at Port Royal had not even the semblance of a naval force, and that of Lynch in the North Carolina sounds was little better. The ironclads *Mississippi* and *Louisiana*, which were to have been the main elements of strength in the defence of New Orleans, could not be finished before the passage of the forts. The rams at Charleston created a twenty-four hours' flurry in the blockading fleet, but they did not succeed in raising the blockade, Gen. Beauregard's proclamation to the contrary notwithstanding. The *Albemarle* for six months occupied the Roanoke River, a small stream of no strategic importance, but was unequal to the task of clearing the sounds. At Mobile the *Tennessee* fought a gallant battle, but its disastrous result might have been predicted with certainty. The *Merrimac* at Hampton Roads, great as was the moral effect of her appearance, was checked in her career after she had only succeeded in destroying two vessels which were really unfit for purposes of war, and which should not have been in commission at all. In all these cases, the failure to accomplish greater results was traceable directly to the weakness of naval resources which compelled the officers to fight with imperfect weapons.

The officers themselves were rarely found wanting, and among them there were many whose record of bravery deserves to be rescued from the obscurity into which it has fallen. Of the whole number, perhaps the only one who achieved great distinction was Semmes, and in his case, unfortunately, the very undeserved abuse which was directed at him in the heat of the struggle has given him a reputation more akin to notoriety than to fame. It is an indisputable fact, which, however, few but professional men really recognize, that Semmes stands out as one of the most remarkable products of the naval war on either side. The unerring judgment with which the cruise of the *Alabama* was planned, and the skill and audacity with which it was conducted, give him a place almost unique among naval commanders. Of the others, the names to-day are almost forgotten. Foremost of all was Buchanan, who gave the clearest evidence of his fitness for a great command. Tattnall was a man of hardly less ability, though he had little opportunity of exercising it. Among the captains there were many whose daring, skill, and professional resource entitle them to eminence as naval officers. The bold dash of Brown in the *Arkansas* through the combined fleet of Farragut and Davis, like the passage of Maffitt in the *Florida* past the blockade of Mobile, was an act of the very highest professional merit; so was the capture of the *Underwriter* by John Taylor Wood, and the fight made by Kennon in the *Moore* at the battle of New Orleans. The raids made by the same Wood in the *Tallahassee*, and by Read in the *Tacony* and her prizes, were brilliant feats, only surpassed by the more ex-

tended cruises of the great commerce-destroyers. In other fields of professional duty must be mentioned the work done at Richmond by Brooke, the creator of the naval ordnance of the Confederacy, and in England by Bulloch, the agent through whose consummate tact and steadfastness of purpose the *Alabama*, the *Florida*, the *Shenandoah*, and the *Georgia* were fitted out as Confederate cruisers.

In writing a book upon this great and attractive subject, Mr. Scharf has been fortunate in having an absolutely unoccupied field. Having been himself one of the pupils of the Naval Academy at Richmond, and having borne a creditable part in some of the famous exploits of his service, he has exceptional advantages for his task of authorship. He has shown evident diligence in accumulating materials, and his book includes a valuable collection of *mémoires pour servir*. A more careful revision would have saved him from many little inaccuracies in names and dates, and from occasional lapses in the use of his mother tongue. In many chapters his materials have been loosely thrown together, with little regard to style or to structural arrangement. In these respects the book is seriously defective.

The most extraordinary feature, however, of Mr. Scharf's otherwise useful book is the undercurrent of political animosity and bitterness which penetrates all his references to the causes of the war and the conduct and motives of the Union leaders. In holding that secession was a constitutional right, he only expresses the sincere conviction of the majority of Southern men before the war; but he goes far beyond this, and appears to think that no other view was possible to men of sincerity and average intelligence. Indeed, it is not quite clear that he regards the war as having done anything towards a settlement of the question. "Whether the theory of a national or a compact government," he says in his opening sentences, "be the true theory of the Constitution, now and hereafter, it is not necessary to discuss," which would seem to indicate that the question is still open for discussion. The condition of affairs at the beginning of the war is explained by the statement that "in 1861 events had presented to the States that most unexpected result—the soldiers and sailors, educated by the Federal Government in its character as agent of the States, were called on by that agent to fight against its principal—by the servant to make war on the master, by the creature to destroy the creator."

Starting with this "anomalous condition of the relations of the States to the Federal Union," as Mr. Scharf correctly designates it, the reader will not be surprised to learn that the war was a bloody work of repression, perfidiously undertaken by a tyrannical government, in the interests of a political party, and that the leaders in the secession movement were the innocent victims of a trick perpetrated by Mr. Lincoln's Cabinet. This opinion recurs again and again, and its manner of presentation is more remarkable for the author's tone of unquestioned authority, and for a certain grandeur of diction, than for cogency of reasoning. A few passages will suffice to illustrate. Thus on p. 20:

"The recital of these facts, as they existed at the South in 1861, establishes beyond controversy that no preparation for war had been made by any Southern State prior to secession; that not one of the States desired war; that there ought not to have been war, and that there would not have been war except to 'save the Republican party from rupture.' The facts of the times and the acts of men cannot be covered up from the search and exposure of the historian, who, when he comes to write the causes of the terrible war of 1861-65, must discover and expose those who, to secure themselves in the possession of political place, deliberately played with the excited passions of the hour to involve the country in war, and dissolve the Union, so that its reconquest would perpetuate their party ascendency, or that the loss of the Southern States would deprive their political opponents of the great bulk of their strength, and thus secure for themselves the possession of power in either the reconstructed Union or in the divided and dismembered northern part."

Here is another passage:

"Mr. Lincoln and his advisers had outwitted and overreached all the precautions of peace taken at the South, and, by deftly and cunningly drawing the fire of the Charleston batteries, had inaugurated war. The latent spirit of devotion to the Union, which the echoes of the guns at Charleston aroused into such terrible force and proportion, stopped not to consider the trick by which the war had been begun. It only saw the flag of the Union in the smoke of battle, and, whether right or wrong, rushed to its defence. But neither that expression of loyalty to the Union, nor the extraordinary efforts in its defence, nor the triumphs of its army and navy, will be able to cover up and conceal from the reprehension of history the shameful subterfuge of provisioning Sumter as a start to war; but history will separate the glory of the people's defence from the shame of the politician's trick."

In regard to the Southern officers who resigned from the old navy, every candid student of history is ready to acknowledge that, during the trying period that preceded their resignation, they discharged their duties with scrupulous fidelity. It is, therefore, hardly necessary to give this lucid explanation of their conduct:

"They did not presume to take upon themselves the duty of dividing the navy among the States, notwithstanding it was the common property of all the States. In the excitement of the times, it would have been pardonable conduct to have brought their ships to the defence of the States; but their sense of honor, and a sailor's duty to the government whose commission he bore, required that he should divest himself of every selfish motive before he returned his commission to the Federal Government."

The author's comments upon persons and events are what might be expected from the general statement of his views. The hotel-keeper who killed Ellsworth at Alexandria is a hero. "Among all the acts of personal bravery during the war," says Mr. Scharf, "not one exceeds in heroism that total indifference to personal safety which inspired the noble Jackson to brave in his single person a whole regiment of the enemy." Farragut is an "apostate," who turns "at the prompting of self-interest against the people among whom he was born"; and his differences with the Navy Department in the last year of his life lead the author to moralize in this pathetic fashion: "It is the old story—they loved the treason, and they rewarded with honors and prize-money the exploits of the apostate son of the South, but they never took him wholly and singly to their hearts." If, as Mr. Scharf states, it was "petty malice" that led the Secretary of the Navy in the heat of civil war to designate the Southern naval officers as deserters, what shall be said of an author who, twenty years after the war is over, has the presumption to say that the great Admiral was induced by the "prompting of self-interest" to stand by the flag and the Union, and that his countrymen "never took him wholly and singly to their hearts"?

It would be a waste of time to dwell upon the preposterous absurdities of this kind with which Mr. Scharf has seen fit to mar his history. He exhausts the language of petulance in his criticisms of Mr. Seward and Mr. Welles. The climax of childishness is reached in a delightfully funny passage on page 428, in which the Secretary of State is charged with having "dirtied the pages of American diplomacy" by an indelicate allusion:

"The euphemism by which, when a household is gladdened by the birth of a babe, the convalescence of the mother is described in technical and courtly phrase, 'that the mother is getting on as well as could be expected,' was introduced by Mr. Seward in a despatch to Mr. Adams, as, 'The work of pacification in the region concerned *is going on as successfully as could be expected*. You hear of occasional guerilla raids, but these are the after-pangs of revolution in that quarter which has proved an abortion.'"

Mr. Scharf is hardly fair in lashing Mr. Seward so unmercifully for a metaphor which he does not hesitate to use himself. On p. 725 he speaks of "the prevailing ambition that the bosom of the James should bear ironclad ships over which the Confederate ensign should float," and he adds: "This pregnant desire gave birth to the *Richmond*." Indelicacy is a very grave fault, but it is well with this, as with other offences, for some one who is without sin to do the stone-throwing.

If Mr. Scharf, as he declares in his preface, is attempting to vindicate "the political views of Confederate officers," he has shot very wide of the mark; for it may be doubted whether there are many of his companions in arms who would subscribe to his extravagances. Capt. Bulloch, who did more than any other naval officer to sustain the Confederacy during its four years' struggle, and who may fairly be considered a representative man of his class, says, in a work every page of which excites admiration by its dignity, its clear insight, its breadth of view, and its moderation: "The South has accepted the result of the war; business and social relations are again intermingling the people of the two sections on terms of friendship and intimacy, and the great majority on both sides can now recur to the events of the war, and discuss them as historical incidents, and not as subjects for strife and recrimination." In his address in New York on the last 4th of July, Gov. Lee declared, with just pride, that "Virginia was not sulking in a corner." It is charitable to hope that sooner or later the historian of the Confederate Navy will emulate Virginia's noble example, and fall into line with Capt. Bulloch and his "great majority."

RECENT PSYCHICAL RESEARCH.

Preliminary Report of the Commission appointed by the University of Pennsylvania to Investigate Modern Spiritualism, in accordance with the Request of the late Henry Seybert. Philadelphia: J. B. Lippincott Co. 1887. 8vo, pp. 159.

Proceedings of the [English] Society for Psychical Research. Part XI. May, 1887. London: Trübner & Co.

THE first report of the Seybert Commission has been awaited with interest, but it is certainly somewhat disappointing. To be sure, the only disappointment that we here can testify to has little to do with the merely negative character of the results so far reached by the Committee. In common with most people who give themselves over to the modern spirit and like to trust its instincts, we, of course, have expected no positive results of any very serious importance. But then it has seemed to us that the Seybert Committee has a work to do that must go far beyond mere special criticism of the so-called "facts" of modern Spiritualism. Granted that one finds little but fraud and delusion in most classes of these "facts," is it enough simply to report one's failure, with a considerable display of literary skill, and with a manifest readiness to assure the world that one is not easily to be fooled? We think that this is *not* enough for men who have undertaken the peculiar responsibilities of the Seybert Commissioners. If up to the present time the Committee have found only deception and

foolishness in those spiritualistic "manifestations" that have come under their notice, it is more than ever their duty so to set forth their researches as to aid in the work of educating the people at large to the point where they also shall be somewhat better able to distinguish imposture from reality. The real task before the Committee is, in fact, plainly much *more* to instruct the general public than to "expose" this or that rascal. A Slade or a Mansfield may be very fair game to bag, and it is amusing enough to read how clever men like the writers of this Report have dealt with such spiritual influences; but it is unfortunate that the Committee have laid so much stress on this part of their story.

Seybert wanted them to "investigate" Spiritualism, as one of the "systems which assume to represent the truth"; and they have certainly labored hard and well upon this task as far as they have gone. But Seybert surely planned this investigation principally as an authoritative and persuasive method of teaching the people. He wanted the world to become Spiritualistic. He had faith that if an unprejudiced body of learned men, appointed by a university, could be induced to give time to the subject, they would become convinced of the truth of the faith that he himself followed. And his aim plainly was to have such an authoritative verdict used as a means of doing away with modern prejudices, and of gaining for Spiritualism a hearing in the world's best circles. Now, unfortunately, yet, of course, very naturally, the appointed judges find themselves so far unable to say one word that could satisfy Seybert's hopes and wishes were he alive to hear from them. It is surely but fair that, with such a preliminary result on their hands, they should at least bear Seybert's wish in mind enough to make their report a strong appeal, not to us who are sceptics and need no repentance and have always made game of Spiritualism, but to the lost sheep themselves, and to the still more important sheep who are in danger of being lost. To make this appeal the Seybert Commission need not have done any mere preaching. That, indeed, was not their affair and will not be. But they surely might have avoided a tone that is amusing enough to us, but which must be distinctly and solely offensive to the very class whom they were most called upon to assist.

Perhaps we are hypercritical, but to our minds the case stands thus: the belief of many people in spiritualistic phenomena of the illusory types that the Seybert Commission have so far met with, is plainly founded upon the very common popular confidence in any honest man's power to judge for himself whatever he personally sees, and to report accurately whatever he has seen. This confidence is an ancient piece of folk-lore. To get rid of it altogether is impossible. We can only fight it wherever we meet it. The untrained human senses are in no wise accurate instruments for the study of unwonted facts; and the untrained human memory both is, and, for the practical purposes of living, ought to be, a largely unhistorical faculty. These are simple truths, but folk-lore has been from the first against them. What a sensible man sees, is there; what an honest man relates, must have happened: these two superstitions form the rock on which Spiritualism builds. To do something towards mining away that ancient rock, is the business of any man who undertakes to deal with such beliefs. Now by implication, to be sure, the Seybert Committee set forth in their report considerations of genuine value for this purpose. They mention the difficulties of observation in just this field, and they relate a number of instances of plausible tricks that would have deceived most ordinary observers, but that did not deceive them. Yet they so relate these instances, and so mention these difficulties, that the moral will be lost on all who are in real danger of falling a prey to this particular delusion.

In short, this report offers to the ordinary "almost persuaded" Spiritualist the treatment of the north wind, not that of the sun. This almost-persuaded man says that he does not profess to understand it all so very well, but he did see his dead wife and his baby at the materializing séance, in the dim light. The spirits even spoke to him, and he did once find written inside the closed slate a message from his lost friend, which referred to a fact unknown, he is certain, to any one now living but himself. Furthermore, the trance-medium did once tell him this or that wonderful thing. All this he is sure of, because he saw and heard it himself, and he has heard similar tales from numberless other people at "fact-meetings" and in private talks. However it all may be possible, then, the dead, he declares, do live again, and, after a fashion, do come back. Such an "inquirer" now turns, let us suppose, to this report, and he finds simply what he will call scoffing. Logically it may be justified, but practically it will be only mischievous to him. He says, "I saw so and so: I remember plainly such and such startling things." The Seybert Commission say, with much humor and great neatness of language, that they went to various places and never managed to see anything but tricks, and have remembered nothing but vanity. Experience shows that this mode of treating an honest and deluded man only hardens him. He loses confidence in your powers, because he loses the sense of your sympathy. To his "I saw," you respond with a smiling "I saw nothing." To his "fact" you have nothing to oppose but your private inability to find any facts. His bag is full of what, in his ignorance, he calls game. You are tolerably sure that the "game" is only crows and sparrows; but you do nothing to instruct him adequately about that. You only assure him that your own bag is so far empty, and you report that you suspect the woods of being empty too. This makes, to his mind, a poor "preliminary report." He only doubts your sportsmanship, and tenderly lugs his bag of crows homeward.

In a passage of magnificent humor, Bunyan makes Christian and his fellow meet one "Atheist," trudging along with his back to the heavenly glow that marks the direction of the Celestial City. "Where are you going?" says Atheist to the Pilgrims. "To the Celestial City," is in substance their response. Atheist bursts into uncontrollable laughter. "You fools," he says, "I have been hunting for that place these twenty years, and have seen nothing of it yet. Plainly it doesn't exist." We cite wholly from an inaccurate memory, and can only hope to remind the reader of this once familiar short and easy method of refuting theism. Now, while the Seybert Commission are not so dogmatic as was Atheist, and profess themselves still open to conviction, their method of telling their tale will seem to the spiritualistically inclined almost as unpromising as his. Yet they surely might have avoided leaving this impression, had they shown more care in rendering their account. We should have said, in the first place, that all their humor and their scorn of fraud—feelings perfectly justifiable in themselves—must be rigidly suppressed in this Report. The facts have their own humor, and the reader might have been left to see it if he would. But the man in danger from Spiritualism is in danger partly because he lacks, in considering just this one topic, all sense of humor. You can never help him by making sport of him, or of the type of mediumship that he chances to like best. What you can hope to do is to show him, in plain and dry speech, not so much that fraud is possible (for that he knows), but that his untrained senses no more give him in this field protection against fraud than his finger-nails would give him protection against the claws of a pack of wild-cats. Do this for him and you have helped him. But just this lesson, which the Seybert Commission had so much chance of teaching, they have kept, as it were, purposely in the background. All their stories of meetings with mediums are not only related in the first place as particular incidents, but, in the summing up, are still left as such for the reader's amusement. Little effort is made to show how far these forms of "manifestation" are typical of the generally reported "facts," or how far the sorts of fraud actually discovered do represent the means whereby the untrained observer is commonly misled. The effect of the whole mass of evidence will therefore be either baffling or harassing, or both, to nearly all who need the help of the Committee's advice; and thus far, for the amusement of the ninety and nine, the lost sheep is not only left in the wilderness, but is laughed at and hooted further off still.

All this criticism turns upon our own conception of the important and delicate task of the Committee. Accepting as they do the trust of a Spiritualist, they are especially bound to act so as to meet the actual and very serious mental needs and perils of the class most inclined to Spiritualism. They are bound, that is, to remember their function as teachers, and they must not take refuge behind the mere word "investigate," when the didactic object of the investigation was plainly so prominent in Seybert's mind. They must, above all, try to keep the cordial confidence of sincere and still moderately rational Spiritualists. For the rest, of course, we have perfect confidence in the accuracy of the results of the Committee's work as far as it has gone. We regret that gentlemen of such ability should have worked so long without more to reward them. But when they accepted their task they knew the chances. If they some day tell their story in a more useful form, we believe that their labors for the cause of general enlightenment will become far more significant than they as yet seem. As for one further matter, the best particular investigation in the book seems to us to be Prof. Fullerton's report on the actual evidence that exists in support of Zöllner's interpretation of his famous experiments with Slade. A more successful reduction of a wondrous tale to its lowest and wholly insignificant terms is seldom met with in so brief and convincing a statement. The result was quite worth the European trip which was in part devoted to Prof. Fullerton's research; and the account of the whole is given in a style to which our foregoing criticisms scarcely at all apply. The very instructive story is told with perfect sobriety and simplicity.

In the number of the English Society's Psychical Research Proceedings now before us, a very successful attempt occurs to do what we have blamed the Seybert Commission for not undertaking. To expose a slate-writing medium is one thing; to show the entire untrustworthiness of every ordinary and untrained observer of slate-writing manifestations is quite another and a much more important thing. A slate-writer exposed is, at best, only one fraud the less in this world of the father of lies; the next fraud has almost an equal chance of being believed. But if you can get a series of observers to attend slate-writing exhibitions that are actually only conjuring tricks, and if you can promptly get full written reports from these observers, there is a chance of showing conclusively, by a comparison of the various reports with one another and with the actual facts, how worthless the best untrained witness is as to all the critical incidents of such an exhibition. Such a result is compara-

tively general in its character. It may thus be possible to convince intelligent but untrained men that their observation and their memory are alike worthless in such a region. If they become aware of this, perhaps the next slate-writing medium who offers them his services will find their curiosity more languid, and their judgment of his miracles less confident. In the paper on "The Possibilities of Mal-Observation and Lapse of Memory, from a Practical Point of View," Mr. Richard Hodgson and Mr. S. J. Davey have set forth the outcome of just such an experimental investigation as this. Mr. Davey furnished the conjuring for the experiments, and Mr. Hodgson conducted the greater part of the work of criticising the reports that were written out by the observers. Result: a most interesting study of human fallibility. To be sure, the study is still very inexact, for obvious reasons. If the investigation is to go much further, instantaneous photography, or some other mechanically accurate method of registering certain of the actual events, must be introduced to control the reports of the observers. But meanwhile a fine piece of work has been done, and one that gives new reason to hope for very good results from Mr. Hodgson's stay in this country as Secretary of the American Society for Psychical Research.

The number of the Proceedings before us contains several other interesting papers, two of which bear witness afresh to the endless and rather dangerous ingenuity of Mr. F. W. H. Myers. Into the boundless and silent sea of recent hypnotic research this modern mariner's ship bursts with an appalling speed. The white foam flies, and the furrow streams forth free. We do not assert, indeed, that the mariner himself has ever yet killed the albatross of truth. We advise him, however, to be very careful of his cross-bow.

REBER'S MEDIÆVAL ART.

History of Mediæval Art. By Dr. Franz von Reber, Director of the Bavarian Royal and State Galleries of Paintings, Professor in the University and Polytechnic of Munich. Translated by Joseph Thacher Clarke. With 422 illustrations and a glossary of technical terms. Harper & Bros.

Dr. Reber's 'History of Mediæval Art' has in its degree the same excellences as his volume on 'Ancient Art,' translated by the same writer and issued by the same publisher five years ago, and then reviewed in the *Nation*. The earlier volume had the advantage of covering a more arable field, and one in which Dr. Reber was more entirely at home. The divisions of the subject were more distinct, its branches less intricately interlaced, its material more manageable. Indeed, it would be hard to find a subject less patient of a condensed historical treatment than mediæval art. The only predecessor who had adequately treated it, so far as we know, was Schnaase; and Dr. Reber has set himself the harder task of condensing into a single octavo volume the theme which in Schnaase's 'Geschichte der bildenden Künste' occupies five.

If, therefore, the present book has not so much directness, decision, and clear exegesis as the last, nor so many interesting deductions and suggestions, it is not to be wondered at. It is only matter for congratulation that the work is well done, and the result valuable. Dr. Reber's plan differs somewhat from that of most of his predecessors in favor of more compactness and continuity of arrangement. His distribution of his subject seems to us just and well balanced, his opinions on general questions eminently reasonable, and there is a commendable absence of partisanship. The intricate mingling of Latin and Byzantine influences in western Europe, the domination of the Latin; the successive preëminence and subordination of Saxony, the Rhinelands, the southern and northern provinces of France; the Gothic supremacy of central France; the late awakening of Italy—all these have their due place and value. The leading place is necessarily given to architecture, which was in the Middle Ages, even more than in preceding ages, the mother and queen of the arts. Guided by this clue, the reader finds the development made as clear as he could expect. The web is a very tangled one, and to present it with all the threads laid out in a plain pattern would be to misrepresent it. The discussion of the development and complication of Romanesque architecture in Germany is lucid and judicious, though somewhat overloaded with detail. The rise and spread of pointed architecture is equally well described. In all this a geographical arrangement of the discussion seems inevitable. When it comes to painting and sculpture, political, physical, and even ethnical boundaries seem to be much less significant, and the lines of development to be disturbed or effaced, rather than displayed, by a geographical treatment. Here, we think, Dr. Reber might with advantage have pruned down his work still further. The leading lines in this part are much fewer and the facts multiply. The distribution which seems necessary for architecture gives the book the character of a handbook. The commentary must be either very minute or very sparing, and to give the facts without full commentary offers a dry and bony result.

Here and there a salient point is slighted, which we should have liked to see dwelt upon with more emphasis. For instance, the transfer of architectural control, at the end of the twelfth century, from the monastic orders to the laity, was one of the most important phenomena in the history of mediæval architecture. The influence of the Church, and especially the cloistered clergy, in conserving and developing the arts from the sixth century till the twelfth or thirteenth, is indeed so important that no mediæval history is adequate which does not insist upon it. Something more might have been said with advantage, perhaps, about early Christian mosaics, about the use of vegetable forms in the ornament of the thirteenth century, and the change in plan due to the addition of lateral chapels to churches in the fourteenth century. If the exposition of such points as these had taken the place of some cataloguing of artists and works of art here and there, the book would hardly have lost by it. In truth, its chief literary fault is the accumulation of detail which merely makes a fuller record, but adds no ideas, and rather cumbers the narrative with facts.

The reader will still notice a little of the overassurance in explaining things from the inside which was visible in the older volume. Dr. Reber never seems quite able to get away from the classic point of view. He is apt to accuse the Romanesque builders of not understanding the classic buildings about them, or of failing in their efforts to imitate them; and to forget that, while the Teutons were content to take hints from the work of their forerunners, they appear to have preferred their own ways of using them. We think he is tempted to press too far the theories which Semper and other acute German writers have imprinted on the criticism of their countrymen—theories of definite climatic forms, of architectural details derived directly from the processes of other arts. These theories are of substantial value, but of too facile application. The dogmatic use of them is repellent, and tends to divert the reader's mind from the effort for artistic effect, which is always present, and is responsible for many things, we believe, for which nowadays it gets no credit.

Every one who has busied himself with this sort of investigation knows how difficult is absolute accuracy of detail, and is disposed to be indulgent to minor errors. That there should be more or less of them in a book of this kind is to be expected, but we find slips that seem unnecessary. We may warn the reader against some we notice. Thus, on p. 43, the author cites the Mosque of Omar at Bethlehem. There is no Mosque of Omar in Bethlehem, we believe, and Dr. Reber must mean the building popularly so called in Jerusalem, but more properly known as the Dome of the Rock. In describing Mohammedan architecture, the name *Mihrab* is given to the covered part of the mosque, wherein the worshippers assemble, and the prayer-niche is called the *Kiblah*. In reality, the *Mihrab* is the niche, and the *Kiblah* properly denotes the direction of Mecca, towards which the niche is set; but they are often confounded. On pp. 176 and 177 we find a plan and section of the "Mosque of Jumma at Bijapur." The unskilled reader will probably interpret this by the analogy of the Mosque of Omar or of Amru. The usual form of the name is Jama Masjid (or Jumma Musjid), which means Assembly Mosque or Chief Mosque. Most Mahommedan cities have mosques so named, and commonly spoken of in English as the Friday Mosques, because service is held there on Friday, the Mohammedan Sabbath. The interior view given of the Mosque of Amru, by the way, does not agree with the description on the next page, the arches being depicted as semicircular, but described as pointed horseshoes. There is an analogous discrepancy between the plan and section of the Cathedral of Noyon, where the plan shows four-part vaulting, which is correct, and the section six-part vaulting. Dr. Reber takes pains to assign the first appearance of the horseshoe arch to Sassanian architecture, forgetting that the Buddhist Chaitya halls and Viharas, before and about the Christian era as well as later, are full of it. The exchange of names between the spires of Chartres and the church at Vendôme, p. 495, is a blunder in proof-reading; to speak of Chartres as having piers alternating with round shafts may be a slip of the same kind. In several places the main or central tower of a mediæval castle is called the *barbacan;* but this is the keep, and the barbacan is an outwork. Ste. Nicaise for St. Nicaise is venial; and *al fresco* (in the open air) for *a fresco* (fresco painting) is more amusing than serious. The indiscriminate and inaccurate use of "cloister" for monastery and convent comes evidently of translating too phonetically the German generic word *Kloster*. It saves some trouble, but makes difficulty where both the generic and specific are required, as where we have "the Cloister [*Kreuzgang ?*] in the Convent [*Kloster ?*] of Gerusalemme, Bologna," which was really not a convent, but a monastery.

We have not seen the book in German, and cannot speak of the translation from comparison, but it seems to be in general exceedingly well done. It is terse, clear, and vigorous; only once in a while does the terseness impede the clearness. Mr. Clarke, however, now and then shows an unaccountable reluctance to subject himself to the received terminology of architecture. He gives us "Kernel" (German *Kern*) for the bell of a capitol, "vaulting-post" for vaulting-shaft, "arcade" (French) for a single arch, "surmounted" arches for stilted. "Trapeze-shaped capitals" smacks more of athletics than of geometry, and "chapiter" for capital is perhaps as "surmounted" as the arch it sustains. We cannot believe in these liberties; it is difficult enough at the best to maintain order and clearness in architectural language, and if every new

writer is at liberty to reform it according to his own preferences, the confusion will be beyond hope. We have the same objection to the neologism of Romanic for Romanesque. The last is well established, and its meaning will not be clarified by a substitute. Mr. Fergusson would have had us say Romance, but he did not prevail. Neither is it likely that the English world will consent to say Romanic.

The illustrations are abundant and very well selected, many of them new to books of this compendious kind, and a pleasant exchange for the familiar ones. They are, of course, reproduced from other works, some very well and some very ill. The glossary at the end is necessary and well done, clear and concise, and not often too concise to be clear. A great improvement on the previous volume is the bibliography. This is not formal, and does not assume to be complete, but the notes give authorities enough to show the student how to continue his studies in all parts of the field. The authorities are the best, and recent ones are not neglected, though we wonder that in writing of Italian Romanesque so important a book as Dartein's 'Architecture Lombarde' should have been overlooked. But, after all deductions, we commend Dr. Reber's book as the best account of its subject that the English reader will find.

Court Life in Egypt. By Alfred J. Butler. With Illustrations. Scribner & Welford. 1887. Pp. vii, 298. 8vo.

TEWFIK PASHA had been Khedive about six months when the author of this book went to Egypt, in January, 1880, as tutor to his children. For more than a year Mr. Butler lived in constant and familiar intercourse with him, and had abundant opportunities for studying his character and observing the spirit which he brought to his work as ruler. It is an interesting and remarkable picture (and one in most respects very different from the popular impression of Tewfik in England and in this country) which is drawn of a Turk who never smokes, is the husband of one wife, has neither slaves nor harem, is simple in his tastes and pleasures, and, though a devout Mussulman, is a member of a sect which believes in education and progress. How such a character could have been formed amid the corrupt influences of Ismail's court, it is difficult to understand, and yet there can be no question that the new Khedive, though less brilliant and energetic than his father, was an upright man, earnestly intent on reforms, and solicitous for the welfare of his wretched subjects. This is shown not only by numerous facts, but also by the reports of some of the frequent conversations which Tewfik held with Mr. Butler on public affairs. We may cite the abolition of the Dôsah, that part of the celebration of the Prophet's Birthday peculiar to Egypt, in which a sheikh, mounted on horseback, rides over the bodies of hundreds of dervishes. Mr. Butler witnessed this scene shortly after his arrival, and his description of the "dreadful and revolting spectacle" is the most vivid we remember ever to have read. From his place in front of the Khedive's tent, "my feet touching the line of heads, I could see with horrible clearness all that happened." The sheikh was a large man, and the horse a stout cob shod with iron:

"Many of the natives had told me that the horse did not tread on the bodies, but merely stepped across them, planting his feet between. This I soon saw was false; the bodies were packed so close that the horse *must* trample upon them. On he came I saw the dreadful yielding of the bodies as thigh or ribs, spine or shoulder felt the crushing weight of the hoofs, and I saw the writhing of the poor tortured forms. . . . For a moment after he passed, the dervishes lay still; all bore the first shock in silence, for this is the proof of their faith. But after an instant's pause all rose or tried to rise. Some were unhurt and jumped up pell-mell; others, as they tried to move, shrieked and yelled and fell back fainting. . . . The wounded are sent away from Cairo and the dead are buried secretly, and no one ever knows the number of either, lest it should be said that the Prophet's miracle was not accomplished. Accordingly the natives believe that no one ever is hurt."

So deep an impression did this scene make upon the Englishman that he lost no opportunity of impressing upon the Khedive (who, it should be said, "remained in his tent, preferring to see little or nothing of the barbarities enacted") the duty of putting an end to the practice. This he did with such tact and persistency that the required order was given, and the next year the sheikh was preceded by "a strong body of police, obviously meant to prevent any fanatics at the last moment from throwing themselves under the horse to be trampled."

It was Mr. Butler's good fortune to arrive in Egypt just in time to accompany Tewfik on a journey up the Nile to the First Cataract, and also to Damietta and Rosetta. This gave him a chance to see the country in gala dress, for every town and village was decorated and at night brilliantly illuminated, while processions, banquets, and receptions without number were given in honor of the new Khedive. At one place "all the streets were adorned on either side with continuous arches of painted woodwork, and every arch was hung with flags and lanterns. Here and there, perched in boxes over the roadway in mid-air, groups of musicians or story-tellers recited or sang, to the great amusement of the crowd below. . . . Whenever we reached the house of a notable or rich merchant, a band of music struck up a salute, slaves salâmed, and carpets were spread for us to walk upon across the courtyard." Mr. Butler was struck with the fact that "the men as a rule make a great deal of obeisance, but are silent; they do not know how to cheer; but the women on the housetops raise their shrill 'ul-ul-ul' (doubtless the Latin *ululatus*), which is used to express either joy or mourning." At a place in the Delta the tents of the sheikhs "were of great magnificence; they were adorned inside with the *appliqué* work common in the country, the designs consisting of flowers, fruits, animals, conventional symbols, and verses of the Korân arranged with wonderful taste and symmetry. One tent is said to have cost £2,000." Mr. Butler is enthusiastic over the beauty and charm of Rosetta, with its gardens and colonnaded streets lined with ancient palaces the windows of which "are covered with exquisite mushrabîah or lattice-work set with tiny oriels; and within-doors abound splendidly carved and painted ceilings of woodwork, and dadoes and pavements of marble mosaic."

The chief interest of Mr. Butler's book, however, is to be found in his account of life in the palace, and of the persons who formed the Khedive's court. His pupils were two boys, 'Abbas Bey, six years old, and Mohammed Ali, barely five. "They were, of course, as fair as most Europeans; had bright, pretty faces, and most winning manners," and had "good abilities." A glimpse into the character of the elder is given in the following anecdote: "One day the younger was rather sulky and refused to work. 'Come, Prince,' I said to him, 'it must be done.' 'Abbas Bey, the elder, at once caught me up, and said, 'Prince! he is no prince; he is a fellah.' 'Why do you say that?' I asked. 'Why, because he is idle and won't obey.'" The pashas and court officials were generally Turks or natives of the old stamp, ignorant and prejudiced, hating the foreigner and always dreaming of the independence of Egypt. Curious stories are told of them and their predecessors which read like chapters from the Arabian Nights. Some of these were related to the author by Tewfik himself, who conversed with him in English, a language which but a single one of his courtiers understood. "When any name occurred which would have betrayed the subject, the Khedive spelled it, or gave the first two letters; so the pashas were not much the wiser. They sat in glum silence, and I fear the thoughts of their hearts to me were not tender." At one time Tewfik gave a curious account of divination in his presence with a ring which he had borrowed from its owner for this purpose. It was "a plain hoop of gold set with a red stone, which is said to have come from Mecca." This was put into the hands of a little girl eight years old, "an ignorant child, unable to read or write," the daughter of one of the palace servants. Upon her head was laid a silver plate engraved with verses from the Koran, and "almost immediately she cried out, 'The stone has turned to white.' The Khedive then asked questions about persons whom the child had not seen, and received correct descriptions," the supposition being that she saw them in the ring. Questions were also put by other persons present which were answered promptly and correctly. The Khedive's conclusion was, "I cannot believe it, and yet I cannot understand it."

Mr. Butler resigned his position when Cairo was still agitated by the mutiny of the three colonels, which led eventually to the bombardment of Alexandria and the occupation of Egypt by the English. He is very severe in his strictures on the pusillanimity shown by the advisers of the Khedive at this time. The latter talked with him long and frequently on the subject, saying on one occasion, "I fear we were guilty of great weakness." The impression which the author leaves upon us is that Tewfik is an intelligent man, who thoroughly understands the situation of affairs, and, if he had the power, would act with wisdom and energy. He is hampered, however, not only by his own ministers, but more especially by the conflicting interests of the foreign Powers. Some curious instances of the manner in which these embarrass the action of the Khedive are given, though none, it should be noted, relate to France, which is hardly mentioned in the book. In social reforms Tewfik has greater liberty. Not only does he "detest" slavery, but he "has the greatest horror of the harîm, not merely because of the moral corruption, but also on account of the ignorant, fanatical, and superstitious ideas of the women." As a first step towards reform in this direction, he has himself started a sort of high school for girls in Cairo. We cannot but regret that the author has not shown, so far as it was possible for him to do so, what Tewfik is to-day—whether or not the difficulties and discouragements of his position have weakened his character.

Scotland as It Was and as It Is. By the Duke of Argyll. 2 vols. G. P. Putnam's Sons. 1887.

THIS book is a most striking illustration of the truth of the saying that a man must have an income of five thousand a year in order to indulge in the luxury of opinions of his own. The Duke of Argyll's income is many times this sum, and the multitude of his opinions, as well as the positiveness with which they are expressed, is in due proportion. His wisdom in his own conceit justifies the hopelessness of Solomon. It is so unbounded as to constitute a most conclusive argument against the very position to establish which he has written his book. His whims are obtruded even in the very printing and publishing of these sumptuous volumes. Nothing could have been easier for so rich an author than to adorn a book upon this most romantic and picturesque of all themes with an abundance of the most superb

illustrations. Instead of showing this moderate degree of consideration for the reader, he has chosen to disfigure his work with some wretched woodcuts taken from drawings of his own. These, as he states, pretend to no artistic merit, and were made chiefly for geological purposes. They are of little value even for such irrelevant uses, and are really introduced by the arbitrary will of the author, who takes pleasure, as he tells us, in reflecting that although all superficial objects, such as buildings, trees, etc., are of comparatively recent date, yet the outlines of the mountains and the contours of sea and land have remained unchanged for many centuries.

The Duke of Argyll finds the existing definitions of political economy "confounding and confusing." Of them he says:

"Land, Labor, and Capital are the orthodox Three. . . . The definition, therefore, altogether is scholastic and artificial in the highest degree teaching nothing, suggesting nothing—because none of its distinctions correspond with such great dividing lines as exist in Nature. One of these lines runs along the seeming gulf between Mind and Matter, and another between our own share in both of these, and the boundless volume of them which is external to ourselves, but with which, nevertheless, we have close relations These dividing lines are familiar to us all in our thoughts, in our actions, and in our language. They seem to point to a better Three than Land, Labor, and Capital. Mind, Matter, and Opportunity would be the amended list. Mind is that which we know—as we know nothing else Matter is that which is ours also in Muscle, and in all that it acts upon, or that reacts on it. Opportunity is a convenient term for every kind, degree, and variety of condition and of circumstance which helps to stimulate our desires, to clear our aims, or to facilitate the attainment of them."

Accordingly, his Grace having swept away the fictions of the economists, proceeds to elucidate the history of Scotland with the aid of a science of his own construction; and here at least the exclusive rights of ownership will be respected. The title of the Duke to all rights of property in his own private system of political economy is far more secure than his title to his lands. Neither armed rebellion nor legalized robbery can ever molest him here, and even envy will avert her malignant glance from this possession. The fundamental principle of this system is the absolute right of ownership in land. The whole history of Scotland is one long testimony to the beneficent results of this right. In the case of the Island of Tyree, documents in the possession of the author "prove in the greatest detail that every single step towards improvement which has been taken during the last hundred and fifty years has been taken by the Proprietor, and not by the people. Not only so, but every one of these steps, without exception, has been taken against the prevailing opinions and feelings of the people at the time." What is true of this island is true, according to the Duke, of the whole of Scotland. Her great landowners—for by ownership we are to understand the proprietary right of a great landlord, not of a peasant—have made her what she is. They lifted her out of the miseries of Celtic feudalism by granting charters, they established their beneficent rule by enforcing covenants, they stimulated improvement by judicious leases, and enforced a rational agriculture in the teeth of the persistent opposition of an ignorant and brutish tenantry.

Somewhat more than a hundred years ago, another distinguished Scotchman, Adam Smith, observed, "The statesman who should attempt to direct private people in what manner they ought to employ their capitals would not only load himself with a most unnecessary attention, but assume an authority which could safely be trusted, not only to no single person, but to no council or senate whatever, and which would nowhere be so dangerous as in the hands of a man who had folly and presumption enough to fancy himself fit to exercise it." In the opinion of the Duke of Argyll, not only is he himself fit to exercise this authority, but also every one into whose hands it may happen to fall. He entirely omits the qualification of Aristotle, who justifies despotism only when the ruler excels all other persons in the community in virtue. In fact, his argument, so far as it is an argument, would justify the institution of slavery. We do not find it difficult to believe that the tenants in the Island of Tyree or elsewhere in the domains of the Campbells should have opposed the measures of their landlords if they resembled the present Duke. We can easily understand how the most judicious scheme may have been presented in a manner so offensive as to compel a self-respecting tenant to reject it on principle.

So far as the argument of this book is directed against doctrinaires of the Marx and George type, we have no criticism to offer. If any one chooses to believe that the condition of the tillers of the soil was better under the hideous barbarism of the tribe or the clan, and that communal property resulted in anything more than universal poverty, he will find the case against him stated with very telling force. It appears clearly enough from these pages that the tenant under the existing law is far better off than the clansman could ever have been under the "coin and livery," the "bonacht," the "coshering," and the "tallages" of the chief. But the author looks in the wrong quarter for his enemy. Attacks either upon property in general or landed property in particular will be repulsed whenever proprietors really become alarmed about them. But landlordism is a very different thing from ownership. The Duke of Argyll wholly fails to show that when the feudal chieftain ceased to fulfil the office of a sovereign, owing to the development of the national sovereignty, he was justly entitled to retain those attributes of sovereignty which immediately assumed the form of absolute proprietary rights in the soil. The land had been given to him and his followers in the first place. It was his to dispose of only among them and while he was their ruler; and when a greater ruler appeared, the rights of the chief ought to have been extinguished. The author also fails wholly to consider that the individual ownership of land by those who occupy it is a very different thing from the right of a single subject to dispose absolutely of a considerable portion of a kingdom.

It would be unjust to deny that there is a great deal of interesting and valuable information scattered through these pages. Neither the absurd pedantry of the author nor his intense bias can altogether avail to conceal his real knowledge or to discredit his genuine patriotism. But his view is so entirely one-sided that it is impossible to accept his account of the development of Scottish society as historical. He misrepresents not intentionally but because he cannot help it. Yet if we can make allowance for this, we may enjoy his graphic accounts of the wild deeds of the clans, and the quiet grace of his descriptions of the scenery of the Highlands. It is impossible not to regret that such powers of narration and such exceptional opportunities should be thrown away in a ridiculous attempt to maintain an obsolete theory. The book might easily have been made a fascinating history; but as all its historical references are introduced to support a certain proposition, we feel sure that there are other interpretations to be put upon them, and that half the case has been omitted. Considered as an historical argument, the book seems to us to be a monumental failure. We feel disposed to give judgment against the plaintiff on his own showing. His plea discloses an arrogance so offensive that it makes the very name of landed proprietor odious. A few more arguments of this kind would certainly put an end to the system of great estates in land. The Duke of Argyll would do well to cease his appeals to the public, taking to heart the advice of an ancient philosopher to the unregenerate sailors who, when a tempest arose, began to call upon the gods: "Peace! Let them not know you are here."

Philadelphia, 1681–1887. A History of Municipal Development. By Edward P. Allinson and Boies Penrose of the Philadelphia Bar. Baltimore: Publication Agency of the Johns Hopkins University. 1887.

THE title of this excellent book sufficiently indicates the purpose of its authors. Although their judicious treatment of the subject required the best legal furniture of their profession, as well as the thoughtful and digested learning of the historian, yet its great value will be to the student of social science, to whom the present extraordinary development of wealth and population is constantly presenting new problems of no easy solution. Notwithstanding the fabulous tales of ancient cities and their exaggerated populations, it is necessary to accept and realize the fact that at no former time has the tendency of population towards great centres been so remarkable; and no branch of science has so lamentably failed to keep step with it, by applying knowledge to new social conditions, as that which aims especially in that direction, and which we rather indefinitely call social science. The reasons of this tendency are well understood by publicists, and are likely to continue and possibly to increase in force. They are closely connected with the progress of mankind, and we would not modify them if we could; but none the less are they tending to alter many or all the conditions of social, and therefore, in a free country, of political life.

In a single generation modern cities have grown from thousands to millions, and every succeeding census exhibits their constantly increasing percentage of the aggregate population. As long as labor continues to be further divisible, and the forces of nature can be more and more harnessed to the work of man, so long will economy of production and distribution be promoted by these great municipal aggregations; and therefore, under the ceaseless spur of competition, the process must go on, and must be regarded as a permanent fact, calling for the most enlightened and effective application of all that we know of both political and social knowledge. To study, collect, and preserve an important part of the knowledge valuable for such purposes has been the aim of our authors. Discarding the sentimental trash which too often swells the bulk of such local histories, they have with excellent taste confined their work to tracing from innumerable, but distinctly quoted, sources the actual political origin and history of a great municipality, pointing out with impartial fidelity the constant efforts, and almost as constant failures, to keep municipal administration fairly up to the civic wants.

First we have a general and most entertaining sketch, tracing back some distinctive corporate peculiarities through our English and Teutonic ancestors to the earliest usages of the Aryan race, and clearly distinguishing the three systems of local administration brought to the new world by the first colonists of the Eastern, Middle, and Southern colonies respectively, all of them equally of pure English race. Passing briefly over the Delaware River settlements of 1620–1681, and approaching the subject proper, we next have the earliest proprietary charter of 1691, which was lost for nearly two centuries, and found by the authors, after most of their book was written, among the private papers of an old city family (Biddle). The strictly mediæval character of

that instrument—which is far more antiquated than its date—and its gradual modification and development towards modern views, are carefully and ably traced by methods which could scarcely be improved. We have a vivid picture of the steady growth and complexity of municipal wants, and the consequent ceaseless crop of charters and law-making—all pushing the difficulties a little further ahead, but all equally futile to dispose of them—down to the latest charter taking effect April, 1887, of which such great hopes are now entertained. Even this last charter has required, to get itself enacted, thirty years since its principal features were outlined in 1856 by the then Mayor, Mr. Vaux, in an able official message which has only now borne its fruit.

Before the law, our modern municipal corporations are only artificial persons, as the rest of us are natural persons. Their duties should be solely financial and administrative. They have nothing to do with the political or legal rights of persons or of things, and consequently there is no political significance in our authors' conclusion, which we think must be shared by the intelligent portion of the public, that most of the failures of our local administrations are traceable to the universal tendency to usurpation of executive functions by legislative bodies. In Philadelphia certainly—and probably in most American cities—the usual course has been to start out with a reasonably strong and responsible executive, and then for the councils, by establishing a multiplicity of so-called "departments," with a standing committee for each, and an obedient agent called "chief of department," to grasp all patronage, and meddle with every purchase and contract, till waste, failure, and ruin startle the public to demand more law and a new start.

The new charter now has aimed to sweep aside this legislative usurpation by concentrating responsibility in the executive, and vesting the appointments directly or indirectly in him, on the theory that power and responsibility are inseparable, and as much as is refused of one must fail of the other. But this necessary concentration of power has been carefully checked by subjecting the appointments to systematic tests of selection by public competitive examination, thus seeking to vest the patronage in an impartial system, instead of in an individual with personal friends to reward, and perhaps enemies to punish. If we were willing to express a single dissatisfaction with this excellent work, it is that the authors have omitted to point out this important check to autocratic power, since all friends of the charter would admit that, without it, such power vested in one man would be offensive and dangerous. It is of the more importance that this feature should have been fully dwelt upon, because if the public, through carelessness or want of appreciation of its importance as a restraint upon the selfish use of executive power, should permit it to be evaded or frittered away, an indifferent individual might become an intolerable despot.

Annals of Augusta County, Virginia. By Jos. A. Waddell, Member of the Virginia Historical Society. Richmond: Wm. Ellis Jones. 1886. Pp. vii, 374.

It was in September, 1716, that Gov. Spotswood scaled the Blue Ridge, forded the Shenandoah, and formally "took possession for King George the First of England." Chaplain Hugh Jones, in his contemporary account of the expedition, intimates that the Governor took with him "a sufficient Stock of Provision"; and the honest diarist, John Fontaine, who was one of the party, shows us that the Jamestown minister was not misinformed. He says:

"We had a good dinner, and after it we got the men together and loaded all their arms, and we drank the King's health in champagne, and fired a volley, the Princess's health in Burgundy, and fired a volley, and all the rest of the royal family in claret, and fired a volley. We drank the Governor's health and fired another volley. We had several sorts of liquors, viz., Virginia red wine and white wine, Irish usquebaugh, brandy, shrub, two sorts of rum, champagne, canary, cherry punch, cider, etc."

Those were droughty times, and if that sort of thing held for forty years, Thackeray did not exaggerate in describing the feats of the drinkers at Castlewood. This was the expedition of the "Knights of the Golden Horseshoe"—Chaplain Jones will tell us why so called:

"For this expedition they were obliged to provide a great Quantity of Horse-Shoes; (Things seldom used in the lower Parts of the Country, where there are few Stones): Upon which Account the Governor, upon their Return, presented each of his Companions with a Golden Horse-Shoe, with this Inscription: *Sic juvat transcendere montes.*"

Peyton, in his 'History of Augusta County,' has the astonishing reading *jurat* for *juvat*, and the more astonishing translation, "Thus he swears to cross the mountains."

Finding that Augusta County now covers only about nine hundred square miles (it has been limited to that since 1791), one will be tempted to think that a great amount of sentiment, to say nothing of good liquor, was indulged in by its first discoverers. But a glance at the map of the county as it existed, or was supposed to exist, from 1738 to 1770, shows a vast empire, running in the old lordly way clear to the Mississippi and up to the Lakes, embracing all of Ohio, Illinois, Indiana, and Kentucky, with generous slices of Tennessee, New York, and Pennsylvania, justifying the bumpers and the volleys and the new order of knighthood.

Mr. Waddell has done a piece of good work. He modestly disclaims anything beyond the title of annalist, but it is exactly in such explorations of musty old records—tax-lists, parish books, newspapers, and private journals—that the best contributions to local history are made. Peyton's 'History,' for example, is far more ambitious and discursive, but is not to be named with the present work for painstaking accuracy, for resources, for a reproduction of the form and pressure of the time. We are glad that Mr. Waddell was not deterred from publishing his material by the fact that Peyton's volume appeared but five years ago. From the first, Augusta County has had a large Scotch-Irish element in its population. Religious exiles from the north of Ireland, as many of the early settlers were, pushing emigrants from Pennsylvania, as were others, their presence in the valley, their characteristics, social, political, and, above all, religious, determine the history of the first two or three generations. Dissenters, they yet managed to live peaceably under the Virginia Establishment, partly through the lax enforcement of ecclesiastical laws, partly by means of easy consciences in taking the oath "to be conformable to the doctrine and discipline of the Church of England." Indeed, the subscription of that time was of a sort to be called Jesuitical in the case of any not so loud in denouncing the Papacy and all its works as were the Virginia colonists; Chaplain Jones recording the grievous fact that even in the ministry of the Establishment "some have been suspected Presbyterians inwardly in their Hearts." In other respects, certainly, there was no lack of Puritan profession and practice.

Violations of the Sabbatical laws were followed by presentment by the grand jury; in 1750, Jacob Coger was presented for "a breach of the peace in driving hogs over the Blue Ridge on the Sabbath." More intelligible was the sentence of Edward Boyle to be put in the stocks for two hours, and to be fined twelve shillings, "for damning the court and swearing four oaths in their presence." It was a proverbially Irish proceeding, that the court should have ordered the construction of a ducking-stool in 1751, without reflecting that there was no water deep enough for its use within reach of the court-house. It does not appear to have been built—though, if so, it was not for lack of material to exercise it on, if we may judge from a record setting forth that one Anne Brown went into the court and "abused William Wilson, gentleman, one of the justices for this county, by calling him a rogue, and that on his coming off the bench she would give it to him with the devil." To the presence of Irish flax-workers was certainly due the choice of Staunton, by the Legislature, as the site of a manufactory for making sail duck, in the early years of the Revolution, when Virginia undertook to provide a navy. And it is a curious anticipation of a modern Irish expedient that the county committee recommended, in the case of the Rev. Alexander Miller, accused of denouncing as rebellion the opposition to the measures of the British Government, that "the good people of this county and colony have no further dealings or intercourse with said Miller until he convinces his countrymen of having repented for his past folly."

The trials and terrors of the long Indian wars, frequently wiping out promising settlements, find faithful and painful record in Mr. Waddell's pages. Before the first militia company organized after Braddock's defeat, the Rev. Samuel Davies preached a sermon, notable for an allusion to "that heroic youth, Colonel Washington, whom I cannot but hope Providence has hitherto preserved in so signal a manner for some important service to his country." Frequent price-lists and returns of taxable property light up the past for us. A proof of growing luxury, which would have delighted the heart of Carlyle, is encountered in a return of 1787 which names the two owners of gigs. Augusta County's part in the Revolution was honorable, though humble. Mr. Waddell puts in a dutiful plea for the priority of his county in looking towards independence, appealing to the journal of the Virginia Convention, under date of May 10, 1776, which states that "A representation from the committee of the county of Augusta was presented to the Convention and read, setting forth the present unhappy condition of the country, and representing the necessity of making the confederacy of the united colonies the most perfect, independent, and lasting, and of framing an equal, free, and liberal government that may bear the test of all future ages." "This," says Mr. Waddell, "is said to be the first expression of the policy of establishing an independent State government and permanent confederation of States, which the parliamentary journals of America contain." The distinction is too technical to be of great value; at best, Augusta County was a year behind Mecklenburg, and far less outspoken than Buckingham, whose delegates to the Virginia Convention were bluntly instructed "to cause a total and final separation from Great Britain to take place as soon as possible."

It is in keeping with the antecedents of Augusta County people that they should have had an anti-slavery delegate in the Legislature in 1831-32, who presented a petition, signed by 215 ladies, praying for emancipation; that they should have been pretty steady Whigs in national politics; should have been "earnestly in favor of maintaining the Union"; and should have promptly acquiesced in the Thirteenth Amendment. Mr. Waddell gives but few pages to the rebellion—those very suggestive, however, being made up almost entirely of extracts from his own diary—and fewer still to the era of re-

construction. He closes his annals with 1870. He might have made a better index than he did. On early ecclesiastical history he might have consulted Prof. Briggs's 'American Presbyterianism' to advantage. Excepting these and a few other minor deficiencies, his work is excellent both in conception and performance.

Letters of Horatio Greenough to his brother Henry Greenough. With biographical sketches and some contemporary correspondence. Edited by Frances Boott Greenough. Boston: Ticknor & Co. 1887.

THIS volume does not purport to give a complete biography of our first sculptor, but it serves for one; and, indeed, from these open and amiable letters and the modest narrative that connects them, the reader obtains a view of Greenough's life and an impression of his character that are all sufficient. He was born into a talented family, several of whom won distinction and led useful lives, and he was educated at Harvard College. It was while there, and before he was twenty years old, that he made the model for Bunker Hill monument which, for form and proportion, was adopted. Soon after graduation he went to Italy, and there, he said, he "began to feel nature's value: I adored her before, but as a Persian does the sun, with my face to the ground." He was compelled by illness to return after a short stay, and, on reaching his own country, went to Washington, where he had commissions for a while; but it was not long before he was back in Italy, where, by the aid of Boston friends and the kindness of Fenimore Cooper, he remained at work until his reputation was established, and thereafter he made Italy his home for the greater part of his life. He was a warm patriot, however, in speech as well as in sentiment; he enjoyed his visits home, and he had the good fortune to die in his native land, December 18, 1852. He was only forty-seven years old.

Such a life is naturally told with much completeness in the letters written home. These are, however, in the strictest sense home letters, and they have the charm of familiarity, and occasionally something of the tedium of personal affairs and the limitation of view within the family horizon natural to such epistles. The best of them are those written in youth, when the freshness, the uncertainty, and the ambition of the chase for fame had their hour. There is a frankness, a genuineness, a real boyishness about these earlier confidences and experiences that keep them still vital; and with them must be included the package of return letters, written by his brother Alfred, which give us a passing glimpse of Boston at the beginning of the thirties, when John Hancock's house, in which the family were living, still commanded "a view of the whole city, country, and harbor," and when Greenough *père* was "the only real-estate dealer." We learn from this same batch of letters that Mr. Ticknor had the only copy of Shelley "in the country" (about Boston, let us hope) in 1831, and the editor adds that he was generous in lending this and other rare works by "Elia, Goethe, Bulwer, and Disraeli."

Horatio's later letters are occupied largely with his orders and with other details of business and family interests; very little is to be found in regard to art or books or famous persons. But constantly one comes upon some little incident, some picture of nature, or pithy remark, or gets near to great events like the revolutions of '48, so that at the end there is a little wonder that such slight materials have turned out so well. The editor has handled his subject very deftly and pleasantly, and made it all interesting. It is painful to observe how Greenough was troubled and hurt by the difficulties of his negotiations with our Government in regard to the disposition and payment of his public works. His ideal statue of Washington has found few defenders, but his protest against the point of view from which it is now regarded, and his own intention that it should be seen in a closed chapel, are to be remembered. Independently of artistic merit, however, he was much vexed by the practical business involved in his engagements by the Government, and he took it very much to heart. He could bid the critics who suggested tossing his great work "into the Potomac" a very satisfactory defiance from the vantage ground of his ideal art; but no reply so solacing was to be found when the Treasury withheld a draft. He behaved very well, nevertheless, and, after his death, matters were properly settled. There is an account of Priessnitz, the founder of the water-cure, and of his establishment and manner of life at Graefenberg, and also a picturesque passage about the Malvern Hills and Wells. Greenough's love of wild nature was strong, and his eye for the salient points good; he seems to have been not unwilling to pen "a description" in his earlier years, and probably he was not greatly offended when the irrepressible Willis published a letter from "a young artist in Italy, as it is so redolent of the land from which it came, though not intended for the public eye." But it was in other days than ours that the lover of nature, too long cramped in his "bird's-eye Florence," breathing once more the New England sweetbriar of a May morning, could write it down—"God is great and Newport is His abode."

With this gem of a former age we take leave of the volume, which those will like to read who are interested in the people and nascent art feeling of old Boston, and who enjoy the words of a simple and unbookish man to his own folk.

Poetry and Philosophy of Goethe. Chicago: S. C. Griggs & Co.

THIS volume contains the lectures and extempore discussions offered at the Milwaukee Literary School in August, 1886. This institution appears to be an imitation of the Concord School of Philosophy, or perhaps we should rather say an offshoot; at any rate, no less than five of those who contributed to the Concord lectures upon Goethe in 1885 were present at the Milwaukee school, and are represented in the volume before us, which is thus, as we should expect, very redolent of the Concord aroma. From Mr. F. B. Sanborn we have a repetition, with some additions, of his Concord lecture upon "Goethe's Relations to English Literature," and from Mr. Denton J. Snider a chapter of his work on "Faust," noticed in the *Nation* of February 10, and also an ultra-Pindaric anniversary ode. One-third of the volume emanates from Dr. W. T. Harris, who contributes two formal lectures and a number of lengthy extempore discussions. A lecture by Mr. James McAlister upon "Goethe as a Scientist" is given according to a condensed report in the Milwaukee *Sentinel*. As reported, the performance has little or no value, and seems to have been inserted only as a peg upon which to hang Dr. Harris's attempted "rescue" of Goethe's theory of color. The best essay in the collection is one by Mrs. Maria A. Shorey upon the 'Elective Affinities,' which is a thoughtful and suggestive study, couched mainly in the literary English of the world's people. Even this, however, exhales in patches the Concord aroma, as witness the following sentence:

"Indeed, I think it will some time be admitted that he often grasped intellectually, if he could not continuously hold, the underlying principle of all progress from the slime, up through the struggling, teeming ranks of life to that half-poetic, half-prophetic dream (which haunts us all) of a race of men and women whose souls, purified by the discipline of the generations into harmony with celestial currents, know at last neither sorrow nor striving, but exist in peace, stirred only by the ebb and flow of the mighty ocean of divine desire and happy attainment."

The book is edited by Mrs Marion V. Dudley, Secretary of the School, who in a prefatory note commends her work to the public in these words: "To emphasize the value of ideas; to stimulate profounder research; to cultivate immortal youth, is its earnest purpose." On the title-page, for some occult reason to us inscrutable, stands the motto, "Das Ewig-Weibliche zieht uns hinan.

BOOKS OF THE WEEK.

Battles and Leaders of the Civil War. No. 3. The *Century* Co. 50 cents.
Burbank, Rev. W. H. Photographic Printing Methods. Scovill Manufacturing Co. $1.
Dostoyevsky, F. Prison Life in Siberia. Harper & Brothers. 20 cents.
Dumont, A., and Chaplain, J. Les Céramiques de la Grèce propre: Vases Peints. Paris: Firmin, Didot & Cie.
Fenn, G. M. The Bag of Diamonds. D. Appleton & Co. 25 cents.
Finck, H. T. Romantic Love and Personal Beauty. Macmillan & Co. $2.
Gaboriau, E. Marriage at a Venture. Geo. Munro.
Grammaire Albanais. London: Trübner & Co.
Greg, P. History of the United States. 2 vols. London: W. H. Allen & Co.
Gréville, H. The Princess Roubine. Philadelphia: T. B. Peterson & Bros. 50 cents.
Holtzendorff, F. von Handbuch des Völkerrechts. Vols. 2, 3 Hamburg: J. F. Richter.
Horton, S. Dana. The Silver Pound, and England's Monetary Policy since the Restoration Macmillan & Co. $4.
Howorth, H. H. The Mammoth and the Flood. London: Sampson Low.
In an Evil Hour, and Other Stories Geo. Munro.
Jackson, T. G. Dalmatia, The Quarnero, and Istria. 3 vols. Oxford: Clarendon Press; New York: Macmillan & Co. $10.50.
James, Henry. Tales of Three Cities. 5th ed. Boston: Ticknor & Co.
Karr, H. W. S. Shores and Alps of Alaska. London: Sampson Low; Chicago: A. C. McClurg & Co. $3.50.
Meade, L. T. The O'Donnells of Inchfawn. Harper & Brothers. 20 cents.
Meyer, C. F. The Chancellor's Secret. New Bedford: Jas. M. Lawton, jr.
Morfill, W. R. Simplified Grammar of the Serbian Language London: Trübner & Co.
Nettleship, Prof. H. Passages for Translation into Latin Prose. London: Geo Bell & Sons.
Pavlovsky, Isaac. Souvenirs sur Tourguéneff. Paris: A. Lavine; Boston: Schoenhof.

The Nation.

NEW YORK, THURSDAY, AUGUST 18, 1887.

The Week.

THE decision of the Secretary of the Treasury to accept no offering of 4½ per cent. bonds at higher rates than 110, including the accrued interest (which on the first of September will be 1⅓ per cent.), has probably caused some disappointment in the circles of speculation, but we think that he would not be justified in going above that figure at present. Each outstanding bond of this class may now be considered in the light of a call loan from the holder to the Government. Call loans on Government security can be had at about 3 per cent. A 3 per cent. bond subject to call would, therefore, be worth about par, and if running, in four years, perhaps, 2 or 3 per cent. above par. A 4½ per cent. bond would be worth as much more as its interest would yield in the four years, *i. e.*, 6 per cent. Putting the time premium and the excess of interest premium together, we get 108 to 109 as the present value of the 4½ per cents to the holders. Of course the Secretary could afford to pay a much higher rate, since the total sum he has to pay if the bonds run to maturity is 118. But he must be able to show to Congress and the people that he has not paid more than was necessary. He must give no color to the charge that he has favored speculators or has allowed them to "corner" him. He is perfectly justified in taking as a starting point the net worth of the bond, which is, at a close calculation, 109 ex-interest, or 110 including interest to date. He has advertised his intention to pay out his surplus whenever the money market has sufficient need of it to pay 3 per cent. interest for it. The offerings made show that the 4½ per cent. bonds are to a considerable extent in the hands of men in active business, as distinguished from trustees and mere investors. The latter class are growing less numerous from day to day. As the date of maturity of the bonds draws near they will sell the 4½s and buy the 4s. The 4½s will fall more and more into the hands of bankers and brokers, and thus be brought within the reach of the Secretary at fair prices. For the present there is nothing like tightness in the money market, and therefore no reason for complaining that the Secretary has not come to the relief of business.

The Civil-Service Commissioners have summarized the results of their investigation into the charges affecting the management of the Philadelphia Post-office in a long "opinion," the points of which may be briefly summarized. They found that the complaints by the local Civil-Service Reform Association, that Postmaster Harrity had violated the rules in making appointments to fill vacancies, were not sustained by the evidence, and state that "in no way, so far as the evidence develops the facts, did he violate either the Civil-Service Act or the rules." That the overwhelming majority of the new appointees entering under the rules were Democrats appears to be true, but the reason seems to be the same as that which caused the overwhelming majority of those who entered under the same system while a Republican was Postmaster to be Republicans, viz., the impression that members of the party opposed to the Postmaster for the time being would not stand much chance of appointment, and so had better not waste their time in passing examinations. The charges that appointments were distributed evenly among the election districts of the city proved to be untrue, as also the charge that men who could not spell or write correctly had been appointed, and the charge that political assessments have been made in the office. As for the charge that numerous removals have been made for political reasons, the Commissioners say that even if it were true, which they do not admit, they could take no action, as the law does not make removals for such reasons an offence. Messrs. Oberly and Lyman think that a rule requiring reasons for dismissal, to be filed with the order for dismissal, would be wise, but Mr. Edgerton dissents from this view.

A signal of distress is hoisted by the Republican party of Massachusetts in the pathetic appeal, signed by Senators Dawes and Hoar and a long list of other magnates, and addressed to the Prohibitionists, imploring them not to be so foolish as to vote for the third party, when the Republican party, with its "splendid national history," etc., is ready to promise them anything—before the election. There is reason for the Republican alarm. The spirit manifested in the town of Conway, where a pledge to support the Prohibition party has been signed by about half of the Republican voters, is shared by many other members of "the grand old party"; and at a largely attended meeting in Northampton a few days ago, the speakers announced their desire and purpose to beat the Republican party as the surest way of ultimately reaching their end. Any fresh promises which the Republican managers may now make will count for little, in view of the fact that the party last year pledged itself to submit a prohibition amendment, and then failed to keep the pledge when the question came to a vote in the Legislature.

Fuller returns from the Texas election confirm the impression that the vote of the native white Democrats, certainly outside the cities and large towns, was pretty evenly divided, and that the great majority against Prohibition is chiefly due to the negro and German Republicans. Twenty-five counties gave majorities for the amendment, and in each of twenty others the adverse majority fell below 100. These 45 counties in which the Prohibition sentiment was so strong contained only 27,557 negroes to 191,980 whites in 1880, and cast 38,849 votes for Cleveland to 8,388 for Blaine in 1884. On the other hand, the six "black counties" of Fort Bend, Harrison, Marion, Matagorda, Walker, and Waller, which contain 47,334 negroes to 23,471 whites, and cast 7,135 votes for Blaine to 3,970 for Cleveland, rolled up 6,849 majority against Prohibition.

The Louisville *Courier-Journal* last week published the official returns from 110 of the 119 counties of Kentucky. The remaining nine will add about 10,000 votes to the total, divided nearly equally between the Democrats and the Republicans. The full returns, therefore, will vary but little from these figures: Buckner, Democrat, 145,412; Bradley, Republican, 125,567; Fox, Prohibitionist, 8,256; Cardin, Labor, 4,841; Buckner's plurality, 19,845; total, 284,076. This is by far the largest vote ever polled in a State election, and, indeed, exceeds the highest total ever reached in a Presidential year, the aggregates having been 259,608 in 1876, 267,131 in 1880, and 275,913 in 1884. The results in 1884 and 1887 compare thus:

	Dem.	Rep.	Pro.	Labor.	Total.	Dem. Plural.
1884....	152,961	118,122	3,139	1,691	275,913	34,839
1887....	145,412	125,567	8,256	4,841	284,076	19,845

This shows that the Republicans have gained about 7,500 votes and the Democrats lost about the same number, while the Prohibitionists and Labor parties together have gained something over 7,500, or practically all of the total increase of the vote in the State.

We have pointed out that the fatal obstacle to an effective Republican campaign in the South next year is the fact that the Republican party still remains a sectional party, and abuses as "rebels" all Southerners who vote against it. There is one other serious obstacle in the way of making the Republican party respectable and strong throughout the South, and that is the fact that in the single Southern State which has been carried by the Republicans during the past ten years they have been represented by Mahone, one of the most disreputable politicians ever seen in public life. Mahone and his subservient followers have just held a meeting at Richmond as the Republican State Committee of Virginia, and the Republican campaign this year is to be made openly and avowedly for the purpose of sending this wretched demagogue back to the United States Senate. It would be an insult to the white men in the North to ask them to support the Republican party if its chief local representative was Mahone; it is equally an insult to white men in the South under existing circumstances.

The general Republican talk about candidates in this State is extremely edifying. The managers are all in favor of offering the head of the ticket to Gen. William H. Seward, but are in doubt as to his willingness to accept. They are also in favor of Col. Fred Grant, Senator Comstock, and others equally removed from merely partisan politics for various positions on the ticket. It is noticeable that there is no longer any talk about Theodore Roosevelt and the ambitious young gentlemen who gathered themselves about him a few months ago for the avowed purpose of taking possession of the Republican party in the State. Not one of

them is even mentioned for a place on the ticket. Still, we have no doubt that they can have all the places they want. The Platt-Hiscock combination is perfectly willing to have that ticket composed of "good men" throughout, since there is very little prospect of its election. The work of the combination will be concentrated upon the nomination and election of a Platt majority in the State Senate. We doubt if there is a Republican politician in the State who expects to see the party's State ticket elected in November. The "hopeful" tone which they all adopt is similar to that of this reply of Senator Knapp of the St. Lawrence district when he was asked by a *Tribune* reporter if the Republicans could carry the State: "The answer to that lies in bringing out the vote. If the feeling on the Presidential question is strong enough to get the voters out, the Labor diversion will offset the Prohibition vote, and we shall win. The prospect looks fair for success."

The apparently authoritative announcement, made by that good Blaine organ, the Rochester *Democrat and Chronicle*, that the Republican nomination for Congressman in place of Senator Hiscock has been settled on James J. Belden of Syracuse, is extremely interesting. It shows as plainly as Platt's leadership does the rapid down-hill pace at which the Republican party is travelling in this State. Belden was one of the leading men in the old Canal Ring which Gov. Tilden broke up. He was for years a professional lobbyist, and was one of the most skilful of his species at Albany. Jacob Sharp, among others, found his services valuable. Sharp testified before the Senate Investigating Committee that he paid Belden $65,000, and when asked for what reason he paid him so large an amount, replied: "Well, Mr. Belden is a man who don't stir round for nothing. He expects to make something." That is the most accurate description ever given of Belden. He was a devoted Blaine man in the last campaign, and has always taken a deep interest in everything in which he was able to see "various channels" of usefulness.

The sober second-thought of Georgia and of the South is making itself felt against the Glenn bill, which threatens with the chain-gang any person who teaches white and black children together. The Atlanta *Constitution* publishes a letter from Mr. Sidney Root, who shows much familiarity with the work done by Northern benevolence in the education of the negroes, and who says: "Unquestionably mistakes have been made, but, on the whole, I believe substantial good has resulted." Mr. Root says of the pending bill: "It will probably be found that penal legislation is unnecessary. Undoubtedly the State has the right to say how its appropriation shall be expended, and it seems to me that a simple declaration of the principles involved, and a resolution forbidding the payment of the public money to support schools where the two races are educated together, will be all that is necessary." Dr. Atticus G. Haywood, the well-known Southern Methodist and manager of the Slater fund, protests against the bill as unwise because it is unnecessary. He thanks God that he knows the white teachers whose children attend the negro college, and he honors them fully as much as he does his own sister, who is now engaged in missionary work in China. He says that there are only fourteen white children in colored schools in the State, and he thinks that Georgia has no reason to be scared. He closes with this very pertinent observation: "There is a law in Georgia against intermarriage—a law more violated, ten to one, if not in the letter, in the reality and spirit of it, than the law against mixed schools. If now the Legislature will give us a law placing the parents of mulatto children in the chain-gang, it would be worth while." The Jacksonville *Times-Union*, the leading Democratic paper of Florida, protests against the measure; and the Memphis *Avalanche*, which speaks with authority for Democracy in Tennessee, says that "the censure which the Georgia Legislature is everywhere receiving for the serious consideration which it has given to the bill making it a felony to teach a white pupil in a negro school, is well deserved."

The public have become very much hardened on the subject of railroad accidents, but now and then one occurs of such appalling magnitude that everybody stops for a few moments to reflect upon the mysteries of life and death, and to wonder whether he or she will die in bed surrounded by the consolations of religion and human love, or underneath a pile of iron and timber, and in the torture of devouring flames. The accident on the Toledo, Peoria and Western Railroad is certainly one of the most horrible that ever happened since railroads were invented. It is so horrible that no words can describe it. We can only shudderingly ask who is to blame, if anybody, for such an awful destruction of human life and such desperate wounding and maiming of men, women, and children. The testimony taken in the Coroner's inquest does not sustain the theory that the bridge was set on fire by robbers. There was nothing to support that theory in the beginning. If the train had been on time, it would have passed over the bridge in safety, but, being an hour late, the timbers had been so much burned that they could not support the weight of the locomotives. If the fire had been started by robbers, they would have made their arrangements to suit the case of a train running on schedule time, instead of one an hour late. Moreover, it appears that the only thieves on hand were on the wrecked train, having come along with the excursionists for what they could pick up. The origin of the fire is still to be learned. But the responsibility for having a pestilent wooden bridge at that place, and having it insufficiently watched at a time when the prairies were burning or liable to burn at any time in consequence of the protracted drought, can hardly be doubtful. The Toledo, Peoria aud Western Railroad was a shoddy concern in the beginning, put together by hook and by crook in the great mania for cheap roads in the period immediately after the war. We suspect that little has been done to improve it since. It went bankrupt in 1873, was reorganized and taken into the Wabash system, went bankrupt again with Wabash, was taken out of the Wabash medley and set going on its own account. Probably this accident will bankrupt it the third time, but that will be the least of the calamities that are involved in the slaughter at Piper City.

The government of Washington is again the subject of much discussion. Ever since the experiment of popular suffrage at the national capital broke down, the District of Columbia has been under the control of a board of three commissioners, two of whom are taken from civil life, and the third from the regular army. When President Cleveland reorganized the Board a year and a half ago, he was most fortunate in being able to secure as the representative of the army Col. William Ludlow, a graduate of West Point, an accomplished civil engineer, and an official of proved executive capacity through three years' service as Chief Engineer of the Water Department of Philadelphia, reëlection to which position was refused him because he had run the Department on business principles and refused to make it a part of the Republican Machine. Col. Ludlow naturally became the leading spirit of the Commission, and he has discharged his duties with the same fidelity which caused the Philadelphia *Press* to say of him, when he was leaving that city, that he was "the most efficient and competent officer the Department has ever had," and that he was "thrown overboard because he *is* a good officer, and because his office is administered strictly on business principles." Such a man is pretty sure to institute changes and establish reforms which are disagreeable to some people, and thus to incur criticism; but a candid examination of the charges brought against him and the Board of which he is the most active member, shows that they are the result of ignorance and misunderstanding, where less creditable motives may not be suspected.

Referring to the recent rejection by the Second Comptroller of the Treasury of an account for the purchase of horses for the Secretary of War, submitted by Col. Batchelder, as late Depot Quartermaster at Washington, the *Evening Star* of that city reminds its readers that there is an almost continuous conflict of authority between the accounting officers of the Treasury and the War Department; that Mr. Maynard, as Second Comptroller, was at variance with the Secretary of War in refusing to recognize as sound the theory that an account for expenditures ordered by the Secretary could not be questioned, and that the conflict continues under the new Second Comptroller, Mr. Butler, on the same ground. It is not a correct inference from this that there exists a hostility between the War Department and the Treasury, or that the correspondence caused by the holding up of these accounts differs from that which has been maintained for many years between the Comptrollers and the heads of the various departments. There is simply friction in our system. Under all administrations it is observable, and it is to be regretted that it should be now pointed out as an indication of want of harmony between Mr. Butler and Mr. Endicott.

A case in point occurred thirty-five years ago. Lieut. Jones of the navy, while on leave of absence in Paris, was severely wounded by accident during the revolutionary outbreak in that city. The Secretary of the Navy sent him $1,000 to pay the expenses attending his injuries. The accounting officers charged this sum against his salary. This presented as clear and as strong a case as can be conceived to test in the courts the legal power of the accounting officers to question the acts of heads of departments. The Supreme Court of the United States (U. S. vs. Jones, 18 How. 92) decided that the propriety of applying this money to the payment of the Lieutenant's expenses growing out of the accident was peculiarly within the jurisdiction and direction of the head of the department, and that the officer could not be charged with the amount so transmitted. Then followed these words, which should be engraved upon the desk of every Auditor and Comptroller of the Treasury: "The Secretary of the Navy represents the President and exercises his power on the subjects confided to his Department. He is responsible to the people and the law for any abuse of the powers intrusted to him. His acts and decisions on subjects submitted to his jurisdiction and control by the Constitution and laws do not require the approval of any officer of another department to make them valid and conclusive. The accounting officers of the Treasury have not the burden of responsibility cast upon them of revising the judgments, correcting the supposed mistakes, or annulling the orders of the heads of departments." This decision would bring about, if respected, a state of affairs such as the English people have at last established. In England, if a payment exceeds the amount prescribed in the particular instance, or if it is for an object outside the appropriation, the accounting officer of the Department is held responsible for making the needful representation to his superior officers. If this representation is overruled, the accounting officer presents it in writing, and then countersigns the order if still required to do so. The theory there is that his function is to assent or dissent, not to administer or to overrule administration. But the Jones case has received no more respect from Treasury officials than John Marshall's Cherokee decision received from Andrew Jackson.

Up to 1881 the Grand Army did not interfere with pension bills, but merely accepted the gifts which a grateful country made its members; and the steps it then took were the legitimate ones of furnishing information to assist in the more rapid and equitable adjustment of claims. In 1882 the national encampment took its first action intended to have effect on pension legislation, and during the following March the Committee on Pensions were able to persuade Congress to pass an amendment which they favored to what was known as the $40 pension bill. The new departure and its success apparently made an impression on the soldier vote, for the organization increased in the following year by 80,745 members, an extraordinary rate, never equalled before or since. In 1883 the then Surgeon-General of the order advanced the idea that pensions were not gifts from a grateful country, but debts accrued by contracts or obligations. He argued that, unless the soldiers had won the battles of the republic, its bonds would have been worthless, and that, therefore, the Government was under no more obligation to pay the bondholders than to make good all detriment received by the soldiers in the war. This view was readily and enthusiastically accepted by many members of extreme views, and was even improved upon by calling all such pension bills as the soldiers might ask for demands of right, that should take precedence over bondholders' claims. The extremists were equally delighted with the Surgeon-General's idea that "the millions which flowed from the Treasury into the soldiers' hands lubricated the wheels of commerce."

Happily for the organization, such impudent claims have hitherto been steadily outvoted by a more moderate majority whenever the question of official action has arisen in the national encampment. Thus, in 1883, a resolution favoring a law to give all honorably discharged soldiers and sailors $8 a month, provided they had not received a pension before—in other words, giving all such honorably discharged veterans a present of that amount—was voted down. Yet so dissatisfied were the hot-headed minority that more than 1,000 posts petitioned Congress not only to pass this bill, but to make it apply to all veterans, whether they had received a pension before or not—that is, to pass a service-pension bill. In 1884 the latter proposition was again voted down, as well as the resolution that every veteran should be presented with a warrant for 160 acres of land, whether he occupied the land or not, and that the difference between the value of the greenbacks they received for their services in war and gold should be made good to them. In 1885 the $8 pension bill for all veterans was once more voted down, and in 1886 the national encampment showed the same good sense by a vote of 327 to 86.

The dry season in Mexican politics is not passing without giving some indications of the way events are likely to shape themselves in the future. The reëlection programme is being carried out smoothly, the Legislature of Sonora having approved the proposed amendment to the Constitution on June 18, and Sinaloa going through the form on the 27th of the same month. President Diaz as yet gives no sign of what his determination will be, but there can be little doubt that he will acquiesce in what his friends tell him is the demand of the country. Meanwhile, the clerical reaction which has been going on steadily for the past half-dozen years appears to have received a serious check. The Juarez anniversary, on July 18, served to call out a remarkably widespread expression of popular distrust of the Church party—an expression so strong that the Administration was forced to side with it. The President and his Cabinet were conspicuous at the commemorative services held in the capital, Secretary Mariscal delivering one of the orations. Federal troops in large numbers were ordered to join the parade, the Government organ had frequent editorials recognizing and approving the popular feeling; a rampant Catholic editor was arrested and sent to jail. Nothing, in short, was left undone to commit the Administration to the Liberal revival. Probably no other name than that of Juarez could have had power to unite, if but temporarily, the factions of the Liberal party in such a way as to draw from even the intransigent *Monitor* expressions of satisfaction. The glum tone of the Church press adds to the significance of the situation.

The circumstances under which Prince Ferdinand of Coburg-Gotha mounts the throne of Bulgaria are apparently as unfavorable as they possibly could be. The conditions stipulated by the Treaty of Berlin for the validity of a choice include the unanimous recognition by the Powers, and this cannot be obtained, owing to the hostility of Russia, whose Government has gone too far in its assertions of the incompetency of the late Sobranye to elect a ruler, to recede now from its position. France has steadfastly sided with Russia since the downfall of Prince Alexander; and out of complacency to these two Powers, the Sultan, whom they so recently supported in his assertion of sovereign rights in Egypt, will undoubtedly withhold, for a time at least, the express sanction of the Tirnova election which it is his right to bestow as suzerain in advance of foreign recognition. Austria-Hungary, Germany, Italy, and England may all secretly favor the choice, but none of them has reasons for driving Russia to an open rupture by an infraction of the solemn treaty terms on which the order of things in the Balkan Peninsula rests. Ferdinand will thus long remain the unrecognized ruler of a nation whose very status as such is still open to dispute. Besides, if he is not to forfeit the enthusiasm which has greeted him on his accession, and which he tries to nourish by displays of ardent zeal for the young nation's independence and greatness, he must assume also the government of Eastern Rumelia—the southern Bulgaria—to which he, however, has no legal or international title whatever; for his predecessor was acknowledged by the Porte as ruler of that autonomous province, after the *coup d'état* of September, 1885, not in the capacity of Prince of Bulgaria, but as Imperial Governor, deriving his powers from a special personal appointment. Ferdinand's entering Philippopolis as Prince will thus be a new usurpation. Add to all this the certainty of continued intrigues by tools or partisans of Russia, of Zankoff and his fellow-conspirators, of King Milan of Servia, and Prince Nikita of Montenegro, and surely the prospect is disheartening enough. But Prince Ferdinand reckons on the strength of accomplished facts; on the rivalry of the Powers, which will not allow intervention by one or two against him; on the weakness and apathy of the Porte; on his dynastic connections as a scion of the houses of Coburg and Orleans; on the sympathies of the central European nations, and especially of Austria-Hungary, springing from anti-Russian impulses; on the favorable disposition of Rumania, and chiefly on the patriotism of the Bulgarians and his own resources as a courageous adventurer.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 10, to TUESDAY, August 16, 1887 inclusive.]

DOMESTIC.

SECRETARY FAIRCHILD on August 10 accepted the offer of the Suffolk Savings Bank of Boston to sell $260,000 registered 4½ per cent. bonds at 110 flat. All the other proposals which had been made were rejected, as the rates were not considered favorable.

The Secretary of the Navy on August 15 awarded the contracts for United States cruisers as follows: Cruiser No. 1, the *Newark*, to Cramp & Sons, for $1,245,000, according to the Department's plans for the hull and the contractors' plans for machinery; cruiser No. 4 to Cramp & Sons, according to the contractors' plans, for $1,350,000; cruiser No. 5 to the Union Iron Works of San Francisco, the Department's plans for hull and machinery, for $1,428,000; and gunboats Nos. 3 and 4 to N. F. Palmer, jr., & Co. of New York (Roach's assignees), at $490,000 each.

The Secretary of the Interior on August 15 revoked the order of withdrawal of indemnity lands for the benefit of the Atlantic and Pacific Railroad Company, and, in a letter to the Commissioner of the General Land Office, directed that they be restored to settlement under the Preëmption and Homestead Laws. It is estimated that between 25,000,000 and 30,000,000 acres are involved in this decision in the case of the Atlantic and Pacific Company alone. The order applies also to a number of other railroads.

The Commissioner of Indian Affairs has interpreted the Indian Severalty Act as a "law sufficient to constitute any Indian 'born within the territorial limits of the United States, who has voluntarily taken up within said limits his residence, separate and apart from any tribe of Indians therein, and has adopted the habits of civilized life,' a citizen of the United States, 'entitled to all the rights, privileges, and immunities of such citizens,' without action on his part." "Should any such Indian be denied or refused any of such rights, privileges, or immunities," the Commissioner explains, "he should appeal to the proper courts, in the same manner as it would be necessary for other citizens to do in case of similar refusal or denial." This interpretation opens the way for all the educated Indians who are scattered over the country to be counted as citizens, without forfeiting any of the property rights which they have as members of tribes.

A sheriff with a small posse of men recently went to the White River Indian Agency in Colorado, to arrest two Indians who had been indicted for horse-stealing. Chief Colorow of the White Utes refused to surrender them, and his warriors fired at the sheriff's men. In the fight one Indian was killed. There has been fear of murder and plunder by the Indians since that time.

It is reported that in a fight with the Indians on August 9 four Utes were killed. The situation is regarded as threatening, and the Governor of Colorado has ordered State troops to the region where the Indians are, and has asked aid of Gen. Crook.

Before the Pacific Railway Commission, in session at San Francisco, Charles F. Crocker, Vice-President of the Southern Pacific Company, and Senator Stanford both refused to say whether or not the Central Pacific had paid any money for influencing State or national legislation.

In the United States Circuit Court at San Francisco on August 15, Judge Sawyer issued an order citing Senator Leland Stanford to appear and show cause why he should not be compelled to answer questions asked him by the Pacific Railroad Commission in regard to the expenditure of funds for the purpose of influencing legislation.

Having been beaten in the United States Circuit Court for the Eastern District of Virginia in his long contest for the continued custody of "Blind Tom," the feeble-minded negro pianist, Gen. James N. Bethune, through his attorneys, made a motion in the Supreme Court Chambers in this city August 11 to vacate the order made in March appointing Mrs. Elise Bethune, widow of Tom's late manager, custodian of Tom's person and property. The motion was denied.

The official returns of the recent Kentucky election give Buckner (Dem.) 17,015 plurality over Bradley (Rep.).

The New York State Convention of the Union Labor party at Rochester August 11 nominated candidates for a part of the State offices, and adopted a resolution favoring a protective tariff. This is the smaller faction of the Labor party, the larger being the United Labor party, of which Mr. Henry George is a leader.

Prominent members of the National Colored Press Association at Louisville, Ky., on August 10, expressed the opinion that the negroes should be independent in politics of the slavish following of any party. The resolutions adopted denounce the acts of the Legislatures of Indiana, Virginia, Tennessee, and other States making intermarriages a penal offence, while crimes committed against colored women by white men are overlooked, and call the Glenn bill in the Georgia Legislature unjust. The attempt to organize a national organization of colored people to work politically was not favored, but local organizations adapted to the peculiar circumstances of places and people were. The Association recommended the establishment of a National Bureau of Information to ascertain the extent and nature of lawlessness and mob violence against colored men.

Rain fell August 10 in a large part of the area in the Northwestern States where vegetation had been destroyed by drought, but it came too late to revive the crops. There have been many destructive fires in this region. Much timber and many fences have been destroyed, and a few dwellings.

On the night of August 10 a train of sixteen cars, filled with excursionists bound for Niagara Falls, was wrecked on the Toledo, Peoria and Warsaw Railroad by running into a burnt wooden bridge near Chatsworth, Ill. More than eighty persons were killed, and at least a hundred more were badly hurt. The bridge was a short one and was burnt from the bottom. There was no blaze visible to the engineer, and the track did not yield until the first engine passed over it. It is probable that it caught on fire from burning grass or from a spark from a locomotive that passed late in the afternoon. The supposition that it was set on fire by persons who wished to rob the passengers, is not supported by the testimony of the railroad officials and of persons who live near the scene of the wreck.

A west-bound express thirty miles east of Tucson, Ariz., August 10, was ditched and the express car robbed by four men of $3,500.

The Giant Powder Works at West Berkeley, six miles from San Francisco, blew up August 11. Buildings were shaken and windows broken in San Francisco, and one man was fatally, and ten others were seriously hurt.

The handsome Masonic Temple, the Hamilton Block, Campbell & Dick's carpet warehouse, and a number of adjacent tenement-houses in Pittsburgh, all valued at $500,000, were burned on the night of August 12. It is thought that the fire started from a match thrown in a waste-paper basket by a man who was smoking.

United States Senator Riddleberger was sentenced, at Woodstock, Va., August 12, to pay a fine of $25, and to imprisonment for five days, for contempt of court. He was released from jail the same night by a mob, but on the next day voluntarily returned to the cell.

At Rockaway Beach August 9, T. S. Baldwin, a San Francisco aeronaut, jumped from a balloon at a great height, and came down with the aid of a parachute. He alighted near the shore in a few feet of water. The time of the descent was a trifle over one minute and twenty-four seconds.

In the series of races by the yachts of the New York Yacht Club off the Rhode Island and Massachusetts coast, the *Volunteer* has in every one been the winner.

The Scotch yacht *Thistle*, the new challenger for the *America's* cup, arrived at this harbor on the morning of August 16. She left Gourock Bay, Scotland, on July 25, at ten o'clock in the morning, and made the passage to Sandy Hook in twenty-one days twenty-one hours.

The Rev. Dr. Curran, a Catholic priest, recently filled an appointment at a picnic of the "Anti-Poverty" Society with Dr. McGlynn, and thereby exposed himself to the censure of his ecclesiastical superior. He expressed to Archbishop Corrigan his sorrow that his presence in company with Dr. McGlynn had been interpreted as favoring contumacy and disrespect to the Holy See, and he has promised to abstain in future from anything that might give rise to such interpretation.

The corner-stone of a monument commemorative of the Revolutionary battle at Bennington, Vt., was laid August 16, with Masonic ceremonies, in the presence of a distinguished company of persons from Vermont and the adjacent States.

The American Association for the Advancement of Science held its thirty-sixth annual session in this city August 10-16. A large number of papers was read, among which were one by Prof. Atwater on economy in the use of food, one by Prof. James of the University of Pennsylvania on the condition of the laboring classes, wherein he opposed the view of Mr. Edward Atkinson that laborers are better paid than formerly, one by Thomas A. Edison about his efforts to produce electricity directly from coal, and one by Mr. Yan Phou Lee on the anti-Chinese law from a Chinese point of view. Among the resolutions adopted was one directing the appointment of a committee to devise methods for obtaining from Congress a reduction of the tariff on scientific books and apparatus. The Association will meet next year at Cleveland, O., the fourth Wednesday in August.

Funds have been provided for the establishment of four or five fellowships at Princeton College for the year 1887-88, the amount of each fellowship being $400 or $500. Applications for these may be made by graduates (A. B. or B. S.) of Princeton College of not more than five years' standing. The Fellows must reside in Princeton during the entire academic year, and engage exclusively in the studies of the departments selected.

Mr. George W. Vanderbilt has made arrangements to build and equip, at a cost of about $70,000, a branch library for the New York Free Circulating Library. Plans for the structure have already been prepared. This new branch, like the Ottendorfer branch, and that now building by Miss Catharine Bruce, will be under the charge of the main library.

John M. Clay, aged sixty-five, died at his stock farm, near Lexington, Ky., August 9. He was the only living son of the late Henry Clay, and was a well-known turfman. Gen. Charles Hughes died at Sandy Hill, N. Y., August 10. He was a member of Congress in 1853 and 1854, and was Clerk of the Court of Appeals in 1859, 1860, and 1861. During the war he served as Provost-Marshal of Washington District. Mr. Davis Collamore, one of the oldest merchants in this city, died August 13. Ex-Senator Aaron A. Sargent died at San Francisco August 14. In 1861 he was elected a member of Congress from California. He subsequently served in the Forty-first and Forty-second Congresses, and in 1873 entered the United States

Senate. On March 2, 1882, he was appointed Minister to Germany by President Arthur.

FOREIGN.

At Tirnova on August 14 Ferdinand of Saxe-Coburg-Gotha took the oath of office as Prince of Bulgaria and signed the Constitution. The Prime Minister on his behalf read a proclamation, saying: "We, Ferdinand I., by the grace of God and the will of the people Prince of Bulgaria, announce to our well-beloved people that we assume the Government of the country. We will rule in accordance with the Constitution, with intent to promote its glory, greatness, and development. We shall always be ready to sacrifice our life for its happiness." The proclamation concluded with, "Long live free and independent Bulgaria!" and there was no reference to Russia in it. Neither Turkey nor any of the Powers has replied to his note asking their approval of his election. The London *Standard's* Vienna correspondent says: "England, Austria, and Italy have sent Turkey an identical note declaring that they consider the election of Prince Ferdinand legal. The Bulgarian situation now depends entirely upon Russia, who, through the Russian Chargé-d'Affaires at Constantinople, has handed to the Porte a formal protest against Ferdinand's proceedings, which protest Russia expects Turkey will endorse."

It is reported that Austria, England, and Italy have informed the Porte that their agents will remain in Bulgaria and continue relations with the Government. Russia insists that the appointment of Artin Effendi as Turkish Commissioner to Bulgaria be cancelled. The *North German Gazette* says the manifesto of Prince Ferdinand appears to be intended as a declaration of Bulgarian independence, and aggravates the breach of the treaty of Berlin, of which he has been guilty, and that Germany cannot approve of Prince Ferdinand's course.

On August 11 the House of Commons' amendments to the Irish Land Bill were adopted by the House of Lords. The Duke of Argyll warned the House that the bill in its present form was an immense development of the Gladstone Land Act of 1881, and one that in the future would lead to some defection.

At the Lord Mayor of London's annual banquet to the Ministers August 10, Premier Salisbury made an evasive speech, in which he said that the Government had done everything to give effect to the country's mandate to preserve the unity of the empire. Extra powers had been placed at the Government's command, and the country had a right to complain if those powers were not used discreetly but firmly. This was construed to mean that the Government will proclaim the Irish National League. Regarding Egypt, the Premier said that England must see real security in that country; that before the British troops are withdrawn Egypt must be free from internal sedition and safe from external attack.

The British Cabinet had a long session first on August 9, then on August 12, and again on August 13, to decide whether to proclaim the Irish National League. The majority were reported to be against proclaiming it, but no decision has been announced.

The most important of all the bye elections of members of Parliament was the election on August 13 in the Northwich division of Cheshire, to fill the vacancy caused by the death of Mr. R. Verdin, Liberal-Unionist. It resulted in a victory for Mr. J. T. Brunner, Gladstonian, who received 5,112 votes, against 3,983 for Lord Henry Grosvenor, Liberal-Unionist. In the last election the Liberal-Unionist candidate was successful by a majority of 458. Lord Henry Grosvenor, the defeated Liberal-Unionist candidate, is a son of the Duke of Westminster.

Mr. Brunner, in an address to the electors of his district, said: "You have won a victory for Mr. Gladstone and for Ireland. The issue between the classes and the masses has been made absolutely clear for the first time. The significance of this message of peace to Ireland it is impossible to overrate."

Mr. Maude, the Secretary of the Liberal Union, has resigned because he disapproves the attitude of the leaders towards the Gladstonians and refuses to support the Tory programme.

Sir J. Fergusson, Parliamentary Secretary of the Foreign Office, stated in the House of Commons August 9 that England had never acquisesced in the presence of French troops in the New Hebrides, and that the English Government were unwilling to believe that the French occupation would long continue; and he declared that the Government would in no wise consent to a postponement of the withdrawal of the French until an agreement respecting the neutralization of the Suez Canal had been reached.

Several Parisian newspapers have announced that the English and French Governments have agreed upon the basis of a plan for the neutralization of the Suez Canal; that a convention embodying these principles has been framed, and that its signature by the two Governments may be expected.

In the second set of British naval manœuvres on August 12, the torpedo-boats failed to do what was expected of them. Expert opinion is that not one of them would have fired its charge or escaped capture or destruction.

The five-hundredth anniversary of the birth of Henry V. was celebrated at Monmouth, August 9. The bells of St. Mary's Church, which Henry V. brought from France, were rung in honor of the day.

On August 11, in Northumberland, the twelfth centenary of St. Cuthbert was celebrated by a pilgrimage to Holy Island, near Berwick, where the ruins of the abbey stand which Cuthbert inhabited as Bishop. The place is approachable at low tide only by wading three miles on the sands. Ten thousand pilgrims, men, women, and children, made the journey, all barefoot, and singing ancient hymns as they marched. An altar was fitted up in the open air on the ruins of the abbey. The priests, more than a hundred in number, and a thousand kneeling worshippers, made an impressive spectacle. Among the waders were all the old Catholic gentry of Northumberland of both sexes, and side by side with them were Irish dock laborers from Newcastle.

A service in commemoration of the centenary of the American Episcopate was held at Westminster Abbey August 12. The Bishop of Iowa preached the sermon, and the Archbishop of Canterbury wrote special prayers for the occasion.

A manifesto written in behalf of Prince Victor by Clément de Royer was read at Bonapartist banquets in France on Sunday. In it M. de Royer says: "Prince Victor intends in future to be sole chief of all the Imperialist committees in France. By the Prince's order I am to continue to communicate with the committees of Paris and the different departments. Under his personal direction we shall achieve the concentration that is necessary to success. This policy is destined to restore the Empire."

Gen. Boulanger sent a telegram of condolence to Mme. Katkoff on the death of her husband. He added that his military duties prevented him from attending the funeral. Prince Krapotkine has written an indignant letter to M. Rochefort, protesting against the enthusiasm of republican France for M. Katkoff. Rochefort refused to publish the letter, though he says that as a Socialist he agrees with its contents; but in his comment on it he asks: "Who shall say that we shall not be compelled to talk German in our old age? Anybody who will save us from that shame will be worthy of gratitude."

M. Jenot, a French professor at the Lyceum at Nancy, was arrested August 16 near a German fort on suspicion of being a spy, and lodged in prison to await an inquiry. He protested against his arrest, saying that he had simply wandered to the fort from a village where he was spending his holiday.

A severe wind storm on August 15 destroyed much property at Bordeaux, and caused the collision at Arcachon of two excursion trains. Several cars were wrecked and seventeen persons were hurt.

Among the notable persons who have died within a week are Jules Etienne Pasdeloup, the eminent French musician, at Paris, August 14; at Constantinople on the 15th, Behram Agha, the Sultan's chief confidential adviser, who virtually directed the state affairs of Turkey; on the same day Meier Goldschmidt, the Danish poet, novelist, and journalist.

A St. Petersburg firm has equipped and started for central Asia an expedition which will establish cotton plantations, and make an analysis of the soils of Turkestan and the Transcaspian Territories.

It is reported from Simla that 70,000 persons died from cholera in the Northwest Provinces of Asia during June and July.

Fishing vessels returned from Icelandic waters report great destitution among the natives of Iceland.

The report of the Hudson's Bay exploration expeditions, sent out last year by the Dominion Government, calls attention to the monopoly of the Americans in whaling in Hudson's Bay, and recommends that since Canada's rights in Hudson's Bay are unquestioned, a proper method for Canadians to secure a part of this business be pursued.

The American schooner *J. H. G. Perkins* has been released by the Customs Collector at Charlottetown, P. E. I., and it cleared August 12 for North Bay. The Dominion Law Agent caused a writ to be served on the captain, McDonald, for $2,000. Capt. McDonald has put in a defence and will contest the case on its merits. He will take action against the Dominion Government for damages.

Two Canadian steamers, the *Hastings* and the *Kathleen*, were seized by the Custom-house officers at Charlotte, N. Y., August 14, on the ground that neither of the boats had been inspected by the United States Inspectors. The forfeiture is $500, and the boats were allowed to proceed upon giving bonds to the amount of $1,000.

At a public meeting at Winnipeg August 15, which was reported to be "thoroughly representative of the commercial interests of the Canadian Northwest," speeches were made favoring closer commercial relations with the United States, and the meeting was unanimously in favor of this view. Among the speakers was Prof. Goldwin Smith of Toronto.

Bishop Perry of Iowa was unanimously elected Bishop of Nova Scotia by the Anglican Synod at Halifax August 10.

Because of the prediction of Zuniga, a pretended earthquake prophet, who declared that there would be a severe shock in the City of Mexico August 10, the churches were thronged with nervous worshippers. Zuniga disappeared, fearing rough treatment. But many superstitious people bought his pamphlets and read them with avidity.

Advices from Honolulu of date of August 2 are that the new Constitutional party had already held a number of caucuses, and placed in nomination candidates for Nobles and Representatives. Of the nominees nearly all are men of property and old residents of the island, but the most of them are of American birth or parentage. The King's Chamberlain had issued a public notice that after August 1 no debts on account of King Kalakaua and the royal household would be recognized unless authorized in writing by the Chamberlain. F. H. Hazeltine, son-in law of ex-President Gibson, had been arrested on a charge of forgery.

THE TREASURY POLICY.

THE *Journal of Commerce* criticises the action of the Secretary of the Treasury for "going out of his way," as it says, "to relieve the money market by anticipating payments of interest not yet due from the Treasury, and offering to purchase a portion of the unmatured debt." This policy it calls "assisting the speculators." "There was a pressure for money," it continues, "and it is said that a panic in stocks, and possibly in some articles of produce, might have ensued if the Secretary had not come to the relief of the market. This was no doubt the substance of the plea made to him and the reason he would assign for his action." Then the *Journal* makes some very proper reflections on the duties of public officers, and especially the duty of the Secretary of the Treasury to keep his hands off the money market and leave speculators of all kinds to their own devices and their deserved fate.

If the Secretary were asked to assign any reason for his action, it would, we think, be very different from that imagined by the *Journal of Commerce*. In the first place, there was no pressure for money at the time when he issued his circular. The pressure had come and gone some time earlier. It had been felt when the wheat speculators and the Fidelity Bank of Cincinnati succumbed. It had culminated on the 24th of June, when the Manhattan Railway speculation failed. The liquidation in stocks and produce which followed those disastrous adventures had been concluded, and the money market had resumed its normal tone of comparative ease, before the Secretary took any action whatever. The circular announcing the Treasury programme was issued on the 5th of August, on which day the quotations for money on call were 4 to 5 per cent. If any "plea" had been made to the Secretary of the kind imagined by the *Journal of Commerce*, it would have been manifestly false. It is not probable that he would assign as a reason for his action a state of facts which did not exist.

But, of course, he must have had some reason, and we look in vain through the long article in the *Journal of Commerce* for some hint or suggestion of it. It is pretty well known to commercial bodies and commercial newspapers that the Treasury Department for many years, under all administrations, has been using its surplus—the excess of current receipts over current disbursements—to redeem the public debt. The bond calls have been as regular as the seasons, varying only as the ordinary income and outgo varied. For all purposes of meddling with the money market, assisting speculators, etc., etc., a call of matured bonds is identical with a purchase of unmatured bonds. Both serve to keep the Treasury surplus down to the requirements of Treasury business. Both serve to keep the Treasury out of the money market rather than in it. So long as the Secretary keeps his balance down to his needs, he is not a factor in the money market. When he accumulates money beyond his needs, he becomes such a factor, and a pernicious one. If it be asked what his needs are, the answer is that a trained body of officials are kept in Government employ to compile the appropriations of Congress, the requisitions of the departments, and the receipts of revenue, in order to know what the needs are at any time, and what they will probably be one month, three months, or six months hence. For the purposes of public discussion we may assume that the average balance of "good times"—the average amount which other Secretaries have kept on hand in fairly prosperous times—would be the proper amount, and that any considerable excess of accumulation in the Treasury would be an act of meddling with the money market, altogether inexcusable if the law afforded any means of escape from it. We remark in passing that the balance kept on hand in the first year of Secretary Manning's administration was necessarily larger than is now required, because the public receipts, owing to the depression of trade, were on the decline, and it was impossible to tell what the shrinkage might be. The tide has turned, public receipts are on the rise, the working balance of the Treasury ought to be smaller, and is so.

We have said that the disbursement of surplus funds to cancel a matured debt operates upon the money market and upon speculation and all the things that the *Journal of Commerce* treats of, exactly as a like disbursement to purchase an unmatured debt. The act in each case is an act of restoration to private business of what belongs to private business. The Government is one branch of the aggregate business operations of the country. It has an army, a navy, a post-office, courts, lighthouses, public lands, and a variety of other things to administer, to provide for, and to pay for. It also has a debt, the interest upon which is one of its current expenses. It was never contemplated in law, or in political economy, and still less in the public conceptions, that the branch of business which has charge of the common defence, the carrying of letters, the administration of justice, etc., should draw a hoard of unused capital to itself to be sat upon in time of peace and in a period of augmenting revenues. No administration could justify itself in the forum of reason in pursuing such a policy.

Of course every officer of the law must find his warrant in the law for what he does. The Secretary of the Treasury has cited the laws which authorize him to purchase portions of the public debt when there is no part of it subject to call and redemption at par. One of these laws is mandatory in terms, requiring the Secretary to set apart a certain portion of his receipts from customs duties for the "purchase or payment" of one per centum of the public debt each year, counting as debt all bonds in the sinking fund. It may be said that the reason for this law no longer exists. But the law exists, nevertheless, and the word "purchase" is as plainly written in it as the word "payment." No Secretary having the means in his hands to comply with it would dare to overlook or come short of it, unless the bond market had been so cornered against him as to require an extortionate price for his purchases. In such a case he might reasonably postpone action until he could lay the facts before Congress and ask for advice. No such case now exists. The Secretary not merely is within his authority, but, failing to exercise it, would be exposed to attack upon legal as well as economical considerations.

"It is not wise to interfere with the operation of natural laws," says the *Journal of Commerce*. Precisely so. This is the maxim that the Secretary of the Treasury appears to be acting upon. If there were no other laws than natural ones, there would be neither Treasury nor surplus. All the money in existence would be in circulation or available for circulation. The establishment of a Treasury with the necessary means is the least infringement upon natural law compatible with the social state. The accumulation of means not necessary is a glaring interference with natural laws, and one which everybody is interested in putting a stop to. In counteracting it as far as possible, the Secretary is in accord with public interests and, we are convinced, with the overwhelming weight of public opinion. Whatever he may do, somebody will find fault with him. If he does nothing at all, still more will he be blamed. We presume that he made his reckoning with all possible fault-finders when he accepted the office which he holds.

THE IVES SWINDLE.

THE affairs of the firm of Henry S. Ives & Co. have not yet been fully exposed, but sufficient is known to warrant some general reflections upon the state of business which enables an impecunious rascal to get possession of a first-class railroad and within a few months clear out its treasury, overissue its stock to the extent of $10,000,000 or more, and incur liabilities to the amount of $19,000,000. These figures have all the air of Oriental romance. The Cincinnati, Hamilton and Dayton Railroad is one of the oldest railroad corporations in the United States. It dates from the year 1845. Its capital stock was small, its bonded debt smaller still, and its obligations in the nature of leases and guarantees very moderate for the mileage operated and the earnings received. It happened that a controlling interest in the stock of the company had been collected together some years ago in a trust, for the purpose of turning its freight business over to one of the New York trunk lines. This trust was in course of time declared to be illegal and void by the courts of Ohio. The stock thus "bunched" in one holding was accordingly sold, and in some way Ives & Co. got hold of it, paying about $140 per share, borrowing for this purpose all the money except a broker's margin. How they obtained the margin is not yet entirely clear, but as soon as they got possession of the road they found money and available assets in the treasury sufficient to make good their margins on the original purchase-money and to do many other extraordinary things, which have been from time to time reported in the newspapers. Their aim from the beginning was to exploit the credit of an old-established property well known to investors, in such manner as to work off some millions of bogus securities on the public and retire with the proceeds.

In order to accomplish this it became necessary to borrow large sums of money to tide over the interval which must elapse before the new securities could be created and brought

out in legal form. Here we find the occasion for the first reflection on the prevailing methods of business. Ives was a man little known in the Street, and what was known of him was altogether bad. He had been engaged in an attempt to swindle a number of members of the Stock Exchange by both selling and buying a stock which was really non-existent, although the formality of striking it from the list of securities dealt in on the Exchange had not been complied with. This characterless person found little difficulty, however, in borrowing enormous sums of money on collateral security. It is much easier for lenders to examine collaterals than to inquire into the character of borrowers. The habit of looking to the security and ignoring the person has become ingrained with most of the large lenders of money. Under no other conditions could Ives have carried on his operations at all. That he was an adventurer everybody knew. That he was a rogue anybody might have known by a very little inquiry. Yet his collaterals were good, or seemed to be, and so he got the money which he required to pave the way for the greater operations that he had in view.

Now, we affirm that such a fellow ought not to be able to borrow large sums of money on any kind of collateral whatever, not even on Government bonds. The rule should be posted up in every banking-house and trust company in Wall Street and in every other Street, "Never have any dealings with persons unknown." The rule never to have any dealings with a scoundrel is supposed to be in force in every responsible house, but we fear is not always obeyed if money happens to be easy and the collaterals are undoubted. The other rule should be as rigidly observed. No well managed bank would accept a deposit account from a stranger, although the acceptance of such account puts the bank to no risk except that of forgery, a risk which it runs more or less every day in the ordinary course of business. Still less should loans of money be made to one who, if not an entire stranger, is one grade worse, in that any attempt to find him out would show him to be a knave.

We are glad to see it stated that District Attorney Martine considers it his duty to institute an official inquiry into the performances of Henry S. Ives & Co. We believe that he will find more than sufficient cause for the criminal prosecution of the adventurers composing that firm. The officers of the Cincinnati, Hamilton and Dayton Company can put him at once in possession of the facts and figures relating to the spiriting away, without the slightest extenuating circumstance, of over two millions of cash and nearly five millions of preferred stock from the treasury of that corporation. Nor is this all. Conclusive evidence may be found that Ives has also helped himself from the Treasury of the Terre Haute and Indianapolis Railroad Company to something like one million and a half in cash and securities, and taken from the Mineral Range Railroad Company about $450,000 in cash. As in the case of the Cincinnati, Hamilton, and Dayton, he acquired control of those two companies by the purchase of a majority of the stock for the evident purpose of getting possession of the funds in their respective treasuries. In both of the latter cases, his stealing from the Cincinnati, Hamilton and Dayton furnished the means for the purchases. The Mineral Range Railroad is a small concern, and its control did not cost him much over $200,000, which he at once got back, and $250,000 more, by emptying its treasury into the hands of his firm.

The method pursued in the plunder of the Terre Haute and Indianapolis Company was unique. Ives took the stock of the Dayton and Michigan Railroad Company in the treasury of the Cincinnati, Hamilton and Dayton Company, sold it for a million to Thomas J. Emery of Cincinnati, and with the proceeds bought the majority interest in Terre Haute and Indianapolis stock from W. R. McKeen of Terre Haute, the President of the company, for about $1,500,000, paying about two-thirds in cash, the balance payable in six months. This purchase was nominally made for account of the Cincinnati, Hamilton and Dayton Company. Thereupon, McKeen surrendered the Presidency to him. Ives immediately had his firm constituted fiscal agents, and transferred the $1,400,000 cash on hand to New York for its account. Besides this large amount of cash, the company had on hand several thousand shares of its own stock and some hundreds of thousands of dollars worth of first-class bonds. Ives took both stocks and bonds, pledging them for the loans of his firm. He made some payments subsequently out of the cash for the company, but the books of his firm show an indebtedness of about $1,500,000 to the Terre Haute and Indianapolis Company. In short, the District Attorney ought to have no difficulty in securing berths for a long term of years for Ives and his aiders and abettors in the State prison, if the courts of this State have jurisdiction of the offence.

TECHNICAL EDUCATION.

THE June number of *Consular Reports of the United States* embraces a synopsis of the special report of M. Amédée Marteau to the French Government on the industrial progress of Germany during the past ten years. The attention of the French authorities was directed to this subject of investigation by the annoying discovery that German goods have been finding a market in France in increasing quantities from the year 1878 onward, so that whereas French exports to Germany had in the year 1875 exceeded imports from that country by 77,000,000 francs, the balance had turned the other way to the extent of 137,000,000 francs in the year 1881, and each year was showing a remarkable excess of imports. That the former supremacy of French technique had been challenged by Germany was proved by the great increase of the latter's exports of manufactures to other countries than France, the total of such exports having more than doubled in ten years. But when this flood came pouring into France and underselling French houses, and displaying superiority in many of the finer products of industry in which French art had been hitherto unrivalled, it became absolutely necessary to discover what it all meant. Hence M. Marteau's investigation.

Without going into all the details of the report, which is a fine tribute to the perseverance and unflagging attention to details which characterize the German nation, M. Marteau finds the principal cause of their growing industrial supremacy in the technical schools, which are increasing in number and efficiency from day to day, and of which there are now more than 250 in operation in the country. In these schools young men are taught everything known to human science and art relating to the practical means of earning a livelihood. Mining, metallurgy, textile industries, pottery, porcelain, and glass, and all the intricacies of machines here open their mysteries to the youth of Germany, who not only are raised to the highest possible standard as producers, but, according to M. Marteau, are imbued with a noble ambition to make their knowledge effective. They gain self-confidence and the spirit of enterprise which prompts them to penetrate all parts of the earth to find markets for the sale of their goods. They exile themselves from home. They carry their acquired knowledge to distant countries. They learn foreign languages and study foreign habits. This consummate training is now beginning to bear its fruits. Germany is gaining on her competitors in the world's markets; she is even gaining on them in their own markets; and she will distance them if they do not keep pace with her in technical education—not the haphazard education of the workshop, but the systematized training of the best minds and the most skilful hands, the true masters of their several callings in all the departments of practical industry.

Neither France, nor England, nor the United States is destitute of technical schools. What we draw from M. Marteau's report, therefore, is that Germany's schools are both more numerous and better than those of his own country, probably than those of any other country. England has been making great exertions in this way in recent years, the most notable result being the Guilds of London Institute, founded with the funds of the ancient city companies. She has been pushed forward in the direction of technical training by the rising commercial importance of Germany. What France has found out only recently, England began to feel ten years since, and she then began to bestir herself. She has studied profoundly and systematically the methods of German instruction in the industrial arts, and is now following those methods with such improvements as she deems best suited to her own people. She is making notable progress, too, but she is still behind her Continental rival in many of the branches in which she was wont to excel. The Higher Weaving School of the city of Chemnitz, for example, is without an equal in the world, and to its influence is attributed the gradual supplanting of the industries of Nottingham by those of its Saxon rival. A graduate of this school, the son of an eminent citizen of Boston, was able, within one year after his return home, to command a salary—we will not mention the amount, but it was such as very few lawyers or doctors, and still fewer editors, ever attain. What this young man had acquired that made his services so valuable was, in chief, the abili-

ty to take in pieces and put together again any weaving machine for any class of goods of any kind, description, or make in the known world. And this various training can be found, all in one place, only in Germany.

The relative status of the nations of the earth always has been and always will be fixed by their mental and moral acquirements. If Germany has more knowledge than other countries, she will eventually have more trade, more money, and more power. It needs but a slight superiority in any industry to give to the people possessing it the command of all neutral markets. The means of international communication are now so rapid and searching that slight advantages tell in a wonderful way. And when these advantages are joined to an enterprising spirit, when the same intelligence that guides the producer inspires the merchant also, the highest results are attained in the commercial world.

Technical schools, it need scarcely be said, are as various as any other schools, ranging from the primary department, which takes the place of the old and now generally abandoned apprenticeship system, to the Polytechnic or Industrial University, and the special institutions for special trades, like the Higher Weaving School of Chemnitz. How many of all grades taken together have we in the United States? We call attention to M. Marteau's investigation and conclusions for the purpose of moving, if may be, the spirit of emulation among Americans in the pursuit of those practical arts in which we are accustomed to think that we excel by nature. Undoubtedly we are an inventive people, but *superiority* in the art of getting a living comes no more by nature than reading and writing come by nature. It cannot be affirmed that we have given too much of our means and our efforts to what is called liberal education, for Germany excels us there also, and with good profit to herself, in the stand she is enabled to take in literature and science. She is the world's leader in technical education because she was the leader in liberal education beforehand. But it is palpably true that we have given too small a share of our means and our thought to industrial training, and that we must take up this subject in serious earnest, and on a large scale, if we would not fall behind our compeers in civilization.

AGOSTINO DEPRETIS.

ITALY, July 30.

IN Agostino Depretis the dynasty of Savoy has lost one of its oldest, most devoted, ever constant champions, United Italy one of its earliest and most pertinacious pioneers. A republican never, a unitarian ever, the difficulties of keeping the revolutionary horses harnessed to the monarchical car, to prevent them from taking the bit between their teeth, and to keep the royal charioteer on his seat, were better understood and more courageously confronted, from his youth upwards to his latest hour, by the man just dead, than by any other statesman who has been at the helm during the last thirty years. These difficulties, confronting a man of settled convictions, but of most vacillating nature, accustomed to consult all points of the compass, to examine all means conducive to an end, all roads leading to a goal, and, while quite clean-handed in pecuniary transactions, not at all scrupulous as to political instruments, laughing at consistency, proclaiming opportuneness as his guide and law, have rendered him one of the best abused men in Italy during the last quarter of the century. While preparing the biography of Dr. Agostino Bertani for the press, I have come across a number of letters from "Agostino" to "Agostino" which will cast no small light on the career of the Minister, and at the same time show how true a friendship between the two patriots endured to the end, although Bertani never hesitated in public and in private to admonish and criticise or challenge to single combat the chief of the majority. Member of the Opposition, captained by Rattazzi in the old subalpine Parliament, Cavour feared Depretis politically, and personally disliked him, opposed his election as Deputy, and protested against his nomination as Governor of Brescia when Lombardy was freed from the Austrians in 1859. Yet it was owing to a motion of Depretis's that the organization of the volunteer corps was rendered compatible with the red-tape system of the Piedmontese army, and Depretis was one of the warmest supporters of Cavour's loan for fifty millions to prepare for the war against Austria:

"If I thought," he said, "that the war was impossible or improbable, I should not support this bill; neither would I vote for the loan if we were only called upon to defend the territory of this state against Austria in the strict sense of the word. But, gentlemen, our Government not only holds aloft the tricolor flag, is not only the head of material forces, it is the moral government of all the Italian populations, it is the moral head of Italy, the guardian of Italian interests and destinies, the centre of Italian hopes. Piedmont has a mission which Italy has recognized and consecrated; united Europe cannot prevent her from accomplishing it; hence, deeming that the Government has done well to propose a loan for the national armament, I vote with the Ministry."

This was in March, 1859. When, in 1860, Cavour and Massimo d'Azeglio had sequestrated or deviated from their original destination the muskets purchased by national subscription for arming the volunteers to be led by Garibaldi to the liberation of Sicily and Naples, Depretis hit upon an ingenious device for outwitting Cavour. The Prime Minister had ordered the National Guard of Brescia to be armed with 3,000 muskets destined for Garibaldi. Depretis, the Governor, writes to the General the following unpublished letter:

"April 27, 1860.—Dear and illustrious friend: It is my duty to notify you that the Provincial Council of Brescia has to-day decided to purchase the 3,000 muskets sent by the Committee of the 'million muskets' resident in Milan. Thirty francs for each musket will be paid within three months to you or to any person furnished with your signature. Moreover, 8,000 francs here collected and actually in the Provincial Treasury will be paid to you at once.—With profound esteem, your most devoted, A. DEPRETIS."

And 98,000 francs were paid out of the Provincial Treasury of Brescia for arming the Sicilian volunteers. Cavour, then Minister, found means to secure the resignation of this Governor of the only province which, as a province, had officially supported the then forlorn hope—an offence aggravated by the money having been handed over to Garibaldi's representative, Agostino Bertani, just as the Duce had steamed out of Quarto with his Thousand for Marsala.

When the Bourbons had been defeated and driven out of Palermo, Garibaldi wrote to Bertani his intention to nominate an able administrator during his absence from Palermo. Bertani suggested Depretis. Cavour preferred Valerio, and writes to Count Persano:

"Depretis was a Mazzinian before and after 1848 Not long since he was in correspondence with Mazzini, and always avoids denying 'The Prophet' solemnly and in public. Moreover, apparently austere, and despite a certain manner which would seem to indicate resolution of character, Depretis is undecided and irresolute, and knows ill how to face unpopularity. He has talent, but is wanting in such political studies as serve to assist a statesman in judging of the opportuneness of acts of an international character He would be an excellent executor under a decided chief, but will be a very poor director in any great political movement."

Partly right and partly wrong was this verdict. Depretis never sought or attained to popularity, and Cavour's repeated injunctions to Persano and his other agents in Sicily not to place confidence in him were most unjust; for when he considered that Cavour was right in insisting on the immediate annexation of Sicily, he risked the utmost unpopularity that could befall a man in those days, opposing Garibaldi's resolve not to annex the island until the Bourbons should be expelled from the Neapolitan kingdom and he with his volunteers in full march on Rome. Before me lie his original letters to the Dictator, then at the gates of Naples, after his victorious march from Reggio—passionate in their patriotism, pathetic in their entreaty. "Dearest and most illustrious friend," commences that of the 1st of September, "God bless your daring enterprise, and keep you safe on sea and shore." Then he expounds the reasons, which seem to him unanswerable, for immediate annexation to Piedmont. But to Garibaldi and to his "To Rome and Venice" partisans, annexation would cut away the basis of operations, and his answer is characteristic: "Dear Depretis: As for annexation, it seems to me that Bonaparte may wait a few more days yet; meanwhile, do you get rid of half-a-dozen intriguers, and begin with the two . . . [noted annexationist agents of Cavour]."

The fiercest opponent of annexation was Crispi, Home Minister under Depretis in Palermo. His letters reached Garibaldi by the same steamer, containing stringent arguments against annexation, supported by the assertion that the Sicilians only cared for the expulsion of the Bourbons and for the liberation of the whole of Italy; that the annexationist cry was fictitious, raised only to stop the Dictator's liberating career; and that he himself felt it his duty to resign. Letter upon letter followed from both. Garibaldi summoned his pro-dictator and Minister to Naples, which he had just entered as victor; listened to their respective arguments and special pleading; decided in favor of Crispi, and accepted the resignation of Depretis, paying a flying visit to Palermo to install the new pro-dictator, Mordini. Crispi was decidedly in the right from the revolutionary point of view, for the instant Garibaldi consented to the annexation of Naples and Sicily he was compelled to retire to Caprera, his volunteers disbanded, and the liberation of Rome and Venice was postponed to an indefinite future.

As long as Cavour lived, little more was heard of Depretis, but after the death of the great Prime Minister he became the stanch ally of Rattazzi, was Minister, and remained so during the tragedy of Aspromonte. He was, nevertheless, a steady supporter of Liberal measures, and waged war against the Moderates perseveringly for the next fourteen years, then appeared as "the minister of progress," and in 1878 the famous programme of Stradella brought him nearer to popularity than he ever came before or afterwards. In the House elected on his platform, his majority was tremendous. From it the pillars of the Moderate church had been excluded—Bonghi, Visconti Venosta, Spaventa, and Saint-Bon only succeeded in entering at the double elections. Massari, Broglio, Ruspoli, and the smaller fry did not get in at all. And here Cavour's judgment proved true. Depretis had not the elements for a leader of men; he seemed frightened at his own power, dismayed by the clamor for the actuation of his own liberal programme. Then an element—whether of strength or weakness we will not decide, but a lessening

of responsibility, blest or cursed by his predecessors—failed him from the outset. King Victor was a constitutional monarch up to a certain point, but when he and his Ministers came to issue, they either had to cave in or to resign, and on one occasion in 1864 he abruptly dismissed them. Not so King Humbert, who from the moment he ascended the throne resolved himself into a model representative King, never passing the boundary limit or even exercising undue influence on his Ministers. Depretis seems to have felt himself, consequently, doubly responsible for the safety of the dynasty; but his very anxiety led him into numerous blunders, every one of which was ruthlessly expounded and held up to public scorn and disapproval by Crispi. All the principal reforms promised at Stradella were effected, but they brought no credit to Depretis—"We forced them from him," cried the scattered components of his majority; but his blunders or intentional sins have all been piled up against him. The African expedition lies at his door; so the railway convention, disastrous in a pecuniary sense, his hostility to France and an almost servile condescension to Germany and Austria, his vacillating policy towards the Vatican, are evils that will live after him. But in our opinion his tampering with elections—out-Cavouring Cavour in pressure put upon prefects, syndics, and every civil servant to secure his candidates — has corrupted what moral sense was left in the country. And such a demoralized police force as he put together and supported has rarely disgraced a civilized country. But these are evils that can be remedied by his successors, and the good he did will not be interred with his bones—the reforms he effected will be associated with his name. It is too early yet to forecast the immediate future. Crispi so far is master of the situation, and were Cairoli (yesterday at death's door and to-day only slightly better) in his usual health, he would probably be Prime Minister without a portfolio. In ordinary circumstances the new Ministry, however composed, would propose to the King a dissolution of the House and an appeal to the country, but since Crispi's accession and the King's splendid telegram to the Archbishop of Venice, who dared to suggest that he should refuse his signature to the decree for the abolition of tithes, the clerical party have put forth their full strength at the late municipal elections in Naples, as previously at Rome they had signally triumphed. Should they ally themselves with the Moderates, and come to the polls at a general election, it is difficult to foresee which party would come off victorious. That there are fierce battles yet to be fought every one acknowledges, and probably the party in power will prefer to defer the combat until their forces are organized.

One merit will ever remain to Depretis. After ten years of almost uninterrupted command, he dies without having added a cent to his personal fortune, leaving a young widow and one boy who bears his name. Thirty years ago I saw Depretis at Turin, when I went there with Carlo Pisacane on the eve of his fatal but glorious expedition, with which Depretis fully sympathized. To-day it seems passing strange, and next to impossible to realize, that the man we have met at every turn of tide in the national destiny has done his worst and best, and can influence the nation's fate no longer. J. W. M.

ABOUT GREEK LEXICONS.

UNIVERSITY OF MISSISSIPPI, July, 1887.

PROF. GOODWIN, in his preface to the 'Moods and Tenses of the Greek Verb,' says: "He who imagines that every important principle of Greek and Latin syntax is as well understood and as clearly defined as the rules for addition and multiplication in arithmetic, has not yet begun to learn." The words apply equally well to many points that cannot claim the dignity of "important principles," but are yet worth knowing and worth taking trouble to find out. Many of these points are such as we reasonably expect our lexicons to give us; but in spite of the great excellence to which they have attained, they are not yet perfect by a great deal. Passow's is one of the greatest names in Greek Lexicography, but for all he is so bulky—with his *un*handy "Handwörterbuch"—he frequently leaves us completely in the lurch. One of his prominent faults is, that he so often credits a word to an author without adding a single reference; and how disappointing this is, every one knows who wishes to study a word in its connections.

The new Liddell and Scott is in many points a great improvement on Passow, as is only natural. Any one who reads a Greek play—say the "Agamemnon"—with these two lexicons will soon see the superiority of the English dictionary; though, of course, it would be bald injustice to blame the great German for not projecting himself into the future and anticipating the results of subsequent scholarship. Liddell and Scott have in very many instances supplied references, thus partially remedying this grave defect in Passow. But the cases are very numerous in which one fails to get the usage of *Attic prose*. Take as simple an example as can well be given. What is the Attic prose word for *brother*? Ἀδελφός, of course. Yes, but a learner cannot find this out even in the new Liddell and Scott. He finds only three examples of the word, as meaning "brother," two from Euripides and one from Herodotus, and these three happen to be all in the plural (the one from Herodotus incorrectly so), and all *seemingly* in the meaning "brother and sister," to judge from the arrangement. In the adjective sense of the word, ten references are given, one of which is from Xenophon, and five from Plato, with the additional remark, "Very often in Plat." Who would not infer from this disproportion that the substantive use is quite exceptional in prose?

Nor is the point taken a trivial one, by any means. It may be so in the example selected, as every one is supposed almost to begin Greek with a knowledge of such a word as ἀδελφός. But let any one undertake the investigation of some new point that had not presented itself before, and it is surprising to see how he needs to lay his hand upon *examples*, although in his previous reading he may have seen numerous instances of what he wants. Great scholars labor under this difficulty as well as small ones. The great Madvig, who has lately passed away after reaching more than his three-score years and ten, was appointed professor in the University of Copenhagen in 1829. I cannot give the date of the publication of his "epochemachende" Greek Grammar. But his 'Bemerkungen über einige Punkte der griechischen Wortfügungslehre' bears the date of 1848; and in this work he declares himself unable to bring forward a single example to *prove* what he firmly believes, viz., that the aorist optative may be used in causal sentences after ὅτι. And yet at least five examples of this construction occur in as elementary Greek as Xenophon's 'Hellenica' (1: 3, 19 *bis*; 3: 5, 25; 7: 1, 34 *bis*), which were noted by the writer at a comparatively early period of his Greek studies, because his attention had been called to the matter by a study of Madvig's Grammar. Of course Madvig had read those examples repeatedly; but his mind was not directed to that point, and so, nineteen years after his appointment to a professorship in a famous University, he had to publish his inability to support his assertion by proof.

If the word investigated happens to be a verb, Veitch's book is an indispensable ally, but even this "result of much toilsome labor and anxious thought" only provides for certain wants. How much labor might have been saved us if Veitch had quoted Plato by the divisions of the pages (a, b, c, d, e), instead of merely giving the pages. That is a trivial point, to be sure; a much more important one is the failure in many instances to note the *meanings*, although the title-page might have led us to expect more than we get. Closely connected with this matter of the significations, is another point. Veitch very often gives the first person singular of the tense system, instead of giving the exact form found in the passage referred to: *e. g.*, under ἀπαγορεύω he gives "p. p. ἀπείρημαι Her. 6, 61; Æschin. 3, 48; Pl. Rep. 396"; whereas the forms are respectively ἀπειρῆσθαί οἱ, ἀπείρηταί σοι, and (Pl. Rep. 396, *b*) ἀπείρηται αὐτοῖς. He quotes, too, "ἀπορρηθήσομαι Lys. 22, 14." The form is ἀπορρηθήσεσθαι, τὰς σπονδάς being the subject. Now the words ἀπαγορεύω, ἀπερῶ, ἀπεῖπον, ἀπείρηκα, ἀπείρημαι, ἀπερρήθην have three distinct meanings running through them: (1) *to forbid*, (2) *to declare off, i. e., renounce, give up*; and (3) *to fail, give out, be weary, be in despair*, etc. Even in the active voice it may not be true that these three meanings are found in every tense. But when we come to the passive, we may well wish a distinct statement as to the usage. To illustrate: γράψαι=*to write* or *to paint*; γράψασθαι =*to indict*; and γραφῆναι may stand as passive for any of the three meanings. Ἑλεῖν=*to capture*; ἑλέσθαι=*to choose*; but αἱρεθῆναι regularly means *to be chosen*, and this only; for the meaning *to be captured* we must use ἁλῶναι or ληφθῆναι. Again, ἠρηκέναι=*to have captured*; and ἠρῆσθαι =*to have chosen*, or *to have been chosen*. That is, the active means one thing, and the middle means another, and the passive is a passive only for the middle meaning. Compare this with the meanings of γραφῆναι, given above, and also with the following: πειρᾶσαι, πειράσασθαι, and πειραθῆναι, all of which mean *to try*, the active being rather rare, and the verb being either deponent middle or deponent passive. To go back to ἀπαγορεύω, it looks as if the perfect and pluperfect active are perhaps not used in the sense of *forbid*; at any rate, the seven examples quoted in Veitch from Attic sources all have the meaning *tired, fail*, etc. We turn to Liddell and Scott. Under ἀπείρηκα we are referred to ἀπεῖπον, and there we find the statement "pf. ἀπείρηκα, mostly used in signf. iv. 2"—*i. e.*, as was suggested, with the meaning "*to give up, to be worn out, fail*," etc. So far, then, so good, with one thing to be noticed that needs betterment. As we are tracing these meanings through the various tenses, we cannot but feel worried to find twenty-two references for the active, with only ἀπ. given. What does it stand for? If we hunt up the references, we find that the aorist is the tense generally meant, but sometimes it is the perfect. To make it still more confusing, we find after ἀπειρηκότων δὲ χρήμασι, "ἀπ. σώμασι, Isocr. 59, c, Lycurg. 153, 4." The passage from Isocrates has the aorist and the one from Lycurgus has the perfect. Then follows ἀπ. κακοῖς, ἄλγει, referred to two places in Euripides, the first of which has the perfect and the second the aorist! The printing of the full form would be a great gain.

But to return to the meanings of ἀπαγορεύω, ἀπερῶ, etc. The perfect active seems to be limited to one of the three meanings. The perfect passive in the sense *declare off, give up*, is used personally (Thuc. 5, 48. cf. Lys. 22, 14), and impersonally in the sense *forbid*, as indicated by the three examples cited above.

Let us take another example in which Veitch's book would be improved by giving the exact form. Under ἐργάζομαι Veitch gives εἰργασμαι first as active, then as passive. One naturally reflects:

"ἐργάζομαι, *to do, work, till:* can the passive be used in any person but the third?" We look up the eight examples of εἴργασμαι as passive and the three for εἰργάσμην. As we expected, we find no instance of a first or a second person. The compound διεργάζομαι, in the sense of *despatch, kill,* may have the first or second person used passively; and we find in Euripides διεργασθεῖτ' ἄν. Our grammars are naturally content to give the first person singular of the principal parts of the verbs, regardless of the fact that the meaning of the verb may make it almost impossible that this form should actually occur. Thus, of ὀρύσσω and πίνω, the forms ὀρώρυγμαι, ὠρύχθην, and πέπομαι, ἐπόθην are given in all grammars. I suppose, but it does not seem as if these forms could possibly occur. It is easy to see, however, that this opens a wide door for any one who chooses to enter; for some figurative use may allow of the occurrence of seemingly impossible forms; or some compound may—as we saw just now in the case of διεργάζομαι. To find out these points we should need concordances to the various authors, or something like Frohwein's 'Verbum Homericum' expanded into a thesaurus of the Greek verb, in which should be given not merely those forms that actually occur (and those alone), but also, and what would be of capital importance, the *meanings* as well—a field upon which Frohwein does not enter at all.

But have we not already a 'Thesaurus Græcæ Linguæ' in eight folio volumes, volume i being in two parts, so as really to give nine heavy tomes? It furnishes us with 20,744 eighty-line columns, not to speak of the pages of *addenda et corrigenda*, nor of over 400 columns of supplementary matter of one sort and another. Originally "constructus" by Henricus Stephanus, and carefully worked over by the Dindorfs, it surely cannot leave very much to be desired. Open it at random. Here is βάλλω. Passow gives it three of his seventy-line columns. The new Liddell and Scott devotes a column and a half to it: while the Dindorf-Stephanus goes to the fore with no less than ten columns, and a fraction over for good measure. Or go to the other end of the alphabet, and note the thirty-seven columns headed with the two-letter word ὡς, and the nine columns that treat of ὥρα. Certainly a work built on this gigantic scale must give nearly all that is wanted, provided one will patiently read that much Latin to get at what he wishes, and does not find himself hung up on one of the many brackets with which the pages are so thickly sprinkled. To supplement the 'Thesaurus' let us throw in Schmidt's 'Synonomik,' with its 2,700 large pages, exclusive of indices. That ought to be enough, in all reason. But suppose we try them on βάλλω, and pursue the Attic prose usage of this verb. Liddell and Scott, we find, gives only four examples from Attic prose. Shut it up and try the 'Thesaurus.' Read through the 824 lines on βάλλω, and you find only eighteen citations from Attic prose, not counting one from Plato, of which Stephanus himself says: "qui (Pl) suis verbis si usus esset, hac constructione, quæ poetica est, abstinuisset"; nor one from Plato Epist. 7, 326, E. Nearly forty-six lines to read for each example from the sources we wish to draw from! Try Schmidt, and see what he promises. When he tells us (vol. iii, p. 125): "I shall only give the active constructions, from which the passive constructions can be inferred," we feel somewhat disappointed, because we have seen that active and passive meanings do not always tally. And, as a matter of fact, it will be found, I think, that βληθῆναι means *to be hit* or *struck* (with something thrown), and *not* "to be thrown." But you will not find this out from Passow, Liddell and Scott, or from the 'Thesaurus.' You begin to think so for yourself after looking up a number of examples of the aorist passive, and finding that *a person* is the subject in all the examples you can find: but even then, if you had before you ten times as many cases of the aorist passive as you have been able to collect, you might find exceptions to your incipient rule.

To proceed: How does one say in Greek *to throw stones*—λίθους βάλλειν? That seems natural, but λίθοις βάλλειν is the real way, certainly in the majority of cases. But we should be glad to know the point *accurately*, if we can. Liddell and Scott tells us that the accusative of the weapon thrown is rare in Homer, and that the dative of the weapon is also used; but the two examples given are both from Homer—not one word about the prose usage. Then follow the words "generally of anything thrown," followed by such examples as "to cast the filth into the sea"; "to cast the ships against the rocks"; "to throw (out) the anchor-stones"; "to cast sleep (darkness) upon the eyes." But not one of these examples is from a prose writer, and so we are again left completely in the dark as to the prose construction. For all we know, βίπτω may be the word prose writers would use in the above sentences. Neither do we learn from Liddell and Scott that *throw at, hit,* is a prose usage. In fact, it may be given as a general criticism on this excellent lexicon, that in far too many words a knowledge of the usages of Attic prose seems to be assumed. Passow treats us better in regard to βάλλω, but even his treatment might be made fuller and clearer.

The 'Thesaurus' is very frequently disappointing, because it gives under so many of its words such a slim proportion of Attic references. The Greek lexicon of the future has, then, ample scope for improving on any we now possess. When will it appear? ADDISON HOGE.

Correspondence.

THE EXCAVATIONS AT SIKYON.

TO THE EDITOR OF THE NATION:

SIR: Many of your readers are aware that, during the past spring, excavations upon the site of the ancient Greek city of Sikyon have been carried on under the auspices of the American School of Classical Studies at Athens. As a student of the school, and one who had immediate charge of this work, I send you a brief account of these excavations, believing that it will be of interest to all friends of Greek learning and archæology.

Sikyon is the second classical site upon which the American School has made excavations. Its selection was justified by its importance, especially in the history of Greek art, and by the fact that no systematic excavations had ever been made there. It was situated a few miles westward of Corinth, about two miles from the Corinthian Gulf. Writers on Greek history and geography become enthusiastic in describing the situation and surroundings of the city. It lay upon a large, level plateau, at the foot of which a plain of great fertility extends down to the blue, sparkling waters of the gulf. Across this rise the peaks of Helikon and Parnassos. On the east the plain is bounded by the bold mass of Acrocorinthos. The landscape is exceedingly beautiful; and Curtius and other writers are no doubt right in supposing that to the exceptional charm of its natural surroundings must be attributed a part of the influences which made Sikyon so famous a home of the arts.

Numerous ruins still exist upon the site, consisting of the theatre, the stadium; considerable remains of a large brick structure, probably Roman baths; many foundations of buildings, aqueducts cut in the rock, and traces of streets. There are extensive remains of the wall surrounding the Acropolis, which was constructed by Demetrios Poliorketes. Fragments of columns also are found in and about the churches of the modern village of Vasiliká. It was thought best to confine our work mainly to the theatre. Our chief object was to discover its complete plan; but at the same time we proposed to do some digging on the foundations of other buildings, since we desired to identify, if possible, some of these structures with the temples or other buildings mentioned by Pausanias in his account of the city, and hoped also to find some artistic remains. But we accomplished little of importance outside of the theatre, finding no inscriptions, and only a piece of marble upon which were the toes of a statue, and an Ionic capital of ordinary stone. The results of our work in connection with the theatre, however, are of great archæological value. It was one of the largest in Greece; the plan of its structure can now for the first time be studied. Dr. Dörpfeld, the distinguished architect of the German Institute at Athens, who has suggested new theories on the structure of Greek theatres, has shown the greatest interest in the results of its excavation.

The plateau upon which Sikyon lay is separated by a rocky declivity into two portions, a larger one nearer the gulf and a smaller one in the rear. The theatre was cut out of this rocky declivity. When we began our excavations, there were to be seen slight traces of the stage foundations of the stone seats, and two large arches, one on each side of the cavea, leading from the outside to the higher rows of seats. Over the orchestra was a layer of earth, from three to nine feet deep. I will very briefly describe what may be seen now. There are three main walls belonging to the stage foundations. The one nearest the orchestra is about seventy-two feet long and three feet high. At its foot, in front, an ornamental marble border extends nearly its entire length. The blocks composing this border have at the ends the masons' marks, in the form of Greek letters. Upon one of them is one of the inscriptions that we found. This front wall has three doors in it, the middle one being double. It is evidently of Roman construction, being composed of not very large blocks of stone, and having bricks built into it. The second wall is of a different character from the first. It is made of large blocks of stone, well laid, and is without doubt of Greek construction. Its length is about forty-eight feet; its height the same as that of the first wall. It has in it only one door. The third wall is of mixed construction, part being like the first one and part like the second. It has the same length and height as the second wall. In it are two doors. At the distance of about twenty-one feet from the east end of the stage a cross-wall extends between the second and third walls at right angles to them.

To determine the form of the orchestra, we dug a trench, which laid bare its boundary. It has an elliptical form; but the ellipse is not a complete one. Along half the circumference of the orchestra we dug far enough upward from the orchestra-boundary to lay bare five rows of seats. There are fourteen stairways extending upward from the orchestra, dividing the seats into fifteen divisions, or *kerkides*, as the Greeks called them. The seats are cut out of the rock. The front row is of more elaborate construction than the rest, each seat having a back and arms. These better seats, however, are not of marble, but of the same ordinary stone as the others. Probably priests and other dignitaries sat in these seats, as in the marble chairs of the Dionysiac Theatre at Athens.

The drainage system of the theatre seems to have been elaborate. A deep drain extends around the orchestra to the entrances, having stone bridges opposite the stairways, precisely as in the theatre at Athens. An aqueduct passes from the centre of the orchestra to the stage, and out under the middle door of the first wall. Another extends from the western side of the orchestra to the one just mentioned. In various places earthen pipes were found, which evidently served as drains.

I have already mentioned two arches, which afforded entrance and exit to the people in the higher rows of seats. These arches are interesting, as adding another to the very rare examples of Hellenic arches. The old theory that the Greeks did not construct arches until after they came under Roman influence must be abandoned. Another arch of Hellenic construction was found by the Germans at Olympia. That the arches at Sikyon are not Roman is manifest from their construction. There is in them no trace of mortar or brick. In the dimensions of the blocks and the manner of laying them, the arches are exactly like the portions of the stage walls that must be attributed to the Greeks.

In addition to the three main walls of the stage structure we found two others in the rear, running parallel to them. Both these walls seem to be of Roman construction. A portion of a column, apparently *in situ*, upon the outer wall, would seem to indicate that it was the foundation wall of a colonnade adorning the front of the theatre.

In following up the wall last mentioned we found a structure the nature of which is obscure, though it seems to have been a fountain of somewhat elaborate construction. In front are portions of four columns, still in position. These columns are channelled only upon the outer side. Back of the columns, at a distance of about three feet, is a semicircular enclosure, with plastered walls and a smooth floor. A semicircular mass projects in front of the rear wall. A great number of fragments of tiles found within would seem to indicate that the structure was roofed. Both in the front wall, forming the diameter of the semicircle, and in the rear curved wall, are orifices, apparently for the passage of water. On the west side is a well-constructed trough having a back like a seat. This trough was probably for the use of horses. At this fountain, also, earthen water pipes were found. Here our last digging was done. Some traces of other foundations appeared, and further digging at this point would probably not be fruitless.

The artistic remains which we found are not of very great value. The most important are: The arm of a statue of more than life-size; a piece of the leg of another statue; the lower part of a draped statue. These were found in the earth covering the stage. We found numerous architectural fragments, among others an Ionic epistyle of common stone, a Doric epistyle of marble, pieces of Ionic and Doric capitals, and of lion-head waterspouts. Some fragments bore traces of blue and red paint. We found numerous copper coins having upon them the dove, the well-known symbol of Sikyon. We found also a number of small earthen lamps. We discovered only two inscriptions, one of the Roman period, incomplete, relating to honors to be bestowed upon certain ambassadors; the other of the Alexandrian period, recording the victories gained in various games by one Kallistratos, the son of Philothales.

A detailed report of the work done at Sikyon, accompanied by a plan of the theatre, and illustrations, will appear in the volume of papers of the American School for the present year.

PROGRESS IN UTAH.

TO THE EDITOR OF THE NATION:

SIR: After a gloomy and tempestuous night of forty years the signs increase on every hand of dawn approaching to the Salt Lake region. The coming of day was really assured when in 1862 Federal troops occupied permanent quarters in Fort Douglas, when a few years later the mines were opened and the Pacific Railroad was finished, and when in the same eventful decade an enthusiastic troop of ministers and teachers in every considerable settlement began to lay the foundations for better things. But the five years last past have witnessed far more solid progress than any twenty that went before, and the march of regenerating forces during the current months is rapid beyond precedent.

As is well known, the nation for a whole generation, fully occupied with slavery, rebellion, and reconstruction, was in no condition to grapple with the serious problem existing in the remote Great Basin. Even Mr. Lincoln was content to promise, "If Brigham Young will let me alone, I will let him alone." But in 1882, by the operation of the Edmunds law, the polygamist Cannon was refused a seat in Congress, and with some 15,000 others, including nearly every man of note, was disfranchised. Thus at a single stroke these hierarchs who, since 1847, had held every office in the Territory yielding either honor, influence, or salary, were unceremoniously relegated to enduring political obscurity and powerlessness, soon after were further compelled to flee to the dismal underground which ever since has been their abode, while not less than 300 have had bitter taste of fines and prison fare. Probably the best result of the calm but resistless enforcement of the Edmunds law is found in the evidence furnished to the Utah saints, long overprone to be a law unto themselves, that the Government is at last resolved that, cost what it may, polygamy shall go, and with it church political rule. Once thoroughly convinced of this fact, faith and patience will ere long begin to fail.

Further warning of the same cogent sort was furnished by Congress last winter by the abolition of female suffrage, and the imposition of an iron-clad oath which numbers of the more fanatical friends of "plurality" could not endure. In addition, by the same Edmunds-Tucker law, the Territory was redistricted for voting purposes, that the Mormon gerrymander of long standing might give place to a division enabling the Gentile population to wield its fair share of influence at the polls. As a result of all this, at the election held August 1, five non-Mormon members were chosen to the Legislature, two of them to the upper house, while in several other districts similar results are within reach. Therefore, in the future no laws hostile to American ideas and institutions can be passed without at least previous free and full discussion. The beginning of redemption has also come, and from the same causes, to the public-school system. Hitherto education, like politics, in Utah has been manipulated *ad gloriam majorem Dei* by the priesthood. The schoolhouse and the meeting-house are commonly one and the same building, and so thoroughly impregnated with a strong flavor of Joseph Smith and the Book of Mormon that no Gentile can endure the atmosphere. The Bishop, often an ignoramus, is *ex officio* the educational boss, and no teacher is tolerated if not in good ecclesiastical standing and ready to pay one-tenth of his wages into the church coffers. For years John Taylor was Territorial Superintendent of Schools, and drew his salary from the Federal treasury. But now the schools are largely delivered from the hands of the hierarchy. The present Superintendent is a prominent lawyer, who is hard at work introducing Eastern ideas and methods. And at the recent school elections, between a dozen and a score of districts elected non-Mormon trustees. When to these startling revolutions we add the fact that about eighty Christian schools and academies have been established in the Territory, with nearly 150 teachers, no wonder it appears to the theocracy like the very crack of doom.

The latest form of assault takes the shape of a suit in the Supreme Court to annul the incorporation of the Emigration Fund Society, and of the Mormon Church itself, and to turn over to the school fund of the Territory assets illegally held, and amounting, as is alleged, to not less than $4,000,000. Thus beset on every side, no faintest hope of relief appears save in the direction of Statehood, and at that straw the drowning leaders clutch. To secure this boon they are even willing *to promise* to prohibit polygamy, as being "incompatible with a republican form of government"! It is hard, however, to believe these men sincere. Their conversion is much too sudden, and too many suspicious circumstances surround the movement. Your elder is nothing if not crafty and apt at juggling with words. Having every office, from Governor down, filled with the faithful, how could polygamy be punished? And a single neat clause of the proposed Constitution, which declares that the State shall not interfere with religion, is roomy enough to hold more Greeks than ever lay concealed in the belly of the famous wooden horse that wrought such mischief to ancient Troy. For what is polygamy but part and parcel of the Utah religion? And all in vain is it affirmed that this movement is purely political, since never yet has aught been done in any sphere without the Church as instigator, nor does any good saint presume to sneeze until after the theocratic leaders have duly taken snuff. The preposterous attempt cannot but fail, and work mischief nevertheless to all such as contrived it.

And finally, in this same evil time, this day of dire calamity, John Taylor, for ten years "prophet, seer, and revelator," dies—and dies on the underground—but how and where no Gentile knows. The fact is not specially significant, and the Church will receive no considerable shock. Only he was one of the few old-time fanatics left. He was too old and too bigoted to learn, and, it is said, stoutly refused, to his last breath, to give his consent even to the promise to prohibit what he had preached and practised right royally for four and forty years. In a few years more not one of these troublesome incorrigibles will survive, and the reins of power in Utah will fall into wiser and better hands. E. O.

AUGUST 10, 1887.

WHAT SHALL A MUGWUMP DO IN '88?

TO THE EDITOR OF THE NATION:

SIR: Can you say anything to reassure a sadly disappointed Mugwump—one who in '84 voted for Cleveland with enthusiasm, in spite of bringing no little obloquy upon himself, but who for the last year or so has been growing more and more despondent over the President's course, and more and more perplexed what to do in '88? If the issue is again between Cleveland and Blaine, as seems not impossible, no serious-minded Independent could hesitate, I suppose. But what if it should be Cleveland against *Hawley*, or some other clean and able man, however wedded to a high tariff and the other characteristic features of the Republican programme? I confess I do not know. Since the Stone-Benton affair the President has seemed to be steadily losing ground, and declining from the high standard he (let us believe, sincerely) professed, until now it is getting difficult to say in what respect he is better than one of the old "spoils" Presidents—I

will not say, than what we dreaded in Blaine himself. A Higgins retained and a Gorman's influence tolerated against the earnest remonstrances of the better friends of the Administration, soldiers dismissed apparently *as such*, a virtual "clean sweep" in the offices rapidly approaching consummation, the President's own injunction about the political meddling of office-holders a dead letter, the present "working" of the New York Custom-house in defiance of the reform law, and in a way recalling the palmy days of the Republican régime—these things must at least give us pause, and make us ask very seriously whether we can expect any Democrat, as we did Cleveland in 1884, to be better than his party, and whether, after all, we must not put up a man of our own, *sworn* to the great reform, and on a platform of our own, distinctly different from those of the two great parties; one which shall speak in no mistakable terms on the other issues, also, of the time—tariff reform, honest money, anti-centralization, etc. That this will mean immediate defeat, is not perhaps a fatal objection, if we can look forward, presently, to a disintegration of the Republican party, like that of the Whig party thirty years ago, when the poor, despised and oft-defeated Free-Soilers became the political assignees of the Whigs, and, under a new name, the anti-slavery men of all parties rallied to ultimate victory.

For my own part, I never had a particle of faith in the Democratic party, and having lost nearly all I had in the Republican, I begin to see no resource open but that of the colored brother who, threatened with the perplexing alternative of "perdition" or "damnation," resolved to "take to the woods."—Respectfully yours,

H. D. Catlin.

Eastport, Me., August 11, 1887.

THE PARTY TO SUPPORT.

To the Editor of The Nation:

Sir: The best and surest evidence of a righteous cause lies in its simplicity. It has taken the best part of a lifetime for me to find out the truth of this, so that I no longer judge of a man's greatness by his ability to make incomprehensible statements, or of the strength of a party by the number of meaningless principles it professes to endorse.

I doubt if one-tenth part of all the newspaper editorials written upon questions of Government policy impress intelligent readers with a single simple truth that should lie at the root of all such discussion. Let me take up one daily paper as a clear and decided exponent of one set of principles, and another as defining some other views on the same subject, and out of both we get nothing but a humiliating sense of our own incapacity to understand. If we are good, honest partisans, it is quite likely we shall see no other way than to take for granted the conclusions of our party organ, whether understood or not.

That this is a necessary experience for the person of ordinary intelligence I will not believe. How many such voters could have learned from our party leaders what the policy of neutrality should require of the insurgents at the Isthmus of Panama some months since? Yet who could fail to know after reading the instructions given our naval commander at the time? Who of us could judge of the merits of a cattle-owner's claim against the rights of the Indian until a message was sent from Washington that did not allow of any question? Not many would be expected to fathom the relation of the United States Treasury to every citizen or property-holder; but we have seen in this Democratic Administration a Secretary of the Treasury who could so state the needs and dangers attendant upon existing conditions that all argument in opposition to his views was stopped, although the power to remedy the evil was not given him. Who of us that had the casting of a vote during a Republican Administration ever considered its influence, or received guidance that should have helped to secure a purer civil service? Yet who can fail to understand the words of our President in which he has made it clear to all who will understand, that each citizen has a duty which is beyond and independent of his power to control?

There is no discussion needed on all these questions. No one can question the clearness of the issue. Let us, then, distrust all who make claims upon us for reasons which they only can comprehend. Let us demand in exchange for our votes a principle plainly stated that can be followed and weighed if found wanting in those we uphold. Benj. Spaulding.

Boston, August 8, 1887.

THE REMEDY.

To the Editor of the Nation:

Sir: I have read Gov. Foraker's reasons for restoring the Republican party to power; the main object of its restored ascendancy being to give to the colored man in the cotton States a chance for a free election and a fair count.

There is an evil which demands some sort of remedy. While in the eight more northerly States of the solid South, that is, in Delaware, Maryland, Virginia, West Virginia, Kentucky, Missouri, North Carolina, and Tennessee, the votes of the colored men are given according to the voter's free choice—mainly for the Republican party—and are generally counted at least as fairly as in New York or Ohio; there are eight other States, South Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas, Louisiana, and Texas, in which the colored man is by pressure of all sorts made not to vote at all, or not according to his choice, or is swindled in the count.

To secure him in his right, to combine against his white neighbors, so that he may raise himself, or some white ally, to power and office, was the leading object of the eight years of Grant's rule; but the attempt was a dreary failure, and a second attempt after the Southern whites had governed themselves for twelve years would of course be more futile than the first. Still, it is undoubtedly a great evil that in eight States, or say in great part of eight States, the most fundamental principle of the Constitution, free suffrage, is openly and defiantly set aside. Many other evils are bred from this parent stem.

The only remedy which I can see for it lies with the next caucus of the Democrats in the House of Representatives. If they will read Sam Randall and his followers out of the Democratic party, the negro-suffrage problem is solved once for all. Force the editors of the Atlanta *Constitution* and of the New Orleans *Democrat-Times* into the Republican camp. The Democratic party of the Gulf States, which is now a mere white man's party, being broken up, the colored men will also separate according to their opinions and sentiments. Those working in mines and furnaces will go with the high-tariff men among their betters into the Republican camp; so will the sugar and rice raisers; those who plant cotton or corn will go in for free trade and Democracy. Each side will have whites to lead them and to protect them, and neither will find any trouble about getting a fair count. The shotgun policy, tissue ballots, and so forth will not again be heard of. The Democratic losses, if any, in the South would be made up fully in the agricultural Northwest; we should again have two truly national parties, as in the days of Jackson and Clay. Carl Schurz tried to bring such a result about in 1872; it was too early then; it is not too early now.—Yours, L. N. D.

Louisville, Ky., August 12, 1887.

DR. ELY ON ETHICAL LEVEL-RAISING.

To the Editor of The Nation:

Sir: In the August number of the *Forum*, in an article entitled "The Conditions of Industrial Peace," Prof. Ely says: "Government must raise the ethical level of competition by prohibiting forms of it which degrade a people." The moral tone of the whole article is pitched in a high key, and deserves the highest commendation so far as it points out the ethical bearings of the industrial problem. But the quotation above given, as well as other passages, indicates that Dr. Ely is under the influence of that ancient and but lately revived superstition that Government is an entity, self-supporting and omnipotent in the control of the people.

When a law is to be carried into execution, and the mere command of the sheriff is not obeyed, he summons the *posse comitatus* to his aid; and if the power of the county will not sustain him, the law becomes a dead letter unless he gets help from some other county, at the instance of the higher State authority. Law depends for its coercive power upon its reflection of the prevalent sense of right. Substantive law is essentially nothing more than the moral rules, commonly and habitually obeyed by the masses, and which must be enforced against a small rebellious minority, in order to prevent consequential injury to the majority. You cannot by law enforce a higher standard of morality than what the masses practise spontaneously. For if it were attempted, for example, to compel every one "to do unto others as he would have them do unto him," the sanction of the law would be wanting, for no penalty is effective which is not backed by the *posse comitatus*.

You can no more create moral energy by legal enactments than you can "by taking thought add one cubit unto his (your) stature." Governments cannot raise ethical levels, for they but voice the habitual morality of the people. If the moral standard of a people is to be raised in any respect, there are but two ways: either by the slow education of the moral sentiment of the people, or by outside interference.

Christopher G. Tiedeman.

University of Missouri, Columbia, Mo.

CLERICAL COLLEGE PRESIDENTS.

To the Editor of The Nation:

Sir: Just now the trustees of one of the large denominational colleges of the New England States are in quest of a President. It may not be amiss, therefore, to call attention to the fact that a slow but steady change has been going on in the educational world, and that college professors and college presidents are no longer so freely chosen because of their excellence in what they shall not have to do—preach, but because of their excellence in what they shall have to do—teach. The students of colleges come almost exclusively from the secondary schools, and the qualities the teachers of these schools demand in the head of the college to which they send their pupils are *not* the ability to preach popular and eloquent sermons, not the mastery of pastoral work and church finance, and not the possibility or probability of a missionary secretary or a bishop; they demand rather the mastery of education as an art and a science, the ability to understand the intellectual and moral impulses of young men, and a thorough imbuement of the spirit of educational progress.

Whether he has "Rev." before his name and "D.D." after it, is just as irrelevant a question as whether he has one middle name, two middle names, or no middle name at all. In a word, they merely ask for the application of business principles to the management of colleges—the selection of officials who understand the work they have to do. W. L. GOODING.

CONFERENCE ACADEMY, DOVER, DEL., August 8, 1887.

FLOOR RUGS.

TO THE EDITOR OF THE NATION:

SIR: May I take exception to one suggestion in the admirable letter of "M. N. S.," in the *Nation* of August 11, on the "Art of House-Furnishing"? She says: "Don't have painted floors with rugs unless you have plenty of servants to keep them in order." I have a house of more than a dozen rooms, in which there are no carpets covering the whole floor. In the entries and on the stairs single widths of carpet are fastened down—on the stairs with rods and in the passages with large brass-headed nails, fitted into sockets in the floor. Otherwise, bare floors with rugs everywhere. With by no means a large retinue of servants, I find no difficulty in keeping these floors in order. They are of all kinds—hard wood, soft wood stained, and soft wood painted. Rugs and floors are treated alike. Once a week they are wiped over with a damp cloth. I find the best thing for the purpose a cotton flannel bag, wrung out in cold water and tied over a broom. This is done twice a week in entries and dining-room.

It can readily be seen that this takes no longer to do than it would to sweep the carpets in the same rooms, and that it removes all the dust, instead of stirring it up into the air to fall on the furniture, whence it would be dusted on to the floor again. In my plan the furniture is dusted first. Once in two or three months the rugs are taken out to be shaken, when the floors are thoroughly washed, still with cold water, and as little of it as possible. This treatment, with polishing once a year, keeps them in excellent condition.

I am anxious to give my experience in this matter, lest persons of moderate means, realizing the good sense and value of "M. N. S.'s" letter, may be deterred from adopting a custom which is not only healthful and cleanly, but beautiful, and which has helped me to lessen, rather than increase, my domestic force. H. H. S.

NEWTON, August 12, 1887.

Notes.

J. W. BOUTON will be the American publisher of Robert W. Lowe's 'Bibliographical Account of English Theatrical Literature, from the Earliest Times to the Present Day,' announced by Nimmo, London. It will appear in October in two editions, one limited to a hundred copies. Some 2,000 titles will be enumerated.

A new volume of poetry by Mr. Robert Louis Stevenson, whose 'A Child's Garden of Verses' is his only other essay in this branch of literature, will be published immediately by Charles Scribner's Sons, along with its appearance in England. The title of the book is 'Underwoods.'

'Beecher as a Humorist' is the title of a work to be published next month by Fords, Howard & Hulbert.

D. C. Heath & Co. publish directly a third edition of 'Notes on the Early Training of Children,' by Mrs. Frank Malleson; Prof. Meiklejohn's 'English Language: Its Grammar, History, and Literature'; Meissner's 'German Grammar,' revised by Prof. Edward S. Joynes; 'Practical Lessons in the Use of English,' by Mary F. Hyde, and 'Industrial Education,' by Robert Seidel.

Mr. W. M. Griswold, 206 Delaware Ave., N. E., Washington, D. C., issues as a supplement to his Continuous Index for September an eight-page (octavo) sheet called "The Novel-List," to which name it has a double claim. It records, by title and author, works of fiction published in English in 1886, and rates them according to their nature and cleverness after the verdicts of the *Athenæum*, *Saturday Review*, *Critic*, or *Nation*. Thus, *a* means a tale of adventure, *m* of murder; *t*, that the novel has "'Tendenz,' or moral purpose"; *k*, that it is well written; *y*, that it is silly; *z*, that it is wholesome, etc. All are summed up in a classified index, as Algiers, Boston, Italy, Russia (scenes laid in); Historical, Religious, Romantic, Short Stories, Wholesome, etc. This is very ingenious, and fills as nearly as may be the want of the random novel-reader, who, as Mr. Griswold says, is ever asking the librarian, "Give me a good new novel." It will be this official's fault if he is pestered any longer.

That Mr. Griswold's multifarious services as a literary guide are not as widely known as they should be, we infer from Dr. Alice B. Stockham's circular, just received. This lady (whose address is 159 La Salle Street, Chicago) has charge of the literary department of the exhibit of "Woman's Work" at the Inter-State Industrial Exposition, which opens next month at Chicago. She assures us that she "has for days had a force of clerks searching libraries and catalogues for addresses of women authors." We counsel her to procure Mr. Griswold's 'Directory of the Writers [of both sexes] for the Literary Press in the United States' (Bangor: Q. P. Index). There have been two issues of it, and both are necessary. Dr. Stockham, we should add, asks for books, magazines, or pamphlets by women authors for exhibit.

From J. B. Lippincott Co. come two more volumes, seventeen and eighteen, of the Library Edition of the Waverley novels, 'St. Ronan's Well' and 'Red Gauntlet;' and the 'Book of Snobs, etc.,' in the pocket Thackeray.

The new edition of Fetridge's (formerly Harper's) 'Handbook for Travellers,' in three volumes, claims superiority over all rival guides because it is revised to January 1, 1887, the compiler having, as he says, spent the past year in travelling through certain countries, among them Tyrol. Yet it not only makes no mention of the Vorarlberg Railway (from the Lake of Constance to Innsbruck), opened two years ago, but continues to describe in detail the diligence journey through the Inn Valley.

"Dr. Frank" is a pseudonymous medical Bostonian, three of whose works, 'Health in Our Homes,' 'Health of Our Children,' and 'A Friend in Need,' the last an octavo of 450 pp., have been issued simultaneously (Boston: Thayer Publishing Company). They are filled with well-meaning chatter on methods for the preservation and restoration of health. The two smaller books, cheaply published, might be used as sanitary tracts among people who need such primers.

'A Decalogue for the Nursery,' by S. J. Donaldson, M.D. (Boston: Otis Clapp & Son), is a mixture of elementary hygiene and homœopathic therapeutics, which appears intended for both mothers and medical students. A little knowledge is the fatal element that so often neutralizes the best intentions, and it seems unwise to put an outline of practice in the hands or heads of interested but uninstructed agents.

The Proceedings of the American Antiquarian Society at its April meeting in Boston, now published (vol. 4, part 4 of the New Series), possess an unusual degree of interest, especially for educators. Mr. Andrew McF. Davis reveals a curious error in the transcription of a will for the records of Harvard College, by which "the colony of now or of late called New Haven" read "the colony of Nox, etc." This unintelligible name was repeated with superstitious care for half a century in bestowing the annuity under the will, for fear of the legal consequences. Mr. Charles A. Chase, in a very readable paper, reviews some of the great charitable trusts now in existence, particularly in England, and particularly for schools. There is a biographical sketch of the late Pliny Earle Chase; and, finally, there is a short history of the Roxbury (Mass.) Latin School, one of the foremost classical schools in the country, and in point of time of founding next after the Boston Latin School and Harvard College. The mode of its support is perhaps without a parallel.

Petermann's Mitteilungen for July contains an interesting account by Dr. G. Schweinfurth, the well-known African traveller, of a recent exploration made by him of a part of the Egyptian desert lying between the Nile and the Gulf of Suez. In the course of his journey he was so fortunate as to fall in with a considerable number of the Maase, a Bedouin tribe of Arabs who inhabit this region but are very rarely seen by travellers. He describes them as in certain respects wilder and more uncultivated than the wildest tribes of Central Africa. These latter possess huts and domestic utensils which they consider essential to existence, but which the former wholly lack. They cannot, in fact, be surpassed in what he terms their *Bedürfnislosigkeit* (*i. e.*, being without wants). And yet, he says, they are intelligent and to a certain extent cultivated, talking well and with considerable knowledge of the events and methods of life in civilization. Their intense love of freedom alone leads them to dwell in caves, subsisting on the milk of their flocks and herds and the sweet juicy roots of the desert, knowing, as they themselves told the traveller, that "with houses came soldiers and taxes." N. Latkin writes discouragingly of the prospects of gold-mining in Siberia. The output is gradually decreasing, though the number of mines and miners is increasing. In 1884, the last year for which he gives statistics, the number of places where gold was washed was 494, with 38,166 workmen and a product of 1,476 puds—a little over 52,000 pounds. There is also a long and elaborate account, accompanied by a geological chart, of a valley running westward from Walfisch Bay, on the west coast of South Africa. The supplementary number, just issued, contains an account of explorations in the Australian Alps, made in 1885-'86, by R. von Lendenfeld. The principal aim of these expeditions, to discover traces of the existence of an ice age in the Australian continent, is said to have been completely successful, as moraines and numerous isolated boulders and glacial scratches were found.

The annual address of the President of the Historical Society of the Protestant Church of France, published in its Bulletin, is an interesting review of the work of the Society during the past twelve months, and contains notices of everything of importance published relating to the French refugees. The Society has now a library of more than 4,000 volumes, many of them very rare, and its collection of manuscripts is increasing both in size and value. A series of articles on the "Moralités polémiques," by M. É. Picot, showing the religious controversy as mirrored in the ancient French theatre, is being published in the Bulletin. The great biographical and bibliographical work published under the auspices of the Society, "La France Protestante," has now been printed as far as the name Foster.

A photogravure after a spirited bust of Marie Antoinette, made by an unknown artist when she

was about the age of twenty, and given to the South Kensington Museum as part of the Jones bequest, is the most noticeable feature of the *Portfolio* for July (Macmillan). In the August number there are some good water effects in the etching of "A Banffshire Harbor" by Colin Hunter; and the photogravure after a landscape by a contemporary Italian artist, Costa, fully confirms the interest excited in him by Miss Cartwright's article in his praise.

L'Art (Macmillan) for July 1 and 15 is wholly, for June 15 in part, given up to the Salon; but the earliest issue is specially attractive by reason of M. Adolphe Jullien's sarcastic review of the first (and only) performance of "Lohengrin" in Paris, in the heat caused by the unfortunate Pagny incident. M. Jullien (whose portrait, by the way, is etched for the same number) is confident that no such interval will elapse between the first and second performances of this "romantic opera" as between those of Hugo's "Le Roi s'amuse." It seems a mode of placating the chauvinism of *L'Art's* readers to reproduce so many Wagner caricatures as M. Jullien does in connection with this article, but they are all credited to his recent work on Wagner, and so serve as a helpful advertisement.

The Biblioteca Nazionale Centrale of Florence has just acquired the archives of Lenari & Co., managers of many Italian theatres at Florence, Venice, and elsewhere in the years 1822-1844. The collection is rich in autographs of the greatest artistic celebrities of the peninsula—actors, authors, musicians, etc., and has great value as a source for the history of the modern drama in Italy.

From the Italian Ministry of Public Instruction we have part 6 of the catalogue of the Codici Palatini in the above library. Like its predecessors, it offers capital browsing for the imagination by its first lines of *rime varie*.

The *Nuova Antologia* for July 1 contains the first part of an article by G. Chiarini on "Romeo and Juliet." After speaking of several stories on this subject, the author investigates at length the relation of Shakspere's play to the "Adriana" of Luigi Grotto, called "Il Cieco d'Adria," and concludes that the imitations of this play by Shakspere, taken one by one, appear very contestable, and therefore of little value, but, taken all together, seem to have some importance, and leave the impression that the "Adriana" was at least known to Shakspere.

—The last number of the *American Journal of Mathematics*, which appeared in June last, completes the ninth volume. In anticipation of their arrangements for the tenth volume, we desire to make one or two suggestions to the editors. For the benefit of such of our readers as may be professional mathematicians, or such amateurs as are able and inclined to devote a good deal of time to the higher branches of the science—and it is only to such that the *Journal* would be of any use or interest—we will make a little explanation in regard to its character. In the first place, the *Journal* is "American" only in so far as that adjective is justified by the fact that its editors, Profs. Newcomb and Craig, are Americans, and by the fact that it is published under the auspices of an American university. Neither are all—perhaps not even a majority—of its contributors Americans. It is eminently cosmopolitan, and continually publishes, in the languages of their authors, papers written by the most distinguished mathematicians of France, Germany, and Italy. But it must be understood that none of these were copied from foreign journals; they were all prepared especially for its pages. In the next place, it is not a "journal" in the ordinary sense of the word. It does not pretend to keep its readers informed of what is going on in the mathematical world. Now and then, of course, a recent event is mentioned by way of introduction to a paper, or incidentally in the course of it. Beyond this, all that can be inferred from its pages is, that some distinguished mathematician, or some person of ability, has recently been engaged in writing what we are reading. It is wholly made up of original papers, some of them rising to the dignity of extended treatises, sometimes handling perhaps a single formula; but almost always having a flavor of originality and an air of completeness and thoroughness.

—The number before us is a good example of the general character of the journal. Its first fifty-six pages are occupied with the continuation of the lectures on reciprocants by Prof. Sylvester of the University of Oxford. He promises to finish them in a future number. Should his concluding lectures be of the average length of those which have so far been published in the *Journal*, the whole will be equivalent to a volume of about two hundred and fifty quarto pages, will constitute a work in advance of anything that has yet appeared, and will probably for some time be elsewhere inaccessible. The next paper, twenty-eight pages in length, is in the French language—"Sur une Classe de Nombres Remarquables," written by M. Maurice d'Ocagne, Ingénieur des Ponts et Chaussées, at Rochefort-à Mer, France. To those whose mathematical acquirements enable them to understand it, it cannot fail to be of great interest. It not only exhibits a high order of ability, but a wonderful amount of mathematical ingenuity. Then we have, also in French, extracts from letters to the editor by M. Hermite, one of the first mathematicians of France. There is, however, nothing epistolary in their style or character. They treat certain formulæ in a rigid mathematical manner. Lastly, in a little over a page, that rising mathematician, Mr. F. Franklin, gives two new proofs of a celebrated theorem of Cauchy. And now for the suggestions to the editors. We would propose that the tenth volume should, if possible, be complete in itself, commencing nothing which it leaves unfinished, leaving nothing to be finished in some succeeding volume. The first ten volumes of the *Journal* would thus form a "set" complete in itself, and it would enable the editors to carry out our second suggestion, which is that the tenth volume should be accompanied by an index, as complete as possible, to the whole *Journal*, up to and including that volume. We have, in our own experience, frequently felt the need of such an index. That need will become more and more pressing as the years go by, for we take it for granted that the *Journal* has a long career before it. The first ten volumes will comprise nearly four thousand quarto pages: that is surely enough to call for some guide through the maze. What sort of an index should be prepared, is a question which we cannot discuss in the limits of a note. We have called the attention of the editors to the matter now, at the conclusion of the ninth volume, in order that they may, should the suggestion meet their approbation, have ample time to fix its plan and carry out its construction.

—One of our best-known schools, and most esteemed, the Troy Rensselaer Polytechnic Institute, has been for sixty-one years turning out men trained to civil engineering in particular. Nine hundred is the total number of the graduates, and more than half as many again have studied at the Institute without graduating. These figures we derive from the large volume called a 'Biographical Record of the Officers and Graduates' of the Institute (1824-1886), edited by Herbert B. Nason (Troy: Wm. H. Young). The stimulus to this labor of love, pursued under exceptional difficulties, was furnished by Sibley's 'Harvard Biographies,' and works of a similar character; and, in conception and execution, it is worthy to rank with its forerunners, though from the nature of the case it cannot compete with them in literary interest. Not a few of the alumni have achieved distinction: and when we name the late S. Wells Williams, and Fitzedward Hall, it will be seen that fame has sometimes been won in other fields than those directly contemplated by the school's teaching. Various causes, like the overcrowding of the profession, the rebellion, and the abounding opportunities for enterprise in this country, have operated on one-half of the graduates, to draw them from engineering and manufactures and turn them to all sorts of avocations. In the civil war the talents fostered by the Institute were employed on both sides. One graduate was made a brigadier-general in the Bulgarian army, while serving as war correspondent for the English press. Three Japanese have carried home engineering knowledge and skill which they were able to put to good account. Among the benefactors of the Institute the name of one woman is conspicuous; but most significant among the recorded particulars of the school's management is the fact that the first four presidents were clergymen—a kind of headship which would now seem decidedly inappropriate. The fifth was a great iron manufacturer, the sixth a physician, and the seventh a railroad lawyer. We congratulate the Institute on having such a hold on the affections of its graduates as to receive the tribute of this memorial volume.

—Amos Eaton, the botanist, whose name by good right stands first on the list of professors at the Rensselaer Institute, had, through his lectures, a happy influence on Mary Lyon, the future founder of Mount Holyoke Seminary. The Trustees of this institution have just published a history of it during its first half-century—1837-1887—edited in excellent taste by Mrs. Sarah D. Locke Stow. Less famous now than it was to the generation nearer its birth, the Seminary has even been overshadowed by its own imitators, like Wellesley College, for instance; but materially it is better equipped than ever, and apparently has lost nothing of the religious character impressed upon it by Mary Lyon, and has acquired no bias towards (Evangelical) sectarianism. A graduate of 1872, herself emancipated from the narrowness she brought to the Seminary, says: "Our little school-world maintained a thoroughgoing Christianity on a non-denominational basis." In its beginnings, if Mount Holyoke's best friends were found among certain of the clergy, so also its opponents were pointedly clerical, including editors of the religious press. Sexual considerations here came into play, at a time when the Massachusetts Congregationalists were trying to suppress the speaking of women in public, as in the case of the Grimké sisters. In 1835, at a private meeting of ministers and laymen favorable to her enterprise, Miss Lyon and two female associates were graciously allowed to be present, as "they [the men] thought there could be no impropriety in admitting us to hear what was said." It was not till 1884 that a woman was placed on the Board of Trustees. The opening chapter, on early New England education (or non-education) of women, is a very instructive review, and will surprise most readers. Equal care for girls in the common schools and in endowed academies was first exhibited about 1820. Till 1828 (not 1822, as stated), even in Boston, girls were allowed only a summer schooling, while their brothers had their holiday. Of the 2,000 graduates of Mount Holyoke a significant contingent has reinforced the corps of missionaries, domestic and foreign, and a very large propor-

tion have become teachers. The death-rate has compared favorably with that of men's colleges, and the marriage-rate is not abnormally low. The Institute draws chiefly from Massachusetts and the other New England States (least from Maine), and from New York, with a very wide total range.

— Miss Lyon discountenanced, if she did not forbid, Sunday letter-writing on the part of her pupils. The pious founder and namesake of the McDonogh School, near Baltimore, also had scruples about the use of that day; and it is one of the curiosities of the human mind that while he deemed it perfectly right to hold his fellow-countrymen as slaves, to buy and to sell them, their working for themselves on the only day allowed them for rest from enforced labor shocked him greatly. This led him (since he saw their 'desecration of the Sabbath" was unavoidable to grant them a Saturday half-holiday, to pay them wages if they then worked for him, and finally to devise a much-lauded scheme of philanthropy by which they were made to purchase their freedom and be deported to Africa. Like Henry Clay, McDonogh would not tolerate the idea that slaves were not as truly and justly property as goods and chattels, nor discuss emancipation at the master's expense and without colonization—*i. e.*, as a purely moral question. The details of his plan as conceived and carried out may be found in a very interesting contribution to the history of education in this country, the 'Life and Work of John McDonogh,' by Prof. William Allan, Principal of the McDonogh School. The hard earnings of his freedmen went, along with his vast accumulations of real estate in the neighborhood of New Orleans and elsewhere, to the educational endowment of that city and of Baltimore. The vicissitudes of his bequest, like the incidents of his self-denying life, are almost romantic, and are well set forth in the book which the trustees of the McDonogh School have dedicated to his memory. This institution itself deserves study as a farm school unlike any other, and probably superior to any. Mr. John Johnson, jr., adds a sketch of it (which had already seen the light, at least in part) to Prof. Allan's biographical narrative. Teachers, clergymen, Sabbatarians, and intending philanthropists generally will find their profit in these pages.

—The question of closing the Bestuzheff courses for the higher education of women in St. Petersburg still remains undecided. Whether they are to share the fate of the courses for women in Moscow, Kazan, and Kieff, no one can tell; but the coming year will see their efficiency sadly interfered with. In place of the four courses, there will be but two, and the whole institution must go through a financial crisis as well. The circumstances, on the whole, will not only prove detrimental to the present welfare of an education which it is desirable should not be interrupted, but will prevent would-be benefactors from carrying out their intentions. A writer in the *European Messenger* gives some curious facts in relation to these courses, and controverts the idea that education predisposes women against matrimony and in favor of Nihilism and conspiracy. With regard to the latter he says that though the students arrive with varied and strongly pronounced opinions, these are greatly modified and corrected by residence together, and that the modification is in exact proportion to the length of the stay, as is the case with the University students. Comparing the statistics of the female courses with the University courses, the writer finds that the division of students and women, as to social classes, is identical, or nearly so. In the University there were last year 59 per cent. from the nobility, 8 per cent. from the priestly class, and 33 per cent. from the remaining classes; the women's corresponding figures were 57 per cent., 10 per cent., and 33 per cent. The number of soldiers' daughters and peasants was particularly small, being not over 2 per cent. Another curious feature of the women's courses is the fact that the harder the study the more women there are to select it, and the larger is the percentage at examinations. In the last year for which the report is at hand, 245 women chose literature, and 500 selected the physico-mathematical course. Nine of the former students are now assistant professors in the courses for women, and two of them have had articles on learned subjects published in periodicals of high standing. A committee which has been looking into the matter of the effect of education on marriage finds that out of 218 graduates from a total of 400 whose careers they have been able to trace, 70 have married, not counting those who were already married during their attendance. As only five years have elapsed since the first set graduated, this is considered a good showing. Out of the 218 above mentioned, 137 are engaged in teaching. It is five years since any students have been received into the women's medical school, and unless something is done soon that school will expire. Its graduates have rendered such good service all over the country that this will be greatly regretted; and there is a strong feeling that these higher courses should not be allowed to share the probable fate of that deserving institution.

—Four parties will observe the total solar eclipse in Japan on the 19th of August. The Japanese Department of the Interior sends out two of these—the one, under the direction of Prof. Arai, to a point on the west coast of Japan, a little south of Niigata; and the other, under the direction of the Imperial Central Meteorological Observatory, to the summit of Nantaisan, 8,500 feet elevation, and not far from Nikko. The Japanese Department of Education sends out a party from the Observatory of the Tokio Daigaku or University, under the direction of Prof. Terao, and located at Kuroiso, in central Japan. The American Eclipse Expedition, in charge of Prof. Todd of Amherst, has fixed itself at Shirakawa, in eastern central Japan, a few miles to the north of the line of central eclipse. Lieut. Southerland, U. S. N., and Mr. Romyn Hitchcock of the Smithsonian Institution joined the party at Yokohama, and Mr. Nakagawa, director of the Japanese Naval Observatory, at Tokio. Prof. Todd is also arranging to have photographs of the sun's corona taken from the summit of Nantaisan by an additional expedition, if the chances of a clear sky appear to warrant the undertaking. In addition to the above, a large number of volunteer observers, all over the region covered by the path of total eclipse, will, through the coöperation of the Japanese Educational Department, make such observations as Prof. Todd directs.

PART THIRD OF THE NEW ENGLISH DICTIONARY.—I.

A New English Dictionary on Historical Principles: founded mainly on the materials collected by the Philological Society. Edited by James A. H. Murray, with the assistance of many scholars and men of science. Part III. Batter—Boz. Oxford: The Clarendon Press; New York: Macmillan & Co. 1887.

AFTER a very careful examination, we have no hesitation in saying that the third part of this great work is an improvement even upon the two preceding, singularly well done as those were. The execution is the more deserving of recognition because the task has been far more difficult. The letter B, it is well known, presents peculiar perplexities to the compiler of an English dictionary; for the etymologist in particular it is full of knotty problems, many of which will doubtless never be solved satisfactorily. It is one of the richest in the alphabet in words of native origin, or in words whose origin can be traced to no source outside of our own tongue. It is one of the letters least cumbered with a vocabulary that is at all technical—one of the letters least defiled, as a purist would look upon it, with the monstrosities that modern science delights in forming. But the very characteristics that add to its interest with the general reader are the ones that add to its difficulties for the lexicographer. It abounds in terms which, while not recorded in the earliest speech, made their appearance in the tongue long before it ever occurred to a human being that there could be any possible interest in the origin of a word. Where they came from, how they happened to come at all, how long they had been existing in the language before they showed themselves in writing—these questions force themselves constantly upon the attention, and often look in vain for a conclusive reply. Moreover, the wide variety of senses which words assume in the course of a life extending over centuries, furnishes an obstacle of its own to a satisfactory study of the development of the meaning, and in some cases, naturally, to the establishment of what must have been the primitive signification. No one, certainly not the editor of this dictionary, would pretend that all these questions have been settled. But no one, also, can go carefully over this immense collection of words and usages without feeling that they have been settled as fully as the present state of our knowledge will permit; that in this work the last results of modern scholarship have been reached and recorded; and that, while the future will doubtless supplement what is here defective, it will have but little to modify or alter in what has been secured.

Let us first give a brief summary of the contents of this part. It includes that portion of the vocabulary which lies between the verb *Batter* and *Bozzom*, the dialectic name of a flower. The editor tells us that it deals in all with 8,765 words; that of these, 5,323 are principal words, of which a detailed account is given in articles devoted to them alone; that 1,873 are compound words, explained in connection with the simple word which forms the first part of the compound; and that 1,569 are subordinate words, which are illustrated by examples, but do not demand special explanation. Furthermore, of the 5,323 principal words, 3,802 are in current use, 1,379 are obsolete, and 142 are so imperfectly naturalized as still to be deemed foreign. But, after all, these numbers, formidable as they may seem, give a very vague impression of the vastness of the results that have been accomplished. When, for instance, we find twelve closely printed columns devoted to the single verb *to be*, we get a far more adequate conception of the amount of labor expended than could possibly be obtained by any announcement of the sum of the individual words registered and discussed. More important, too, than their number is the treatment to which the words have been subjected. We have here the same sanity of statement that marked the two preceding parts; the same refusal to make conjecture do the work of investigation; the same willingness to confess ignorance when knowledge is not attainable, which of itself tends to inspire confidence in whatever conclusions are asserted with positiveness. These qualities, indeed, seem to us shown more conspicuously in this last part than in the two previously published, as if the men engaged in the preparation of the work felt themselves on firmer ground, and saw more clearly the boundaries between the known and the unknown and the unknowable

It is a matter of gratification as well as of jus-

tice to be able to pay this tribute to the work before entering upon any criticism of details. This will be largely devoted to pointing out certain mistakes in what has been said, and certain omissions of what ought to have been included. But any fault-finding in which we indulge is not done for the sake of disparaging the merits of what has been achieved here; the value of that will never be seriously affected by assaults from any source. It is done for the purpose of contributing some slight share to the perfection of a lexicon in which every member of the English-speaking race is permanently interested. Errors of details in an undertaking so vast there must always be, and there is no better time to take note of these than while it is in progress. In our criticism of omissions, too, we shall not seek for illustration from outside and petty sources, but confine ourselves to writings and writers who have been read for this work, or at least ought to have been read for any dictionary that sets out to represent the resources of the English tongue.

In an American journal the subject of Americanisms naturally occupies the first place. It is satisfactory to find that no small number of these falsely so considered have, on the authority of this work, taken what is to be hoped is a final departure. It was inevitable they should do so the moment the actual facts of the language were brought to light. English writers in the past have been in the habit sometimes of stigmatizing and sometimes of praising, as Americanisms, words and meanings which they personally happen to meet with for the first time in the pages of an American author. It was natural that they should do so in those cases in which a usage once current in the literary speech of England had there died out, but had been retained in that of this country. But the term has been frequently applied to words which have always formed part of the universal speech. Ignorant men on the other side of the Atlantic have denounced them as corruptions coming from this quarter. Ignorant men on this side have, on the authority of the former, included them in the list of words peculiar to the United States. It is curious to note how several of these so-called Americanisms appear in this dictionary with exclusive quotations from English authors, and without the slightest suggestion that they owe their origin to this country. The information on this subject collected and brought together in this work will lay for ever many a ghost which has hitherto disquieted the hearts of imperfectly informed writers on both sides of the Atlantic.

But even the best informed reader will doubtless light upon many curious surprises in the contrast of usage as exhibited in the speech of England and America. Some of them are worth giving. The word *berate*, common enough with us, has apparently become obsolete in the mother country. No quotation for it later than 1601 is recorded as taken from any writer belonging to Great Britain. From the United States many nineteenth-century examples have been received, as might well be imagined in the case of a word used as frequently as is this, both in the colloquial and in the literary speech. In another instance usage here corresponds to that of the north of Great Britain as contrasted with that of the south. In the latter, we are told the "bid him do it" of the former is unknown or archaic; it is regularly represented by "tell him to do it." It is singular, too, to read that in England the adverb *bloodily*, used as an intensive, is "by respectable people considered . . . on a par with obscene or profane language, and usually printed in the newspapers (in police reports, etc.) 'b——y.'" This seems about as striking an illustration of delicacy as language could well present. The word is certainly rather offensive on the grounds of taste; but it is as certainly surprising to find it condemned on the score of morals. We cannot conceive even of its arousing the sensitiveness of Anthony Comstock; but our insensibility may be due to the fact of its not being a common word with us in the speech of even the lowest class.

But perhaps the most striking distinction of usage in the language of the two peoples that is recorded in this Part is in the case of the word *biscuit*. Its most common meaning in this country is not known at all to England. From the purist point of view, it ought not to be known here. The biscuit of America is usually soft; and on historical and etymological grounds no biscuit has any business to be soft. It is evident that the editor of this dictionary cannot quite venture to conceive of the atrocity. He speaks of it with reserve, and is careful to give his authority. "Even the characteristic hardness, implied in the name," he writes, "is lost in the sense 'A kind of small, baked cake, usually fermented, made of flour, milk, etc.,' used according to Webster in U. S." He might have added that Worcester says essentially the same thing, though his language is not so precise. With him it is 'A kind of bread, baked in small cakes, and intended to be eaten while hot or fresh.' Put these two definitions together, and we have fully described the ordinary biscuit of the United States. On the other hand, it is well to add that the strict usage of the word, as implying a kind of crisp, dry, hard bread, is also gaining ground steadily in this country; and it is probable that the now widely employed *cracker*—itself derived from the dialect of the north of England—will, at no distant day, give place to it, at least in the speech of the educated.

The omissions in the case of Americanisms must in some instances be intentional. We miss the frequent slang phrases *on a bender* and *big bugs*, though it is possible that the latter may occur later. *Bender*, in the Scotch sense of 'a hard drinker,' is given; and as the employment of it as just mentioned is contained in Bartlett, it seems to have been left out by design. One or two words that occur to us have sprung up since vocabularies of Americanisms have been printed; and they naturally are not found here. One of these is *battery* in its technical sense in the game of base-ball, as denoting the pitcher and catcher. The other is *bob-veal*, with accounts of the seizure of which by the health authorities the newspapers are full every spring. It is certainly as deserving a place as *bosch* or *bosh*, an English equivalent of 'butterine.'

The errors in the definitions of the Americanisms recorded are not many. Such as they are, they are marked rather by an imperfect comprehension of the meaning of the word than by actual misstatement. The definition can hardly be said to be wrong in itself, but it leads to a wrong impression. Thus, one would get the idea from what is said here that *bluff*, in the game of poker, is accompanied by noisy behavior and gesticulation; whereas, its effectiveness is due usually to the grim and almost unnatural quietness with which it is done. *Bolt*, again, is described as 'breaking away from a political party.' This is not quite true. A man does not bolt his party, but the candidate or candidates his party has put up. Sometimes, though less properly, he is said to bolt the platform of principles it has enunciated. The essential point is, that the bolter does not necessarily, in fact does not usually, abandon the political organization with which he is connected. He not infrequently votes for some men upon its ticket, and at the same time bolts others by 'scratching' their names. While upon this subject it is hardly proper to speak, as is done here, of a 'Bourbon' party as existing in the United States. No such organization can be found anywhere. The epithet is simply an application to particular persons of a general term, which has come to designate everywhere certain characteristics that have been attributed to the members of the Bourbon family of princes. It might be applied almost as readily to certain adherents of a school of political economy as to those of a political party. As a matter of fact, it is now applied just as often to Republicans as to Democrats, and in neither case does it denote any particular body of men acting together in any organized capacity. Distinctions like these it is impossible for a foreign editor to be familiar with, and he is accordingly at the mercy of informants whose knowledge, or rather whose judgment, is defective. One of the queerest results of this misinformation is to find the new slang term *boodle* euphemistically defined as 'stock in trade, capital.' The word *boodler* does not occur. This is to be regretted, not so much for itself as for the way in which it would have been explained.

One of the definitions that would convey no meaning whatever to him who should need to look up the word, is that of *Boweryish*. It is illustrated by a quotation from Poe, and explained as 'smacking of the Bowery in New York.' *Bowery* in turn has given it its original meaning of 'farm, plantation,' with the added remark, 'hence the Bowery in New York city.' What idea an Englishman could get of the passage from Poe from this explanation it is hard to conceive, for that author is applying the term to editorial articles. The definition is right as far as it goes, but it is utterly inadequate. The reference is, of course, to the Bowery as the street in New York, for a long time the home of the "b'hoys"—a word also not to be found here—that is, young men of the lower class, but a grade above roughs, loud of voice, swaggering of gait, and much given to noise and bluster and rant. It was perhaps the style of plays and play-acting as seen at the old Bowery Theatre that led to the application of the term to literature.

We hesitate to include among Americanisms a signification belonging to *boycott*, but which finds no place in the definition given in this work. Still, it seems to us that it must be a sense known and recognized in the land of its origin. *Boycott* as explained here is simply an agreement between two or more persons to have no dealings with some other one in order to punish him for his conduct. This is unquestionably the original meaning. The act denoted by it, however unjust in some cases, or even immoral, can hardly be deemed illegal. But as now commonly employed, *boycott* implies something much beyond this. It is not merely that A and B refuse to have any dealings or hold any relations with C, with whom they have a controversy, but they go to D, an outside party, and inform him that he also must join them in having nothing to do with C, on pain of involving himself in a similar punishment. It is the acts implied in this extension of the use of the word that the courts in this country have been visiting with penalties; and although this dictionary does not recognize any such sense, it is strange if it has not already developed itself on the other side of the Atlantic.

THE GREAT CANADIAN RAILWAY.

The Queen's Highway from Ocean to Ocean. By Stuart Cumberland, F.R.G.S. London: Sampson Low & Co.; Chicago: A. C. McClurg & Co. 8vo, pp. 431.

WHEN the transcontinental railway through Canada was approaching completion, much interest was naturally aroused among the English-speaking residents of Australia and India. They saw with pleasure the prospect of a new line of travel opening to them through British territory, offering many attractions, and enabling them to

escape the monotony and discomfort of the Red Sea route. To satisfy the general curiosity, Mr. Stuart Cumberland was, as he tells us, "commissioned by a syndicate of Australasian, Indian, and English newspapers to give a description of the country through which runs this new Queen's Highway." He left New South Wales in June, 1886, and arrived in British Columbia in the following month, in time to be not only the first through-passenger, but, as he rather oddly expresses it, "the first person to go over the line in a journalistic sense." To these circumstances the world is indebted for this fairly successful effort at bookmaking. A handsome volume of something over four hundred pages, illustrated by many attractive "collotype" pictures, and two tolerably good maps, embodies the author's personal observations, along with a large amount of information, historical, geographical, and statistical, compiled from recent publications. Of these compilations a considerable portion consists of extracts taken bodily from the 'Canadian Handbook,' a description of Canada prepared in the public offices at Ottawa for the purposes of the Colonial and Indian Exhibition of last year. Such details, though authentic, are naturally dry, and the author, who is evidently a newspaper writer of some experience, has thought it necessary to "throw in a little humor" occasionally, by way of relief. The humor, it must be said, is not always of the most elevated order, being chiefly made up of broadly comic accounts of his personal discomforts and annoyances, and ultra-jovial notes of his experiences and sentiments in regard to poker playing, mixed drinks, and Western profanity. These portions of the book might have been compressed with advantage; but it is fair to say that most of the narrative and descriptive part of the work is well done, and that any traveller who takes it as a guide on the route will have no serious reason to be dissatisfied with it.

The author has the genuine and laudable reporter's desire to represent accurately what he sees; and he does this constantly, even when it obliges him to state facts which directly contradict his own opinions. His sentiments as a loyal British "imperialist" make him anxious to see everything in rose color. He rebukes a leader of the Canadian Opposition for describing British Columbia as a "sea of mountains," which expression he pronounces "anti-national"; and he then proceeds to give a precise and most formidable account of the region, which fully confirms the objectionable epithet. The vast prairie land which stretches eastward from the Rocky Mountains has been described by some sanguine explorers as good agricultural territory; but the author shakes his honest head. "A good deal of the country in the earlier stages," he declares "presented a most melancholy picture. The ground seemed parched up or blackened with burned grass. Nothing was green, and but little apparently was alive. I was told that the season this year had been an exceptionally dry one, but, allowing for this, the greater part of the region had the appearance of being sour, barren, and unprofitable." "It is perfectly correct," he continues, "that, as compared with the United States, Canada has no really 'bad lands' to speak of, but that she has a good deal of indifferent land no one can deny; and Canada's best friends must admit that a great portion of such land lies in the Northwest Territories." This was in 1886. The present year has brought a sad confirmation of the author's opinion. According to the papers, many of the settlers who had been induced to attempt farming in the region he thus graphically describes, have lost their crops by the drought and "gophers" (or ground squirrels), and are giving up their farms, with all the costly improvements, as valueless.

The author is equally plain-spoken in his account of the forbidding region through which the railway is carried along the northern coast of Lake Superior, where the chief points noticeable are the enormous engineering difficulties which have been overcome, and the utterly worthless character of the country, except possibly for mining purposes. "Natural fortresses," we are told, "guard every pass through which the line has forced its way, and they frown down upon the work of man in a manner calculated to make the timorous traveller tremble for his safety." "Frequently the face of the towering cliffs has had to be cut to make a roadbed for the rails: while frowning promontories have been tunnelled and blasted, bridged and spanned, in a manner most wonderful to behold." "There are portions of this world," he concludes philosophically, "which nature reserves to herself, they, in consequence of their sterility or inaccessibleness, being unfitted for the uses of man; and almost the whole of the lake coast from Thunder Bay to Peninsula Harbor seems to be one of nature's reservations." To this may be added that the country westward of Lake Superior to the Lake of the Woods, a stretch of 300 miles, is pronounced "sterile and uninteresting."

The question naturally arises—if British Columbia is a "sea of mountains"; if the greater part of the land in the Northwest Territories is "sour," barren, and unprofitable; if the land north and west of Lake Superior is sterile and forbidding—how is the Pacific Railway to pay expenses? How will the vast sums which the Canadian Government has spent on this line and its complement, the Intercolonial Railway—stated by the best authority, the official 'Canadian Handbook,' at $122,000,000, or nearly one-half of the public debt of the Dominion—be recouped to the country?

The Canadian Pacific line must be regarded as the most irrational product of a most irrational political system. No person can deny—indeed, no person sufficiently educated to put pen to paper has ever denied—that the natural connection of the various segments of Canada is with the portions of the United States immediately south of them. British Columbia is simply a continuation of the California and Oregon region. Manitoba and the Northwest Territories find their proper outlets into Minnesota and Dakota. Ontario and Quebec belong to the great central system which includes the whole range of States from Michigan through Ohio and New York to western New England; while the Maritime Provinces have their most direct and profitable relations with Maine and the other Eastern seaboard States. If the politics of Canada had been ruled by the facts of geography and the light of common sense, neither the Intercolonial nor the Canadian Pacific Railway would have been thought of.

The purpose of these railways was to "bind together" by an artificial tie the long straggling row of British provinces, which nature has separated by well-nigh impassable barriers. The actual result has been the direct opposite of that which was intended. Nature has proved too powerful for her adversaries. The immense sums expended on these works, in conjunction with the other constantly increasing outlays of the Confederation, have burdened the Dominion with an oppressive load of debt, requiring a large increase of taxes. These imposts and the ill-managed efforts made to keep together the incongruous elements of this ill-assorted confederacy, partly by bribery and partly by force, have created widespread discontent. There have been already two rebellions; and a third, growing directly out of an attempt to maintain in Manitoba the Pacific Railway monopoly, has only been prevented by an ignominious surrender of the Federal authorities. An agitation in favor of "commercial union" with the United States has already assumed large proportions, and seems likely to break up the old parties in the Dominion and to bring about results which will astonish our author and his fellow-imperialists. No one who reads their publications, including Mr. Cumberland's book, can deny that their sentiments are natural and respectable. But they fail to take into account the great secular forces which determine the history of nations, and which must make the permanent separation of two countries in the condition of Canada and the United States simply impossible.

RECENT TEXT-BOOKS OF ENGLISH HISTORY.

The English Parliament, in its Transformations through a Thousand Years. By Dr. Rudolph Gneist, author of 'The History of the English Constitution,' Professor of Law at the University of Berlin. Translated by R. J. Shee of the Inner Temple. Boston: Little, Brown & Co. 8vo, pp. 380.

England under the Angevin Kings. By Kate Norgate. With maps and plans. Macmillan & Co. 2 vols. 1887.

The Early Tudors.—Henry VII., Henry VIII. By Rev. C. E. Moberly, M.A. With maps and plans. [Epochs of Modern History.] Charles Scribner's Sons. 1887.

We fear that Dr. Gneist's work will not add much to his high reputation: not from any fault on his part, but because of the exceeding badness of the translation, which is bald and literal in the highest degree, often obscure, and always inelegant. Commas abound to excess, oftener serving to puzzle than to help the reader. The translator is very fond of hyphens, too, as in such words as tran-substantiation, war-like, land-lord. A specimen of his confused and obscure style is the following (p. 30): "Of how much great personal qualities were, in such a position, capable to effect for land and people alike is manifest," etc. The book is consequently slow and hard reading.

It would, we suppose, be slow and hard reading in the best translation, by reason of its great condensation. It is in one sense a supplement to the author's 'History of the English Constitution,' published last year in a translation which contrasts very favorably with this in lucidity and elegance. But a considerable part of it covers the same ground, and, being very much abbreviated, is not nearly so easy to understand as the larger work. Take, for example, the important chapter on the Curia Regis, which is to all intents and purposes an abridgment of the corresponding portion of the larger work, and an abridgment which it is not easy fully to understand without the assistance of the more complete treatise. The history of the Parliament stands in such close connection with that of all other branches of the subject that, if it were not for this hardness of style, this would be for many reasons the best text-book for the history of the English Constitution, of which no other writer of equal eminence has given us a complete and continuous history.

These writings of Prof. Gneist's are especially acceptable at this time, because the controlling idea which runs through all his study of the English Constitution is that of the institutions of self-government; and these institutions are just now the subject of special interest and exhaustive study. It was with this branch of the subject that he commenced his labors, afterwards following up his 'History of Self-Government' with a 'History of English Administration'—an equally important and suggestive aspect. It is in relation to self-government that the book before us

possesses its chief value, especially to us Americans. Prof. Gneist is of opinion that a serious crisis is impending in the English Government—a crisis which he feels confident that the English institutions will pass through triumphantly, but which derives its most threatening features from a departure from the inherited principles of self-government. Now, the American people have retained these institutions of local self-government, which they brought with them in the seventeenth century, in a far higher degree of vigor and integrity than the mother country has done. This is the case, we believe, through the entire North, although in varying degree in the different States. But unquestionably the influences which have so largely interfered with local self-government in England are at work here also: and it is to be hoped that American students of the subject will give careful attention to the writings of a man who not only has subjected the topic to the most profound analysis as a piece of political science, but also sees most clearly the unfavorable tendencies in their working.

Chapter viii, "The Parliaments of the Nineteenth Century down to the Second Reform Bill (1867)," begins with the significant words: "In the ancient world an aristocratic constitution, such as existed in England at the beginning of the nineteenth century, in all its exclusiveness, would have ended in reducing the lower classes to slavery. It is a splendid testimony to the power of Christianity and of this nationality, but especially as concerns the ruling class in England, that from amid such a condition of things English society has entered upon an era of social reform and reform bills." The writer then proceeds to discuss the measures of this period under the three heads of Social, Administrative, and Political reforms. In the two first departments the reforms have been rapid and far-reaching; it is in the third field that he sees danger: "Only in the sphere of *political reforms*, that is, in the organization of the communal bodies and the further development of the parliamentary constitution, attempts at a new order of things appear as failures" (p. 348). With the ecclesiastical reforms, the repeal of the exclusive privileges of the national church, he does not sympathize: "The negative result remains, that the equality of right and the intimate union of each contending church breaks up the uniform basis of the parliamentary constitution, and introduces doctrinal sections into Parliament side by side with parties political" (p. 351). This is a point that has no direct interest for a nation which never had an established church.

The next subject considered is the dissolution of the communal system. The "lowest substratum of the parliamentary constitution [the parish, corresponding to our town] had become such a decisive foundation of the *Communitates*, through the offices of constable, churchwarden, overseer of the poor, and inspector of highways, and through the vigorous development of the communal taxation system, that in the compact system of parishes and in its intimate connection with the office of justice of the peace the true power of resistance on the part of the *Communitates*, in the great constitutional struggles, was to be found. Not without fault of the ruling classes did the local officials of the *communæ*, in the course of the eighteenth century, dwindle from their original significance" (p. 352). The attempt at reform under this head was through the creation of "Boards." "The improvement in the care of the poor and surveying the highways and sanitary inspection—the whole range of social reforms—did, it is true, require not only taxes, but a wider *individual* activity for the multifarious duties of the parish. But henceforth there is no longer, amid the whirl of party strife, any further thought of these personal duties (which are not yet out of mind in German communal life). The sinking into decay of the small parochial offices only brought as a consequence that the significance of the personal honorary office became, in this regard, entirely underrated in England." "The perilous step of *setting aside all personal duty and responsibility*, in the communal body, has destroyed the whole structure, and this change, little noticeable at first, involves consequences further-reaching for England than would the abolition of the general duty to serve in the army for Germany"; the first result being "the virtual withdrawal of the well-to-do and educated classes from local communal life, and a final interweaving of the administration by a still further-spreading system of ministerial commissaries and ministerial orders."

It is a pity that the translator has retained the clumsy German practice of putting the notes at the end of the chapter (without any reference to their page), instead of the more convenient method of foot-notes, adopted in the 'History of the English Constitution.' On page 116 we find Henry IV. for Henry III., and on page 129, Edward III. for Edward I.

Miss Norgate's history was undertaken under the inspiration of the historian Green. It is dedicated to his memory, and although "of the book in its finished state he never saw a page," the labor of eleven years has been done largely with his counsel and criticism, and always in his spirit. She refers to him with constant affection as her "dear master," and we are almost authorized to regard her work as a continuation of his, which was so sadly interrupted.

Neither is the execution of her task unworthy of her model. She possesses much of Mr. Green's graphic power in narration, as well as his remarkable insight into the relations of events with one another; and she resembles him in her practice of grouping and arranging events, not by the artificial limits of royal reigns, but by the successions and transitions in larger and more profound relations. We must say that we have always thought that Mr. Green carried this last practice to an excess, so that, however clear his arrangement may be in a continuous reading of his book, it has been a stumbling-block when one has wished to search for any particular event. So with the book before us. The first chapter describes England under Henry I. The reign of Henry II. begins in chapter ix, under the title "Henry and England, 1154-1157." But the author has taken great pains in the seven intervening chapters not to devote any whole chapter or chapters to the intervening reign of Stephen, and even to avoid in their headings giving any clue to the dates of his reign. Chap. v is "Geoffrey Plantagenet and Stephen of Blois, 1128-1139"; chap. vi, "England and the Barons, 1139-1147"; Stephen's reign extended from 1135 to 1154, and, so far as the table of contents is concerned, there is no recognition of the last seven years of his reign except for ecclesiastical concerns. This we must call running a theory into the ground.

The book begins, as we have seen, with a sketch of the reign of Henry I., followed by a series of chapters upon English affairs and the French provinces, so that the time of the Angevin Kings of England is not reached until near the end of the first volume. On the other hand, the word "Angevin" is taken as meaning not the family, but the possessions; that is, the Kings ceased to be Angevin when they ceased to rule Anjou. The book ends, therefore, with the loss of the French provinces in 1206, and a closing chapter, chap. x of volume ii, is devoted to "The New England."

The character and career of Becket, and his quarrel with Henry II., are discussed with great discrimination, and the view here presented has much to recommend it. It is wholly favorable to Becket's honesty of purpose; and, as depicted in these pages, he appears an heroic personage, but somewhat vacillating and lacking in foresight. This is no doubt the estimate which has been gaining ground, as against the severe verdict passed upon him heretofore by Protestant writers. But we confess we incline more to Bishop Stubbs's calm judgment ('Early Plantagenets,' p. 68), as in his last years exhibiting "a morbid craving after the honors of martyrdom, a confessorship at the least, a crafty policy for embroiling Henry with his many enemies, combined with a plausible allegation that it is all for his good and that of the Church." So sudden a change as his in manner of life and in public policy is not in itself inconsistent with sincerity, but all the circumstances are against it. He had been for years the King's bosom friend and confidential adviser. It is not possible that he did not know the King's plans of reform; it is hardly possible that he did not support them, wholly impossible that he did not give the King reason to believe that he agreed with him and would support him. In the first year of Henry's reign he had advised the imposition of scutage upon the ecclesiastical lands, against Archbishop Theobald's vehement opposition. Even his assurance to Henry that he as Archbishop must oppose him in his plans concerning the Church, proves two things against him: that he knew these plans, and that he had been theretofore so completely identified with them, that Henry *could not believe him when he asserted that he should oppose them*. On no other theory can we explain Henry's intention to appoint him Archbishop, and especially his insisting upon it, in spite of Becket's opposition.

From this moment he saw things with new eyes. Because he had learned things that he did not know before? No, it was his class relations and class interests only that had changed. All society in the middle ages was based upon class distinctions; they formed the basis, not only of social relations, but of the parliamentary organization throughout Europe. The thing that Henry had overlooked—just as Frederick II. overlooked it when he transformed Sinibaldo de' Fieschi into Pope Innocent IV.—was that he was not merely giving Becket a new and higher office, but that he was transferring him from the feudal class to the ecclesiastical class, and thus fundamentally changing his relations to society and to all public questions. The need of reform was as imperative as ever; but now it came into collision with the new Archbishop's class interests, and he became its bitter opponent. His action may therefore have been conscientious, but it was that of a narrow *class conscience*—not proceeding upon a judgment of right and wrong, or what was for the good of society, but what was for the interest of himself and his order. In this point of view we are not called upon to condemn Becket severely, but we cannot regard him as a man of a high order of greatness, or as in any true sense a sacrifice to his sense of right. He could not rise above the narrow interests of his order; if he was a martyr at all, it was not to religion, but to his order.

The details of the book are thorough and scholarly, and the statements are supported by a mass of references, which in many cases we wish were citations. For example (vol. ii, p. 15), the explanation given of Becket's first quarrel with the King, as being a constitutional resistance to arbitrary exaction, is interesting and plausible; but we can find no clear authority for it. In regard to the condemnation of John after the death of Arthur, we are surprised to find no mention of M. Bémont's article in the *Revue Historique*, which seems to prove that this was a mistake (see the *Nation*, No. 1122). If M. Bémont is wrong, it ought to be shown.

Mr. Moberly has produced a work which, by

its thoroughness of preparation, soberness of judgment, and interesting style, is well worthy of a place in its series. The reigns of the first two Tudors do not possess any such marked unity and individuality as to qualify them especially for being selected as an "epoch." But the period, from the point of view of European history, is especially interesting as being that of transition from the mediæval to the modern dynastic system. That series of international events which introduced the great wars for the balance of power, as well as that series of moral and intellectual events which were the true beginning of modern history, all fell in these two reigns. The period is divisible into two quite independent ones, the line being, one might almost say, the moment when Anne Boleyn captured the heart of the susceptible King. From this moment the history of England was changed; all the worst elements of the King's character came to the front, and his policy and purpose were made new.

This is not to say that, because Henry became a worse man, his policy was necessarily worse for his country. His motives were one thing, the work he wrought was another. Whatever his shortcomings, intellectually and morally, there was one quality which distinguished Henry and his daughter Elizabeth perhaps more than any other English sovereigns—*tact*: the capacity of seeing what the people needed, what they desired, and how far it was safe to reckon upon their compliance. Still less, therefore, would we say that this new policy was the work of the King alone and his selfish and sensual passions. It is hardly possible that England should not have followed the same path with the other northern nations, even if her King had not forced her into it.

Mr. Moberly's judgment of Henry VIII. appears to be intermediate between the high estimate of his intellect and his masterful character expressed by Bishop Stubbs, and the exceedingly low estimate placed upon them by Mr. Friedmann. The judgment passed upon him in the closing paragraph of the book is temperate, and, we should think, just. It is only fair to remember that he was always popular with his subjects as a whole, and that, if he had died after a reign of twenty years, he would have come down to us with a reputation certainly not as a bad King.

The history of the fifteenth century, the last reigns of the Plantagenets and the succession of the Tudors, depends more than that of any other period of English history upon questions of title. Mr. Moberly regards the title of Henry VII. to represent the line of Lancaster as sound, for the reason (p. 15) that the words *excepta dignitate regia* were omitted from the authoritative copy of the act legitimating the family of Beaufort. In regard to Henry IV., he speaks (p. 10) of his "defective title." But—apart from the fact that the hereditary rule of succession was far from being fully defined in this age—it is plain that the title of the house of Lancaster was fully as good as that of the house of Hanover. Neither was worth a straw according to the strict rule of hereditary succession; both alike rested on the will of the people, as expressed by Parliament—in each case a transfer of dynasty having taken place in order to put an end to gross misgovernment. In 1399 it was well agreed that the arbitrary and vacillating rule of Richard II. must come to an end, and it would have been an act of folly to give the throne to the child, Edmund Mortimer. At such a crisis in earlier times there was no question what should be done—the mature Edred was chosen King instead of the infant Edgar. There was no such formal decision in the present case; but when Henry seized the power, as being the one man of the royal family who was able to exercise it, the nation acquiesced.

In 1455 there came a similar crisis, and again the nation decided for the strong man, against the incapable King. But not so wisely in the results. As Mr. Moberly shows (p. 12), the house of York set aside the constitutional limitations of royal power which the Lancastrian kings had recognized, and a régime of arbitrary and tyrannical rule ensued, which was interrupted by the retransfer of the crown to a branch of the house of Lancaster, and again because the nation was tired of misgovernment. It is true the Tudor kings were as absolute as Edward IV.; but their authority rested on that of Parliament, and Parliament, under their rule, continued to be an integral part of the machinery of government.

We find on page 7 the statement that Charles the Bold "was on the point of excluding France from all communication with the rest of Europe except through his States, by seizing the Provençal dominions of René of Anjou"—a curiously incorrect statement. How could the possession of the *Provençal* territories cut off France from any part of Europe? It was not Provence but Lorraine that Charles seized; and the possession of Lorraine, forming a connecting link between his Burgundian and Netherland possessions, did block up the communication between France and the *north* of Europe. Moreover, this was not the possession of René of Anjou at this time—he had ceased for a number of years to govern Lorraine (which belonged to his wife), and this province was now the property of his grandson, René II. of Lorraine, ancestor of the Guises and Lorraines of the sixteenth century.

Shores and Alps of Alaska. By H. W. Seton Karr. Chicago: A. C. McClurg & Co. 1887. 8vo, xvi, 248 pp. Maps and illustrations.

THIS volume is as far as possible from containing the record of a properly trained explorer in a new field, the investigation of a scientific geographer, or the enthusiastic tale of an ardent sportsman. Yet all three may find some grains of wheat scattered through the chaffy chronicle of the Author (with a large A), his doings and opinions.

Lieut. Karr crossed the continent by the Canadian Pacific, and took the Alaska steamer at Victoria. The chapter in which he describes some of the chief features of interest along the new railway is not uninteresting, and is enlivened with several effective, if somewhat exaggerated, illustrations of bits of scenery. His journey to Sitka is remarkable only for the fact that he met and joined the New York *Times* expedition under Schwatka, with a view of scaling Mt. St. Elias. The incidents of that excursion have been too fully set forth in the daily papers to need recapitulation. So far as this book is concerned, the expedition is viewed in the light of the action and reaction between the author and his environment, and not as an organic whole. It may be noted that the position of the peak of St. Elias has been well determined by the United States Coast Survey to be in latitude 60° 20¾′, with a limit of error probably less than one mile. Although this expedition had no instrument of precision more efficient than a prismatic compass, which is occasionally referred to with a kind of awe, by making a wholly unwarrantable assumption as to the position of the landing-place, the mountain on the map of the expedition's route (p. 86) has been placed about sixteen and a half geographical miles too far north and several miles too far east. For the purposes of the narrative this does not much matter, but it is only fair that map-makers should be warned of the discrepancy.

After returning to Yakutat, Lieut. Karr left the Schwatka party and took passage on a small trading vessel for Kaiak Island, with the view of reaching Nuchek, and eventually Kadiak Island. Although the supposition of the author (p. 7) that he was the first explorer in the footsteps of Cook "to make the circuit of the coast northward from Cape Spencer, or the canoe journey from Kaiak to Prince William Sound," is ludicrously inaccurate, yet, as those who have preceded him have published little or nothing on their observations, this journey was really the grand opportunity of Lieut. Karr's whole voyage. Unfortunately he gives comparatively little information useful to geographers or ethnologists, though the prismatic compass might well have been brought into service. Still, what little in the way of observation and illustration he does give, is the most valuable part of the book. After his arrival at Nuchek, some time was passed there, and chapter x is devoted to the diary of John Bremner, a prospector who spent a winter on the Atna or Copper River. This is chiefly remarkable for its bad spelling and the absence of any really valuable information notwithstanding its length. Though the people of that region are the least known of Alaskan tribes, and any trustworthy data in regard to them would have been invaluable, this diary is as empty of facts worth noting as is possible to conceive. After some delay the author reached Kadiak, and soon after sailed for San Francisco, witnessing meanwhile the shocking murder of the Alaska Company's agent at St. Paul by a Russian maniac.

In minor matters there is much inaccuracy. Names of places are generally misspelled. Sir Thomas Hesketh's yacht, *Lancashire Witch*, which explored Cook's Inlet in 1880, is referred to as the *Paladine*. With regard to previous explorations of the region visited, the author preserves a pretty consistent silence. Nevertheless, those who have paid little attention to the subject of Alaska will find the book not without interest. It has a good index, and the publishers have done their part well.

Cucumber Chronicles. A Book to be taken in Slices. By J. Ashby-Sterry. Scribner & Welford. 1887.

THIS collection of light sketches is an English summer book of an agreeable literary and outdoor flavor. Dickens and Thackeray, with a touch of Hogarth, are the *belles-lettres* ingredient, and the rambling inn, the seashore resort, and walks across country afford the nature-tonic. It must be acknowledged that much of the writer's thought is as frivolous as one can well endure even to pass the time, and sometimes his sentiment has the lightness of thistledown, with but a modicum of its grace. But for all that there are three or four papers worth liking for the half-hour they will live in the interest and memory of the hammock-lounger. "Tubbleton's" is as frowsy and stuffy a bit of Dickens's London as one would pick up in a twelvemonth outside of the novelist's own broad acre of our literature; the "Christmas Visitors" on the train—the old Admiral, his very girlish daughters eagerly scanning the platform for "Snackleton" and "Charlie," home from Egypt with his arm in a sling—make a party so natural and charming that one regrets breaking off their acquaintance; and the "Haunted Precinct" is a capital Temple reverie from a literary bachelor. But when this is said, though it would perhaps be too much to say that all is said, yet we must leave the indolent reader to seek for the plums himself in the rest of the volume, or for whatever special delicacy a slice of cucumber may have for his palate. We observe only that nothing in the book suggests that cold, unripe, and indigestible

thing, and that in the sauce of the author there is nothing acid or hot, neither pepper nor vinegar. The only analogy between these pleasant essays and that singularly heavy and ungraceful fruit is probably that the author is fond of both.

BOOKS OF THE WEEK.

Abbott, Dr. C. C. A Naturalist's Rambles about Home. 2d ed., revised. D. Appleton & Co. $1.50.
A Modern Circe. Philadelphia: J. B. Lippincott Co. 50 cents. New York: Geo. Munro. 20 cents.
Autobiography of Samuel D. Gross, M. D. Edited by his Sons. 2 vols. Philadelphia: George Barrie.
Barrows, C. M. Facts and Fictions of Mental Healing. Boston: B. H. Carter & Karrick.
Bottomley, J. T. Four-Figure Mathematical Tables. Macmillan & Co. 70 cents.
Bary, Prof. A. de. Comparative Morphology and Biology of the Fungi Mycetozoa and Bacteria. Oxford: The Clarendon Press; New York: Macmillan & Co. $5.50.
Chauvenet's Treatise on Elementary Geometry, revised by Prof. W. E. Byerly. Philadelphia: J. B. Lippincott Co. $1.20.
Cohen, J. B. The Owens College Course of Practical Organic Chemistry. Macmillan & Co. 70 cents.
Cotterill, H. B. Schiller's Wallenstein's Lager. Macmillan & Co. 50 cents.
Dettmann, F. O. Complete Text-book of Phono-Stenography. F. O. Dettmann. $2.
Fasnacht, G. E. Schiller's Wilhelm Tell. Macmillan & Co. 60 cents.
Franklin, B. Complete Works. Edited by John Bigelow. G. P. Putnam's Sons. $5.
Grasset, E. La Guerre de Sécession. 2e partie. Les Hommes. Paris: L. Baudoin & Cie.; New York: Christern.
Gulley, Prof. F. A. First Lessons in Agriculture. Starkville, Miss.: F. A. Gulley. 75 cents.
Hall, H. S., and Knight, S. R. Higher Algebra. Macmillan & Co. $1.90.
Kirk, Eleanor. Beecher as a Humorist. Fords, Howard & Hulbert. $1.
Kunhardt, C. P. Steam Yachts and Launches: their Machinery and Management. *Forest and Stream* Publishing Co.
Lubbock, Sir J. The Pleasures of Life. D. Appleton & Co.
Lyall, Edna. The Autobiography of a Slander. D. Appleton & Co. 25 cents.
Lytton, Sir E. B. Poems and Ballads of Schiller. Frederick Warne & Co. $1.
Macdonald, G. God's Words to His Children: Sermons. Funk & Wagnalls. $1.50.
Macmillan, Prof. M. Milton's Paradise Lost. Books I., II. Macmillan & Co. 60 cents.
McKay, G. G. Elements of Scientific and Practical Agriculture. Baltimore.
Morris, C. The Detective's Crime. Rand, McNally & Co. 25 cents.
Murray, C. A. The Prairie-Bird: A Novel. Frederick Warne & Co. $1.
Peard, Frances M. Scapegrace Dick. Thos. Whittaker. $1.05.
Philadelphia and its Environs. New ed. J. B. Lippincott Co. 50 cents.
Phillips's Elite Directory. W. Phillips & Co. $6.
Piatt, Mrs. S. M. B. Child's-World Ballads. Cincinnati: Robert Clarke & Co. $1.
Poor's Directory of Railroad Officials. 1887. New York, 70 Wall Street. $2.
Rand, E. A. Fighting the Sea: or, Winter at the Life-Saving Station. Thos. Whittaker. $1.25.
Robertson, F. W. In Bad Hands, and Other Stories. Harper & Brothers. 20 cents.
Robertson, W. Pocahontas and her Descendants. Richmond: J. W. Randolph & English. $1.50.
Sachs, J. von. Lectures on the Physiology of Plants. Oxford: The Clarendon Press; New York: Macmillan & Co. $8.

THIRD EDITION.

"A WEEK AWAY FROM TIME is an interesting social mystery. Each story except one was written by different women prominent in Boston, and the other, so it is whispered, was imagined by a man. The narrative mentions the single story as if it were the thought of a male mind, but a privileged glimpse into the secret of the volume's construction explains that it is woman's finely wrought and really noble production. The round of papers, seven in all, are threaded together by still another feminine social leader, who makes its conversations charming, and here and there she is brilliant. There is a high-bred air about even the mechanical part of the product. Its dainty cover has a woman's illustration which no one can study without being convinced that the pencil which created it has an unusual sum of reserved artistic talent that the world greedily craves a sight of. A most delightful series of papers, a prelude to which, in musical double quotation, was written by one of Boston's cleverest and sweetest gentlewomen," says the *New York Home Journal*. Price, $1.25. ROBERTS BROTHERS, Publishers, Boston.

TO LET, FURNISHED, FOR SIX months or more—A Queen Anne house, with Studio attached, with good top light; dining-room, drawing-room, and library; 5 bedrooms; 2 dressing-rooms; bath-room, with hot and cold water; lavatories, and very complete servants' offices and housekeeper's room, and small garden; the house quite recently furnished; 3 minutes from West Kensington underground station. Terms, five guineas a week. Apply W. J. STILLMAN, 3 Challoner St., Baron's Court, S. W., London.

The Nation.

NEW YORK, THURSDAY, AUGUST 25, 1887.

The Week.

THE resolutions adopted by the Henry George party at Syracuse were tolerably familiar before the Convention gave them the character of a State platform. After the platform reported by the regular Committee had been adopted, a lot of trimmings were added, some of them congruous and others incongruous, some valuable and others merely amusing. In this matter the United Labor party merely follow in the wake of the old parties, which, in proportion to the dimness of old distinctive issues, show a kind of feverish industry in manufacturing new ones. The United Laborers, in addition to their main task of getting a living out of other people's land, favor the improvement of the Erie Canal; an eight-hour law for letter-carriers; schooling for children to their sixteenth year; the establishment of free public libraries; a State printing-office (in order to kill the "rat" office of Weed, Parsons & Co.); the prohibition of private armed forces to protect "scab" laborers; the prohibition of public appropriations of money for schools "or charitable or other institutions unless they are under State control"; the adoption and enforcement of proper forestry laws; woman suffrage; the suppression of Gov. Hill's cohort of factory inspectors, arbitrators, and statisticians, who are stigmatized as "a flagrant abuse"; and, finally, the suppression of "the baleful system of landlordism in Ireland"—this last being a ground of sympathy rather than of action.

The regular platform was also somewhat variegated, demanding the public control of such agencies as are in their nature monopolies, and the public supply of water, light, and heat, and also of money, a postal-telegraph system, postal savings banks, and public ownership of railroads. The "Australian system of voting" receives the honor of an endorsement, and the resolution favoring it seems to have excited more enthusiasm than anything else in the whole platform. Very few people know what the Australian system of voting is. The description given of it in the platform coincides so nearly with the present English Election Law that we presume the latter is the system referred to. The Australian system, however, sounds better than the English system to republican ears, and especially to those of Irish descent. It is agreeable to notice that the United Laborers are not behind either of the old parties in their attachment to equal rights and justice to the humblest citizen, and in their opposition to corrupt legislation and to monopolies of every kind. The resolution against Socialistic production and distribution is explicit, and is emphasized by the nomination of Mr. George for the chief place on the ticket. Mr. George protested that he did not want the nomination, and in this he was evidently sincere. But it was fitting that he should be nominated, in order to show how far the movement that began in the city last fall has extended into the State.

The United Labor party is entitled to some applause for rejecting, in a summary and contemptuous manner, the overtures of the tramps who met at Rochester a week or two ago under the style and title of the Union Labor party. The communication of the latter so-called party was returned to its owners with a very curt answer, but accompanied by many individual expressions of opinion as to the character of the senders, such as "strikers," "pirates," "stool-pigeons," and other short descriptive lists which would be promptly recognized by any mustering officer or examiner of passports in any part of the world. That the Rochester Union Laborers are somebody's decoy ducks, and that the money for their travelling expenses and board bills has been paid by some other organization, is as plain, on the face of things, as it was that the Butler party of 1884 was so equipped and provisioned.

The solemnity with which the *Tribune* comes to the support of the Henry George Labor ticket is very moving. What most commands its admiration about Mr. George is his "earnestness," and upon this point the following noble sentiment is emitted: "Wherever there is a political party that does not profoundly believe in anything, and is not desperately in earnest about anything except the effort to get office, that party is dead at the roots and ready for defeat." Now, if there is anything which Mr. George has been "desperately in earnest" about, it is the doctrine of free trade. He has not only written a book on the subject in which the protective system is ably and effectively assailed, but he has heretofore, in his public utterances, denounced protection as a fraud upon the workingmen. In a letter written to a Connecticut friend in October, 1886, he said: "I am a free-trader, pure and absolute, and regard protection as a fraud on workingmen. . . . I would do anything I could to show the workers how they are humbugged by a tariff which, while protecting favored capitalists and landowners, leaves them free to grind the faces of their employees." In his Syracuse platform this same Henry George, who is the laboring man's foremost disciple and candidate, leaves out all mention of free trade or protection, thus wantonly abandoning the issue which he has hitherto declared to be of the utmost importance to the workingman; and the *Tribune* says "it was wise in Mr. George to leave out of his platform the free-trade theory which he has personally advocated," and in the next breath speaks of Mr. George as a man whose "honest beliefs are pressed with the earnestness of religious conviction."

Why did Mr. George leave his free-trade principles out of his platform? The composition of his ticket will possibly throw some light upon this question, as well as help to explain the deep fervor of the *Tribune's* interest in the George party. Victor A. Wilder of Brooklyn, the candidate for Comptroller, was a Butler man in the campaign of 1884, but, when election day arrived, he voted for Blaine as the most direct way of defeating Cleveland, whom he regarded as "an enemy of Labor." P. H. Cummings of Amsterdam, the candidate for State Treasurer, was also a Butler man in 1884. Denis C. Feeley of Rochester, the candidate for Attorney-General, was a prominent Blaine Irishman in 1884, and stumped the State for Blaine. Like Wilder and Cummings, Feeley has not the shadow of a qualification for public office, and, aside from their usefulness as assistant Blaine Democrats, all three of them have no reason for being made candidates. Now, when Henry George joins such a combination as this, and, in joining it, drops the very principle which he has heretofore regarded as of the highest importance to the welfare of the laboring classes; when the chief organ of Blaineism is so impressed with the beauty of the combination that it not only praises George's sincerity, but commends the whole ticket by saying "it will be as well to accept these candidates as personally worthy and proper," what does it all mean?

The pension plank of the Pennsylvania Republican platform is perceptibly milder than that of the Ohio Republicans, and gives indications of the restraining influence of public sentiment. The Ohio Republicans came out boldly for liberal pensions, practically without limit, declaring:

> "We demand of Congress that it pass, and of the President that he approve, liberal enactments pensioning the soldiers of the country, that the helpless widows of dead soldiers, regardless of the cause of death, dependent parents, and disabled soldiers shall receive the bounty of the nation they fought to save, and which they richly deserve."

The Pennsylvania platform draws the line as follows:

> "The soldiers of the Union are worthy of the lasting gratitude and continued favor of a restored Government; and the surplus in the Treasury cannot better be distributed than in the enlargement of the general pension list so as to include all honorably discharged soldiers of the Union Army who may be in absolute need of public aid."

The progress of "bond" selling to the Government shows very clearly that the Secretary of the Treasury holds the whip hand, and that he does not intend to relax it. A fortnight ago he bought $260,000 of bonds at 110. A week ago he bought $2,500,000 at 109.44. No bondholder can be blamed for getting the best price possible. That is his right. On the other hand, the Secretary would not be warranted in paying more than the conditions of a normal market, uninfluenced by his purchases, would justify. The price paid on the 17th inst. was clearly within those limits.

In the address which he has issued in the name of the Republican party of Virginia, ex-Senator Mahone dwells at great length upon what he is pleased to call the "debt settlement," saying that until it was brought about by the Republicans under his guidance the Democrats opposed it, but that when it was accomplished they accepted it, and agreed that the debt question was settled for ever. He says that the Democrats re-

gained power under a solemn pledge not to disturb the debt, and adds: "How the Democrats have redeemed that pledge, let the record of the present condition of the debt question speak. From the moment the Democratic managers were restored to the control of State affairs, the settlement has languished." Now, what was Mahone's "settlement"? Briefly summarized, it was, first, repudiation of one-third of the entire debt on account of the separation of West Virginia—about $15,000,000; second, repudiation outright of nearly one-half the interest on the remaining two-thirds—about $900,000; third, repudiation of more than one-third of the remaining principal and one-half the interest, reducing the debt at one stroke from $30,000,000 to $19,000,000, and the interest from 6 per cent. to 3. When he says that since the Democratic accession to power the "settlement has languished," we presume he means that they have been very weak in not repudiating the remainder of the debt and thus "settling" the whole of it for ever.

The Jeffersonian Democracy of Massachusetts received some elementary and valuable instruction on the subject of official responsibility from Mr. Saltonstall, the Collector at Boston, on Monday. A select committee of them, representing the Democratic State Committee, called upon the Collector at his office to convey to him the information that there was much dissatisfaction in the party because of his conduct in allowing so many Republicans to continue to hold office in the Custom-house. They begged to assure him not only of their personal esteem as a man, but also as an officer under a Democratic national Administration, and they wished to have him consider whatever they should say as coming not from themselves personally, but from the Democratic State Committee. Mr. Saltonstall then asked them what they wished, and the reply was: "We have come here to go over the list of your subordinates with you, and find out how many of them are Republicans, and why they are retained in office." To this modest request the Collector replied:

"I had some notice of your coming, and have made some little preparation for the event. Gentlemen, my reply is that if you are here as a committee of the Democratic party, or of any other party, I must positively refuse to grant your request. I am only responsible to the President of the United States and to the Secretary of the Treasury, and I can give no account of my administration of this office to any one else. If you come to me as private gentlemen, only interested in the welfare and good of the public service, that is another thing, and in your personal capacity it will afford me the greatest pleasure to give you any information in my power."

The Committee received this information in silent amazement, and the Collector went quietly on to tell them that it was true that there were a large number of Republican officials under him, but that he governed his action in regard to them by the President's letter, which was his only guide, adding: "I have determined in this matter to take no orders from any one except the President and Secretary of the Treasury. I am very sorry, gentlemen, that I cannot please you in this instance, but I must refuse to answer the questions which your Committee desires to ask, or to show you the list of my subordinates. Anything else that I can do for you personally I shall only be glad to do." The Committee arose, shook hands solemnly with the Collector, and withdrew. It is reported that one of them remarked that "it was a very cold day," but none of them was able upon the spur of the moment to dispute the soundness of the Collector's position.

Authoritative Democratic reports from Massachusetts are to the effect that the State will send a solid Cleveland delegation to the next Democratic National Convention, and that it is upon the record of the Cleveland Administration that the party will base its hopes of carrying the State at the election in November. We presume that there is not another New England State from which inquiry would fail to bring similar reports. The South is known to be in the same frame of mind, and we have yet to hear of a Western State which is likely to select an anti-Cleveland delegation next year. Where, then, is the influence of the anti-Cleveland press exerted? Its utterances are quoted nowhere save in the Blaine papers.

The "anti-saloon Republicans" in Massachusetts, in their recent appeal to Prohibitionists of Republican antecedents, urged that the resolution submitting a prohibition amendment would have been carried in the Legislature if in several districts the Prohibitionists had not run candidates of their own, thus defeating Republicans who would have supported the amendment. But this sort of talk does not fool the Prohibitionists. As Mr. William H. Earle of Worcester says: "I don't see how any sound man who watched the proceedings in the State Legislature could candidly say that the third party defeated the prohibitory-amendment resolution. Everybody, even confirmed Republicans, must know that the Senate and House played foot-ball with the amendment all winter, and that when it came to a vote, members were conveniently absent. At the next vote the former absentees were on hand, but other members were absent. There never was any intention of passing the resolution. If we had sent a dozen more Republicans, it would have made no difference in the result. Enough Republicans who voted for the resolution would have voted against it to preserve the balance and defeat the prohibitory amendment."

The New Haven *Register*, one of the most prominent and influential Democratic newspapers in Connecticut, continues to denounce Higgins and demand his removal. A Republican contemporary having inquired whether, in not relieving Mr. Higgins of his official duties and pointing out to him the open path to private life, President Cleveland is acting for the best interests of civil-service reform, the *Register* replies: "To be frank with you, neighbor, we think the President is making a great mistake in retaining this man in office. He is not alone objectionable to the Democrats of the country because of his political character and ways, but his retention in office is a positively disagreeable bit of evidence showing a hesitation on the part of the Administration to redeem *all* its pledges. Our position has been from the first that the President should resolutely redeem all his promises, regardless of the consequences to individuals." The *Register* says that it anticipated the President's course would arouse the ire of the Higgins sort of Democrats, but it also expected the loss of their influence to be made up by the gain of a more trustworthy influence; but it regards the chances of this gain being made now as seriously compromised by the Higgins incident, although it still has faith that Mr. Cleveland will remove him. It proceeds in this plain-spoken fashion: "He certainly should do so if he hopes to retain the friendship of a large class of independent Democrats who see little prospect of permanent Democratic success in a return, or even a partial acknowledgment, of the methods of the past. These men, who are Democrats from principle, have the future of their party in mind, and believe that if it is placed on a foundation of Higginses, it will totter as perceptibly as a house built on the shifting sands."

The *Register's* independence in Connecticut is matched in Florida by that of the Jacksonville *Times-Union*, the leading Democratic newspaper of the State. The mail-service in Florida has been demoralized, and the *Times-Union* says that "the principal reason is that inexperienced, untrained, and incompetent political bummers have in too many instances been substituted for the trained men in the service, on partisan and political grounds." The *Times-Union* exposes one recent notorious instance of this, and says that it is "a disgrace to the Democratic Administration and a reproach to the Democratic party." Proceeding from particulars to generals, the Jacksonville paper says: "We are confident that outside of the circle of professional politicians there are not twenty Democrats in the State of Florida who care a fig whether the work of the mail service is done by clerks and appointees calling themselves Democrats or Republicans." There is not a more hopeful political sign in the country to-day than the independence which is reflected in such utterances as these of the *Times-Union*, and which characterizes a large proportion of the Democratic press.

The Associated Press on August 17 sent out from Washington the figures regarding changes in the post-offices during the fiscal year ending with the 30th of June. With these figures was incorporated a summary of the changes during the fiscal years ending in 1886 and 1885, and the total for the three years. Through ignorance or desire to mislead, the Republican organs have taken this total as representing the changes made since Mr. Cleveland became President, whereas about three-fourths of the appointments for the fiscal year ending in 1885 were made under President Arthur. The true comparison is between the two fiscal years from July 1, 1885, to June 30, 1887, and the corresponding two years under a Republican President. Such a comparison shows that with 44,512 post-offices in

1881, the appointments during the following two years aggregated 24,845, or 55 out of every 100, while with 51,252 offices in 1885, the appointments during the next two years aggregated 35,826, or 70 out of every 100. The difference is very much less than was generally supposed to exist.

It is now two years and a half since Mr. Bayard became Secretary of State. Of the three assistant secretaryships, one was vacant and was filled by the appointment of ex-Gov. Porter of Tennessee; the incumbents of the other two were not changed until the death of John Hunter in 1886 permitted the promotion of the third assistant (who had been in the Washington office for nine years after seven years' service abroad) to the second place, and the simultaneous promotion to the third place of a clerk who had entered the Department under the civil-service rules. The chief clerk, who had held this position for twelve years under Republican Secretaries, is still retained, as are four of the six chiefs of bureau who were in office March 4, 1885, while a fifth is a man who had proved his fitness for the charge of the Diplomatic Bureau by seven years of service as Secretary of Legation at Berlin. There were forty-six clerks in the Department when Mr. Bayard became Secretary. Forty-five of them are still retained, six of them having received promotions during the period. The propriety of a new Administration's making changes in the chief offices of the diplomatic service has been generally recognized, and civil-service reformers were not disposed to criticise the selection of new men as ministers of the United States to foreign countries and as consuls-general to those countries to which ministers are not sent. The secretaryship of legation, on the other hand, is an office so disconnected from the policy of an administration that an efficient man in such a place ought to be retained, and of the twenty-one whom Mr. Bayard found in office nine are still retained, while three secretaryships have been filled by promotion. The consular service ought to be a permanent one. Mr. Bayard has sought to treat each case upon its merits, and has made it his rule to retain every man who appeared to deserve retention. The result is that of 381 consuls in office by Republican appointment March 4, 1885, 109 are still in office under a Democratic Secretary; of 418 vice-consuls, 161 have been retained; of 414 consular agents, 280; and of 13 consular clerks, 6. It must be remembered that deaths and resignations have caused a considerable number of changes in the period.

There is much in this showing to provoke the howls of the spoilsman, but little for any reformer to criticise. Indeed, it is no more than justice to say that since civil-service reform first came to be talked about, it has never been put into application on a large scale more sincerely and effectively than in the Department of State under its present head. It is a great thing to have one department at Washington conducted so absolutely upon the true principle of retention during good behavior, and a still greater to have the system of filling the consular service on the ground of merit put in operation. The gain of such a change is as far-reaching as it is important, for public opinion will hardly permit any future Secretary to reintroduce the spoils system. Mr. Bayard deserves and will receive the hearty thanks of all who believe in putting the civil service on a sound basis.

The manner in which the "Bill to Promote Mendicancy" operates to demoralize a community is illustrated in a most striking way by the recent election in Kentucky. The Republican gains in that election were chiefly in the mountain country in the eastern part of the State, and are attributed to the fact that the Republican party advocated the Blair bill, while the Democrats opposed it. As everybody knows, the scheme of Federal aid to Southern schools was originally proposed, and has always been advocated, upon the express ground that such aid was needed in order properly to educate the blacks. Its supporters have invariably held that it was the presence of the negroes alone which afforded any excuse for the proposition, since the whites, of course, could educate their own children without any outside assistance. Indeed, if there had been any way by which the benefits of the measure could have been confined to those parts of the South where the negroes are massed, the bill would have been framed to apply exclusively to those regions. In the whole South there is no section where the negro element is so small as in the mountain counties of eastern Kentucky. Pike County, for example, has 12,286 whites to only 174 blacks, Johnson 9,052 to 103, Martin 3,025 to 32, and so on. The country is very much the same sort of country, so far as nature is concerned, as the mountain districts of the neighboring State of West Virginia, or the White and Green Mountain towns of New Hampshire and Vermont; and the negro population is so small that it is not to be taken into the account any more in eastern Kentucky than in New England. Yet it is in these counties, with a population almost exclusively white, that the Blair bill, which was devised in the interest of the blacks, is used as a vote-getting machine.

That Federal aid is not needed for the blacks is freshly shown by the speech upon State affairs which Gov. Lowry of Mississippi delivered at Vicksburg last week. Mississippi is one of the three Southern States in which the negro population exceeds the white, the figures for 1880 being 650,291 of the former to 479,398 of the latter, and if the Blair bill were needed for any State, it would be needed for Mississippi. But Gov. Lowry's speech shows again, as the reports of superintendents of education have shown before, that Mississippi is able to educate her children, black as well as white, without turning beggar. "Our common schools," he said, "are in a far better condition than they have been hitherto, and I may safely assert that there is not a boy or girl, white or black, that may not get a fair education by availing themselves of schools convenient to them, for it is the object of the law-making power of the State to so establish the schools that every child can be reached. I may say in this connection, too, that under the system adopted by the present State Superintendent, we have a better class of teachers than heretofore." The Governor reported the higher institutions of learning also in a favorable condition, saying of the one for colored youths: "The Alcorn College for colored boys is prosperous and succeeding admirably. Its President and faculty are working in harmony together, and the trustees, who are composed in the main of the citizens in the vicinity, look after the finances of the institution."

The verdict of the Coroner's jury on the Illinois railway disaster near Chatsworth is as thoroughly unsatisfactory as such verdicts usually are. The jury was composed of men the majority of whom were under various kinds of obligations to the railway company, and they secured a verdict which virtually relieves the company of all responsibility. The section foreman whose duty it was to inspect the portion of the road where the accident occurred, is severely censured for allowing fires to burn within sixteen feet of the bridge, and for not inspecting the track late in the afternoon of the day on which the disaster took place. The jury express the opinion that the bridge was burned before the train struck it, thus relieving the company of all responsibility for running an extraordinarily heavy train with two engines. The censured foreman has been arrested and taken to jail. Upon him is placed the awful burden of the death of eighty-four persons and the injuring of several hundred others.

In an address before the American Bar Association, at Saratoga on Thursday, Mr. Henry Hitchcock of St. Louis spoke at length upon the subject of corporation laws, and dwelt with especial emphasis upon the facilities afforded for corporations to obtain credit beyond their actual resources. He advocated stringent laws requiring the publication by all corporations of all the facts relating to their business, together with their transactions, resources, and liabilities. All this was sound and commendable, but Mr. Hitchcock might have supplemented it with some plain words to his fellow-lawyers about the manner in which they are accustomed to serve corporations. It is a melancholy fact that what the corporations of the present day seek in a lawyer, is not advice about the enactment and enforcement of salutary public laws, but oftener aid and counsel as to the safest ways in which to evade the spirit of existing laws. Not only this, but the lawyers give their services to draft such laws as will enable the corporations to prosper at the expense of the State. We do not say that all lawyers do this, but everybody knows that many of them do, and that the largest fees which are earned in the profession are paid in return for such services. We should like to see our bar associations take hold of this subject and discuss it in all its bearings. That would be the surest way of getting at the defects of our laws in relation to corporations.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 17, to TUESDAY, August 23, 1887, inclusive.]

DOMESTIC.

SECRETARY FAIRCHILD has given instructions for a chief of division in his office to make a thorough investigation of the administration of immigration affairs at the port of New York, to be made particularly with reference to the treatment and care of immigrants and the general business methods employed by the Commissioners of Emigration of the State of New York.

Secretary Whitney has promised that the navy shall be adequately represented at the forthcoming centennial of the ratification of the Constitution at Philadelphia, and that the Navy Department shall be instructed to make practical demonstration of the advance in naval construction and armament in the last one hundred years.

A court-martial has been ordered by Commander Sampson, Superintendent of the Naval Academy at Annapolis, to try a third-class cadet who is accused of hazing a fourth-class cadet.

The United Labor party of New York in convention at Syracuse, August 19, nominated for Secretary of State Henry George of New York; for Comptroller, Victor A. Wilder of Brooklyn; for Treasurer, Patrick H. Cummins of Amsterdam, Montgomery County; for Attorney-General, Dennis H. Feely of Rochester; for State Engineer and Surveyor, Sylvanus H. Sweet of Albany. The Socialistic delegates from this city who made contests for seats in the Convention were not admitted, and recognition was refused to a committee of the Socialistic Union Labor party which recently held a State Convention. The main feature of the platform is the plank favoring Mr. Henry George's theory of State-ownership of land and of railroads, telegraph-lines, and the like.

The Republican Convention of Pennsylvania on August 17 nominated Wm. B. Hart for State Treasurer and Judge Henry Warren Williams for Judge of the Supreme Court. The platform adopted favors a protective tariff, the creation of an American marine by the provision of bounties upon exports and discriminating duties upon imports in American bottoms, and the distribution of the surplus by an extension of the pension lists. A resolution was adopted recommending Mr. Blaine for renomination for the Presidency.

A mass-meeting of anti-prohibition Republicans was held at Des Moines, Iowa, August 19, to nominate independent candidates for the Legislature. About 125 well-known Republicans participated in it, and candidates were nominated on a platform pledging them to support the repeal of prohibition and the enactment of local option and high-license laws. Seven hundred names are signed to the pledge to support these nominees.

The Virginia Republican State Committee, of which Senator Mahone is the dominating spirit, has issued an address in which the Democrats are denounced for their failure to make an agreement with foreign bondholders. Concerning the Democratic desire to have the Treasury reimbursed for the territory granted to the United States by Virginia, and for the loss that was caused by the separation of West Virginia, the address, after pointing out the late Gov. Wise's and Mr. Blaine's mention of this project, says: "If it is ever given effect, it will be in opposition to the narrow views of Federal power entertained by the Democracy, and through the liberal construction contended for by the Republican party."

The last dollar in the general fund of the State Treasury of Indiana was paid out August 19, and no money can be had before next December. In the meantime $200,000 will be needed to pay the current expenses of the State Government and public institutions. The Treasurer has announced that he will call upon the counties to advance funds voluntarily. Work upon State institutions, several of which are now in course of erection, will be suspended.

The Committee of the New Hampshire House of Representatives on National Affairs has reported adversely on a resolution endorsing national aid to education and instructing the New Hampshire delegation in Congress to support Senator Blair's bill providing for it.

The American Bar Association was in session at Saratoga August 18–19. The Committee on Commercial Law made a report, which was adopted, recommending the regulation by a Congressional enactment of inter-State commercial transactions, including the protection of creditors against the unjust preference of other creditors and against the operation of unreasonable exemptions of property from the payment of debts. Mr. Henry Hitchcock of St. Louis delivered the annual address, wherein he made an argument for uniform laws in the States concerning corporations. A resolution was adopted instructing the Committee on Jurisprudence and Law Reform to report at the next meeting whether it be desirable to promote the enactment in the several States of some uniform law (and if so, in what form) to regulate the marriage of their citizens in foreign countries, and the proper authentication and registration of such marriages in this country.

Mr. Adolph Sutro has declared his intention to present a colossal statue of Liberty to the city of San Francisco. The figure will be of stone, and, including the pedestal, will be forty feet high. At the base will crouch a figure representing Anarchy. The statue is to be erected on the summit of one of the hills in the city, overlooking both the Pacific Ocean and the Bay of San Francisco. The electric torches will be 1,000 feet above the level of the sea.

Richard and John Bean, a herdic driver and a hackman in Boston, and their sister, who is the wife of a member of the Springfield Fire Department, are heirs to $10,000,000, left by their uncle, Thomas Bean, who recently died at Bonham, Texas.

A man has been arrested in Arkansas for passing counterfeit silver dollars, and apparatus for making them was found in a dense canebrake five miles from a railway station.

A dinner was given to James M. Trotter, the colored Recorder of Deeds of the District of Columbia, in Boston August 17, by leading colored citizens. Speeches were made full of expressions of political independence.

Travel and traffic are very heavy in southern California. The Central Pacific Road runs its overland passenger trains in two sections on account of the large fruit shipments, which are carried in cars attached to passenger trains, and several new lines to resorts and to fruit-shipping points are under construction.

A company has begun the erection of very large smelting and reduction works at Tacoma, W. T., which are to turn out 400 tons of ore daily.

There has for some time been a fire in one of the shafts of the Calumet and Hecla mine in Michigan. Great quantities of steam and carbonic-acid gas have been injected in vain, and it is feared that it will be months before more copper can be mined.

One of the severest storms of recent years blew along the coast of North Carolina August 20. The apparatus for measuring the velocity of the wind at Kitty Hawk was blown away. Many small craft were injured, and much damage was done to property.

Most of the houses at Republican City, Neb., were blown down or unroofed by a tornado August 18. Two were killed and six others seriously injured.

The Coroner's jury which investigated the cause of the railway accident near Chatsworth, Ill., whereby eighty-four people lost their lives, rendered a verdict which holds Timothy Coughlin, foreman of the section, guilty of neglect, and exonerates the company. The verdict says that the failure to patrol the track for six hours before the train came, and the habit of burning grass near the track are subjects for criticism. The foreman of the jury and some of its members are reported to be under obligations to the railroad company for passes and other favors.

At the Burnham Street crossing of the Naugatuck Railroad in Waterbury, Conn., recently the driver of a funeral coach was killed and a number of persons hurt. There was no gate nor flagman at the crossing. Suits have been brought against the railroad company for $70,000. At the dangerous grade-crossings on the New York division of the New York, New Haven and Hartford Railroad, between Stamford and Bridgeport, nine persons have been killed within a week.

The late Charles Merriam of Springfield, Mass., the publisher of Webster's Dictionary, bequeathed more than $50,000 to missionary societies.

Prof. Spencer F. Baird, head of the Smithsonian Institution and the United States Fish Commission, died at Wood's Holl, Mass., August 19. In 1850 he was elected Assistant Secretary of the Smithsonian Institution, and after the death of Prof. Henry he became its chief officer. In 1871 he was appointed by President Grant United States Commissioner of Fisheries, an office which added to his responsibilities, but not to his compensation. A chronological catalogue of his works, down to 1882, includes more than 1,000 titles. On the same day Alvan Clark, the renowned telescope-lens maker, died at Cambridge, Mass. Charles P. Miller, a well-known young lawyer of this city, and his wife died at New London, Conn., on August 19. Theodore E. Tomlinson and Josiah P. Fitch, two other well-known New York lawyers, are dead. Dr. N. A. Randolph, Professor of Physiology at the University of Pennsylvania, and one of the most prominent practitioners and medical writers in Philadelphia, was drowned while bathing at Atlantic City August 21. At Concord, Mass., August 22, John B. Moore, one of the most prominent pomologists and horticulturists of New England, died; and on the same day Aaron J. Vanderpoel, the well-known lawyer of this city, died suddenly of apoplexy in Paris.

FOREIGN.

Mr. William Henry Smith announced in the House of Commons August 18 that the Government would abandon the Tithe Rent-Charge Bill, the Technical Education Bill, Mr. Goschen's Revenue-Collection Bill, the Irish-Constabulary Bill, and other minor measures. On the report of the Land Bill Mr. Balfour said that the Government accepted the House of Lords' amendment relating to town parks, and his motion to accept it was carried—206 to 164. Mr. Gibson, Attorney-General for Ireland, moved that the House confirm Earl Cadogan's amendment, which provides that the revision of rents be based upon the difference in prices in 1887 as compared with prices from 1881 to 1885. This was opposed by Mr. Parnell and other Irish leaders. A motion to adjourn the debate was defeated, and by the application of closure the Cadogan amendment was adopted—215 to 161. On Mr. Balfour's motion to adopt the remaining Lords' amendments the House disagreed, and a committee was appointed to draw up the reasons for the disagreement.

In the House of Commons, August 18, it was announced that the Government had made an arrangement with the Peninsular and Oriental Steamship Company by which the company would hold three new steamers and seven others ready for use as armed cruisers. For this service the Government pays £3,500 annually.

In the House of Lords on August 19 Lord Salisbury announced that the Government had proclaimed the Irish National League. Four members of the Privy Council and the Lord Lieutenant met at the Castle in Dublin and issued the proclamation, wherein it is declared that "whereas we are satisfied that there exists in Ireland an association known by the name of the Irish National League, and that the said association in parts of Ireland promotes and excites to acts of violence and intimidation and interferes with the administration of the law, now we, the Lord Lieutenant, General Governor of Ireland, by and with the advice of the Privy Council, by virtue of section 6 of the Criminal Law and Procedure, Ireland Act, 1887, and of every power and authority in this behalf, do by this, our special proclamation, declare from the date hereof the said association known as the Irish National League to be dangerous." This proclamation was published in the Dublin *Gazette*, and a printed copy of it was posted at every police station or barracks, and every place in which divisional police courts or petty sessions are held in Ireland.

The Irish members were very calm when the proclamation of the League was announced. A number of them who were not members are reported to have joined it. Their opinion is that it will be a bad winter for Ireland. "We are going to have a bad time of it during the winter, or I am no prophet," said Michael Davitt. The Loughrea and Armagh branches of the League met August 21 and resolved to continue work, notwithstanding the proclamation. The Irishmen of Liverpool have adopted resolutions protesting against it.

On August 23 a very large meeting was held in Dublin to protest against the proclamation, over which the Lord Mayor presided. So large was the attendance that there were two overflow meetings. Several English members of Parliament were present. A resolution was adopted "that this meeting of the citizens of Dublin denounces, in the face of the civilized world, the proclamation of the Irish National League as an unscrupulous attempt to drive the Irish people from the path of a peaceful and constitutional struggle for their rights, and to disarm them of an organization which has suppressed crime and outrage, and awakened English democracy to sympathy with the sufferings and aspirations of the Irish people; and that we hereby declare our determination never to submit to so gross an outrage upon our constitutional liberties."

Mr. Joseph Chamberlain, in a speech at Birmingham August 20, explaining the Liberal-Unionist dissatisfaction with the Government for proclaiming the League, said: "The Government is responsible, not we. If they think it imperative to use the powers conferred upon them by the Crimes Act, I do not blame them. But I claim also for myself and my colleagues that we shall continue to occupy the attitude we have hitherto adopted—independent friends of the Government. When we differ, as now, we shall express our differences in the usual way—by our votes in the House of Commons. I regret that the Government has proclaimed the League. When the Government asked for these powers, we agreed to give them, and now, if they consider it absolutely necessary to use them, that, doubtless, is the last resource; but it is for their discretion, not ours. As a matter of principle, I think it was right for the Government to have these powers, in order to hold them in reserve; but, as a matter of policy, I regret that the Government has thought it necessary to use them at the present time."

Mr. T. W. Russell, who left the Liberal-Unionist party because of the proclamation, has given this explanation: "The Government, in my opinion, have sped their last bullet, and have handed over Ulster to Parnell. I confess that my heart burned with indignation to see my friends sacrificing the Union and sacrificing loyal tenants to a handful of unreasonable landlords deserving of nobody's consideration."

Mr. Gladstone has written a letter to Mr. Brunner, the successful candidate for Parliament in the Northwich election, in which he says: "Few will seek to disguise the unquestionable addition thus made to the evidence now rapidly approaching a demonstrative character, that the people of England intend to do full justice to the people of Ireland by confiding to them, in a spirit alike generous and wise, the conduct of Irish affairs. It is to be lamented that years of the precious legislative life of the country should have been spent in a controversy which can only end in one way. But while it is important that the nation's judgment be speedy, it is more important that when it does come, it shall be unequivocal and decisive."

Mr. Gladstone, in a speech in Wales on August 16, strongly advocated a channel-tunnel. The London *Times* thereupon made an attack upon him, accusing him of advocating a new heresy for the sake of winning the votes of those anxious to promote a channel-tunnel enterprise.

Lord Tennyson, replying to an inquiry as to whether Mr. Gladstone's home-rule policy, if carried out, would produce separation and disaster, wrote on August 19 that he thinks a closer union of every part of the empire would be for the better.

The British Cabinet have decided to hold an autumn session of Parliament.

Mr. Robert Bannatyne Finlay, member of Parliament for the Inverness District, it is reported, will become a member of the British Cabinet in the autumn.

A memorial to President Cleveland and Congress praying for the establishment of a Board of Arbitration between England and America has been signed by 200 members of Parliament. It will receive many more signatures, and be presented at Washington in October.

Threatening comment on Prince Ferdinand's occupancy of the Bulgarian throne has been made every day recently at some of the European capitals. The Russian papers declare that his proclamation is "a veritable act of defiance, and an exhortation to Bulgarians to evade all their engagements." The *North German Gazette* has said that Germany cannot approve his course. It has been officially announced that the Russian Government has sent a circular to the Powers declaring that it is unable to recognize the validity of Prince Ferdinand's election, and the Moscow *Gazette*, which has predicted his retirement, says that if he does not leave Bulgaria, Russia will renounce her obligations under the Berlin Treaty, which "she has always regarded as a bitter deception after a glorious war." But Prince Ferdinand has issued a general order assuming the chief command of the Bulgarian Army; he has refused to grant unofficial interviews to foreign consuls, and it is reported that the Bulgarian Government has ordered 200,000 repeating rifles from an Austrian firm.

The Russian Minister of War, after making a tour of inspection, has reported to the Czar that the troops and fortifications in the Caucasus and Transcaspian territory are in an excellent condition, and are prepared to fulfil any duties that may be imposed upon them.

The German Government has expelled two Russian families who lived near Berlin.

The American expedition to Russia to take observations of the eclipse of the sun on August 19 was disappointed. At the place of the greatest obscuration, clouds prevented the work that had been projected. The eclipse was not observed at St. Petersburg for the same reason. At Klin the sun was obscured, but an aged professor named Mendeleieff, made a balloon ascension alone, so as to get above the clouds and take an observation. He descended in safety near Moscow, forty miles distant.

On September 23 and October 8 Prince Bismarck will celebrate the twenty-fifth anniversary of his assumption of the office of Prussian Foreign Minister and Prussian Prime Minister respectively, and the Minister of Public Worship and Instruction has commissioned a sculptor of Stuttgart to make a colossal bust of him in marble at the expense of the Government.

Emperor Francis Joseph's birthday was celebrated throughout the Austrian Empire, August 18.

The Austrian Government has withdrawn the Pasteur subvention to the General Hospital, the treatment having proved a failure.

Premier Rouvier presided at a dinner given by merchants in Paris August 19, and in a speech reviewed the work of the parliamentary session and spoke about projected legislation, mentioning in particular a scheme for the better distribution of the burden of taxation. He said that the Government was considering the question of the sale of spirituous liquors, and would endeavor to reduce taxes thereon. He deprecated any brusque movements in the direction of the separation of Church and State, and he repeated his statement that if ever 200 Republicans voted against the Government, the Cabinet would resign.

Gen. Ferron, French Minister of War, has gone to the Alps to establish definitely the defences of the southeastern frontier and to organize a new Alpine corps.

Four fatal accidents to Alpine tourists were reported from Zurich, August 17, making eighteen deaths in the Alps within a month.

The steamship *City of Montreal*, which sailed from New York on August 6 for Liverpool, was burned at sea on August 11. There was a heavy sea running, and it was with great difficulty that the life-boats were kept from overturning, but all the passengers and crew escaped from the steamship, and all were rescued soon afterwards by the *York City* and carried to Queenstown, except the thirteen occupants of one boat, who pulled away from the steamship contrary to the Captain's orders. The fire is supposed to have caught in cotton in the hold.

Another rumor was started of Henry M. Stanley's death in Africa, but it is discredited. Sir Francis de Winton, President of the Emin Bey Relief Committee, thinks that Stanley has by this time reached Emin Bey.

The Canadian Pacific Railway Company on August 20 obtained an injunction against the provincial authorities in the Northwest Territory and against contractors of the Red River Railroad, the construction of which these provincial authorities are encouraging so as to make connection with railroads in the United States. The Red River Road will open a line in competition with the Canadian Pacific. The provincial authorities have paid no heed to the injunction, and a clash between them and the Dominion Government seems imminent.

The Bank of London, Ont., suspended payment August 19. It had a subscribed capital of $1,000,000, of which $223,588 were paid up. Very little loss is anticipated by bill-holders.

At Halifax on August 20 the *Galatea* won the thousand-dollar jubilee cup. The *Dauntless* won the American cup.

A statue of the last of the Aztec Emperors was unveiled in the City of Mexico August 21. Very few Mexicans of Spanish descent were present, but thousands of Indians, many of whom came from miles around the capital, bringing with them great quantities of flowers, attended the ceremony. When President Diaz unveiled the statue, the spectators cast flowers upon the pedestal in such profusion as almost to hide it. An address was delivered in the Aztec language.

The Peruvian Cabinet has resigned, and a new one has been appointed, consisting of Mariano Alvarez, President of the Cabinet and Minister of Finance; Carlos Elias, Minister of Foreign Relations; Señor Borgono, Minister of War; Señor Torrico, Minister of the Interior; and Señor Sergarcia, Minister of Justice.

THE UNITED LABOR PLATFORM.

Economists of all shades and everywhere, and practical business men and real-estate holders without exception, regard Henry George's taxation shibboleth as a fraud on the human intellect, a cheat and a delusion, and not an economic theory in any sense. It rests on a confusion of ideas as its basis, and when this confusion of thought is dissolved, the supposed economic proposition disappears with it. "It proposes," says the Syracuse platform, "not the disturbing of any man in his holding or title," but "to devote to the common use" (*i. e.*, to expropriate from the owner and make public property of) "those values which, arising not from exertion of the individual, but from growth of society, belong to the community as a whole." Here it is asserted that certain values in land, now held by a private title, are to be devoted to the common use by taxation without disturbing the private title and holding. Both these promises cannot simultaneously be kept. Either the man who expects his private title to remain undisturbed must be cheated, or the man who expects that such of the values of land as "arise from the growth of society" are to be "devoted to the common use" must be deceived. For "use" cannot be had without "title." The only object of "title" is to obtain use, and whatever effectually transfers the use of land, or of its values, from its present owners to new ones transfers the title. Two centuries of the history of English legislation consisted in efforts to render possible the vesting of title to land in one person while another should have the use. It ended by declaring that to whomsoever the use had been effectually conveyed, in him also vested the title. Hence the first assumption of Henry George's main proposition, viz., that owners will retain their titles intact, but that the values of real estate will vest in the State, is not a principle or theory of any kind. It is a flat self-contradiction, and a political humbug of no use except to impose on the understandings of those who want to be imposed upon.

The second humbug underlying the main proposition of the Syracuse platform is that it is possible, under any form or system of taxation, to "abolish all taxes on industry or its products, and leave to the producer the full fruits of his exertion." The Government, not being itself a producer of exchangeable commodities, can only derive means for its own subsistence by taking part of the fruits of the exertion of those who do produce them. The officers of Government eat, drink, and are clothed out of the aggregate supply of commodities produced by the people. The promise of Henry George to feed, clothe, and shelter the officers of the Government, and still "leave to the producer the full fruits of his exertion," *i. e.*, to collect no taxes which are paid by deduction from the proceeds of the joint exertions of labor and capital in organized industry, is an economic impossibility. It is based on the assumption that the State can continuously and perpetually derive support out of the annual taxation levied on values which have become its own, thus deriving an annual interest from a fund of which it is in the constant possession. It has usually been assumed in finance that a State could not derive a revenue from taxing its own values or property to which it has the title and use. How a State could grow rich by withdrawing taxation from the property of all private citizens, or "producers," and concentrating it on its own State-house, canals, court-houses, jails, highways, lands, and other State property, is not apparent. And yet the Syracuse theory is, that all the land values which are due to society at large are to be taxed until the capitalization of the annual tax will be equal to the value of the land. When so taxed, the former private owner will have no interest in remaining the nominal owner of these "values," but will be in the condition of a mortgagor whose interest payable on a given piece of real estate equals his rent receivable. Such property, if the scheme could be reduced to legislation, would be remitted to the State, as the great tracts of land in the Adirondack wilderness have periodically been, because the taxes payable thereon equal or exceed the income derivable therefrom.

Up to the period at which the property should be remitted to the State, there would be some residuum of "value" in the owner which the taxation would have failed to extinguish. To that extent the promise would not have been kept of devoting all the value which arises from society to public use. And when the property is remitted to the State, in confession that the last vestige of "socially caused value" has been extinguished, the State, having become the owner, can no longer levy taxes on it, but must proceed, if at all, to work or use it as owner, and depend for revenue on the profits of so working or using it. But these "profits" would not be "taxes" in any sense. They would be, like all other profits of capital, whether managed by the State or by individuals, dependent on the skill and foresight of the State as a manager of production.

Another delusion is, that there can be "taxation of land values to the exclusion of improvements." We can understand what is meant by confiscating ground rents, if this phrase is a euphemism for that operation. As applied to agricultural land in this country, the conception is in the last degree *outré*, for the reason that the improvements are so mixed with the soil that they cannot be separated. As to all such land, the proposed system of taxation is not an idea or a theory of any kind, any more than *Portia's* proposal to permit the pound of flesh to be cut, provided no blood were drawn, was an idea or principle. As to all other land, it is, as Mr. Shevitch affirms, Socialism pure and simple.

The Syracuse Convention shows not a little demagogic skill on the part of its managers in denouncing Socialism and Socialists in form, while elevating all the pith and substance of Socialism into a Host to be worshipped throughout their camp and made the one test of loyalty to their party. Supposing it to be practicable to make the taxing power an engine for divesting all land values from private owners and vesting them in the State, without running athwart the present fundamental principle that private property shall not be taken for public use without just compensation; evidently, so far as the engine works out its results, it devolves upon the State the same responsibility as to employing these confiscated "values" profitably, as it "disestablishes" from the present owners. To make these values earn a profit, the present owners are compelled to keep them embarked in all the risks and subject to all the losses of active business. In this manner only, and for this motive only, do the owners of capital become the employers of labor. When the engine of State taxation should have transferred these values to the State, a like necessity would devolve on the State to make these values earn a profit, and to this end the State would have to embark as enterpriser in all the industries of which private land-owning capital now has control. The Syracuse platform demands such a system of taxation as would eventually vest all the means of production in the State. It leads up to a crisis in which the State would inevitably become the director of enterprise, the one and only capitalist, the sole profit-maker and employer of labor. Yet it denounces Socialism as foreign to our institutions and absurd, and "does not propose that the State shall attempt to control production or conduct distribution." This crowning self contradiction is worthy of the others.

PENNSYLVANIA REPUBLICANS.

The guarded approval which the Pennsylvania Republican Convention has given to Mr. Blaine's candidacy in 1888, recalls an anecdote which is told of Mr. Beecher. At one of his Friday evening "talks," a gentleman arose in the audience, and asked him to say whether a man who had lived an upright and strictly moral life, but who was a professed unbeliever in Christianity, would, upon dying, go to heaven or to hell. Mr. Beecher responded promptly, "He would have my best wishes wherever he went." Ever since the Ohio Republican Convention gave its emphatic approval of Senator Sherman's candidacy, a few weeks ago, the idea has been carefully spread abroad that, when the Pennsylvania Republicans came together, there would be a shout sent up for Mr. Blaine which would start the Blaine ball for 1888 rolling at irresistible speed. It was natural to expect such action from Pennsylvania, for that State has been for years the starting-point of the quadrennial Blaine boom. It is also the banner Republican State, and the nursery and stronghold of American protection, undiluted and unlimited. But instead of the ringing shout promised, what do we hear? Why, simply the unimpassioned remark that "the Republicans of Pennsylvania, the native State of the Hon. James G. Blaine, will view with high pleasure his nomination for the Presidency in 1888"; and the consoling information that "accident cannot abate the love of a great party, nor the admiration of a great people, for a statesman true alike to his convictions and to his country." In other words, "Whatever happens, you have our best wishes."

Compare this for a moment with Mr. Sherman's Ohio endorsement, in which, after a fervid tribute to his record as a "statesman of

fidelity, large experience, and great ability," this unequivocal preference is avowed: "Believing that his nomination for the office of President would be wise and judicious, we respectfully present his name to the people of the United States as a candidate, and announce our cordial and hearty support of him for that office." Mr. Blaine's friends were quite sure that this recommendation did not commit the Ohio delegation in the National Convention to Mr. Sherman; and if that view of it was correct, what do they think of the binding force of the Pennsylvania declaration of "high pleasure"? Reports from the Pennsylvania Committee-room say that when it was objected to the resolution that it was inexpedient to commit the party to a candidate so far in advance, "Chris" Magee, who is Quay's partner in the management of the Machine, replied that, "as modified, the resolution did not mean anything, and was binding on nobody." This inside professional interpretation coincides entirely with the unprofessional view of the outside observer. Hence the question arises, If Pennsylvania Republicans are growing lukewarm and calculating in their Blaineism, what shall be said of other portions of the party?

Next to the Blaine resolution, the most interesting part of the platform is the deliverance on protection, both to American industry and American labor, which are joined together in one resolution. Notoriously, the architect of a Pennsylvania Republican tariff plank always has an arduous task, because he is expected to make it demand more protection than any of its predecessors, though they have demanded the fullest protection of everything for the past half-century. The man who was assigned to the work this year evidently concluded that the thing for him to bear down upon most heavily was "labor." So he casually remarked in favor of enough tariff to make it very expensive for Americans to buy any foreign article which could possibly be produced here, and came out strongly for protecting "home labor against foreign labor, as well as its products." How this is to be done is not clear from what follows: "We demand the passage of more rigorous national laws for the scrutiny of immigration and the return of the unfit and the unworthy"—which is merely an enlargement of the previous phrase concerning the "unjust competition of imported contract and pauper labor."

Taken altogether, what do these demands mean? We already have laws forbidding the introduction of contract and pauper labor, and no State has done more to make such laws necessary than the highly protected State of Pennsylvania. When a protectionist speaks of "pauper" labor, he wishes his hearers who are workingmen to understand that he means cheaper labor than theirs. If, now, he is to go a step further, and bar out of the country the "unfit and unworthy," as the American labor agitator understands the words, what kind of labor would be admitted? Who would decide as to the "fitness" and "worthiness"? Presumably Mr. Powderly, or a committee of Master Workmen or Walking Delegates. In no other way could this demand be enforced. If it were to be enforced, what would be the result? Why, simply to bar out entirely the introduction of skilled labor of all kinds from Europe. A large proportion of our skilled labor to day is European. Most of our labor organizations are doing their utmost, by their rules against apprentices, to prevent the creation of American skilled labor. What the Pennsylvania "demand" would accomplish, therefore, would be the gradual diminution and extinction of skilled labor in this country. Does anybody believe that Pennsylvania manufacturers favor such a policy, or that the Pennsylvania Republicans are sincere in demanding it? Not a bit of it. What the platform-builders were seeking to do was to make the American laborer believe that they were in favor of such legislation. If it were to be seriously proposed, they would be the first to work for its defeat.

SECRETARY LAMAR'S LAND DECISION.

THE decision of Secretary Lamar, restoring to settlement under the Preëmption and Homestead laws the indemnity lands claimed by the Atlantic and Pacific Railroad, is a very rigid construction of the law, but, we think, the true and only true construction. The land grant of the company withdrew from settlement and occupation, either before or after survey, the odd-numbered sections of land within a strip *forty* miles in width on either side of the railway, such lands to belong to the company if it should comply with certain conditions named. In the event that any lands within these limits were lost to the company by previous occupation and settlement, or by private land claims in force before the passage of the act, the company might select from the odd-numbered sections within *ten* miles further a sufficient amount to indemnify it for the shortage within the forty-mile strip. But the indemnity clause did not say anything about withdrawing the latter class of lands from settlement meanwhile. There was a grant, therefore, in two parts: (1) definite and certain, (2) indefinite and uncertain. The intention of Congress was clear that the company should have so many acres for so much road, provided they could be found within *fifty* miles. But this intention did not negative the previous rights of settlers on the public lands except so far as the terms of the grant explicitly suspended them, *i. e.*, within the *forty*-mile strip. It was within the discretion of the Secretary of the Interior, by virtue of his general control over the subject, to carry the withdrawal beyond the forty-mile limit, but it could not be said that the law directed him to do so. It is accordingly within his discretion to revoke the withdrawal if he is satisfied that the public interests require such revocation. It is true that the company was disabled from making its selections within the indemnity limits by the failure of the Government to make surveys of the lands. This comes from a hiatus in the law, which the Secretary is not bound to supply.

If it is asked what the equities of the case require, it would seem that there were quite as many on the side of the settlers as on the side of the company, seeing that all the grants were conditioned upon the completion of the road to the Pacific Ocean by the 4th of July, 1878, whereas it is not even yet completed. "If," says the Secretary, "at the time this company applied for its grant it had stated its purpose was to build the proposed road, or so much of it as it might desire, from time to time, and in such fragments, or to and from such points, as pleased its management, and that the Government should withdraw from entry and settlement along its whole line all the land in both granted and indemnity limits, and keep such lands in a state of indefinite withdrawal to await the pleasure or convenience of the company, is it believed for a moment that Congress would have listened to the application for a grant? Yet this is exactly what the company now insists Congress has done; with the further assertion that though the company may violate every specification of its contract, the Government is bound in equity not only to carry out the contract on its side, but to guarantee to it a monopoly for an indefinite period of a vast part of the public domain not contemplated by the grant. I do not so understand either the law or the equity of the case."

Another question, and a not unimportant one, is this: Under what circumstances is the head of a department justified in reversing the action of his predecessor? Ordinarily the rule of *stare decisis* must be observed in the departments as in the courts, and this for the reason that there must be an end to controversy somewhere. If old questions once decided can be reopened, there will presently be no room or time to consider the new ones constantly arising. There will be a gorge and a deadlock, and public business will be thrown into confusion. Worse than that, rights will be uncertain so far as they rest upon department rulings. It must be a very grave matter that will warrant a Secretary in reopening a question once decided. Such reopenings are not unprecedented, however. Indeed, the Supreme Court has been known to reverse its own decisions in cases deemed by the judges of very great importance, such as the legal tender cases, in which it may almost be said that the court turned around twice in the short space of twelve years.

The importance of the question before the Secretary was certainly very great. Several million acres of land were involved in it, and the policy of the Government now announced will govern in all parallel cases. Land grants differ from each other in some particulars, and accordingly the announcement is made that each one will be considered by itself. We cannot see any ground for the charge that Secretary Lamar has sought to make political capital by bearing down hard on "soulless corporations" or by standing up for the rights of "the poor man." The tone of the decision is almost coldly judicial. If it has any political effect, it cannot be because there is any striving after it in the form in which it is rendered.

ALVAN CLARK.

THE career of Alvan Clark, uneventful though it has been, is so closely identified with the scientific progress of the past thirty years as to merit more than passing notice. Perhaps it is most instructive as an example of what pure ge-

nius can accomplish by persistent effort, unaided by any of the conditions which ordinarily insure success in life. Whatever education Mr. Clark ever received beyond that afforded by the village school of seventy years ago, was the product of his own reading and thinking. He never enjoyed the support of an influential friend or patron. Up to the age of forty years he was known only as an accurate and painstaking portrait painter, a fine shot with the rifle, an agreeable neighbor of retiring habits, and a conscientious citizen. There is no evidence that he ever thought of making a telescope until he was surrounded by a growing family of children, and then his attention was turned to the subject by pure accident. He one day found his eldest son, who had studied physics, polishing a plate of metal; and, in answer to his inquiries, was told that the plate was intended as the mirror for a reflecting telescope. The little mirror, rude though it was, succeeded so well that the father determined to try his hand on a small object-glass. The rough glasses necessary for the purpose were purchased from an optician, and, after a few months, Mr. Clark was able to exhibit a very good little telescope as the product of his ingenuity.

After this first step his progress was for several years very slow. His efforts were regarded with indifference or incredulity by the few men of science who knew anything about them. The theory of the achromatic object-glass had taxed the powers of the greatest mathematicians, and the art of shaping one had been confined to a few artists prepared for the work by a long course of training both in the investigation of mathematical formulæ and the practical manipulation of the optician's tools. The idea of an untrained inhabitant of a Massachusetts village becoming a rival of the great Fraunhofer seemed too far outside all the limits of probability to merit serious consideration. Fortunately, the entire absence of "push," which was one of the most marked characteristics of the man, was partially compensated by a large measure of quiet persistence. He kept on making telescopes, and gained the means of prosecuting his work by occasionally selling one. He opened a correspondence with the Rev. W. R. Dawes, one of the leading amateur astronomers of England, which finally led to the purchase of two of his telescopes by Mr. Dawes. The fact slowly became recognized that, in point of accurate vision, Mr. Clark's telescopes were the best ever constructed. The most remarkable feature of his work was its unerring certainty. The success of the greatest German opticians was largely a matter of chance; sometimes they were fortunate enough to turn out an excellent object-glass, and sometimes they failed. But the American artist, without any apparent difficulty, and with less time and trouble than the older artists, brought his work to the highest standard of perfection, by a process which never failed him.

Mr. Clark's career after he obtained a national reputation is so well known that only the briefest outline of it is necessary. He associated his two sons with him in business, the concern taking the title of Alvan Clark & Sons. Four times the firm received an order for the greatest refracting telescope ever made, and four times executed it. The first came, in 1860, from the University of Mississippi for an eighteen-inch objective. This instrument is now the property of the Chicago Astronomical Society. Ten years later, Mr. Clark commenced the celebrated Washington twenty-six-inch refractor. In 1879, he was selected by the Russian Government to make a thirty-inch object-glass for the Pulkova Observatory. Seven years later, he had the pleasure of seeing the completion of the thirty-six-inch objective for the Lick Observatory of California. Every one of the four was a splendid success.

Mr. Clark's personal qualities so strongly influenced his achievement that they form an interesting subject of study. Most remarkable was his aversion to advertising himself or his work in any way whatever. He never sought an order. He could never be induced to place specimens of his handicraft on exhibition; even the Centennial at Philadelphia had nothing to show from his hands. Astronomers the world over applied in vain for a price-list of the productions of Alvan Clark & Sons. The firm would not print anything of the kind. Nowhere was anything arranged for display. Visitors to his workshop, whatever their rank, position, or objects, were received with the same unstudied courtesy, and found everybody, from the head of the firm down, in his working garb. No pretensions to a secret art were ever made. When, in travelling abroad, members of the firm found their foreign colleagues afraid to show how they worked, the only impression conveyed was that human nature had its weaknesses. Never before was an art or manufacture built up on so admirable a moral basis.

One cannot but regret that the fine moral qualities which shone so strongly in Mr. Clark were not associated with that spirit of enterprise necessary to the foundation of a great business. He could without difficulty have built up an establishment for the construction of astronomical instruments of every kind which would have competed with any in the world. But the firm seemed to look upon an increased demand for their work as something to be avoided rather than sought. A mechanical department had to be organized, because an object-glass is a very small part of a telescope; but the firm was always glad to find a customer who wanted only an object-glass, and would get the mounting of the telescope done elsewhere. If we regret this, it is on account of what the world has failed to gain, and not for anything Mr. Clark lost. The optimist could not find a more pleasing object of study than the perfect contentment with which Mr. Clark regarded his life-work, and his readiness to pass away when it was done. When the great Washington telescope was finished, he was satisfied that it should be his last. When the California telescope was projected, he wanted to see it finished for the sake of his sons; he saw it perfected, and died content.

IN BELGIUM.

PARIS, August 11, 1887.

How easy travelling has become in our days! Who would have thought some years ago that you could leave Paris at half-past six in the evening and arrive at Brussels at twelve o'clock at night? The tedium of this short journey is relieved by dinner, for we have now restaurants on our trains. You can eat as elaborate a dinner as on the Boulevard des Italiens; the only difference is a little vibration, which reminds you agreeably that you are not in a steamer. After the repast, you go and settle in a comfortable chair in one of the great saloons of the International Company. You see as in a dream the varying landscape, the Cathedral of Saint-Quentin, the tall chimneys with their long tail of smoke in the northern districts of France, and in Belgium when you enter the coal basin which extends from Mons to Namur.

One of the finest objects in Brussels, near the railway station, is the famous Porte de Hal, which was one of the entrances of the city and was on the line of the fortifications. These fortifications are now demolished, and you can only see their outlines in the beautiful boulevard already shaded by tall trees; the Porte de Hal has been preserved. It is a fine monument of mediæval architecture, and Sardou chose it for the theatre in the first act of "Patrie." It remains in modern Brussels as a witness of the old and heroic times.

It is impossible for one to see Brussels without thinking of the first scenes of 'Vanity Fair.' In a recent visit I went to the great forest of Soignies, which extends as far as Waterloo. My coachman told me that the visit to the battle-field of Waterloo is as often made by English travellers as it was years ago; it is a sort of pilgrimage. I have often wondered how the Duke of Wellington could be so bold as to fight a decisive battle with this enormous forest of Soignies at his back. There was no retreat possible for the baggage and for the artillery. Napoleon felt so sure of victory that he had already bulletins and decrees prepared with the heading "Palais de Laeken." (Laeken is the royal residence, near Brussels, where King Leopold and his wife live now almost constantly.) It is impossible for an Englishman, and even more for a Frenchman, to enter without emotion this great forest of Soignies. The road to it is very fine. I left Brussels along the new Avenue Louise, the finest imaginable boulevard of modern creation. All the houses are built in the English fashion—that is to say, there are no apartments, no *flats;* every family has its own house, but there is no monotony in the buildings. The architects of Brussels have admirable materials at their disposition, a great variety of marbles, which they sometimes combine very happily with brick. At the end of this beautiful avenue, which took its name from Princess Louise, the daughter of Louis Philippe and the wife of Leopold I., you enter the Bois de la Cambre, which is the Belgian Bois de Boulogne, only a much finer Bois, with magnificent old trees, as it is in reality the end of the immense forest of Soignies, arranged as a park, with lakes more or less artificial, winding roads, lanes, etc. The contrast is striking when you enter the real forest; there you find what the French foresters call a *haute futaie*—dense masses, trees rising like parallel columns, many of them eighty years old, long, straight roads. It is at the end of this green desert that you find the great historical battle-field where the fate of Europe was decided in 1815.

Belgium did not suffer much then from the war, as it was of short duration. Since 1830, Belgium has been neutral, and her neutrality has been solemnly guaranteed by the great Powers. It has never been violated, but the Belgians, ever since the beginning of the Second Empire, have always been more or less uneasy. King Leopold I. always urged them to take proper measures for the eventual defence of their neutrality. He conceived the great scheme of the fortification of Antwerp. According to his theory, Belgium was not able, with her small army, to defend every part of her

territory against a large invading force, but she could concentrate all her army behind the forts of an entrenched camp; and Antwerp was an admirable position for such a camp, as the army could wait there till an English fleet should arrive in the Scheldt. What he wished was, to give time enough to England, as he probably never believed in anybody's help but England's.

Leopold's plan was excellent, and the fortifications built round Antwerp were as good as they could be at the time they were built; but the progress of modern artillery has changed the conditions of war, and the Belgians have lost their faith in Antwerp; they have also lost their faith, to a certain extent, in the treaties and guarantees which protect their neutrality. They are convinced of the necessity of defending their neutrality with their arms, and are preparing to join immediately the adversaries, whoever they may be, of the Power which first invades their territory. I had a conversation with one of the persons who have given the greatest attention to this question, and I was struck by the arguments which he gave me. The Belgians can bring about 100,000 men on the battle-field. This is quite a respectable number. An army of 100,000 men can, of course, not expect to repulse one of those enormous armies which either Germany or France can mobilize in a week; but an army of 100,000 men would be a very valuable addition to a German or to a French army—so valuable that it would make Germany or France reflect before either tried to force its way through Belgium. This is not all. Why should a French or a German army be tempted to violate the Belgian neutrality? It would be because a great rapidity of movement, a shorter road, might give an invading army great advantages. If the Belgians could offer such an amount of resistance on this shorter road of invasion that a few weeks, perhaps a month, would have to be spent in destroying the resistance, all the advantages of a Belgian invasion would be lost. This is the reason why, many years ago (ten years ago, if I am not mistaken), Gen. Brialmont, a very distinguished Belgian General, advocated the construction of a series of forts which should protect the line of the Meuse either against a German or against a French army.

At the present session of the Belgian Chambers, this project, after a long and ardent discussion, has finally been adopted. Gen. Brialmont's ideas have triumphed. He was never favorable to the construction of huge fortresses; he wanted to give perfect freedom of movement to the Belgian army, and not to shut it behind walls; to build, in well-chosen positions, a line of small forts, which could be defended by little garrisons. Gen. Brialmont was the first to advocate for these forts what is called the cupola system. This system of steel cupolas, covering very powerful revolving guns (similar to the cupolas of the turret-ships), was first tried experimentally in Rumania. The King of that country, like all the present rulers of Europe, is preoccupied with the dangers of his realm. His neutrality has been very contemptuously treated once by the Russians, who forced him to accept a military convention at the beginning of the last Turkish war; now, with a view to strengthening himself, he is making artillery experiments. His officers tried a French cupola and a German cupola. The French, which had been constructed at Saint-Chamond, near St.-Étienne, had the advantage; nevertheless, I believe that for political reasons the final order was given to the German firm. The original plan of the Brialmont cupola has already been altered. Experiments are actually taking place at the camp of Châlons with a cupola constructed in parts (similar to the glass reflectors of a Fresnel lens). In the new system the cupola is invisible to the enemy; you cannot fire at it directly, you can only do so indirectly. The cupola has no longer a curved roof. The steel monster rises a moment with its formidable guns, fires, then goes down and disappears. The line of the Meuse is to be guarded with a number of little forts armed on the new system. Belgian neutrality will therefore have a two-fold defence: first, the passive protection of the new forts of the Meuse; secondly, the active protection of an army of 100,000 men, all ready to join the enemy of the invader. The Belgians are following the old precept, "Aide-toi, le Ciel t'aidera."

All this was explained to me in the beautiful forest of Soignies. We were driving in endless avenues; the tall trees were rising all around to an enormous height, and their foliage formed over our heads an unbroken vault, under which the light seemed green. On our return to Brussels I was asked to admire the new Palais de Justice. I tried hard to admire this gigantic pile of marble, a sort of an "ara" towering over the city, but I could not find any beauty in the Babylonian and extravagant building (it has cost, I am told, as much as 50,000,000 francs). The new Brussels is very fine: many private houses are real palaces; but the old Brussels is not yet dethroned. Nothing can compare with the Cathedral of Sainte-Gudule, with its admirable lines and its enormous pictures in glass, designed by the greatest masters; nothing can compare with the Hôtel de Ville, with its lofty spire, and the famous square, with all the houses of the ancient guilds. These houses are in the most admirable state of preservation, and the fine "Maison du Roi" is just now being restored with the greatest care. In the middle of the square of the Hôtel de Ville there is a huge iron mast which bears an electric lamp. To see this place at night, in the bluish and fantastic light of the voltaic arc, would be worth a journey. It produces the effect of a dream, and you are free to people this historic place with the figures of the sixteenth century; to see, with the mind's eye, the famous scenes which have made it one of those singular points which an historian is bound to visit.

There is no fear that, in all their improvements, the Belgians will ever spoil the artistic parts of their fine cities; for there is no nation more proud of its past, more attached to its traditions, more given to the fine arts and to literature. We French have a habit of saying that everything in Belgium is a *contrefaçon* of France. I modestly wish that we might, here and there, attempt a *contrefaçon* of Belgium.

Correspondence.

OUR CONSTITUTIONAL CENTENARY ABROAD.

To the Editor of The Nation:

Sir: It is suggested that fêtes should be held in London and other European capitals to celebrate the centennial of the adoption of the Constitution of the United States this year, if not coincidentally with the national demonstration to be held in Philadelphia. These celebrations will forcibly bring to the attention of our own people and of foreigners the unique form of government (with its limitations on the Federal and State Governments) under which we have so wonderfully expanded our territory and developed our resources. They will actually serve as a school for education in matters of the noblest realm of thought; and by the study and criticisms of foreigners we shall all be the gainers. It is a celebration on a higher plane even than that of the Fourth of July, inasmuch as it lifts the minds of the people to consider *constructive* statesmanship, and away from mere policy and machine and party politics to principles.

By the enclosed circular you will see the scope and character of the entertainments proposed to be held over here. But such celebrations will have more far-reaching interest than a mere temporary show, bringing notoriety to the participants: they may even have an influence on history.

It would seem that the form of Constitutional Government wrought out just one hundred years ago is one for which (in a modified form of course) the British are about ready, and to which they are tending and must ultimately come. Their machine for governing Parliament is an antique one, overloaded with new work for which it was not built. Its capacity is not equal to the business with which it is surcharged, and the consequence is that it is congested and choked. The consideration by Parliament, as was the case within two weeks, of such details as the proper clothing of the police, or the whipping of a boy seven years old, or even the case of Miss Cass (important enough in a proper tribunal) should be relegated to local assemblies. To occupy the time of a body charged with the duty of legislating for 500 (?) millions with such comparative trifles, is like employing a locomotive to kill a mosquito. 'Tis an anachronism, projected into the nineteenth century, to employ on such topics this high court of a nation, once circumscribed to islands only, but now imperial in its sway and world-wide in its domination. The machine needs to be readjusted to its work, the organism to its environment.

Such celebrations here would also gratify our people in America, and tend to promote international good feeling.—Very respectfully,

Horace J. Smith.

Hanover House, Upper Norwood,
London, August 5, 1887.

A BIT OF MODERN POLITICS.

To the Editor of the Nation:

Sir: A political deal has just been made in Schuylkill County, Pa., which for shameful prostitution of decency and self-respect can be approached only by the former work of the same parties.

Schuylkill County is in the anthracite region, forms by itself the Twenty-first Judicial District, and requires three law judges to run its courts. It was her court in which the Molly Maguires were convicted, and the same class of people that formed that infamous organization still furnishes material for the judiciary to work upon. The late Chief-Justice Mercur said that every question which can arise under Pennsylvania law arises in the Schuylkill courts. A moment's reflection shows the importance to the State of having the right kind of men on the bench of this district.

The entire vote of the county for Governor in 1886 amounted to 22,549, distributed as follows:

Republican	9,725
Democratic	11,168
Prohibitionist	643
Greenback-Labor	1,013

For our present purpose we need not consider the Prohibition party.

Now, the one thousand members of the Greenback-Labor party are owned, body and soul, by that eminent demagogue and member of Congress, the Hon. Chas. N. Brumm; and he has kept himself in Congress for several terms by combining his little one thousand with the ten thousand Republicans. The ten thousand have several owners, some of them prominent in State affairs. They don't want to go to Congress: places in the county and at Harrisburg satisfy their ambition. So they combine their ten thousand with Brumm's one thousand, distribute the

offices, and the Republican organs support everything that is done with most disgusting servility.

But at the last meeting the work of the combination went so far as to make even the community which has so long tolerated it stand amazed.

On the 15th of August the two conventions, after their established custom, met in neighboring halls in Pottsville. Brumm was elected (!) Chairman of the Greenbackers, and Sam Losch presided over the Republicans. After Brumm had made a speech denunciatory of capital and predicting the success of the Labor party in the next Presidential election; and after the Republican Convention had offered resolutions full of "the matchless statesman to whom foreign nations are now paying their tributes, and who was defrauded of the Presidency in '84"—after much of this, conference committees were appointed.

This had been done so often that the work had become easy. The conventions never had to wait long. This time there was a little friction. Heretofore Brumm's Congressional seat and a few minor offices were all the modest one thousand asked of the ten thousand. Now they demanded a judgeship. Why not? The ten thousand had never refused them anything. The organ of the ten thousand always supported them. Therefore they demanded the Judge, Treasurer, one Auditor, and clerk of courts. This gave to the Republicans two Commissioners, Director of Poor, Surveyor, Prothonotary, Register, Recorder, and one Auditor. The Republican wing of the Committee balked a little. To be sure, the people had never gone back on former deals, but the judiciary was a sensitive point. But their hesitation was ended by the Greenbackers' announcement that the only thing which could induce them to give up the Judgeship was the two Commissioners. This the Republicans could not do, so the ten thousand Republicans gave in once more to the one thousand Greenback-Laborers. When their report was made to the Republican Convention, let us record gladly that one or two men felt the disgrace keenly enough to make a strong protest against prostituting the bench. They were howled down, and the Convention endorsed the Greenback-Labor candidate for Judge—a young man who is an avowed atheist, a notorious demagogue, and a proven ignoramus on questions of law.

The exceeding brassiness of this proceeding may result in the final smash of the combination. But of a community so besotted as to stand this sort of thing year after year, who can predict anything manly? The Greenback-Labor vote in Pennsylvania in 1878 was 81,758; in 1882 it had shrunk to 23,484, while in 1886 only 4,835 votes were cast for Labor's candidate. But still the dregs of the party, one thousand strong, command ten thousand who claim to belong to the moral, intellectual, and progressive party of the nation. They have elected delegates to the National Convention who are pledged to support for the Presidential nomination "that matchless statesman, James G. Blaine." INDEPENDENT.

AUGUST 16, 1887.

PRESIDENT CLEVELAND'S SHORTCOMINGS.

TO THE EDITOR OF THE NATION:

SIR: The civil-service reform measures of the Administration began and ended with the appointment of Mr. Pearson as Postmaster of New York. It is said by Mr. Curtis that the Civil-Service Law, within its narrow limits, has been enforced; but even this statement is over-favorable. A few of the higher officers, like the Postmasters and Collectors of New York and Boston, have carried out the law in its spirit, seemingly because such was their individual preference; but many more, and notably the Postmasters of Philadelphia, Baltimore, Chicago, Indianapolis, and elsewhere, have practically nullified the law. All the Government houses at Baltimore have become a national scandal, and not only have long-continued and earnest efforts on the part of the decent element of the Democracy to have these offices filled with men of respectable character been met with total indifference by the President, but the vilest of the crew have been sheltered in the highest departments at Washington.

It is said in excuse of the President that reform cannot be carried out against public sentiment. Herein it is assumed that public sentiment is represented in the clamor of the spoils politicians, and Mr. Cleveland must have so regarded it. Certainly the unenlightened and reactionary opposition to the reform has been exceedingly strong, but not stronger than Mr. Cleveland must have anticipated; and in yielding to these influences and turning his back on the spirit of progress and the effort for purer administration, he has sacrificed his own fame. He has had an opportunity which comes to few men, and to none more than once. He had the ability to meet its demands, for he is unquestionably an able man, and has more than once shown his power as a leader, has silenced his enemies and kindled to enthusiasm the loyalty of his supporters; but he lacks the moral fibre, the steadfast resolve, the uncompromising devotion to principle, of which heroes are made.

He will doubtless secure a renomination. He would have done so without lowering his colors to the degrading influences which have overwhelmed him. He is not as likely to be reëlected as he was a year ago. He has lost materially in popular strength, and it is difficult to see where he has made gains, except in appeasing the Bourbon discontent in Kentucky and Indiana. The bulk of Tammany Hall will go with the Labor party, or to Blaine, as it did in 1884. The *Sun* and *World*, and the elements which they represent, always the enemies of reform, exult over his betrayal of his principles, and laugh at his weakness and remain as hostile to him as ever.

He is, however, yet infinitely to be preferred to Blaine. The moral rottenness of Blaine and of every ramification of his influence would make his election to the Presidency a public calamity. Between Cleveland and Sherman there is less choice. The objection to Sherman is that he turned his back to the future twenty years ago, and fretfully rakes the stubble of garnered issues, crooning over the evils and hatreds of the past as inconsolably as Jefferson Davis himself. He has no eyes and no statesmanlike solution for the problems of to-day. From the present outlook, the Independent vote may wisely be given again to the President, but the friends of civil-service reform must await another champion in the Chief Executive, or depend upon its growth among the people to make all political aspirants its friends. M.

WICHITA, KAN., August 17, 1887.

LINCOLN AND CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: Anent recent disclosures of Lincoln's attitude towards civil-service reform, I recall an anecdote told me by Mr. W. H. Herndon, the President's partner, who is still living at Springfield. According to Mr. Herndon, Lincoln's friends very generally felt that he was grossly delinquent in dispensing patronage to them. Speaking of the President's ingratitude in this respect, Leonard Swett once said that "Lincoln gave to his friends just enough 'sop' to keep them from howling like hungry wolves." David Davis, too, is accredited with the remark that Lincoln did not make the first movement in appointing him to the Supreme Court.

Perhaps Mr. Cleveland's attitude towards civil-service reform is explained by Mr. Swett's statement of Lincoln's position. The Democratic wolves must be placated, in a measure, in order to insure Mr. Cleveland's reëlection and the keeping of the infant Reform in the house of its best friend. I for one have not lost confidence in Mr. Cleveland. But we must make temporary sacrifices for the sake of ultimate victory. The President's reform policy is, like Solon's laws, not the best that could possibly be devised, but the best, probably, that the diseased condition of our political methods would admit of.—Yours respectfully, JOHN BASIL BARNHILL.

MEADVILLE, PA.

CHEER FOR DEJECTED MUGWUMPS.

TO THE EDITOR OF THE NATION:

SIR: The wail of your "sadly disappointed Mugwump" correspondent seems to me to come from a heart bowed down by the exclusive and excessive consideration of the distressing features of the course of the Administration. Should he "take to the woods," his gloom will not lighten. Rather let him hold his ground, quitting himself like a man, and, *when the time comes*, choosing *for himself*, instead of meekly calling for guidance from even so good a monitor as the *Nation*.

Meanwhile, the contemplation of the disappearance of the "sectional question," of the demonstration that the country can be "saved" even in the face of the defeat of the Republican party, of the growing popular appreciation of the enormity of such offences as Higgins's, of the continued reduction of the public debt, and of other such pleasant facts, may help him to feel more kindly towards the Administration; while the realization of the fact that the Republican party has not yet rid itself of either Blaine or Blaineism, may prevent him from doing anything rash.

S. H. T.

BOSTON, August 19, 1887.

COLOR PREJUDICE NORTH AND SOUTH.

TO THE EDITOR OF THE NATION:

SIR: I am greatly pleased by your just and temperate treatment of the action by the Georgia House on the Glenn bill. But "what fools these Democrats be to lose the next President just for such nonsense!" Since an "all-wise Creator" has the matter in hand, and does not seem to be calling loudly for "help against the mighty" just now, why couldn't they let Mrs. Partington's broom alone, and look after the front door?

C. M. GARDNER.

CHICAGO, ILL., August 13, 1887.

TO THE EDITOR OF THE NATION:

SIR: Discussing your editorial on the race issue in Georgia with a friend, the question came up as to the race issue in the North. The Grand army is certainly a Northern institution, and yet the opinion seems to be very general that colored ex-soldiers are not taken into G. A. R. posts. We would ask you if this is true: also, if Massachusetts's laws to-day forbid and punish marriages between white and colored people; also, if it is not true that the great humane organization of A. F. and F. M.—Freemasons—does not recognize the colored lodges of the same order.

The New York *Tribune* has started asking questions of G. A. R. posts, and might follow this commendable enterprise up by asking the different posts if they take in the colored ex-soldiers of the late war. The color question undoubtedly looks to education more than to laws for final settlement; and until the progress of education wipes it out, it will remain decidedly mixed. Here in Chicago are a number of colored barber shops

where negroes need not apply for a shave or shampooing.—Yours very truly,

W. Bodemann.

Chicago, August 14, 1887.

[We believe that the rule in the Grand Army is to organize separate posts of colored men where there are large numbers of them; there are such posts in Brooklyn, and when an entertainment for the benefit of the general organization was given last winter, they were notified that they could attend only on condition of sitting in the gallery. Not many weeks ago a colored man was refused admission to a Grand Army post at Portland, Oregon, on account of his color, and more recently the color line has been drawn in the New Orleans posts. It has been said that the question would be brought up for discussion and action at the approaching National Encampment of the Grand Army. Massachusetts does not now forbid and punish intermarriage; the law against such marriages was repealed long before the war.—Ed. Nation.]

THE RAILROAD DISASTER AT CHATSWORTH.

To the Editor of The Nation:

Sir: Relating to the accident at Chatsworth, there is one subject that does not seem to have attracted the attention of the coroner's jury as it ought. I refer to the *strength of the passenger cars*. Allowing for the broken bridge and all that, men familiar with railroad accidents wonder how so great a loss of life could have occurred in so small a hole. This can be accounted for if the cars splintered to pieces, but is a mystery if they held together. I am inclined to think inquiry will reveal the fact that the cars were old and weak, in which case it was just as criminal to run them, especially if overloaded, as it would have been to have continued to run over a bridge known to be unsafe. E. Y.

Pittsburgh, August 19, 1887.

THE LOGIC OF THE IMAGINATION.

To the Editor of The Nation:

Sir: As one magnetized needle may hang to another in a long chain, so one perhaps trivial criticism may connect itself with preceding ones. Mr. Sidney Colvin has lately pointed out what he considers a fault in Keats's "Ode to a Nightingale," describing it in these words: "By a breach of logic which is also, I think, a flaw in the poetry, he contrasts the transitoriness of human life, meaning the life of the individual, with the permanence of the song-bird's life, meaning the life of a type." Your reviewer of Mr. Colvin's volume criticises this criticism as "inapplicable," on the ground that "the magic of the poem keeps it outside of the mind while the poem is being read, and that is not really a fault in a poem which cannot be felt as a fault when it is being read." I, in turn, am inclined to criticise the critic of the critic, not as being in the wrong, but as not being *enough* in the right, as not going far enough. I would maintain that there is no fault of this kind, no sin against "logic," in the poem. Just as there is a poetic truth profounder than any literal truth, so there is a poetic logic infinitely more delicate, more *accurate*, than that of the logicians, and it is this unconscious process of reasoning which Keats here admirably illustrates. Though the title of the Ode is "To *a* Nightingale," it is really addressed to *the* nightingale. And why? Because, in truth, there does not exist to human apprehension *a* nightingale. On the other hand, it is only with an effort that we conceive of our fellow-beings as Humanity. The moment "the weariness, the fever, and the fret" of life fills our imagination, we see the "emperor" or "clown" of ancient days, or sympathize with "the sad heart of Ruth." Thus (to use Mr. Colvin's phraseology) it is *necessarily* that the poet treats the life of the type in the (by the imagination) unindividualized existence of the song-bird as the true contrast to the life of our (by the imagination) individualized passing generations. * *

Notes.

An *édition de luxe* of Randolph Caldecott's picture-books, printed in colors by Edmund Evans from the original blocks, is in preparation by George Routledge & Sons. Also, the same artist's 'Last Graphic Pictures.'

The Rev. W. W. Newton's 'The Vine out of Egypt,' a history of the growth and development of the Episcopal Church in America, with an appeal against a change of name, will be issued early next month by Thomas Whittaker.

G. W. Dillingham has in press a novel, 'At the Mercy of Tiberius,' by Mrs. Augusta J. Evans Wilson.

Among the latest contributions to knowledge which we owe to the indefatigable workers of the Bureau of Ethnology at Washington, is the 'Bibliography of the Eskimo Language,' by Mr. J. C. Pilling. In a closely-printed pamphlet of 116 folio pages, he gives a list of all the published accounts of this language, from the vocabulary of Olearius (1656) to the works of Petitot, Rink, Reichelt, and others, dated in 1886, as well as notices of many MSS. relating to the same subject. This monograph displays the same careful exactness which distinguished the author's important preliminary work, the 'Bibliography of the North American Languages.' The present publication, it appears, is the first of a series which is to comprise, in separate issues, catalogues of the works relating to each of the principal linguistic stocks of North America. These catalogues will be of great utility to students of American linguistics. Besides precise descriptions of the books and manuscripts referred to, and notes of the libraries where they are found, the compiler gives, in many instances, succinct biographical sketches of their authors, which add much to the value of his work.

A correspondent asks us, apropos of the meteorologic and seismic performances of recent years, whether it is not likely that the West was subject centuries ago to tornadoes and even earthquakes. He conjectures that if a primitive race were advanced far enough to raise crops and build granaries, a year or two of tornadoes, floods, and fires would destroy their accumulations, and in a generation throw them back into entire barbarism; and thinks we have dwelt too much on the idea of destruction by war, and too little on that by natural agencies.

For handy reference, in this centennial year of the Constitution, T. & J. W. Johnson & Co., Philadelphia, have published a small brochure containing that instrument and its predecessors, the Articles of Confederation and the Declaration.

The well-illustrated pamphlet guide to 'Philadelphia and its Environs' (Lippincott) comes to us in its annual new edition. We do not remember to have seen before an account of the "Hotel Felis," an actual inn for the family cat when its owners leave town for a season. Here "she (or he, as the fact may be) is well fed, tenderly cared for, enjoys association with her kind, and all the advantages and comforts of a well-regulated home," under the auspices of the Society for the Prevention of Cruelty to Animals. The writer's doubt as to gender seems chronic. On page 87 a female statue in Horticultural Hall is labelled "Il Penserosa."

A short time ago we had the commemorative volume of King's Chapel, in Boston; now a similar one has been edited for the West Church, over which Dr. Bartol has presided for just one-third of its 150 years of existence, so that the celebration on March 1, 1887, was a double one. The book, which has been handsomely published by Damrell & Upham, has been made more than a pamphlet by supplying some historical and some doctrinal sermons by the pastor. The West Church, like many other religious edifices in Boston well placed for patriotic signalling, fell under British displeasure during the Revolutionary occupation. Almost all its other associations are personal, and in particular cluster about Jonathan Mayhew, Charles Lowell, and Dr. Bartol himself. When the famous split in Massachusetts Congregationalism occurred, in the first quarter of the century, Pastor Lowell refused to side with humbled Trinitarian or triumphant Unitarian, and kept his congregation an independent one. He was the father of the poet, whose speech at the memorial exercises is here reported with the rest, and harmonizes well with the general vein of fine feeling. Portraits of all the ministers of the West Church except the first, and views of the building itself, embellish the volume.

We have received from the publishers, Macmillan & Co., the concluding part of Grove's 'Dictionary of Music and Musicians (1450-1887),' a work to whose excellence we have again and again borne testimony during the many years in which it has been appearing. We reserve our particular remarks on this final instalment (Watson to Zwischenspiel).

To their "Chandos Classics" Frederick Warne & Co. have added 'The Poems and Ballads of Schiller' in Bulwer-Lytton's translation, with the accompanying memoir, which postdates Carlyle's. Like the other volumes of this series, the exterior is very comely and the typography good.

We will also call attention to two little Schiller volumes in Macmillan's "Foreign School Classics," viz.: 'Wallenstein's Lager,' edited by H. B. Cotterill, and 'Wilhelm Tell,' edited by G. E. Fasnacht. Both of these are thoroughly equipped with preliminary historical and literary information and with notes, and it is only to be wished that, as regards the German text, the publishers had insisted on the Roman in place of the Gothic letter, which, in some of the subordinate extracts, becomes exceedingly fine and trying to the eyes.

'Attic Greek' is the infelicitous title of a beginner's book in Greek by Prof. Brooks of the University of Minnesota (Henry Holt & Co.). The title is explained, however, in the first sentence of the preface. The plan of the book is to deal almost exclusively with words and phrases, whereas, in dealing with any language, the only true and pedagogical method is to deal with the sentence. In this book, the better part of 160 pages is taken up with utterly disconnected words and phrases, to be translated into one language from the other. Just how felicitous these exercises are may be judged from the last Greek exercise (p. 160), where a translation of ἄν is asked, which has no equivalent in English at all; of δέ, although the young student is taught in Lesson 2, by a dash, that it has no translation; of δή, which has as many translations as it has places in a Greek sentence, when, indeed, it can be rendered into English at all. On page 15 the student is asked to translate μὲν δή, disconnected from anything else; but, by referring elsewhere, we find it translated "moreover." As this refers to chapter i, section 4, book 1 of the 'Anabasis,' we are compelled to say that it does not translate the meaning of δή at all. Here is a translation of βουλεύεται ὅπως μήποτε ἔτι ἔσται . . ἣν δύνηται: "He de-

liberates how never longer he shall be subject to (his) brother, but, if he was able," etc. The infelicity of this sequence of moods and tenses in English will be apparent. Criticisms of this character could be made upon nearly every page of the book; and when made to refer to each other, the incongruities are multiplied.

We read, in a circular "Request for Coöperation" issued in May last by the American Society for Psychical Research: "It is hoped eventually to found a library for the use of members of the Society. Contributions of books on psychical subjects should be sent to the Secretary [Mr. Richard Hodgson, 5 Boylston Place, Boston, Mass.]. It is also hoped that voluntary donations to the Society will enable the Council to issue a monthly journal, which shall be circulated gratuitously among members and associates. The object of this journal will be to give information of the business transacted at the meetings of the Council, and of the progress made by the various committees, and to furnish to our members early records of matters of interest which would otherwise be delayed till the next publication of the *Proceedings*. The journal, as contemplated, will be open to correspondence and discussion by members and associates. Pecuniary contributions towards the establishment of the journal will be gratefully received."

—An article in the August number of *Unsere Zeit*, on the condition of the copyright law in Germany, mentions certain decisions of the German Supreme Court which remind one of somewhat analogous cases in this country. It will be remembered that our law limits the duration of copyright to twenty-eight years, but permits an extension of fourteen years to the author, or to his widow and children—no mention being made of his assigns or other heirs. Owing to the small pecuniary value attaching to the works of most of our earlier authors, it has rarely been worth while to reprint them, so that, to our knowledge, but two cases have come before the courts in which a decision was given upon the rival claims of author and publisher. In one instance (Pierrepont vs. Towle) the publisher was enjoined from continuing to sell the book named after the expiration of the twenty-eight years, on the ground that he had bought only "the copyright," no mention being made of contingent rights. But these decisions leave two points untouched. *Can* the author convey a right which he does not, and may never, possess? For if he should die before the expiration of the twenty-eight years, not he, but his widow and children, are entitled to a renewal; or, if he die childless and wifeless, no one is entitled to it. He can, of course, bind himself not to take advantage, as against the publisher, of the provisions of the law in his favor if he should be alive when they accrue (Paige vs. Banks). But would this relinquishment convey a valid title against his children or against a rival publisher if the author be dead?

—To return to our article: each of the German States before 1870 conferred copyright for a different period, and the Federal legislation establishing a uniform term had the effect, in some States, of lengthening the term, sometimes for forty years. The question, of course, arose, should the author or should the person to whom he had sold the copyright have the benefit of this extension? What the publisher bought was the exclusive right to publish for a definite time; why should this time be extended without corresponding advantage to the author? The French courts, we are told, acting under similar legislation, had decided in favor of the author, but in Germany it is the publisher who profits by the decision of the Supreme Court. The article does not give the grounds for the decision, but the court may have argued thus: The author must be assumed to have received a fair price for his work, otherwise he would have kept it in MS. That is to say, the value to an author of his production is something positive, though to a large extent intangible, since it may chiefly depend upon indirect advantages brought about by its publication. But with the publisher such a transaction is a speculative and strictly pecuniary one, and he is entitled to any rise in the value of the commodity in which he deals, just as a trader in jackknives would be benefited by an increase in the duty on that article unforeseen at the time of purchase.

—A well-informed writer in the *Frankfurter Zeitung* furnishes interesting revelations concerning the manner in which the books of "Count Vasili," the author of 'Société de Berlin,' 'Société de Paris,' 'Société de Rome,' etc., are manufactured. The last-mentioned work, which, like all its predecessors, appeared first as a serial in the *Nouvelle Revue*, has just been prohibited by the Italian Government. It had long been suspected that "Count Vasili" had no actual existence, and that Mme. Juliette Adam, the vivacious editress of the *Nouvelle Revue*, was more or less directly responsible for his utterances. The precise relations of Mme. Adam to "Count Vasili" are now clearly seen in the following letter addresed by her to Countess Hugo, a niece of Victor Hugo, living in Rome, who herself furnished a privately printed copy to the writer in the *Frankfurter Zeitung*:

"DEAR COUNTESS: Please send the letters you speak of directly to me. You know undoubtedly that Count Vasili has done (*fait*) for me in the *Nouvelle Revue* all the European societies, and that his name is one of great importance. He has just announced the 'Société de Rome,' and, in fact, began it in one of the last numbers. But if your letters are better than his (and it will only be necessary for me to see one or two in order to judge), I shall publish yours, provided, however, that you accept the pseudonym of Count Vasili; for my arrangements prevent me from publishing 'societies' [*sic*] under any other name than that of Count Vasili, who has not only acquired rights as against myself, but as against similar productions still to appear, which he would cede only after mature consideration."

The Countess Hugo thereupon sent to the editress of the *Nouvelle Revue* a letter on the Italian Premier Depretis, which, however, was rejected by Mme. Adam as not possessing the peculiar political complexion of the works of Count Vasili. As soon as Countess Hugo received Mme. Adam's reply, she resolved to write, under the title of 'Choses et Gens,' a work on the society of Rome in her own name. This rival publication, which also appeared serially, elicited another characteristic epistle from Mme. Adam, addressed to the editor of the *Capitano Fracassa*:

"DEAR SIR AND COLLEAGUE: I must ask you to be good enough to protect me against a threatened fraud concerning the 'Société de Rome,' similar to the one committed recently with regard to the 'Société de Londres.' Please call the attention of your readers to the fact that the society of Rome will be described by Count Paul Vasili, and that any other work on the same subject, no matter under what name, is a fraud on its face, and one which will lead to a lawsuit. I shall be greatly obliged to you for protecting me in this matter."

From the consideration of "Count Vasili," the writer in the *Frankfurter Zeitung* proceeds to that of the 'Société de Rome' itself, which he finds entirely worthy of its source.

—Nearly twenty years ago, in No. 177 of the *Nation*, the late George P. Marsh contributed an interesting article on the economic writings of Prof. Gerolamo Boccardo of Genoa, and, in particular, on his 'Dizionario della Economia Politica e del Commercio,' which was pronounced a work of remarkable value and comprehensiveness. The materials which Prof. Boccardo had collected, partly for the historical portion of this dictionary and partly for a course of lectures, he arranged into a condensed narrative of the history of commerce. The third edition of this 'Manuale di Storia del Commercio, delle Industrie e dell' Economia Politica' (Turin, 1886, Roux e Favale), revised and enlarged, is before us. One of its subtitles, "The Economic Evolution of Human Society," will give the best brief description of it. Based upon a wide range of economic learning, it is at once remarkably concise and comprehensive. It begins with prehistoric man, and comes down to the present Socialist movement and the protectionist reaction in Europe. Though not so large as Blanqui's 'History of Political Economy,' it is a much more satisfactory book, and, in fact, contains more matter. We have no hesitation in pronouncing it one of the best manuals we have ever seen, and much the best short general review of the history of commerce and industry that we are acquainted with. It is very greatly to be desired that it may be translated into English. It would make a useful text-book for colleges and scientific schools, while the force and vigor of the style and the essential interest of the contents would secure it attention from the general public.

—Turning for a moment to the contents, we will note one or two matters of interest. On page 99 there is a most suggestive remark on the early church councils: "The creation of councils (to consider them merely as meetings where the highest intellects are gathered to discuss an idea) is one of the happiest thoughts of the genius of Christian civilization. The largest assemblies of the ancients had been the Forum, the great games, the amphictyons; but the Christian councils brought together the strongest minds and noblest hearts, not of this or that nation, but of the whole civilized world, to decide not merely questions of doctrine, but also the most lively and pressing social problems." In discussing the significance of the discovery of America, an instructive parallel is instituted between the Romans and the Spaniards in their contempt for the occupations which lead to industrial and economic development, and in their common passion for glory and military conquests. We have noticed a few slight errors. On page 165 Michael Palæologus is called the Emperor of Constantinople in 1261, instead of Emperor of Nicæa. Grasham is printed instead of Gresham, Warren for Warren Hastings. Like some of his foreign predecessors, Prof. Boccardo explains the name "Doomsday Book" incorrectly as the "Book of the Last Judgment." Most English readers will smile on reading the list of great spirits that have contributed to England's growth and development, when they come to the last line—"the keen and observant art of Thackeray, Dickens, Eliot, and Ouida." The volume is supplied with an analytical table of contents, an index of several hundred articles, and a very useful guide to the literature of the subject, which mentions about one hundred and forty titles.

—With regard to our recent comment on Prof. Delitzsch's change of view concerning the Sumero-Accadian question, a correspondent writes, for the benefit of non-Assyriologists:

"Let me very briefly show that the interpretation of Assyrian texts is entirely *independent* of the question whether there is such a language as Sumero-Accadian or not. The cuneiform writing consists of signs which are either to be read as syllables entering into the composition of Assyrian words, or they represent entire words. The "Sumero-Accadists" believe that the majority of these syllabic values of the cuneiform signs are originally words (or parts of words) of a non-Semitic language, which carries with it the conclusion that the Assyrians, who are Semites, obtained their system of writing from a non-Semitic people. Prof. Halévy, on the other hand, claims that the phonetic values of the cu-

neiform signs (*i. e.*, as syllables) are of Semitic origin, and represent Assyrian words abbreviated or otherwise modified. Now, it is evident that the *reading* of the signs is not in the least affected by the question as to their *origin*. Give Prof. Halévy any Assyrian inscription, and he will translate it precisely as his great opponent, Prof. Oppert, would do, barring, of course, passages in regard to which—as is the case in every language—legitimate differences about the exact meaning may, for various reasons, exist Again, in the so-called bilingual texts, consisting of 'Sumerian' or 'Accadian,' and an interlinear Assyrian 'translation' (or, what amounts to the same thing, the two arranged in parallel columns), the point at issue is a purely *theoretical* one. What the 'Sumero-Accadists' regard as parts of speech, stems, affixes, and the like of a *real* language, Halévy claims to be merely an artificial manner of writing Assyrian, invented by the Assyro-Babylonian priests as a species of mystic writing."

—Lessing's 'Laocoön' is one of the books about which Germans have built up a literature of commentary, and over which the tides of polemics seem likely to flow for ever. The original work, small as it is, remains the valuable part of this literature: its dicta, though their range is now seen to be narrow, have not been set aside, and even the realistic movement of our generation has not seriously impaired their credit. The volume and laboriousness of the later exegesis make an English reader shrink a little at the sight of a new commentary; but Heinrich Fischer's pamphlet of 200 pages, 'Lessing's Laocoön und die Gesetze der bildenden Kunst' (Berlin: Weidmann'sche Buchhandlung, 1887), will please those who have interest enough in the subject to read it. Like its fellows, it is polemical, but the author brings a distinct contribution of his own, and writes with directness, force, and acuteness. He knows the artist's point of view, and can discuss his subject from that side; he has, besides, a knowledge of works of art which we miss in many recent writers on æsthetics as much as in Lessing himself. His mission is chiefly to reconcile the doctrines of the 'Laocoön' with modern practice, and to defend Lessing from his detractors. Among these he singles out Justi for special attention, belaboring him with a pleasant self-confidence which is not without its justification. If the reader is not deterred by the subtleties of German æsthetics, and can bear a considerable thrashing of old straw, he will find much that is keen, fresh, and interesting in Fischer's discussion.

PART THIRD OF THE NEW ENGLISH DICTIONARY.—II.

A New English Dictionary on Historical Principles: Founded Mainly on the Materials Collected by the Philological Society. Edited by James A. H. Murray, with the Assistance of Many Scholars and Men of Science. Part III. Batter—Boz. Oxford: The Clarendon Press; New York: Macmillan & Co. 1887.

ERRORS and deficiencies of the kind last noted are so exceedingly few that we do not care to emphasize them beyond saying that so long as Americanisms are introduced at all, it is unfortunate that they are not subjected to competent revision—difficult as we concede it would be to find it—before being embalmed in the immutability of stereotype. A far graver charge against this work we have pointed out previously. It is destined to fulfil only in a subsidiary sense the duty of supplying the best authority for the best usage. Its character in this respect was determined from the outset, and it is not likely now to vary from the lines upon which it was started. It is with no thought of expressing the slightest disrespect for those engaged in its preparation that we say it is in the hands of scholars rather than of men of letters. The interests of literature will therefore always meet with scant courtesy as contrasted with the interests of philology. In this respect the new dictionary stands at the very opposite extreme from that occupied by the great lexicon of the last century. Dr. Johnson was in no sense an English scholar, judged even by the low standards that prevailed in his day. His dictionary is of no authority whatever in the case of disputed derivations; and the information it usually imparts to him who seeks after the origin of doubtful words, is of a sort which the inquirer had far better be without. On the other hand, it is so full of apposite quotations, mainly from the best authors, that it is even now a pleasure to turn over its leaves and enjoy its selections. For every extract has weight, not because it illustrates the fact that the word has been employed, but because it has been employed by a man whose usage gives it the stamp of authority.

We lay it down once more as a fundamental principle, that, in any dictionary prepared upon an extensive scale, the great representative authors of the language should be gone through with a closeness and care that leaves not a sentence unexamined, and, as a consequence, not a word or form unrecorded, not a difficulty unnoticed, even if it cannot be explained. In a dictionary prepared upon a scale as extensive as is this, all writers in our tongue who are entitled to be called classic should be subjected to the same process. They need not necessarily be those that stand high in their grade; but whether standing high or low, whether major or minor classics, readers should obtain the benefit of their position. In quotation, moreover, they should have precedence. The use of inferior names, when greater ones can be obtained, denotes a certain lack of the literary sense, a disposition to believe that, as regards authority, one man is as good as another; as if the value of a dictionary depended upon the number of authors represented, and not upon their character. But so far as that is concerned, we do not look to a lexicon for a census of English writers, but for a consensus of the best usage. One result of the indifference exhibited for this principle is the frequent recurrence of authorities that carry no weight, and the occasional occurrence of usages that have no right to be recorded. This dictionary will be the means of bringing to notice the names of several persons hitherto quite unknown to fame. A number of authors appear in it frequently that will never have been met before by most of us, and outside of its pages are never likely to be met with again. On the other hand, as an illustration of a usage which never ought to have been admitted, we designedly select a particular one, for the insertion of which the editors themselves make a quasi-apology. Under *bel-esprit* is the definition, 'wit, wittiness,' with the remark that it is "hardly in English use." The single authority given for it is Adler's translation of Fauriel's 'History of Provençal Poetry.' This is authority with a vengeance. Here is a meaning recorded and recognized, though with a qualification, which is based exclusively upon a translation of a French work by a writer born in Germany, and who transferred to his acquired tongue all the hideous qualities that characterize the most vicious German style. The late Prof. Adler was a scholar of respectable acquirements; but no one who read his school-books, or, for that matter, anything he wrote, ever accused him of writing the English language.

We devote space more freely to the discussion of this particular point because the editor, it seems to us, mistakes, and in his preface misstates, the relation of literature to language. He maintains with justice that in a living tongue the creative epoch, the period of roots, never comes to an end. But he then goes on to add that the literary speech, with its hoard of words already existing and its appeals to authority for usage, is hostile to word-creation. This assertion is undoubtedly true of a language that is dead; as regards a living one, we venture to say that it is not supported by any evidence whatever. It is, in fact, based entirely upon misconception. The literary speech is hostile neither to the creation of new words nor to the revival of old ones. In the case of the latter, indeed, it usually precedes the spoken tongue; in that of the former, it has certain definite functions to fulfil. Its province is not to adopt indiscriminately the myriad creations of the hour, but to select from the vast number of new coinages furnished by the colloquial speech those which are most fitted to survive. It does this readily, for it instinctively feels that it must seek in sources outside of itself for something to uphold decaying energy, to add vigor and freshness to expression which commonness has made to seem commonplace. It adopts slang when slang says forcibly what it has been saying tamely; for it recognizes the fact that slang is nothing but an effort to say with sharpness and strength what has been worn smooth and pointless by the wear of constant use. But it is conservative, and conservative in the best of ways and for the best of reasons. It adopts terms and phrases slowly, because it is adopting them for all time.

This indisposition to make haste is something, however, quite distinct from hostility. The result is that, to a great extent, what is worthless in the formations of the hour disappears; what is valuable is retained. So far, in fact, is the literary speech from being averse to additions, from whatever source derived, that there is no new word which expresses a new idea, or names a new thing, or condenses into itself the signification of a sentence, that is not destined sooner or later to be embraced in its constantly increasing vocabulary. A dictionary must, of course, often anticipate the decisions of literature, and must recognize much that the latter may never adopt; but all this is to be done with discretion. To illustrate our meaning: *dude* is an Americanism that is almost certain to become in time established in the literary speech. It expresses in a word what otherwise it would require a sentence to explain. But even if it failed to pass beyond its present usage, it ought to have a place in a dictionary on account of the extent of that usage, just as the somewhat similar but now forgotten *maccaroni* of the last century is entitled to be put on record. But, as a specimen of words that do not deserve the slightest recognition, we may instance *beehive* as a verb, found in this part. It has appended to it "[U. S. A.]," which, of course, gives the false impression that it is a word in current use in this country. It must have been a sense of international comity that induced the editors to insert such a term; for anybody can change at any time a substantive into a verb. It certainly proves a deficiency of the literary sense, both on the part of the one who originated the usage, and on the part of the one who forwarded it. Several formations of this character have been credited in this dictionary to the U. S. A.; and the U. S. A., so far as we have observed, are not grateful for them.

We should be far, however, from wishing to be understood as implying that the writers of our tongue who can in any way be deemed classic are not fairly represented in this work. It is an ideal standard we are holding up designedly, for that is the standard which a dictionary of this character sets out to reach. These writers have all been read carefully. Scarcely a word or form or meaning fails to be recorded, so far as the limited knowledge we possess enables us to test the matter. Yet we doubt if a single author has been read in that exhaustive manner which the preparation of a work like this demands. Certain deficiencies

have struck our attention as we have run over its pages. Let us begin with the first great poet of our literature. *Boastance*, of the earlier printed editions of Chaucer, and still found in some manuscripts, does not occur here. A figurative use of *beast* in the 'House of Fame,' in which clouds, mists, and tempests are described as beasts of the air, is not noticed. The word *beard*, in the exact sense of a 'sell,' as in the line—

"A berd, a berd, quod hende Nicolas"—

is not recorded, though the corresponding phrase, 'to make one's beard,' finds place. There is no reference whatever to the singular and as yet unexplained use of *beguile*, towards the end of the 'Doctor's Tale.' *Bicorne* as a substantive appears simply as 'a two-horned animal.' There is no mention made of the *Bycorne* of Lydgate, the gigantic beast that fed upon obedient husbands—the counterpart of Chichevache, that maintained a precarious and half-starved existence by subsisting upon patient wives. The substantive use of *best* in the 'Winter's Tale,' in which the Saviour is simply described as 'the Best,' is not entered here, perhaps intentionally. *Bead*, in one of the quotations that appear under the word, seems to mean 'a rosary': it certainly does so in the unquoted line from Vaughan—

"One sun more strung on my bead of days."

We miss also *bewitchedly*, to be found in Steele's play of "The Funeral"; *baubledom*, used by Horace Walpole in a sense tending to approach the modern 'bric-à-brac'; the *blandulish* of Sterne; the form *bourasque*, found in the notes to the fourth book of Pope's 'Dunciad'; and, worse than all, that author's specific use of *the bays* as denoting the office of poet-laureate. We could furnish a few other illustrations, but these are sufficient to make our statement good.

It is the readers and not the editors that are directly responsible for such failures, the importance of which, it is well to add, can be easily overestimated. There are certainly occasional instances in which the work of the former has been done with a good deal of carelessness. An illustration of this can be noticed in the case of the dramatic writings of Thomas Shadwell. From these enough quotations have been taken to show that all his plays have been read for this dictionary. Shadwell is not a great author, but he is of sufficient importance to deserve careful perusal. Had it been done more thoroughly, earlier dates than those given here could be found for several words and phrases. *Bird's-nest*, as the edible nest of the swallow, is mentioned here under 1760 with a quotation from Goldsmith; it is spoken of in Shadwell's "Woman Captain," which appeared in 1680. The first quotation of *beau monde* in this work is taken from Pope, and belongs to the year 1714; it occurs in Shadwell's "True Widow," 1679, his "Bury Fair," 1689, and his posthumous "Volunteers," printed in 1693. *Blowing*, a cant term for prostitute, has no earlier example than 1812, yet it occurs about a dozen times in Shadwell's "Squire of Alsatia," which belongs to 1688, and, furthermore, is defined in the glossary prefixed to that play. Shadwell has also in his "Woman Captain" the term of endearment, *bird's-nye*, for which only one authority seems to have been found. We may add that *bemuse*, with a quotation from Pope of the year 1735, is in the fourth volume of Dryden's *Miscellany*, which came out in 1694. It was used in a poem written by a certain Mr. Knapp of Magdalen College. For *belle* as an adjective, only Pepys is quoted, under 1668; yet nearly three hundred years before, Pandarus had addressed Cressida in the second book of 'Troilus' as 'O bele nece.'

For certain omissions the editors themselves must be held responsible. They give no separate entry to, nor indeed do they make any special mention of, the once common contract forms of the third person singular of the present tense of certain verbs such as *bit* for 'biddeth,' *bint* for 'bindeth,' and *betit* for 'betideth.' That such forms can be found in the extracts will be of little service to him who is ignorant of the place where to look for them. Even that help will be denied him in the case of *boes*, the contract form of 'behoves,' found in the Ellesmere text of the 'Reeve's Tale.' Objection might also fairly be taken to the rather inadequate treatment of *bergeret*. This is a word which to our knowledge occurs but once in English literature, in the poem of "The Flower and the Leaf." It is simply explained here as the etymological spelling of the obsolete word *bargeret*, meaning 'pastoral.' Turning to *bargeret*, we find it defined as merely a variant of *bergeret*. This is doubtless one of those oversights into which the most careful of editors cannot save himself from sometimes falling. Under the participial adjective *being*, in the sense of 'seeing,' 'since'—which Bartlett, singularly enough, puts down as an Americanism—there is a slight error in the reference, noticeable mainly because the work strikes us as extraordinarily free from mistakes of this kind. For B. ii under the verb *to be* should be read B. i, 3.

The mention of the substantive verb reminds us that the first illustration of the modern passive formation represented by *is being built* occurs here under the year 1769. There is a much earlier instance of the form, or at least of the transition to the present form, in a play of Thomas Porter, called "The Villain," brought out in 1663. It can be seen in the two following lines of blank verse, or, at any rate, what the author chose to consider blank verse:

"The fear of thieves is worse than the loss we can
Sustain by them; we're still a being robbed."

Our quotation is taken from the edition of 1694.

There are numerous other points which we should be glad to discuss in connection with this Part; but the length to which our notice has already extended warns us to stop. We have largely given up this review to pointing out what are, or what seem to us, deficiencies; but we should fail of the commonest justice did we not bear the fullest witness to the extraordinary value of this dictionary so far as it has been completed. Our criticism has been scattered over hundreds of pages; but there is not a page, nor even a single column, which will not correct the errors or add to the knowledge of all of us. As the work advances and covers a larger proportion of the alphabet, its merits will be recognized by larger and larger numbers. But it has already gone far enough to show that it is a work upon which every member of the English race can rely with confidence, and of which he can speak with just pride; and furthermore it has already gone far enough to enroll the name of its editor-in-chief among the scholars whom English literature will always be delighted to honor.

THE LATEST PLEA FOR BIMETALLISM.

The Silver Pound, and England's Monetary Policy since the Restoration; together with the History of the Guinea, Illustrated by Contemporary Documents. By S. Dana Horton, a Delegate of the United States of America to the International Monetary Conferences of 1878 and 1881. Macmillan & Co. 1887.

THE last paragraph in this book might well have been printed first. It is the concluding sentence of a note sent by the Governments of France and the United States, on the 31st of March, 1882, to the other Powers represented in the Monetary Conference of the preceding year. The Conference had adjourned on July 8, 1881, to a day certain, viz., April 12, 1882. The note advised the other Powers that although the question of bimetallism had been under discussion in the interval, no conclusions had been reached sufficiently positive to serve as a basis for formal deliberations of the Conference. The last paragraph of the note was in these words:

"In this situation, the Governments of the United States and of France are of the opinion that it would be desirable to defer the convocation of the Conference, subject to a determination, on the part of the States interested, of the date for its reassembling, *the same to take place within the present year.*"

As the Conference did not reassemble within the year, nor within five and a half years thereafter, and as there is no prospect that it ever will reassemble, and no reason, in our opinion, why it ever should, Mr. Horton's book will serve as a very good substitute for it, and it is in the light of such a substitute that we regard it.

The world has pursued the even tenor of its way these five and a half or rather six and a half years, not much thinking about bimetallism. The evils suffered for want of it, if any, have been surmounted, or at all events are not now felt. It requires a very loud shout to make anybody aware of them. Mr. Horton undertakes to tell us that they still exist, and to define what they are. An author having this end in view ought to qualify himself in the spirit of scientific inquiry if he wishes to convince doubters. The habit of bimetallists of looking upon silver as a person, and an extremely ill-used person, instead of one among many instruments of human convenience, has always been a sad stumbling-block in the discussion. Mr. Horton, on the first page of his preface, speaks of the "Disinherison of Silver" as the wrong to be righted. The "Outlawry of Silver" is his alternative phrase, and these two terms run through the entire work. Such language is as inappropriate in a scientific treatise as it would be to speak of the Disinherison of flint-lock muskets or the Outlawry of tallow candles. And of this the author should be well aware, for he reminds us on page xi of the preface that "words are good servants, but bad masters." In order to make an impression in the right quarter—that is, among reasoning creatures—the author's starting-point must be reasonable. The personification of silver is a false starting-point. Even if we suppose that the words Outlawry and Disinherison are used in a metaphorical sense only, the insistence and persistence of their use are calculated to throw the untrained reader off the track at every step, and bring him to the conclusion that what is wanted is not so much a good kind of money as the overthrow of wicked usurpers and the restoration of an outraged dynasty. This is the coloring of almost every chapter, where we find plentifully scattered such phrases as Monetary War, Inter-Metallic Peace, and Reënfranchisement of Silver—all terms attributing personal qualities to certain inert substances. We know what a war with cavalry and infantry is, and what the enfranchisement of a non-voter is. We do not know what kind of a war that would be in which the combatants were gold and silver, nor do we know how the right of suffrage could be bestowed upon silver. Conferring the freedom of the city upon a person in a silver box is a time-honored ceremony in some parts of the Old World, but who ever thought of conferring it upon the box? Surely, "words are good servants, but bad masters."

The author's argument proceeds upon two assumptions, (1) that the fall of prices since 1873 is due to gold monometallism in Europe, although he contends subsequently (on page 53) that gold monometallism does not exist in Europe and cannot; (2) that a decline of prices is a bad thing for the world. Both of these propositions are denied by the other side, who contend that all the

decline in the prices of commodities that can be discovered can be traced to improved means of production and transportation, and that along with declining prices of some commodities, advancing (or at least stationary) prices of other commodities are observed. A list of twenty-one such articles of general use was published in a recent number of the *Quarterly Journal of Economics*. Mr. Horton declines to go into the examination of index numbers and that sort of thing, because he knows that the eternal principles of Ricardo require that the facts should be as he states them, and that if they are not so now, they will be so in the course of the twentieth century, unless justice is done to silver meanwhile by the removal of the Disinherison.

By way of improving the terminology of the science and insuring clearness of thought, the author asks us to divide the term Standard of Value into two parts, viz.: Standard of Desiderata and Greater Standard of Value. "The organic law of the standard of desiderata," he says, "is still a desideratum. The subject seems to lack its devotees, though the memory of much that has been achieved already, encourages the belief that such devotees will appear in time." It has to do, however, with prices in particular countries. The Greater Standard of Value has something to do with "the general level of prices" in all countries as distinguished from particular countries, corresponding to the level of the sea. It is dependent upon "the sum total of National Instruments of Valuation, the Money of the World." If this division of the word Standard is the aid to clearness offered to the next international monetary conference, the muddle in which the last one found itself on the 8th of July, 1881, and out of which it could escape only by adjournment, would, we fear, be very little relieved.

If prices are in general declining—and of this there can be little doubt—the effect must be to bring a larger amount of the good things of this world within reach of all persons whose wages or incomes are not declining. And this must be the effect whether the decline in prices is caused by new inventions, or by the bringing of new land under cultivation, or by the lightening of taxes, or by silver demonetization, or by all combined. Is this a bad thing? The badness of it it the trump-card of bimetallism. It is assumed by the author as one of the accepted axioms of social science. He finds it disputed by Mr. Pirmez and Prof. Nasse, who hold that the wage-earning classes—the larger portion of mankind and the portion best entitled, if any, to have their interests consulted by the law-making power—are benefited by low prices of commodities, for the reason that their wages do not decline as commodities decline, but tend rather to increase. This position is met by the unsupported assertion that a decline in prices tends to check production and throw laborers out of employment or put them on half-time. The invention of the power-press has caused a great decline in the price of books and newspapers. Has this decline thrown any printers or pressmen, or bookbinders or paper-makers, out of employment or put them on short time?

Mr. Horton's treatise is addressed particularly to English public opinion, and is properly timed to produce such effect as it may upon the Gold and Silver Commission with which the Salisbury Ministry is amusing John Bull. The testimony, or a large part of it, taken by the Commission has been published. An examination of it leads the *Economist* to say that "the case for bimetallism has, in fact, broken down completely, and in view of that fact it is hardly worth while to discuss again the schemes of its supporters."

A number of hitherto unpublished documents relating to English coinage are printed as appendices to the present volume, several of which bear the signatures of Sir Isaac Newton and of John Locke. These were supplied for Mr. Horton's use by the Manager of the British Mint. The papers submitted add little or nothing to previously known facts. The interest belonging to them is antiquarian rather than scientific, although any scraps that bear such honored names are always welcome.

If ingenuity and industry misapplied are ever worthy of praise, Mr. Horton's labors are to be highly commended. He will find his reward, however, among those in both hemispheres who esteem bimetallism a precious thing, irrespective of any means of putting it into practice.

SOME EASTERN GRAMMARS.

Simplified Grammar of the Serbian Language. By W. R. Morfill, M.A. [Trübner's Collection of Simplified Grammars of the Principal Asiatic and European Languages.] London: Trübner & Co. 1887.

Grammaire Albanaise. À l'usage de ceux qui désirent apprendre cette langue sans l'aide d'un maître. Par P. W. [Simplified Grammars.] London: Trübner & Co. 1887.

A Hebrew Grammar. By the Rev. W. H. Lowe, M.A., Lecturer on Hebrew, Christ's College, Cambridge; joint author of 'A Commentary on the Psalms,' etc. Thomas Whittaker.

LIKE some others of the collection to which it belongs, the above-named Serbian Grammar quite undeservedly claims the merit of being "simplified." It is an abridged grammar, and one greatly obscured by condensation and elimination. Surely, there is little simplicity in a paragraph like the following, which is made easily comprehensible neither by what precedes nor follows—all of it similar in tenor—and is no unfair specimen of the author's presentations of the Slavic verb:

"The perfective verbs are again subdivided either: *a*) as they denote completion without regard to the duration of the action—*e. g.*, *kupiti* [we transliterate the Serb words and correct the punctuation, which is most careless throughout the book], *to buy*, in one or more acts (unconditional perfective verbs), or *b*) with reference to the duration of the action (conditional perfective verbs). In the last circumstance the action may be either *a*) one the beginning and the end of which are simultaneous, as *striyelyati*, *to shoot*, the action being done rapidly, once for all, as it were—these verbs are called by MIKLOSICH momentaneous, and correspond to the perfect aspect of unity of the Russian grammarians—or *β*) the action may not have a simultaneous beginning and end, and this class is further subdivided into 1) where the action the completion of which is predicated is a continuous one, or 2) repeated at various times. The first of these [verbs] MIKLOSICH calls durative perfective, the second iterative perfective."

In fact, this Serbian Grammar is also obscured—where it ought to be most plain—by frequent references to the other Slavic tongues, to Miklosich's 'Vergleichende Grammatik der Slavischen Sprachen,' and "a good Serbian dictionary." The comparative side of the task has the greater attraction for Mr. Morfill as he has been assigned also the elaboration of the Polish, Russian, Bohemian, and Bulgarian grammars for the collection. The Serbian is, to judge from the Preface, to cover the whole Serbo-Croat domain of the language, embracing "the following territories":

"1) The Kingdom of Serbia;
2) The part of Old Serbia still under Turkish rule;
3) Bosnia and Herzegovina;
4) Istria, the Dalmatian littoral and the islands;
5) The Principality of Montenegro;
6) The Austrian provinces Croatia, Slavonia, Syrmia, and the southern part of Carniola;
7) The Serbs in the Banat and South-Hungary;
8) A few who are settled in the South of Russia."

In reference to this quotation we cannot refrain from remarking that Syrmia is not an Austrian province (Austro-Hungarian would have here been the proper expression), but a division of the just mentioned Slavonia; that the Banat is a part of South Hungary; and that "the Serbs in . . . South Hungary" and the "few who are settled in the South of Russia" are, correctly speaking—which grammarians ought to do above others—not "territories," but inhabitants of territories.

Instead of referring so often to Miklosich's German work and to a good Serbian dictionary—which would not be English either, we presume—Mr. Morfill would have done much better to explain many peculiarities of the Slavic idiom—peculiarities most strange to English students—by a simple reference to similar forms in German. The whole statement (pp. 33, 34) about "compound verbs . . . which take a preposition before them"—as, *do*, to; *na*, on; *o*, *ob*, around; *od*, from; *po*, after; *pod*, under; *pre*, through; *raz*, asunder, etc.—could have been greatly simplified by comparing such German compounds with *hin* (*fort*), *an*, *um*, *weg*, *nach*, *durch*, *zer*, etc., as would best agree with well-chosen Serb words. "*Pre* implie[s] change, going from one place to another, as *prebroditi*, *to cross a river*," is neither clear nor literally correct; *durchwaten* is a perfect German translation of the Serb compound. *Naigrati se* is poorly explained by "*to play till one is tired out*", *sich* (*voll*) *anspielen* would render it exactly. Why not use *zertrümmern* to explain *raz* in "*razgraditi*, to demolish"? Only *pod* in *podjarmiti*, to subjugate, is well explained by "the Latin *sub*"; the German *unterjochen* is, however, a still more perfect parallel.

Referring to the Albanian language, at the end of a classification of the Aryan tongues spoken in Europe, Max Müller said, a quarter of a century ago: "This language is clearly a member of the same family; and as it is sufficiently distinct from Greek or any other recognized language, it has been traced back to one of the neighboring races of the Greeks, the Illyrians, and is supposed to be the only surviving representative of the various so-called barbarous tongues which surrounded and interpenetrated the dialects of Greece." This brief and rather vague statement is even now almost all that can be said to be generally agreed upon by comparative philologists concerning the affinities of the strange idiom of the Shkipetars, although it has been subjected to special scrutiny by such first-class minds in the linguistic domain as Bopp and Miklosich. The results obtained as to closer relationship differ considerably. Some trace the Albanian directly back to Sanskrit, others find the nearest kinship in the Letto-Slavic group of languages, and still others see the Pelasgic—of which there are, however, no written remains, if it ever was a written language—clearly preserved by the rude mountaineers of ancient Epirus and Illyria. What renders the decision the more difficult is the heavy admixture of Greek, Latin, Italian, Slavic, Ruman, and other words, which renders the Albanian a puzzling linguistic amalgam. Add to this a great diversity of dialects, the absence of a uniform method of writing—both Greek and Roman alphabets, variously modified, are in use by scholars—the general illiteracy of the people, and the impenetrability to cultured Europeans of the rude interior of the country. The latest publications on the subject show that various views continue to be held.

The author of the grammar before us—an advertisement in another volume of the 'Collection' shows "P. W." to stand for "Wassa Pasha, Prince of the Lebanon"—is one of the most convinced ethnological partisans in regard to this question. "The Albanians," he says in

his Preface—in French, for the publishers have wisely left his work untranslated—" are, without contradiction, the most ancient of all the peoples that inhabit Europe. This priority over their congeners cannot be contested, for science has fully established their direct descent from the Pelasgians." He does not enter, however, upon the task—"qui requiert une étude des plus approfondies"—of proving what he deems incontestable. He avows only the practical aim of presenting to scholars a manual which shall prove "a sure guide." His work is a labor of love, and he executes it evidently after serious studies—without wasting words on moot questions, grammatical, lexicographic, dialectic, or orthographic. He ignores the Greek alphabet completely, explains well the Latin alphabet, with modified pronunciation, which he has adopted, and in every division of the book supplies the student with plenty of examples. The book is one of the heaviest of the series, being twice as large, for instance, as the Hungarian Grammar, which again is larger than the Serbian. That the fulness and strictness of its rules—of declension, conjugation, etc.—have been attained only by ignoring discrepancies and dialectic divergences, suppressing doubts, and occasionally concealing a lack of knowledge, we venture to suppose; but writers on Albanian matters are privileged persons, and we are far from presuming to oppose Tosk forms to Geg, or the authority of G. Meyer to that of Camarda.

What is indubitably the result of a comparative study of the Albanian is its Aryan origin. To become convinced of this one has only to compare its *dy, tre, kater, pēs, gjasht, dhêt, kind, myi*, with the corresponding Latin or Slavic numerals, *duo, tres, quatuor*, Pol. *pięć*, Russ. *shest', decem, centum, mille;* the fem. noun *grue*, gen. *grues*, acc. *gruen*, voc. *o grue*, with the Greek γῆ γῆς, etc.; or *yam, asht, yemi*, am, art, (we) are, with *sum, est, sumus*, εἰμί, ἐστί, ἐσμέν, Boh. *jsem, jest, jsme*. What is equally patent is the terribly mixed character of the Albanian vocabulary. Among twenty-one words grouped only on account of their gender we find *gēn*, dog (cf. *canis*); *luā*, lion (*leo*); *mazh*, she-cat (Magy. *macska*); *gyarpen*, snake (*serpens*); *luftār*, warrior (*luctator*, Rum. *luptator*); *buyar*, noble (Rum. *boier*, Russ. *boyarin*); *sherbtuer*, domestic (*servitor*); *rob*, slave (Russ. and Magy. *rab*); *perenduer*, emperor (*imperator*); *regy*, king (*rex*).

Considering how few works on the Albanian language exist altogether, we can but regard this comparatively exhaustive one as an uncommonly valuable contribution to linguistic literature. As such it deserved a very careful handling on the part of the publishers of the 'Collection.' Instead of that, we meet with shocking carelessness. On page 2 we find "on l'emplore," "s'emploi," and "le son du *K* grec devant [for *dans*] le mot κύριε"; on p. 4, "clec," probably for *clef;* on p. 6, "beau, fils," for *beau-fils;* on p. 7, "volense," for *voleuse*. That the author has not himself been guilty of disfiguring so precious a production by hasty proof-reading is evident from the queer addition in English to the conclusion of his French Preface. Without a dividing line, the author's appeal for indulgence is followed by these words—evidently a note to another grammar of the series: "For ordinary use, only, four tenses are necessary: the present, past future and imperative. [The punctuation is not ours.] Colloquially, the present is almost invariably used instead of the future." Fortunately, these are the only English lines discoverable in the 'Grammaire Albanaise.'

The little book which Mr. Lowe presents as "merely a sketch of Hebrew grammar, but . . . sufficient to enable the student to read the Hebrew Scriptures with the aid of it and of a dictionary," appears to us to go in some of its sections far beyond its promise, and in others to fall short of it. As defective, we may instance the paragraph (98) devoted to the numerals. We are, however, not inclined to lay too much stress on unevenness of treatment, considering that what is given has throughout the merit of order, clearness, precision, and general accuracy. As an aid to students who can receive ampler information and the occasionally needed explanations from a competent teacher, it will prove a most handy manual, and those sufficiently advanced in the study of the language will find it a particularly pleasant companion. We notice, however, some peculiarities which we cannot approve of—though we have, perhaps, no sufficient warrant absolutely to condemn them—and here and there a slip. To the former belongs the use, in transliteration, of *bh* and *dh*, while *c* stands for all forms of "Caph"—even as in "*lēc*, go thou"; of *kh* for *'h* (though exceptionally also *ch*, as in "chōlem," side by side with "*pathakh*," "*khātūph*," pp. 24, 51); and of *gr* for *'Ain* ("Graïn"), as in "*grāvōn*" (for *'āvōn*) and *Gilbōagr*. Of slips we may mention "*çippor*, bird," in the list of masculine nouns forming their plural in *-ōth* (p. 14), while no such plural as *çippōrōth* exists; the translation of *sā'ar* by "while away" (p. 30); and such misprints as "*m'zabēa'h*" for *mizbēa'h* (p. 14), "*zammōtti*" for *zammōthī* (p. 42), and "*yayshāreth*" for *vayshāreth* (p. 48). "*Zeh livyāthān*" (p. 11) stands probably for *livyāthān zeh* (Ps. civ, 26), but the rendering of "this leviathan" is incorrect, for *zeh* is in this instance a relative pronoun (as in verse 8 of the same psalm). Equally incorrect is the rendering of *am zū* (p. 11) by "this nation (which)," instead of by *the nation which* (more literally, *the nation that*).

Modern Hinduism, an Account of the Religion and Life of the Hindus in Northern India. By W. J. Wilkins of the London Missionary Society. Scribner, Welford & Co. 1887. Pp. xi, 494.

So far as this book is held true to the promise of the preface, and is the record of the observations of one "with the seeing eye and inquiring mind, who has lived for many years in India," it is of interest and some value. Where it simply reproduces the writings of others, as it does very frequently and at great length, it wastes both time and paper, as the excellent authorities cited are all accessible. The author's naïve expressions of surprise at encountering facts which comparative religion has long since put in their proper setting, argue a deficient equipment, on that side at least, though he keeps himself admirably, on the whole, to his declared purpose of appearing as a "chronicler rather than a preacher." He has the thoroughly unconscious humor of an Englishman when he enumerates in his rather formidable list of Hindu vices "ingratitude," "want of confidence in their fellow-men," and, coolest of all, "oppression." His book gives us, we repeat, a great deal of important matter, and we only regret that he so overweights it by extracts from other writers, and that he tells his tale in so prosaic and colorless a fashion.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 1, 1887.

The Week.

THE action of the Democratic reformers in Maryland shows that the spirit of independence is not confined to those who were once Republicans. Thanks to the machinations of Gorman and his unhappy power of deceiving the President, the Democratic party has been brought to such a pass in the State that decent men could no longer act with it. They, therefore, gave the Republican leaders to understand that if they would put up a ticket beyond reproach, and would advocate certain specific State reforms, they would go with them. In consequence, the Republicans have nominated as candidate for Governor Mr. Walter B. Brooks, one of the best known business men in the State of Maryland, whose name is a synonym for honorable dealing, and who is especially remarkable for soundness of ideas combined with unusual executive ability. He is not a politician in any sense, and we do not know of his having ever run for office before; but that he will make a good Governor his successful management of great business enterprises is a perfect guarantee. The wonder is how he could ever be prevailed upon to accept the nomination, and it is safe to say that nothing but a high sense of duty and recognition of the necessity of reform in his State could have induced him to accept it. As to the platform which the Maryland Republicans have put forth, while we do not consider the arraignment of the President, as hypocritical in his advocacy of civil-service reform, to be just or true, if a broad view is taken of his acts throughout the whole country, we think it natural and right that he should suffer the full measure of reproach for such appointments as he has made in Maryland. The approval of the Blair bill is a bad plank, but, as this is a State campaign, the planks relating to State matters are the really important ones, and they are admirable. They demand abolition of the State tobacco-tax inspection, which is a useless and heavy burden upon one of Maryland's principal industries, and has been retained only because it gives fat places to political henchmen; a revision of legal procedure, which is at present slow and expensive, often to the defeat of justice; stringent laws against bribery, which is rife in some of the counties, and of which the negroes are the principal subjects; a minority representation on all boards and commissions; and, most important of all, the adoption of such election laws as shall guarantee free suffrage.

With such a ticket and such a platform on State matters, the Democratic reformers do well to join the Republicans, and they are especially to be admired as many of their leaders suffered personally in the war for their belief in the wrong side, and some of them even fought on that side. The combination is a formidable one. In the last Presidential election, Maryland went Democratic by only 11,118 plurality. There were nearly 3,000 Prohibitionists, many of whom will vote with the Republicans in this campaign; and if the reformers' votes are counted, they have about 12,000 majority in the city of Baltimore alone. In short, it is hard to see how anything except fraud and intimidation can keep Maryland from going Republican in the next election, and the hope of the Opposition rests on Gorman, who, by his unscrupulousness and his skill in fraud, assisted by the criminal classes of Baltimore, has twice before saved the day for the perpetuation of his ring when it was overwhelmingly outvoted.

The Iowa Republicans stand manfully by the great Tuttle on the pension issue. Their platform declares: "This Government, saved from destruction and treason by the patriotism and valor of the Union soldiers, cannot afford in justice or honor to deal less than justly with them. It should cordially and promptly bestow, as an obligation of the Government and not as a charity, liberal pensions to all disabled or dependent soldiers, and to the dependent widows and parents of soldiers." That opens the way to a "liberal pension" for nearly everybody who either served in the war or belongs to a family which sent a member to it; and if it were to be carried into execution, there would be no further question as to the disposition of the surplus. This is the most comprehensive demand yet made by a Republican convention, being slightly more emphatic than the Ohio resolution, and a distinct rebuke to the guarded utterance of the Pennsylvania platform. It is not surprising that the Convention which adopted it should also have remarked, with ludicrous solemnity: "We are unable to give the commendation of good citizens to the Administration of Grover Cleveland."

So far as we can learn from their platform, the Republicans of Iowa are about two-thirds satisfied with the condition of affairs in the South, and one-third dissatisfied. They accordingly accept as settled the old issues of the war, and "hail with satisfaction all *sincere* evidence of *returning* fraternity and reunion." Insincere evidence is properly rejected, or held for further examination. The new issues raised in the South against the right of the majority to rule in the State and nation, the platform says, "are yet to be settled," but how they are to be settled it gives no hint. Protection to American labor by tariff is warmly endorsed, but it is declared in the same resolution that "the tariff should be revised and reduced," and also that there should be "all possible and practicable reduction of taxation both national and State." On the subject of immigration the platform is firmly "opposed to criminal and vicious immigration of all kinds, and to all pauper immigration and convict or coolie labor, or to the contract of prison labor by the State to bring unfair competition to American workingmen." As criminal and vicious and pauper immigration and convict labor and Chinese labor are already prohibited by law, we are in some doubt as to the meaning of this clause. The substitution of the word "coolie" for Chinese is the only novelty offered by the platform in this regard. There may be some coolie laborers in the United States who are not Chinese, but we never heard of any.

The withdrawal of Mr. Sweet, the nominee for State Engineer, deprives the Henry George Labor ticket of its one candidate who had the merit of fitness. Mr. Sweet says he is not a member of the Labor party, did not seek the nomination, does not want it, will not accept it, and does not know why it was given to him. We believe it was conferred upon him because the George party did not have among its members any man who happened to be an engineer, and in a moment of squeamishness the leaders of the party yielded to a suggestion that it was necessary for the candidate for State Engineer to have professional knowledge of the duties of the position. This was a weak concession to demands which no friend of Labor ever ought to recognize, and we trust that in selecting a substitute for Mr. Sweet no such limitation will be imposed. What, in heaven's name, has fitness got to do with it? The only important consideration is that the nominee is a friend of Labor. It might be well, in order to make the ticket homogeneous, to pick out a good Blaine man for the place. There are three such on the ticket now, and one more would make it so much the stronger.

The Farmers' Convention at Syracuse turned out to be as grotesque in representation as the United Labor party's Convention was. While there were a few delegates in the Labor Convention who work more or less directly with their hands for a living, the nominations which it made were taken from the intellectual and speculative branches of Labor. An editor, a "financier," a storekeeper, and a lawyer were chosen to command the armies of Labor. In the Farmers' Convention a New York city real-estate owner, a country editor, a professional politician, a doctor, and a retired contractor directed affairs. What any farmer had to say about the proceedings was not ascertainable from the reports. The object of the Convention was advertised to be to devise some way to prevent the appropriation of any more money by the Legislature for the improvement of the canals. It is difficult to see what the Convention farmers, or even any number of real farmers, could do by such a meeting to accomplish this result. The right place for agitating this subject would seem to be in the Assembly and Senate districts. Farmers who object to improving the canals at public expense would do better to look to the Assembly and Senate nominating conventions than to expend their energies in a State convention, for the Legislature appropriates money, not the State officers.

Some very interesting revelations of the party sources of the Prohibition strength were

made in the Convention at Syracuse on Friday All delegates who had formerly been Democrats were asked to stand up, and 134 arose. Then all who were formerly Republicans were asked to stand, and about 800 arose. Of life-long Prohibitionists there were only forty-three. These figures show that seven out of every eight Prohibition votes cast are drawn from the Republican party. This is the reason why the Democrats view the movement with such complacency. Another revelation, equally instructive and equally ominous for the Republicans, was made when clergymen and other representatives of the churches of the State were called up. Of clergymen there were ninety-five, and when church officers and Sunday-school superintendents were asked to stand, nearly the whole body of the Convention arose. Here is a source of power, especially in the rural communities of the State, which it is difficult to overestimate. The fact that the Sunday-schools and churches are deserting the Republican party as the representative of moral ideas, is not the least significant of the many signs of the disintegration of that party. The ticket nominated is well adapted to command the support of this element, for it is headed by a clergyman and composed entirely of men of high character.

Tennessee succeeds Texas as the scene of an exciting campaign in which no office is at stake, but the only question is whether a Democratic State will vote a prohibition amendment into the Constitution. Two years ago the Legislature passed a resolution proposing such an amendment. Last year the Democratic State Convention put in its platform this plank: "Recognizing the sovereignty of the people, and in response to their demand through their representatives in the last General Assembly, we favor submitting to them for their adoption or rejection the proposed constitutional amendment prohibiting the manufacture and sale of intoxicating liquors as a beverage in Tennessee." Last winter the Legislature, Democratic in both branches, ratified this plank by passing almost unanimously the necessary resolution, and fixing the 29th of September as the day for the election. The campaign opened in earnest some weeks ago, and will be very lively during the month which still remains before the election. The general course of the canvass has much resembled that which recently closed in Texas, except that the prohibition sentiment has been more widespread among the politicians. In Tennessee a larger proportion of Democratic leaders than in Texas has favored the amendment, and a smaller proportion of Republican leaders has opposed it. Indeed, no Republican of such prominence as the last candidate of the party for Governor in Texas has taken the stump against the amendment, and the "anti" Democratic speakers have tried to make a point by urging that the movement was a partisan dodge of the Republicans. But so many Democrats support it that it is useless to attempt drawing party lines.

The result, after all, chiefly concerns the cities of the State, since prohibition already prevails very generally outside of them. The Legislature several years ago passed a law forbidding the sale of spirituous or malt liquors, outside of incorporated towns or villages, within four miles of any chartered institution of learning; and as soon as the people found out about it, schools were chartered all over the State for the express purpose of thereby stopping the liquor traffic in their vicinity. The law was very generally enforced, and at the last session of the Legislature its scope was extended by an amendment forbidding the sale of liquors within four miles of any school-house, public or private, whether the school was in session or not, except in incorporated towns and cities. The result is, that there is said not to be a civil district in the State, outside of incorporated towns and cities, in which liquors can be lawfully sold, and the only effect of adopting the amendment would be to prohibit their sale in such incorporated towns and cities.

It has been evident for some time that public sentiment in Georgia did not approve the Glenn bill, which threatens with the chain-gang anybody who teaches white and black children together, and that the leaders in the Legislature would be very glad to drop it if they could see their way to doing so without a complete backdown. Such a way has apparently been devised in the resolution adopted by the lower branch on Friday, which, after reciting the fact that white and black children are both admitted to Atlanta University, while its funds ought to be devoted exclusively to the education of blacks, directs the Governor to withdraw his warrant for the $8,000, payable to that institution annually, until this practice is stopped. This is a rather silly proposition, inasmuch as nobody pretends that the end of negro education sought in the appropriation of this money will not be reached just as well if the white professors allow their children to study and recite along with the blacks; but it is infinitely more humane and justifiable than the original bill, for which it is expected that it will be substituted.

A protracted discussion has just closed in the lower branch of the New Hampshire Legislature which is of general interest, as illustrating the change of public sentiment on one of the most important issues now before the country. Early in the session a resolution was introduced, which, after the usual amount of "whereas" on the subject of illiteracy in the South, heartily endorsed the Blair bill, and instructed the Congressional delegation to support the measure. The author of the resolution expected that it would go through the Legislature without any opposition, and Mr. Blair waited in perfect confidence for the commendation of his educational scheme by the lawmakers of his own State. Undoubtedly this expectation would have been realized, and this confidence justified, if the proposition had been brought forward two years ago, and in this attitude the Legislature would only have reflected public sentiment at that time. The resolution of endorsement was referred in regular course to the Committee on National Affairs, which proceeded to consider the questions involved upon their merits. This Committee includes Gen. Marston, the able lawyer who has so long been prominent in the Republican party, and a number of other representative members of both parties, although two thirds of its eleven members are Republicans. After thorough consideration the Committee decided, by a vote of nine to two, to report "inexpedient to legislate," which was virtually equivalent to saying that the resolution ought not to pass. Mr. Blair at once rushed to the State capital, and set earnestly at work to prevent the acceptance of the report.

The case presented by the opponents of the resolution was so strong that its advocates saw that it was certain to be beaten upon its merits. They were constrained to change its character from a hearty endorsement to a cold "approval" of the Blair bill, and to eliminate the clause instructing the Congressional delegation to support it. Even then it was only after the most diligent lobbying on the part of Mr. Blair's friends, and the most urgent appeals for support of the resolution on the ground that its defeat would be a personal rebuke to the Senator by his own State, that it was at last got through by the narrow margin of nine majority, the vote standing 136 to 127. The moral effect of the incident is of course practically equivalent to a defeat of the resolution. The change in public opinion towards this measure in Mr. Blair's own State is symptomatic of a change throughout the country.

The reports of the "Ute rising," or the "Indian outbreak," or whatever the newspapers choose to call it, in Colorado attract less attention than they would if they were made up of stirring conflicts and details of savage cruelty practised on scattered settlers. But it seems probable that, if the history of this trouble is ever truly written, it will add only another chapter to the story of the white man's savage treatment of his uncivilized neighbors. Even now the weight of testimony goes to show that all the present trouble with these few Utes arose from the ill-advised course of a border county sheriff in attempting to arrest one or more of the Indians—a process which they mistrusted through their ignorance of it, and, perhaps, lack of faith in the officers—and in his having recourse to arms at their first failure to submit to his authority. Some of the despatches picture the "hostiles" as anxious to return to their place of abode, but fearful to do so on account of the Sheriff's posse that is pursuing them; and the Governor coolly telegraphs to the Interior Department, "We want to get them out of the State." No one who is acquainted with the treatment that the Indians have received in Colorado in recent years—the treacherous slaughter of White Antelope's band of Cheyennes in 1864, for instance—can be blamed for attributing the present troubles to the white man's willingness to shoot an Indian when occasion offers, and his constant effort to have the Indians removed from territory which he covets, no matter how this may be accomplished or how valid may be the Indians' title. But the interesting question remains, what will any one do about it? Suppose that in-

vestigation shall prove that the Indians in this instance have been forced to what fighting they do in self-defence, and that they make it manifest that their only desire is to live in peace on the territory assigned to them? Who then will be held accountable for the blood that may be shed, and what redress will the Indians have?

Gen. Terry's explanation of the law in the case shows that the United States authorities, military and civil, are powerless in the matter unless the Colorado State officers appeal for Federal military aid. The alleged offence of the Indians is against a State law, and the "war" is thus far entirely in the hands of the State officers, every one of whom would lessen his popularity with his constituents if he made any attempt to secure to the Indians a white man's rights. This situation offers another strong argument in favor of the legislation known as the Dawes Bill as a means of settling the Indian problem. If all the Indians in Colorado were to-day the individual owners of the land constituting their reservation, without any immediate authority to dispose of it, that would put a stop to the inciting of "wars" as an excuse for the Indians' removal. And if these Indians were enjoying the citizens' rights which will come to them with the division of their lands under this law, then a way would be open to them to protect themselves against civil injuries, and protection under the law would soon teach them to resort to it, rather than to the rifle, in securing justice.

The stay of proceedings granted by Judge Potter in the Sharp case is grounded upon supposed error on the part of Judge Barrett in admitting as evidence (1) the testimony given by Sharp in the Senate investigation; (2) the fact that certain of his co-conspirators had fled to Canada; (3) the testimony of Alderman Miller that he supposed that the $5,000 handed to him by DeLacy had some connection with the Broadway Railroad franchise. These points are all strictly questions of law, to be argued by the profession and decided by the courts. We have no doubt that they will be decided rightly in the end, and of course Sharp has the same right to be tried by admissible evidence, and no other, as the humblest malefactor in the land. Mr. Martine's application to the Governor for an order convening an extraordinary General Term of the Supreme Court to hear arguments on the question of a new trial for Sharp, was a very shrewd move, and the Governor's prompt action in granting it is most commendable. The day for the argument being fixed so early as September 7, no excuse is left for admitting Sharp to bail; and if there was any scheme for getting him free of justice by that means, Mr. Martine seems to have defeated it, for the present at least. The cause of law and order in this city is consequently under fresh obligations to the District Attorney's office for its vigilance. From first to last in this memorable case, the city has had the great good fortune of being served by men who, in intellectual acuteness and legal skill, have proved themselves to be more than a match for the talent which Sharp's money was able to bring to his defence. Had we been less ably served, he would not be where he is now, and the prospect of his going to the penitentiary at no distant day would not be so good as this last move of the District Attorney seems to have made it.

There is nothing in Justice Field's decision in the Stanford case that can be considered novel, or that ought to occasion surprise. The Pacific Railway Commission summoned Mr. Stanford as a witness. He appeared before them, although, if he had stood upon his rights, he need not have done so. He answered some of the questions put to him, and he refused, or declined, or was unable, to answer others. The Chairman of the Commission telegraphed to the President for authority to employ counsel, to wit, the District Attorney of the United States, to compel him to answer, and received such authority. The only way a district attorney can proceed is to apply to a court for an order directing the recusant to testify. Application was made to the highest judicial authority within reach, and it was refused, as Stanford knew, and as everybody ought to have known, that it would be. Of course the Pacific Railway Commission were bound to omit no means to accomplish the objects of their creation. But the decision of the Supreme Court in the Hallet Kilbourn case was directly in the teeth of the application. That decision was founded upon the principle that Congress has no power to order a man to jail. *A fortiori* a committee of Congress, or a commission appointed by its authority, cannot do so. If neither a committee of Congress, nor a commission appointed by its authority, nor Congress itself, can send a man to jail, no power exists in that quarter to compel a man to testify against his will. The decision is incontestably right, being founded upon the constitutional division of powers of the Government into executive, legislative, and judicial. Congress has no more power to deprive a man of his liberty than the President has, not a whit. The Government of the United States was established to secure the blessings of liberty, and accordingly the steps by which a man may be deprived of his liberty must be some process of law. An order from the legislative branch of government is not a process of law. There may be inconveniences attending the release of Stanford, but none so great as that attending the incarceration of Kilbourn, at whose suit Congress was virtually fined $20,000.

We were wondering the other day what the *Tribune* meant by chiding the Democratic party for passing the Tariff Act of 1883, and thereby exposing the laboring classes to disastrous competition with foreign paupers. The history of the Tariff Act of 1883 is pretty well known. It was initiated by a Republican Congress. The Commission appointed to frame it was selected by a Republican President. The bill framed by them was reported to a Republican House of Representatives, under the Speakership of J. Warren Keifer, but, being considered too liberal in its reduction of duties, was substantially rejected, and another substituted in place of it. The Senate, which was also under Republican control (by the help of Mahone and Riddleberger), made some further changes in it. When it was finally passed, it was approved by a Republican President. This state of facts, according to the *Tribune*, made it a Democratic measure, and warranted that newspaper in reading us a homily of half a column on the sins of the Democrats against the workingman. A Western newspaper having raised the objection that the writer must have had some other tariff act in his mind than that of 1883, the *Tribune* now acknowledges that "the Republican party cast nearly all the votes by which the tariff act of 1883 was finally passed," that only one Democratic vote in the Senate and only 17 in the House were cast for it, while only 2 Republicans in the Senate and only 10 in the House were cast against it. "But," it says, "certain of its provisions were fastened upon the bill by almost exclusively Democratic votes." No particular ones are specified, but the gentle reader is left to infer that all the provisions which have exposed the workingman to pauper competition were adopted by the wicked Democrats against the desires and intentions of the Republican majority. The reader whose intellect is not wholly crushed by this suggestion will naturally inquire which party is responsible for the injury to the workingman—the one which voted almost unanimously against the bill after it had been so constructed, or the one which voted almost unanimously in favor of it, and put the Executive approval upon it.

The "bout" between Gov. Wilson and Gov. Foraker at Wheeling on Friday was a sheer waste of wind power on both sides. We do not apprehend any sad consequences from it, because it is too late to stir up sectional strife between the North and the South. That witches' cauldron will not boil any longer. The only effect of such speeches is to make the speakers themselves appear ridiculous in the eyes of all people who have any serious business in life. Which of the two was the more ridiculous in the Wheeling encounter depends on the question, which of the two began it. The testimony upon this point is rather confusing The affair was evidently one in which the "personal equation" is the principal ingredient. Soldiers' reunions without number have taken place in which the Blue and the Gray have mingled without any syllable of discord. The recent one at Gettysburg contrasts finely with the jarring sounds given forth at Wheeling. The incident of real importance was the refusal of the G. A. R. to march under the banner which bore the President's portrait. The significance of even this may be exaggerated. If the leaders of the procession turned away from the banner, those who followed would turn aside also, in order not to break the line, even though they might think that they were committing an indecorum. Still, the fact remains that they did put an indignity on the Chief Magistrate of the nation, and that they did so because he vetoed a profligate pension bill.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 24, to TUESDAY, August 30, 1887, inclusive.

DOMESTIC.

THE President has promoted Mr. Owen A. Galvin to be United States Attorney for the District of Massachusetts, vice George M. Stearns, resigned. He was Mr. Stearns's assistant.

The President on August 30 appointed Prof. G. Brown Goode, Assistant Director of the National Museum, to be Commissioner of Fish and Fisheries, vice Prof. S. F. Baird, deceased. He was associated with Prof. Baird in many important duties of a scientific kind.

The President and Mrs. Cleveland will arrive at St. Louis on Saturday, October 1, and will be the guests of Mayor Francis. They will spend Sunday, October 9, in Madison, Wis., the guests of Mr. Vilas, and they will be the guests of ex-Senator Howell E. Jackson at Nashville, Tenn., on Sunday, October 16.

The Kansas City (Mo.) *Times* on August 28 published answers received to inquiries sent out through Kansas and Missouri as to Presidential preferences. In Missouri, of 270 answers from Democrats, 251 were for Cleveland, 3 for Thurman, 1 for Wade Hampton, and the rest scattering. The Republicans sent 261 answers, of which 125 were for Blaine, 77 for Sherman, 41 for Lincoln, and the rest scattering. In Kansas, 326 Democrats answered as follows: Cleveland 306, Thurman 7, Hill 6, remainder scattering. The Republicans sent 302 answers, of which 181 were for Blaine, 86 for Sherman, 44 for Lincoln, and the rest scattering.

On the line of march of the Grand Army of the Republic posts of western Pennsylvania, eastern Ohio, and West Virginia, at Wheeling, August 26, a banner bearing a portrait of President Cleveland and the inscription "God Bless Our President, Commander-in-Chief of Our Army and Navy," was suspended across the street. Most of the posts crowded into the gutter to avoid passing under it, and either folded their colors or trailed them along the ground as they went by; but the Union Veteran Legion of Pittsburgh passed under the banner, and many of their members took off their hats and saluted. Very great excitement was caused, and a street fight at one time seemed imminent.

The retirement of Rear-Admiral John Lee Davis of the United States Navy was announced August 30.

Senator Cullom of Illinois, one of the authors of the Inter-State Commerce Law, has expressed the opinion that modifications of the statute will be found necessary and will be made, but that it will not be repealed by Congress.

Senator Sherman, taking occasion to deny statements about the fisheries dispute which had been attributed to him, wrote on August 29 that while the Canadian Government had legally the right to exclude American fishermen within the three-mile limit of their shore, it was an act of bad policy to do so, and that their denial to American fishermen of the commercial rights to seek shelter and buy bait and supplies in Canadian ports was inconsistent with the civilized and generous policy of modern commercial nations, and that he hoped it would be promptly abandoned, as the best preparation for more intimate commercial relations between the United States and the Dominion Government.

United States Senator Hearst, Gov. Stevenson, and Delegate Du Bois recently held a conference at Shoshone, Idaho, regarding the proposed enlargement of the boundaries of the Territory, with a view to its seeking admission into the Union. The plan to annex Nevada was abandoned, and it was suggested that the Idaho line be extended northward through Montana so as to take in the counties of Beaverhead and Missoula.

In the application made by the Pacific Railroad Commission to compel Senator Stanford and other officers of the Central Pacific Railroad to answer certain questions in regard to the expenditure of funds for the purpose of influencing legislation, Justice Field of the United States Supreme Court delivered at San Francisco on August 29 the opinion of the United States Circuit Court, to the effect that the act of Congress creating the Commission improperly invites the coöperation of the courts in an inquiry that is not judicial; and that, therefore, the railroad officers need not answer the questions.

The Republican Convention of Maryland, August 24, nominated Walter B. Brooks for Governor, Robert B. Dixon for Comptroller, and Francis Miller for Attorney-General. Mr. John K. Cowen of the Citizens' Reform League of Baltimore, a Democrat, made a speech in the Convention pledging his own support and the support of the Independent Democrats to the Republican ticket, because of the Democratic Machine's failure to reform the election laws. The platform declares in favor of civil-service reform, and complains of the violation of the law in Maryland appointments, favors the Blair Educational Bill, and denounces discrimination in the public schools against colored children.

The Republican Convention of Iowa at Des Moines on the same day renominated Gov. Larrabee and Lieut.-Gov. Hull, and nominated Clifford S. Robinson for Judge of the Supreme Court and Prof. Seney Sabin for Superintendent of Public Instruction. The platform contains a demand for the restriction of immigration, a complaint that the President has not enforced the Civil-Service Reform Law, and that he has discriminated against Union soldiers, and a demand for pensions to all dependent Union soldiers and the dependent families of soldiers.

The Prohibitionists of Pennsylvania on August 25 nominated Simeon B. Chase of Easton for Judge of the Supreme Court and Dallas C. Irish of Newcastle for State Treasurer. The platform severely criticised the Republican party of the State for the failure of the last Legislature to submit a prohibitory amendment to popular vote. On August 26 the Prohibitionists of New York nominated the Rev. D. W. C. Huntington for Secretary of State, Caleb B. Hitchcock for Comptroller, William W. Smith for Treasurer, Silas W. Mason for Attorney-General, and John G. Gray for State Engineer and Surveyor. The Convention was one of the largest and most enthusiastic that have met in the State for many years. The platform declares in favor of woman suffrage, and favors many of the demands made by Labor conventions.

A resolution was adopted in the Georgia House of Representatives August 26 directing the Governor to withhold his warrant for $8,000, now annually appropriated to the Atlanta University, unless the school refuse to admit white pupils.

A report was received at Denver, August 27, that Sheriff Kendall's posse had had a fight with Colorow's Indians near Meeker, and that one white man and several Indians had been killed and a number on each side had been wounded. Orders have been sent by the War Department to Gen. Crook to confer with Gov. Adams about the Indian outbreak. It is thought that the Indians will easily be induced to return to their reservation if the State authorities give over the effort to enforce civil processes against them.

Capt. Pratt of the Indian Training School at Carlisle, Pa., will bring some of the wildest Indians he can find and march them in the procession at the Centennial of the Constitution in Philadelphia, side by side with the pupils of the school. The object is to illustrate in the most striking way the progress made in Indian civilization in the century.

The forthcoming Convention of German Catholics, to be held at Chicago, has provoked a discussion by the German-American papers, wherein they have expressed a strong desire for the children of German parents in America to be taught the German language.

The proclamation of the Irish League has stimulated the Irish in America. A largely attended meeting of the American branch of the League was held at Omaha August 29. Patrick Egan delivered an address, and resolutions were adopted denouncing the proclamation of the League in Ireland, and praising Gladstone and Parnell.

Joseph McLaughlin and Patrick O'Brien, two striking workmen who have been doing "picket" duty near a shoe factory at Brockton, Mass., since the strike of lasters began there, have been arrested for conspiracy to injure the business of the proprietor by inducing lasters to stay away from the factory. In Hoboken, N. J., also, four bricklayers have been arrested on the complaint of a contractor, because, after taking a contract for a house, he could not secure sufficient men to work for him because the Bricklayers' Union, of which the prisoners are members, had ordered a boycott against him for dismissing a Union workman.

Judge Potter of the Supreme Court of this State on August 24 gave an opinion that there is a reasonable doubt whether the judgment of conviction rendered in a lower court against Jacob Sharp for bribe-giving should stand, and he ordered that the execution of the judgment be stayed until the termination of an appeal to the General Term. Thereupon Gov. Hill issued an order convening an extraordinary General Term of the Supreme Court, to be held in this city on September 7, to hear the appeal. Sharp's counsel have made no effort to secure his release on bail, pending the appeal. He is yet in jail in this city.

Twenty five miles from Louisville, Ky., on the Indiana side of the Ohio River, a very strong flow of natural gas has been struck at a depth of 400 feet.

Early on the morning of August 27 a slight earthquake shock was felt at Columbia, S. C.; on the next day another slight shock was felt in Georgia, and at the City of Mexico it was severe enough to alarm the people.

Mrs. Sarah Jackson, wife of Andrew Jackson, jr., and mistress of the White House during President Jackson's second term, died at "The Hermitage," near Nashville, Tenn., August 23, aged eighty one years. Other noteworthy deaths are those of the Rev. Moses Rogers, who was probably the oldest member of the Methodist ministry in America, at Fresh Ponds, Long Island, August 25, in his ninety-fourth year; Judge Daniel Goodwin of Detroit on August 25; on the same day Spencer Mowry, a well-known citizen and banker of Woonsocket, R. I.; and on the next day Augustus Lord Soule, a distinguished lawyer and judge in Massachusetts, and formerly Justice of the Supreme Court of that State; on August 28, Judge Samuel Hall of the Supreme Court of Georgia.

FOREIGN.

An open-air meeting was held at Westminster on the evening of August 24 to denounce the Government's action in proclaiming the Irish National League. Mr. Biggar, member of Parliament, and Sir William Vernon Harcourt made speeches. Sir William declared that the Government used the Unionists as a cat's-paw to pass the Coercion Bill, and now treat their advice with contempt, and threaten to dissolve Parliament and annihilate the party if they withdraw their support from the Government.

On August 25 Mr. Gladstone moved in the House of Commons "that a humble address be presented to the Queen, representing that the

Viceroy of Ireland has proclaimed the National League a dangerous association; that no information has been furnished to Parliament to justify the proclamation, by virtue of which her Majesty's subjects are to be rendered liable to be punished as criminals without a judicial inquiry into the nature of their acts; and that this House, in the absence of such information, prays that said proclamation shall not continue in force as to the association named and described therein." It was rejected on August 26 by a vote of 272 to 194. Sir George O. Trevelyan and Sir William Vernon Harcourt made the principal speeches in support of the motion, and Attorney-General Webster and Lord Hartington opposed it. All the Conservatives, including Lord Randolph Churchill, supported the Government, as did Lord Hartington and Messrs. Bright and Russell. The bulk of the Unionists voted with the Gladstonians and Parnellites. Messrs. Joseph and Richard Chamberlain, Collings, Williams of Birmingham, Hingley, and Buchanan also voted with the minority. Nine Liberal-Unionists supported Mr. Gladstone, and seventeen other members of the party were absent and unpaired. In his speech moving the resolution Mr. Gladstone said that the Irish Viceroy, in declaring that the League had incited to violence, must have acted on information, but where was that information? The Irish chiefs had a right to demand to know the grounds on which the Government had acted. If the facts were withheld, the Opposition must forthwith urge three propositions upon the House and the Government: (1.) That it was a slight, almost an outrage, on the dignity of Parliament to suppose that it was to discharge such an important statutory duty without knowing the grounds. (2.) That it reduced to utter destruction, and to an absurdity, the main contention that the Government advanced during the discussion of the Crimes Act, that the safeguard promised had proved a farce. He asked, What was the value or meaning of a Parliamentary approval given in ignorance of the facts? Why not follow the course taken by Wellington and Peel in 1829 regarding the Catholic League, and suppress it? (3.) What could the House think of information that they must know would not bear the light? The proclamation of the National League was a near approach to a declaration of war on the Irish people.

In the House of Commons on August 29 a motion was made to grant an additional sum for the Irish constabulary. Mr. Dillon protested against the constant increase of the expenses of the police in Ireland. Although the population had decreased 200,000 since 1880, the cost of the police service had increased over £250,000. Mr. Sexton said that Ireland was the only country in the world where, with a steadily decreasing population, there existed a steadily increasing police force to overawe the people. After a nine hours' discussion the motion was carried by a vote of 107 to 50.

William O'Brien was served on August 24 with a summons to appear at the Mitchelstown County Court Sessions September 19, to answer a complaint for obstructing the sheriffs and making inflammatory speeches. Michael Davitt, in a speech before a branch of the Irish League August 28, said that if England imprisoned men for resisting the injustice of landlordism and exercising the right of free speech, the country would be steeped to the lips in crime during the coming winter. Archbishop Walsh has published a letter inviting landlords to appoint a committee to meet a committee of Irish tenants in a round-table conference on the land question. It is announced that Mr. Arthur O'Connor, member of Parliament for Donegal, and Sir Thomas Henry Grattan Esmonde, member of Parliament for Dublin County, will visit the United States in September and address meetings to be convened by the Irish National League of America.

Evictions of Irish tenants at Herbertstown were begun August 30. The bailiffs were reinforced by 100 soldiers and 300 policemen. All the houses occupied by the tenants were barricaded and guarded for defence, and so stubborn was the resistance at the house of one woman that several policemen were severely wounded before it could be entered.

Mr. Gladstone writes, in an article on "Electoral Facts of 1887," that the general election of 1886 indicated not the conviction but the perplexity of the country, and he contends that the results of the recent elections are equivalent to an improved Liberal strength of 22 per cent., and that, giving the Conservatives the benefit of all doubts, a new election would leave the latter in a minority of 103.

Sir James Fergusson, Parliamentary Secretary for the Foreign Office, said in the House of Commons, August 26, that Austria, Hungary, Germany, Holland, Italy, Spain, and Denmark had joined the conference proposed for the arrangement of a union among European nations concerning sugar bounties. France, Russia, and Portugal had not yet answered the invitation to join the conference.

Sir James Fergusson, Parliamentary Secretary for the Foreign Office, announced in the House of Commons on August 30 that the Government had agreed upon a new commission to represent British interests in the North American Fisheries Convention, and that Mr. Joseph Chamberlain had accepted the office of Principal High Commissioner for Great Britain.

Mr. John Bright, writing to the Secretary of the London Peace Society, who is one of the deputation to the United States to present a memorial to President Cleveland in favor of the establishment of an international arbitration treaty, says: "There is talk of a permanent arbitration treaty between the United States and England. The project is a reasonable one, and discussion may lead to its adoption. If the Government of the United States were willing, and were in any way to signify its willingness, to become a party to such a treaty, there is a force of good men with us to induce our Government to consent. If this be done, it will be a grand step forward in the world's march, and be followed in some not distant time by other nations willing to escape the sorry burden of military armaments. Two hundred members of the House of Commons sign the arbitration memorial. But far more than this number will be ready to urge the acceptance of the treaty upon our Government. If the action taken at Washington be favorable to the success of the scheme, England and the United States will still remain two nations, but I would have them always regard themselves as one people. An arbitration treaty, honestly made and adhered to, would tend much to bring about this blessed result."

The boat of the burned steamship, the *City of Montreal*, that drifted away from the other boats and was thought to have gone down, was picked up by a German steamship, and the thirteen occupants were safely landed at Falmouth August 24. They were five days in the open boat.

Prince Ferdinand of Bulgaria has received a message from the Sultan that his assumption of the throne was an illegal act and constitutes a breach of the Berlin Treaty, and another from the Czar, that Russia disapproves of his action, and deems it a gross violation of the treaty. It is reported from Berlin that Russia has decided to take independent action in Bulgaria and to send a Governor there, unless Turkey intervenes quickly and puts an end to the crisis. Baron Blanc, the Italian Ambassador at Constantinople, had a private interview with the Sultan August 28, and it is said that he urged the Sultan to sanction the appointment of Prince Ferdinand, and thus terminate the crisis. England and Austria are said to support Italy in this policy.

It is reported that an attempt to kill the Czar was made on the 20th inst. A Nihilist, disguised as an officer of the Guards, approached the imperial carriage and fired a revolver twice. The first shot missed the Czar, but the second perforated his coat. The Russian royal family arrived on August 26 at Copenhagen, where they are visiting the King of Denmark.

A new Russian loan of £6,000,000 has been negotiated in Paris.

The subvention that was formerly granted to the Moscow *Gazette* has been given to the *Grazhdanin*, edited by Prince Meshtcherski, which is now become the Government organ of Russia. On August 29 this journal published an article full of bitterness towards France. "A nation," it said, "whose patriotism exists only in phrases, cannot be an ally of Russia."

The Russian Government has issued a decree that the number of Jewish children in secondary schools shall not exceed 10 per cent. on the frontier line, 5 per cent. in St. Petersburg, and 3 per cent. in Moscow.

The German Socialists are reported to have issued a circular to members informing them that a conference of the leaders of the Society will be held abroad in the autumn. The date and the place are kept secret.

An order made by the German police forbidding the Socialists to celebrate the death of Ferdinand Lassalle was disregarded on August 29, and thousands of them made a pilgrimage to his grave.

The International Astronomical Congress began its session at Kiel August 29. There was a large attendance, including astronomers from America, Austria, France, and Sweden.

Gen. Lawton, the new United States Minister to Austria-Hungary, presented his credentials to the Emperor on August 26.

A statue of Garibaldi was unveiled at Vicenza August 24 amid great enthusiasm.

The census of Italy, taken last December, is published, and it shows a population of 29,943,607, an increase of 243,822 since 1885.

The Government of New South Wales having offered 300,000 acres of land to any missionary society that will undertake to civilize the natives, the Pope has directed that immediate attention be paid to the offer in order to forestall Protestant societies.

Prince Victor, son of Prince Jerome Bonaparte, has issued a manifesto at Brussels, in which he condemns the Conservative party of France for supporting the Opportunist Cabinet. He describes the present condition of his party, and expresses his views as to the proper course to be pursued to restore the Empire.

Two secretaries of Gen. Ferron, the French Minister of War, have been arrested for disclosing to a newspaper the plan for carrying out the mobilization scheme, and they will be tried for high treason.

Ayub Khan made his escape from his imprisonment August 14, and is said to have been accompanied in his flight by several Afghan chiefs.

Information was received at Key West, Fla., August 28, that a revolution was imminent at Havana on account of the recent acts of Captain-General Marin in taking possession of the Custom-house and placing the officials under arrest. The city was in charge of regular troops, and it was expected that it would be declared in a state of siege. Several conflicts had occurred between the troops and civilians, resulting in the killing of some and the wounding of others. The Captain-General had issued his proclamation, calling on the rioters to maintain order, but everybody was armed and troops were in readiness at every important point. Soldiers had been placed even in the cable offices to prevent despatches being sent about what was occurring. All important despatches between officials in Havana and the authorities in Madrid are conveyed to Key West by special messenger for transmission.

WHAT PRODUCES IVESES.

A WRITER in the *National Review* has recently been maintaining that the result of American education is such widespread dishonesty, that a business man among us who does not lie and cheat is considered by his fellows more or less of a ninny. Another writer in another English review gravely informs us that an English friend of his, having received a dollar too much in change at a New York store, was informed when he returned it that "he must be a great fool," and intimates that this is the sort of reception his honesty would have met with anywhere. One of our morning contemporaries, moralizing on all this, apropos of the Ives case, maintains that it is not our education which is at fault so much as our love of wealth, and that we owe the Ives episode principally and solely to the young man's over-haste to get rich. But this really explains nothing. The eagerness to get rich is great in all commercial countries—probably as great in England or France or Germany, in the great cities, as it is in this country. What makes it seem greater among us is the multiplicity of opportunities for making money rapidly. It is this which keeps Americans in that feverish condition about money which has so long excited the wonder or derision of foreigners. Wealth always seems within reach of even "the small people," as the French call them, among us in a way unknown in Europe, and keeps them constantly on tenterhooks of expectation. It was this, too, which so impressed John Stuart Mill's imagination, in observing American ways, that, in the first edition of his 'Political Economy,' he described the Americans by saying that one sex was entirely occupied in "dollar-hunting" and the other in "breeding dollar-hunters."

Young men as fond of money as Ives, and as unscrupulous in striving for it, are probably as numerous in London or Paris or Berlin as in New York. The reason they do not do as Ives has done is, that they do not know how; that is, they have never seen any one else do it successfully. Ives has. He has, ever since he left school, probably given more attention to the career of successful railroad robbers than to any other subject If he has read Mr. Charles Francis Adams's 'Chapter in Erie,' as he doubtless has, he knows that the foundation of probably the most colossal fortune in this country was laid in a railroad robbery much more audacious than that which Ives himself has perpetrated, and so much more successful that the principal in it, when compelled to disgorge, was able to make "restitution" of nine millions of dollars without being at all pinched, and in fact without ceasing to be a very rich and prosperous man. Ives, too, has seen this same person go on adding railroad to railroad, and million to million, until he has become the greatest "magnate" in the country, the envy of millions, and almost as much talked about as Bismarck, courted secretly by thousands who are now abusing Ives, and recognized in all the money markets as a good man and true, in all great transactions in which he chooses to take a share. If James Fisk, jr., had lived, he would probably have furnished an equally edifying example to our young men, and they would doubtless have profited by it. His untimely end deprived us of another illustration of the great truth that it is not so much your mode of getting money as your ability to keep it, which shapes your reputation.

When a man like Ives, too, first enters on a career of "Napoleonic finance"—that is, begins robbing corporations and overissuing stock and bonds—he meets with comparatively little opposition from the people whom he first comes in collision with or has to make use of, because they are all afraid that he may succeed like others, and become a power in "finance," in which case it would be unpleasant to have his enmity, and might be very advantageous to have his friendship. Consequently, if he has audacity enough, he almost always gets a good "send-off" from the bystanders and the newspapers. It is only when his schemes miscarry, or his "restitutions" leave him penniless, that the world "goes back" on him and denounces him as "a fraud." It is not everybody who can even rob successfully. It requires talent, like nearly every other human pursuit, and the world does not honor people who fail in it, any more than in any other.

GOVERNMENT BOUNTIES.

A CURIOUS and instructive illustration of how the "practical" statesmen attempt to set aside the "dreamy theories" of economists, and at great expense to the people, is furnished by the course of events which has led to a proposition made by the English Government to the other Powers of Europe for a conference on the sugar question. The more important of the Continental governments seem anxious to unite in such a conference; and close examination of their past action and their present position would justify belief that, did they act from public considerations alone, they would soon reach a determination satisfactory to all. But this is exactly what they cannot do, for through the measures of their "practical" statesmen they have become involved in a mesh of legislation and vain seeking after selfish ends, and now find themselves not only deliberately working against their best interests at home, but exciting retaliation and injury abroad. This curious situation is worth a glance, if only to serve as a warning against a similar line of conduct which many would seek to force upon the Government of the United States.

The history of the sugar-bounty policy of Europe need not be recounted here, nor is it necessary to show how the first suggestion arose. The beginnings were small, and were justified as the advocates of a higher duty on tin plate under our tariff seek to justify their demands—as a measure of high public policy. Had this plan of fostering the beet-sugar industry been pursued by a single nation—like France—some benefit might have accrued to that country in its relations with other nations, however costly to its own people the experiment might have proved. But no sooner had the idea been put into practice than other countries adopted it, and even went beyond the original measure, each new recruit to the bounty-givers seeking to offer to its manufacturers and exporters higher inducements than were offered elsewhere, and, as a matter of course, this step raised bounties all around, since it was preached that the higher the bounty the greater must be the prosperity of the sugar interests. Moreover, as the administration of the bounty system was a matter of some difficulty, and as a somewhat elastic basis for estimating the duties and rebates was adopted (the supposed saccharine strength of the raw sugar and the supposed results after refining), human ingenuity, sharpened by interest and by the prospect of relatively enormous gains, began to improve processes, and, in fact, did bring about such a ridiculous result as to compel the Treasury, more than once, to pay out as bounties on exports a greater sum than was received on the raw imports. Legislation, seeking to correct this anomaly and blundering a long way behind this "enlightened self-interest," only made matters worse, for uncertainty and extensive frauds were the natural results, the cost of which had to be paid by the people.

The great number of laws which Continental Europe has adopted in the vain hope of placing the sugar interests upon a working basis, would fill an enormous volume, and would constitute a monument to the folly of the "practical" when divorced from the reasoning of political economy. Were we to judge by the production of beet-root sugar only, the bounty policy would undoubtedly be accepted as remarkably successful. But this would be to overlook far more important results that have followed these bounties. Beet-root sugar is now a more important factor in sugar markets than is the cane product, but this preëminence has been attained by enormous and almost fatal losses to the cane-growing colonies of the very countries that have sought to foster the beet industry, by great loss of revenue to the national treasuries, and at fearful cost to the taxpayers. Producing for foreign markets, the increased production has proved a heavy burden, for foreign markets have been closed not by successful competition, but by the artificial stimulation of a domestic sugar industry which is itself seeking vents for its product. Now, when all the sugar that is wanted, and perhaps all that is at present needed, is produced, and when the governments which have granted bounties have apparently good reasons for congratulating themselves upon the success of their policy, we find them discussing a conference that is to undo all that has been done—that is, to abolish all bounties on the production and export of sugar, and destroy the network of legislation which has been formed in vain effort to solve the contradiction, how the industry may live and thrive normally and on its own footing, when almost entirely maintained by too liberal subventions from the public treasury: vain effort, because no such artificial arrangement can be anything but mischievous to all interests other than the sugar.

Now, what we are showing with regard to the results of bounties to the sugar interest—and what might be shown with equal effect as to the bounties to merchant ships—is merely an illustration on a small scale of what the protective tendencies of Continental Europe are producing on a large scale through

high and prohibitive tariffs. So long as each nation seeks to enter other markets with its own productions, while at the same time excluding foreign products from its own, it is useless to expect other than perpetual friction, a continuous series of retaliatory measures, each one constituting a grievance to the injured party, and each one doing violence to many interests both at home and abroad. And there are signs that the end is nearer than is commonly supposed when these grasping Powers have overreached themselves, and when their so-called commercial policies are in reality more injurious to their own manufactures and their own trade than to those of their competitors. What this end will be cannot be forecast, but it will be either conciliation and reciprocity, or force, and there are indications that recourse may be had to the latter before its alternative can be tried. Austria and Hungary, hard hit by the revocation of a commercial treaty with Rumania and by the new Italian tariff, have again united commercially, but a quibble over the duties to be imposed on petroleum delayed the negotiations for months and threatened to break them off. It should be remembered that Austria-Hungary in 1878 increased its tariff with the avowed purpose of inducing its neighbors to purchase concessions through reciprocity. The result, as shown by Mr. Phipps of the English diplomatic service, was as follows: "As soon as the one autonomous tariff came into operation, the example was followed by one Continental State after another, each imposing higher protective duties. All stability of duties came to an end, and all calculations of exporters and importers are now defeated by constantly recurring modifications of the customs tariff, every change in the tariffs of neighboring States reacting on each other's policy." The result was, that instead of securing concessions, Austria invited reprisals, and now stands alone commercially, "reduced to the position of a State which consumes its own products, and which is an isolated and close commercial State."

The union of Austria and Hungary under one tariff is a step towards reciprocity. On the other hand, France demands that her colonies in China shall accept her general tariff, or be regarded as aliens; Russia is about to raise greatly her duties, although she has now a tariff more protective than that of any other nation in Europe; and Germany is threatening reprisals for the injuries received from Russia by tariff modifications already made. Here is not material for a peaceful solution of the difficulty. The sugar conference may result in an agreement, but it is far more likely to end in a disagreement. However favorable to the meeting the governments may be, they are too prone to listen to the demands of vested interests which any action on their part must disturb. Surely it would be madness to introduce into this country a system of bounties when we have before us so striking and forcible an illustration of their mischievous effects.

NORWEGIAN POLITICS.

News comes from Norway that the temperance movement is making extraordinary progress there. It is not many years since "getting drunk" was held to be a perfectly legitimate amusement, and the man who at festal gatherings refused to drink was regarded as a sneak and a churl. To drink a guest under the table was looked upon as an excellent joke, at which no reasonable man could take offence; and if the intended victim could turn the tables on his hospitable host, it was a stroke of exquisite humor, which furnished no end of amusement. It was the crucial test of manhood to be able to "take aboard" a great quantity of liquor without being intoxicated. Lord Dufferin relates, in his 'Letters from High Latitudes,' that in Iceland, where the old Norse customs still prevail, he "got sober" three times in one night, while his Icelandic hosts showed no effects whatever from their potations.

The temperance movement, which has especially taken hold of the peasantry and the laboring population in the cities, is now working a great change in the sentiments of the Norsemen on this subject, and their habits are showing a corresponding change. The consumption of alcoholic liquors averaged, ten years ago, six litres annually for each individual; in 1884 the official statistics showed a reduction to three; and if statistics were obtainable for the last two years, a very large reduction even from this figure would probably be observed. Within a few years 650 total-abstinence societies, with a membership of 73,000, have been formed, besides a number of Good Templar lodges and Blue Ribbon societies, which all unite in fighting the drink evil. Prohibition is, for the first time in the history of Scandinavia, beginning to attract attention as a possible political factor, and an address to the Storthing demanding a law prohibiting the manufacture and importation of alcoholic liquors obtained in a short time the signatures of 65,000 men and women over twenty-one years of age, although it was not by any means generally circulated. In the province of Christiansand a similar address obtained 35,000 signatures. Twenty or thirty members of the Storthing are also members of total-abstinence societies, though they were not elected as representatives of this idea. In short, we may look with confidence for a prohibitionist party in Norwegian politics in the near future; and in Sweden and Denmark there are indications that similar forces are at work.

From the point of view of mere political expediency, a prohibitionist party could scarcely be welcomed at the present time as an unmixed good. The Liberal Peasant party, which, after the constitutional crisis, came into power under the premiership of John Sverdrup, three years ago, is on the point of splitting into two hostile camps, and, by its internal dissensions, reinstating the Conservatives. A radical group called the "Pure Left" is opposing the Ministry, and has twice left it in a minority in the Storthing. According to the very principle for which the Liberal party fought during the many years it constituted a majority in opposition, the Sverdrup Ministry ought, therefore, to have resigned, or at least effected a reorganization without the two Ministers, Jacob Sverdrup and Sörenssen, who were responsible for the defeated measures. This is what the Pure Left demands, and the Premier's hesitation to comply with this demand is undermining his popularity, and may lead to his defeat in the impending election. That he has furnished a curious illustration of the absolute and consistent parliamentarism which was the chief plank in his own political platform, is undeniable. The law introducing trial by jury, which, after twenty years of arduous fighting, this Ministry has just succeeded in passing, was, singularly enough, repudiated by Mr. Sörenssen, the Minister of Justice—the very man who was selected to expound its merits before the Storthing. Yet Mr. Sverdrup refused to discipline him; and he himself did not see the propriety of resigning. Jacob Sverdrup, the Premier's nephew and Minister of Ecclesiastical Affairs, recently introduced a law dealing with congregational councils, and intended to effect a radical change in the discipline of the Church; but he obtained scarcely a handful of votes in its favor. According to all precedent, he ought, of course, to have resigned; but he yet retains his portfolio, and apparently has no intention of giving it up.

It will thus be seen that parliamentarism is not yet securely established in Norway. It has been stabbed in the very house of its friends. No one will wonder, then, that Björnstjerne Björnson, to whose eloquence and fearless agitation the Ministry largely owes its power, has now turned against it. And John Sverdrup, Björnson's friend, has retaliated by virtually depriving the poet of the paltry salary or stipend of 1,600 kroner which the Conservatives, Björnson's political enemies, honored themselves by bestowing upon him. It will be remembered that two years ago, when the question of conferring a "poet's salary" upon the novelist Alexander Kielland was debated in the Storthing, a large number of members refused to favor this measure, because Kielland had attacked the clergy, and might therefore be supposed to be hostile to Christianity. This debate, with its result, deeply grieved Björnson; and last year he and Ibsen sent a petition to the Storthing repeating the request that Kielland be granted a stipend equal to their own, because of the absence of international copyright laws, and on account of his recognized eminence in letters. Björnson declared that if such stipends were granted with the implied condition that the recipient must be an orthodox Lutheran Christian, then he was in exactly the same position as Kielland, and should regard the vote on the petition as indicating the Storthing's attitude towards himself. If he were to continue to draw his "poet's salary," it must be without any condition restricting his spiritual liberty. If he could not thus draw it, he would renounce it. The Storthing, being placed in this dilemma, dodged the question, granting Kielland 1,600 kroner for one year, not as "poet's salary," but as compensation for the loss he suffered by reason of the absence of an international copyright law. When the grant was to be renewed, however, they rebelled, and, repeating their former arguments, rejected it by a very narrow majority.

Of course, a single word from the Ministry could have reversed the result. But John Sverdrup obviously intended to flog

Björnson over Kielland's back, and both he and his colleagues remained silent. As was expected, Björnson telegraphed promptly from Paris, renouncing his salary, and Sverdrup the Liberal champion, has the honor of having deprived Norway's greatest poet of his chief means of sustenance. He has refused to discipline the members of his own Cabinet, for whose action he is responsible, but he promptly seizes the opportunity to discipline his critic.

THE CONSTITUTIONAL IDEA.

THE hundredth anniversary of the formation of the Federal Constitution is a time when men may profitably ponder the Constitutional Idea. The only unique feature of the American polity, as compared with the polities that preceded it, is the provision within it for a written constitution. The problem of the fathers was, as Lowell says, "to adapt English principles and precedents to the new conditions of American life"; and the system which they formed for the United States is but a modified version of that of Great Britain as it existed between 1760 and 1787. The President is the British King of the eighteenth century—a magistrate elected, to be sure, for four years, instead of inheriting his position for life, but with powers and functions very similar to those of George III. A still closer resemblance exists between the House of Representatives and the House of Commons. The Senate and the House of Lords are less nearly analogous, but the former is nevertheless plainly foreshadowed in the latter. Descending from these great central features to the lower ranges of administration, it is found that the entire apparatus throughout the States for the rendering of justice and for local self-government in town and county has come down almost unchanged from the colonial period, constructed after the models of the mother land. What is the history of the Constitutional Idea? Although in its developed form it is not to be traced until the establishment of America, the beginnings of the notion must be sought far earlier. Possibly a germ may be found in Magna Charta, where it is ordained that all things done afterwards violating in any way its provisions shall be null and void. Another germ may be found in the charters by which the guilds of the Middle Ages were constituted. Each corporation found its grant of privileges accompanied by a code of obligations, to which it was forced to conform under penalty of losing those privileges. The English settlement of America was made by great trading corporations, the charters of which, originally nothing more than grants made to guilds in true mediæval fashion, "perverted" into instruments of government, stood behind the colonial assemblies like the constitutions behind the Legislatures, State and Federal, of the American Union.

An essential part of an American constitution, however, is that it comes from the *people*. The *people* thus save themselves from themselves. Where and how enters into the idea this element of noble self restriction? Magna Charta, extorted, while as yet the people were voiceless, from John by the barons and churchmen, is in form a grant of privilege and imposition of duty by the King. The charters of the mediæval guilds are, in like manner, grants and impositions by the over-lord—king, noble, or monastery—the people as yet having no agency in the matter. For the entrance of the people upon the scene we must wait until a later day. The Social Compact on board the *Mayflower*, and the similar agreement of the settlers of Rhode Island in 1637—instruments in which English exiles bind themselves into a body politic—have been much insisted on as constitutional beginnings. The men, however, are so few and their agreement couched in terms so brief and simple, that it is easy to overrate the significance of the documents. More important is the action of the three towns of Connecticut, Hartford, Wethersfield, and Windsor, in 1639. As Prof. Johnston has just made plain, the emigration from Massachusetts Bay, led by Thomas Hooker, to the Connecticut Valley was a democratic secession, the partakers in which had no sooner established themselves than they formed a constitution precisely in the modern fashion. The freemen came together in convention and formulated an elaborate code, by which the Legislature, when assembled, found its course narrowly prescribed. Undoubtedly it would be wrong to underestimate all this foundation work, but when was the thing first done upon a national scale? Here we have only little groups of pioneers, as yet on shipboard or living from hand to mouth in the forest, framing systems that will answer the simple needs of a handful of human beings. The matter of constitution-building on a great scale, for a populous country, with all its complicated external and internal relations, was first undertaken by the men of the English Commonwealth. At the deserts in this field of these prime heroes, we may well at this time afford to take a glance.

How many Americans make it real to themselves that one hundred and thirty years before the establishment of the United States there was an effort to turn England into a republic, undertaken by men whose ideas were precisely our own—that government, namely, should be, in the immortal phrase, of the people, by the people, and for the people? The attempt failed because, as yet, the fulness of time had not come. It was, however, magnificent; for the world has never seen stouter hearts or stronger brains than those of the Independents—the men nicknamed by their enemies Ironsides upon the field of battle, and, in political conclave, the Rump. In the fall of 1647, while the leaders hesitated, the rank and file of the Ironsides demanded that King and Lords should be laid aside; that, each reputable man in the land casting his vote, representatives of the people should be chosen who should convene in a legislature; that over this legislature nothing should have power but the people who elected it, and that there should be no limitation of this power except as regarded liberty of conscience—there, no man should undergo restraint. A year afterwards, at the time of the execution of the King, all this was carefully formulated. The leaders, civil and military, now stood with the men, and Henry Ireton prepared an "Agreement of the People" which was, in all substantial respects, a draft for an American constitution. It never took effect because, in spite of almost miraculous prowess, two sevenths could not prevail over five-sevenths. A blind and perverse generation turned back to Stuart rule, abandoning the achievement of popular government to another time and another land. But before the nascent freedom was quite overswept, there came, in 1656, from one of those mighty strivers, an exposition of the whole matter of constitutional theory—the first ever made, and yet one to which succeeding ages have made little essential addition. It was the work of young Sir Henry Vane. Cromwell, long his bosom-friend and fellow-republican, discouraged, saw at last no way out of embarrassment but to make himself, through power of the sword, absolute. After he had thus ruled three years, opportunity came to Vane, disgraced and in retirement, to plead with him for an attempt at a different establishment.

Vane's letter to Cromwell, known as the "Healing Question," is affectionate and respectful in tone. It declares that during the three years of the Protectorate there has been "great silence in heaven, as if God were pleased to stand still and be a looker-on to see what his people would make of it in England. And as God hath had the silent part, so man, and that good men, too, have had the active and busy part, and have, like themselves, made a great sound and noise, like the shout of a king in a mighty host." Vane believes the time has come for a new arrangement, and recommends that "a restraint be laid upon the supreme power before it be erected in the form of a fundamental constitution." He considers how this "fundamental constitution" shall be established:

> "The most natural way for which would seem to be by a general council or convention of faithful, honest, and discerning men, chosen for that purpose by the free consent of the whole body, . . . by order from the present ruling power, considered as general of the army. Which convention is not properly to exercise the legislative power, but only to debate freely and agree upon the particulars that, by way of fundamental constitutions, shall be laid and inviolably observed, as the conditions upon which the whole body so represented doth consent to cast itself into a civil and politic incorporation. . . . Which conditions so agreed . . . will be without danger of being broken or departed from, considering of what it is they are conditions, and the nature of the convention wherein they are made, which is of the people represented in their highest state of sovereignty, as they have the sword in their hands unsubjected unto the rules of civil government, but what themselves, orderly assembled for that purpose, do think fit to make. And the sword upon these conditions subjecting itself to the supreme judicature thus to be set up, how suddenly might harmony, righteousness, love, peace, and safety unto the whole body follow hereupon, as the happy fruit of such a settlement, if the Lord have any delight to be amongst us!"

The "Healing Question" is hard reading, as the prose of Milton is hard. Like the utterances of "the god-gifted organ voice of England," so the periods of Vane, often full of a certain long-drawn music, do not readily yield up their content to the somewhat decrepit comprehension of our less masculine age. Across the thought drift obscurities, dimly and solemnly luminous from fanatic heats that glowed deep within the soul of the Puritan enthusiast. A great idea, however, is clearly outlined—the presentment, perhaps, gaining impressiveness from the vague rhapsodizing by which it is here and there attended, as a peak, draped in vapor, which is aglow from unseen volcano fires, grows sublime. In the midst of such circumstances, for the first time in the history of the world, the Constitutional Idea finds exposition.

A WEEK IN YELLOWSTONE PARK.

PORTLAND, Oregon, August 15.

A TOURIST who visits the Yellowstone National Park via the Northern Pacific Railroad has an opportunity to convince himself that a feast is all the more enjoyable after a fast. On the western section of the Northern Pacific Road the attention is constantly riveted by a fascinating variety of river, lake, and mountain scenery, including refreshing glimpses of summer snow-fields and such gems as Lake Pend d'Oreille and the romantic shores of the Columbia River, with Mount Hood in the background. But on the eastern section, between St. Paul and Livingston, the train traverses monotonous prairies, suggestive of the ocean, but less exhilarating, on account of the dust, and less uncertain and exciting, and with only a few prairie dogs, herds of cattle, grain-fields, and ugly little villages to vary the view from the car windows. It is with a sense of relief, therefore, that the first sight of the snow-capped mountains is greeted, a few hours east of Livingston, at which station the tourist leaves his comfortable Pullman and takes the branch road, which in a few hours lands him at Cinnabar, where stages have to be taken, as no railway is allowed within the limits of the Park.

This little branch railroad reminded me of some of the so called "passenger trains" in Southern Europe. For slowness it would certainly get the first prize at a national exhibition of time tables. "Gentlemen," I once heard a conductor exclaim, as he entered the waiting-room of a railway station in Southern Germany—"Meine Herren, hurry up with your beer; it is time to start." But local color varies. On the Yellowstone Road the train was stopped for ten minutes in one place to leave a box of merchandise in the middle of a field, and to dispose of a bucketful of buttermilk which a nut-brown maiden had brought there for the trainmen and passengers; and shortly afterwards the train was again stopped, apparently because the engineer espied a couple of prairie chickens on the hillside. He pursued them with his revolver, bagged one of them, and the train stubbornly proceeded to its destination, notwithstanding the polite request of one of the passengers to the conductor to wait until he had caught a string of trout in the adjacent Yellowstone River. A week later, when I returned over the same road, the train stopped for a quarter of an hour at one place while the conductor, engineer, and brakeman amused themselves with a game of base-ball.

The gateway through which the train enters the fertile Paradise Valley and the National Park is bounded east and west by lofty mountains, on which, however, only a few specks of snow remained in the first week of August. Indeed, throughout the Park I saw much less snow than the guide-book had led me to expect; but for this the uncommonly warm summer may be responsible. Yet even without snowy summits the Yellowstone mountains are picturesque, and must appear fairly sublime to those who have never been in Switzerland. In ruggedness and grotesqueness of outline they seek their rivals, and the colors are often unique, the rocks being sometimes so white that they present the appearance of slightly discolored snow, such as is seen in the lower portions of glaciers; and this partly atones for the absence of real snow.

After a dusty stage-ride, lasting several hours, and very much up-hill, the passengers are landed at the Mammoth Springs Hotel, where a fair supper and good beds await them. Although this hotel is conveniently located near the foot of the remarkable many-storied, snow-white terrace-mound built by the calcareous deposits of the hot springs, and adorned with the most brilliant colors, its site is nevertheless badly chosen; for there is no view from either the front or back windows, or from the piazza; whereas, if the building had been erected only a few hundred yards to the front, visitors might have enjoyed an extensive and delightful mountain view on all sides. This error is possibly responsible to a large extent for the fact that fewer visitors than had been expected make this large hotel their home for a week or two. With the exception of that at the Upper Geyser Basin, all the Yellowstone Park hotels are placed in like manner, though in each case a picturesque situation might have been found within a short distance. Perhaps the builders calculated that visitors, after their wearisome stage ride of forty or fifty miles and a subsequent brief inspection of the geysers, would hardly look upon the hotels as anything else than a place for providing them with meals and beds.

Having been apprised of the disadvantages to which those who take the regular round trip by stage in five days are subjected, I concluded to see the Park in a more leisurely manner, and hired a saddle horse for a week at the rate of $2 50 a day, to which $1.50 a day was added for taking care of the horse at the several stations; thus making the expense about the same as it would have been if I had taken the regular $40 coupon ticket, which includes fare and hotels for five days. They seem to have great faith in human nature in Wyoming, for I was allowed to take away my horse without leaving a deposit and even without being asked my name! On entering the Park an officer rode up and requested me to register, explaining that all parties entering privately were asked to leave their names, and state how long they intended to stay, as a precautionary measure against violations of the laws relating to hunting and forest fires. These regulations, with others, are printed on linen and conspicuously posted along the road every few miles, so that no one can plead ignorance of the law. Scattered throughout the Park are also hundreds of signs reading "NO HUNTING," "EXTINGUISH YOUR FIRES," with others indicating good places for camps. In the Geyser Basins the principal springs and geysers are also marked by sign-boards, though not so liberally as might be desired. There should be more of them near the road to indicate the most remarkable spots. At present the "paint pots" and the Gibbon and Tower falls are very apt to be missed by tourists. Some of the sign-boards in the Geyser Basins need renovating. At Norris one of these attracted my attention; and after getting my eyes within six inches to decipher the obscure inscription, I read the word "DANGEROUS!" These danger signals ought to be much more frequent. The very day when I was at Norris, a lady broke through the crust near one of the springs and was badly injured.

Norris Geyser Basin is directly south of Mammoth Hot Springs, and is the place where the tourist, if lucky, gets his first view of a geyser. If the reader has never looked at a map of the National Park, he may get an approximate idea of its topography by bearing in mind that the principal curiosities are so placed as to form a parallelogram. The road first leads south from Mammoth Springs to the four geyser basins—Norris, Lower, Midway, and Upper; then east to the Lake; then north to the Falls and Grand Cañon, and over Mount Washburn to Yancey's; and thence back west to the Mammoth Springs. The patrons of the stage line, however, miss the Lake and Mount Washburn, and are obliged to return by the same road a great part of the way. This must be very fatiguing, as the road between Mammoth Springs and Norris is most dreary and uninteresting, being generally lined on both sides by melancholy wastes of blackened tree corpses—a veritable forest cemetery. Now that fires are carefully guarded against, a vigorous undergrowth of young trees is perceptible, which in time will obliterate these and the many similar stretches of charred timber.

The hotel at Norris was destroyed by fire about the middle of July, and I arrived just in time to be the first occupant of a room in the new hotel. In the ruins of the old hotel were still to be found heaps of roast potatoes, hams, and other meats, and groups of molten beer and wine bottles twisted into peculiar shapes. Beer and wine, by the way, may be had at all of these hotels, although no bars are allowed within the limits of the Park. The water throughout this part of the Park is strongly flavored with sulphur and other mineral ingredients, and is apt to disagree with people. After supper I went up the road for a mile to see the Geyser Basin. The distinguishing characteristic of the Norris Basin is the many steam-holes, sending out uninterrupted columns of steam with a deafening roar. I have read of canary birds who were silenced for ever after hearing a mocking-bird imitate and surpass their song. I wish all locomotive engineers could be sent to the Norris Basin; perhaps that would make them stop competing as to which of them can make night most hideous with steam whistles. Besides these steam-holes there are simple hot springs, sizzling "frying pans," mud geysers, and "paint pots," in which paste of various colors is boiling and blubbering. A bench has been placed beside one geyser which every seven minutes sends up a mass of liquid mud, splashing and spluttering, and darting out arms in every direction, like a hideous polyp, until the frenzy has reached its climax and forced some of the mud over the border, whereupon the agitation subsides as gradually as it came on, and the liquid mass disappears down a fathomless hole, where it compresses the steam until it has gained sufficient volume to drive the nasty intruder once more out of its hole.

While I was watching this ludicrous spectacle, some of the workmen who were building the new hotel passed by and invited me to follow them and see the "Monarch" geyser spout. We occupied a place on the hillside where there was no danger that the wind would drive the steam and hot water into our faces, and waited. The liquid eruption was due at eight, but the Monarch long refused to give us an audience. The workmen meanwhile discussed the news of the day—the accident to the lady, already referred to, the characteristics of the new dish-washer, and the death of a popular saloon-keeper, "a splendid fellow, who never refused a man a drink whether he had money or not." The Monarch awaited this opportunity to make the transition from the ridiculous to the sublime, and, precisely at nine o'clock, with hardly any warning, he shot up a hot stream into the air a hundred feet or more, and kept it there for several minutes, the moon furnishing just enough light to see the stream of water amid the steam. *Après nous le déluge* appeared to be his motto, for we found it difficult to reach the road again because of the inundation he created during his brief activity. One of the workmen told me he waited for the eruption every evening, and that he had discovered some springs not known previously, including one sourer than a lemon (probably sulphuric acid). The number of hot springs in the Park seems, indeed, to be countless. Every day the tourist comes across them repeatedly, often most unexpectedly, and it seems probable that some of the greatest wonders of the Park remain to be discovered among the forest-clad hillsides. Among the most curious of the springs are the groups of little ones, with openings no larger than peas, lining the banks of the brooks and the roadside, and so hot that one has to exercise caution in riding across them.

I should have stated that perhaps the prettiest sight on the road from Mammoth Springs to Norris is the frequent patches of dense grass, ordinarily of a pale yellowish-green color, but, if seen from above, facing the sun, of the richest yellow, suggestive of lakes of liquid gold. More beautiful still are the golden rivulets which form the outlets of some of the hot springs in the Lower and Upper Geyser Basins. As the "Fountain," the principal geyser of the Lower Basin, was at rest when I saw it, I devoted most of my time to admiring these streamlets with their golden beds. All the gradations in color, from red through blood-orange and orange to pale yellow, are here to be seen, the color fading out gradually with the distance from the spring. Quite as beautiful as the colors themselves are the exquisite waving golden lines and honey-comb figures which adorn the bottom of these rills, the reflections of the wavelets and ripplets on the surface of the water. In some places these dainty figures are replaced by rows of silky yellow fibres gently undulating with the movement of the water. The bottom of these rills is not hard, but consists of a soft, pulpy mass in some places several inches deep. This is fortunate, for otherwise some of those irrepressible idiots who write their names even on the bottoms of the white basins into which the water flows from the geyser craters, would not

hesitate equally to mar the beauty of these fairy brooks.

The hero of the Midway Geyser Basin is the "Excelsior," which, however, has been quiescent for several years. It forms an immense pool, which, with some others and their overflow, converts the Basin into a place of most dismal, forbidding aspect. It is close by the Firehole River, which is lined by hot springs, one of which has the aspect of a pigmy waterfall, the spray being represented by the steam. When one considers the number of these mineral springs, and the fact that the Excelsior has been known to vomit sufficient hot water to convert the Firehole River, a hundred yards wide, into "a foaming torrent of steaming hot water," one wonders no longer that this river, like several others in the Park, notwithstanding that its water is rapid, cool, and clear as a crystal, is destitute of fish. Were it not for this occasional excess of mineral water, there would be scores of places where a tourist might go through the unique performance of catching a trout, and boiling it in an adjacent spring, without moving from his place. As it is, those who wish to try this curious experiment have to do so at the Gardiner River or the Yellowstone Lake.

Few of the unfortunate tourists who are hurried through the Park on the Wakefield stages have an opportunity to see a geyser in activity till they arrive at the Upper Geyser Basin. Here more than a dozen geysers of the first magnitude are congregated, and although some are very irregular and others only play at long intervals, there are several which every one who remains a few hours can see. A blackboard in the hotel gives a list of the geysers and their intervals of performance, and the hotel is so located as to command a view of almost the whole basin, so that, whenever one of the irregular geysers starts up, the guests may be at once informed, and hasten to the scene. Fortunately, one of the finest geysers in the basin is "Old Faithful," only a hundred yards from the hotel, and so-called because it spouts once in sixty-five minutes, almost with the regularity of a clock. The "Grand," "Castle," "Beehive," and "Splendid" geysers are also certain to play for the benefit of those who spend a day at the Upper Basin. But the grandest of them all, the "Giant," wakes up only once in a fortnight, and unfortunately I arrived just eight hours too late to see it. But there was no room for disappointment, as the other geysers afforded more than enough excitement and wonder for a day. Even if these geysers were extinct, it would be worth a visit to this Basin to see the fanciful lofty craters built up by the calcareous deposits of the hot springs. No two geysers appear to be quite alike in their style of playing. Some have more steam mixed with their water than others; some shoot up a constant stream, others an intermittent one, somewhat like the various forms of rockets. The stream of the "Castle" looks almost like a waterfall flowing upwards and vanishing in mid air; and the "Splendid" afforded the spectacle of two lovely rainbows. Besides these exciting geysers, which represent the sublime, the Upper Geyser Basin has some of the loveliest pools or springs in the Park, as representatives of pure placid beauty. Chief among these are the "Morning Glory" and the "Gem"—pools of fathomless depth filled with diamond of the purest water, lined inside with the richest, deepest colors, and with a "horrid" black hole at the bottom, suggesting the entrance to the nether regions. Into one of these pools a stupid boy once threw a stick, and his poor dog jumped in after it and was boiled to pulp in a few minutes. In another was found the bare skeleton of an elk, possibly driven into it by pursuing wolves—a fine subject for a ballad.

From the Upper Basin I might have gone straight to the Lake, but as the road is a mere trail on which a horse cannot run, and the distance is therefore too great to cover in one day, I returned to the Lower Basin, whence it is only about thirty-five miles to the hotel camp at the Lake. With many tourists it seems to be a mooted point whether it is worth while to visit the Lake; and as few go there, the accommodations are of a most primitive kind. There are two men at the camp, and three tents—one for cooking, one for eating, and one to sleep in. An Englishman and his wife were the only guests besides myself. The lady naturally desired the sleeping tent to be made up into two separate rooms, and the 'landlord" finally submitted to the extra trouble this involved, though afterwards he was overheard commenting to his assistant on "those fussy English." When the English lady got up in the morning to wash, she found the towel had already been used by her husband and myself, so she asked for another. The assistant replied he had already put out a fresh towel for that date, but, after a moment's hesitation, he decided to make an exception in her favor and produced a second. Notwithstanding the possibility of such trials and tribulations, the tourist who omits the Lake makes a great mistake. Not only does it rank among the curiosities of the world, being the only lake of its size at so great an altitude (7,788 feet above the sea, or, as the guide-book graphically puts it, if Mt. Washington could be sunk in it with its base at sea-level, "its apex would be nearly half a mile below the surface of the lake"); but its intrinsic beauty would insure it renown at any altitude. Snow there was none on the surrounding mountains when I saw them; but, like all mountains, they gain immensely in picturesqueness and apparent loftiness by being seen across a sheet of water. And a beautiful sheet of water the Lake is, aside from its surroundings. If a small steamer, such as those which ply on Lake Hopatcong, could be placed on the Lake, few tourists could resist the temptation to take a trip. The Lake, however, is treacherous, and there is a violent thunder or wind storm almost every morning at eleven. About six o'clock in the morning I distinctly heard the mysterious rushing sounds in the air referred to in the guide-book as unexplained. I believe they are due to the sound of the waters dashing against the beach and borne on by the wind, gradually accumulating loudness. Or the sounds may be due to the movements of the capricious and fitful wind among the tree-tops. I repeatedly heard a gust of wind approaching in that way with a magnificent crescendo and climax which a modern orchestra could hardly equal.

Everybody knows that the Yellowstone Lake is as brimful of trout as the Columbia River is of salmon. But a general notion prevails—even among those who dwell in the Park—that they are all unfit to eat, being infested by worms. This is an error. About half the trout are as sound as any other fish, and can be readily distinguished from the diseased ones. In the middle of the Lake it is said that all are sound; but as there is *no boat of any kind* on the Lake, this assertion could not be verified. Our Englishman caught a dozen in the river just before it leaves the Lake. The cook assorted them, threw away the bad ones, and fried the others, which proved to be as good fish as I ever ate. The next day, on the way to the Falls, I stopped for a short time to catch a few of the numerous two-pounders that I saw swimming near the shore. Further down the Yellowstone the trout are smaller and less abundant than near the Lake, so that there is some sport in catching them; but where I stopped it was very much like fishing in a reservoir filled with hungry hatched fish. All I had to do was to select my fish, place the bait before his nose, and pull him in. I took along half-a-dozen which I knew to be sound, but at the Falls Hotel I was informed that their French cook refused to touch the Lake trout. As the hotel itself furnished trout for supper caught below the Falls, where they are admitted to be sound, I did not argue the point with the cook, who was busy providing for an excursion party of fifty.

If the Yellowstone region contained nothing but the two falls at this place, and the Grand Cañon, it would have been worth while to reserve it as a National Park for all time. The two falls, though only half a mile apart, are utterly different in character, as the smaller, upper one plunges into a quiet, small basin in a secluded idyllic retreat, while the lower plunges three hundred and fifty feet down an abyss which is formed by the stupendous walls of the Grand Cañon, of which several miles lie before the eyes of the dazed spectator. The best place to enjoy the grandeur of the Falls and the Cañon is not at Lookout Point, as is generally believed, but at the edge of the Falls. Seen from a distance above, these Falls present a unique sight. The water flows on like any other rapid current until suddenly it appears to vanish in the air. On approaching the edge of the Falls, this illusion resolves itself into a scene which Niagara can hardly equal. As the water plunges into the pool below, it is dissolved into clouds of vapor that put to shame the steam columns of the biggest geysers. The breakers which wildly dash against the sides of the pool indicate the turbulence of the water beneath this spray and foam. Some of the spray is carried by the wind to the abrupt walls of the Cañon, where it nourishes mosses and lichens which add one more color to the numerous tints that adorn these rocks. These tints bewilder by their variety and richness. The same strong mineral waters that have painted such exquisite brook-bottoms in the Geyser Basins here undertook a kind of fresco painting on a scale of the most sublime grandeur. Our artists who have already discovered the use of aquafortis or nitric acid for their purposes can here learn from Nature how much more brilliant pictures can be painted with sulphuric and ferric acid. Near the summits of some of the rocks may be seen some inviting caves. Other rocks terminate in turrets and pinnacles suggesting mediæval architecture; and some of the rocky walls are adorned with a mosaic of brown, red, yellow, and white, as elaborate as the floor of St. Mark's in Venice. Some of the turrets, when you climb up to them, appear so wofully weather-beaten that it looks as if you could kick them over; but you cannot. The torrent, at a dizzy depth below, in which the green water struggles wildly for supremacy with the white foam, enlivens the scene; and in one place a turn of the river bed, near a streak of painted rock, gives the impression of two waterfalls side by side, one green, the other red, one in motion, the other frozen.

From the Grand Cañon the coupon slaves return to the Mammoth Springs and Livingston, while those who travel independently can enjoy the ride over Mt. Washburn, with its extended views of the Rocky Mountains, its fertile sides fairly crammed with flowers of the richest colors and strangest varieties, and its solitary trail through the depths of a primeval forest, frequently blocked by fallen trees; on which one may not meet a human being in eight hours, nor hear any sound but the melancholy moan of a poor tree against which a dead trunk has fallen and is wounding it with every movement of the wind. But I cannot stop to describe the dismal delight of this ride, or the exciting sport of trouting that may be enjoyed at Yancey's, as I wish to devote my remaining space to a few practical considerations.

I have stated that I made my trip on a horse;

and thereby hangs a tale. The Yellowstone National Park, I found, is in the hands of a monopoly which calls for the attention of Congress. The Yellowstone Park is not at present a part of our republic, but it is a monarchy, and the King's name is Wakefield. Mr. Wakefield owns the stage line, and the object of the present arrangements is to make each passenger buy a round-trip stage ticket, no matter how much or how little of the Park he may wish to see. If he endeavors to avoid this compulsion, he is deliberately subjected to various disadvantages and indignities. Having made up my mind to take a horse, I applied for one to King Wakefield, but was told that there was none to be had for a week or two. Then I went to Clark's and got a horse there. But when I arrived at one of the hotels and asked to have my horse fed, I was told it could not be done because it was not a "Wakefield horse"! In some places I arranged matters by humbly apologizing for not having a Wakefield horse, and by explaining that I tried in vain to get one. But at one of the hotels even this apology failed of its effect. At the Firehole they absolutely refused to take care of my horse for any price! The visitors all agreed that it was the greatest outrage they had ever heard of. Imagine a company which enjoys special privileges to build hotels in the National Park, where generally there is no other house within ten or twenty miles, then refusing to take care of a horse unless it belongs to one man—Mr. Wakefield—with whom the company has obviously an understanding which, I repeat, deserves the attention of Congress. Not only must this disgraceful monopoly be crushed at once, but Mr. Wakefield and his stage line ought to be abolished altogether. What the Park needs is a railroad—not a steam railway, which would frighten the game and set fire to the forests, but an electric railroad. Great as are the wonders of the National Park, the intervening distances are so great and the scenery often so commonplace, that nothing would be lost and very much gained by having an electric road. Dust and fatigue could be thus avoided, and more time be devoted to the wonders of the Park in three days than at present in a week.

H. T. Finck.

WITH THE ECLIPSE EXPEDITION TO JAPAN.

Shirakawa, Japan, July 28, 1887.

To the uninitiated, a voyage across the Pacific Ocean in June may mean something very sunny, and even tranquil. The reality was more like a typical Atlantic voyage in November. The eclipse party found itself enveloped in fog, with but fitful gleams of sunshine, varied by rain, boisterous waves, and a gale or two. Sea-rugs, shawls, and heaviest clothing were required to combat the cold of this northern Pacific region; but, after struggling to keep warm for sixteen days, landing in Japan was to plunge into the midst of an almost tropical summer. Fusiyama was unhappily invisible, in spite of the sunny atmosphere. That sacred mountain is very chary of showing itself either to the faithful or to the heretic foreigner. Capt. Marshall of the steamship *Abyssinia* told us that, entering this harbor very frequently during nearly twenty years, he had but twice seen clearly this great landmark.

Yokohama is Japanese, but it is much more than Japanese. Foreigners from every nation make it the most cosmopolitan of all cities. A pleasant incident of the short stay there was the morning spent in the tea-firing establishment of Mr. Varnum, the only one in Japan where every process is carried on by machinery. The natives bring in the slightly dried tea in boxes or sacks of a hundred or more pounds each—called a picul. Tons of it lie in piles upon the floor—enough for centuries of wakefulness. After this, the various drying processes take place—the sifting, sorting, coloring, and the blowing off of the dust, which is afterwards frequently used to flavor whiskey. All these operations are accomplished by the many machines which have been chiefly invented by Mr. Varnum himself. In Tokyo another few days were very enjoyably passed, while meteorologists and records were consulted with reference to finding the best place for the location of the eclipse station. The line of totality runs diagonally across the island, from northwest to southeast, and various places along the line were considered available by those most familiar with the peculiarities of the Japanese climate. The beautiful summer resort, Nikko, among mountains, groves, and temples, was the most attractive from a personal standpoint; but as a daily afternoon thunder-storm is among the probabilities of that region, it was reluctantly abandoned. The city of Niigata, on the west coast, was also considered, but its selection involved either several days at sea, or a long overland journey by pack-horse and *kuruma*, with a ton or two of instruments. That city, however, was weighed in the balance for several days against Shirakawa, which is but 113 miles from Tokyo by rail. Shirakawa was at length selected, and may all the kind deities of wind and cloud look propitiously upon the choice!

The site for the setting of the instruments—the eclipse-station proper—is an old castle outside the city, which was burnt during the revolution of 1868. Nothing now remains but the series of stone embankments, which rise about seventy-five feet above the level of the surrounding rice-fields. Inside is space enough to quarter an army, and the whole is overgrown with grass and ivy and climbing white roses, while a number of the quaint, flat-topped pines with which Japan abounds have rooted themselves in effective niches. The castle was built somewhat more than 300 years ago, and has had no history worthy of particular note, except that it was one of the last and most difficult strongholds to be taken and subdued in the late rebellion. Parts of the old moat have been planted with rice; else, for twenty years, wild vines and trees and the lonely screech-owl have had it all their own way. To-day its summit is crowned by the white tents and instrument houses of the expedition. A more picturesque station could not have been devised, nor one more favorable for the observations to be made. Shirakawa itself is rather an uninteresting city. Even the shops offer no temptation towards the spending of money, for the lacquer-work is coarse, and the porcelains are merely the ordinary blue ware. But the broad rice fields and the flowing river, with its wooded banks, the blue, distant mountains, the ponds of pink and white lotos, and the field flowers everywhere—above all, the lovely old castle, from which all these beauties can be seen at once—will make our stay far from tedious.

A few of the male residents in Shirakawa wear European dress, so that the sight of it is comparatively familiar. Foreign ladies, however, are evidently an exceeding curiosity. The two who accompany the expedition found, during excursions about the town, that the only attraction which could rival themselves in popularity was a sort of juggler with a monkey, performing in the street. The crowds following us went for an instant towards the monkey, but soon returned to their first allegiance. As no *kuruma*-man can here be induced to go faster than a walk, our body-guard augments at every corner. If perchance we stop in some shop, their proximity becomes well-nigh suffocating. But a Japanese crowd, even in remote districts, is always orderly, and to a considerable extent well-mannered and good-humored. Curiosity pure and simple seems to be the only motive for following. The authorities of the city are very kind and courteous. When the officials call they are preceded by presents which have in every case been most welcome, especially in a city where European food, as such, is unknown. Four feudal knights of the old régime called an evening or two ago—one of them a truly grand-looking old man, with flowing white hair and beard. All were in the picturesque loose *kimono* of the country, and all bowed to the floor as they entered, which we returned so far as American backs would permit. Sitting on the floor in a circle, all then drank solemn cups of tea, while the civilities and compliments back and forth were translated by the young student from the University who acts as our interpreter. Their present to us had been some ducks and chickens, tied together and laid in a large red lacquer tray. The ducks were rather vociferous in their objection to the proceedings, keeping up a somewhat continuous quacking. The chickens, less vehement in their protestations, doubtless sympathized with their unwilling neighbors. At length the call came to an end, after an interesting conversation in which our visitors had told us what they could of the city and the castle and the war which so changed their fortunes. They asked permission for certain teachers and scholars from their schools to visit the station and see the instruments. How changed their life, when they must ask of an American the privilege of visiting their own castle.

And now it is but three weeks to the eclipse. For the astronomer this time means overseeing the building of piers and setting up of instruments during the hot daytime and observing stars half the cool night. For the photographer it means much concern over dark rooms and chemicals; for the other gentlemen of the party, directing coolies in a mixture of uncertain Japanese and very definite American (which they seem, nevertheless, to comprehend), and in general much care for the welfare of the company; while those of us who are unofficially attached to the party are fain to content ourselves with books, writing, or painting in this lotos-land of hot sunshine and greenest vegetation.

Mabel Loomis Todd.

Correspondence.

THE NEW ENGLISH DICTIONARY.

To the Editor of The Nation:

Sir: The *Nation* has helped on the work of the Philological Society's Dictionary most liberally, kept its plans before the public, and often urged its readers to help; so that when any one of them finds that he has memoranda of words which ought to be in the Dictionary, and are not there, he owes everybody an apology for not having sent them forward. Some choice spirits have, in fact, privately made such apologies and promised to do better. But those who write critical notices naturally introduce their memoranda of such words as part of their criticism, and they often do it in a most distressing form—they give no references. The elaborate notice in the last two numbers of the *Nation* devotes a couple of columns to the mention of deficient words in Part III., but not one proper reference is given. Dr. Murray will wish to put this new matter in the Appendix, but it might take a man a month to find *baubledom* in Horace Walpole, or *blandulish* in Sterne. The learned reviewer may send the quotations and references in proper form to Dr. Murray, as is to be hoped; but there are a good many readers of the *Nation* who would be

glad to have them, and I am sure the *Nation* would have given them place.

It is a striking proof of the immensity of the materials in the Dictionary that so erudite a student of literature as the writer of this notice should so often miss his way. The line from Vaughan which he refers to as "unquoted" under *bead* is there, page 724, ii, 4 b. *Bele*, for which he quotes Chaucer as three hundred years earlier than Murray's first quotation, is given in the Dictionary from Chaucer, and from Guy of Warwick, eighty years earlier, page 778, v. *bel.*; he looked at *belle*. *Bergeret*, which he thinks occurs but once in our literature, is left, he says, with a reference to *bargeret*, where nothing is explained; but there is a full article under *bargeret*, giving quotations from 1400 to 1616. He looked, very likely, at *bargaret*. He cannot find anywhere *boes*, a contraction of *behoves*, in the Ellesmere text of Chaucer; but under *behove* the dictionary says "for contracted impersonal forms, see BUS," and *Bus* is not yet reached. He mentions other third persons of verbs which he does not find specially mentioned, regular forms in Anglo-Saxon conjugation, and occurring in the quotations under their verbs. As dictionaries have been made, these are hardly to be called deficiencies. It does not seem to me a deficiency to be free from the line quoted by the reviewer from the beastly passage in Chaucer, "A berd, a berd," etc. If *berd* (beard) here means a "sell," as he says, it is only by *double entente*. It has another plain meaning. But the Dictionary gives a wholesome quotation from Chaucer in which the meaning is plain and certain ('House of Fame,' 689).

There is special difficulty with American uses. Are there not some readers who have not noticed that an advance list is kept printed of words near at hand in the printing, for which additional special quotations are needed? The next list runs from *brand* to *catchy*, and is well worth examining. It may be had of Dr. Murray, Oxford.

Very respectfully yours, F. A. MARCH.

LAFAYETTE COLLEGE, EASTON, PA., August 27, 1887.

[To our other sins, let us add confession of a slip in our late notice (*Nation*, No. 1155), when we commented on the strange circumstance that the adverb *bloodily* is regarded in England as almost a profane word. This statement the Dictionary really applies to the adjective *bloody*. The insertion just above it of a paragraph on the adverb misled us. For the rest, a plea in abatement might be made of treacherous eyesight.—ED. NATION.]

SCIENCE AND THE WAR DEPARTMENT.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly allow me a little space in your columns to tender you my sincere thanks for your having taken up the cudgel, as you did in an editorial in the issue of the *Nation* on the 11th inst., in Sergt. Cole's case of the United States Signal Service? And I prefer that these thanks of mine come from me as a citizen of the United States rather than from me as an officer of the United States Army. We ought to feel in this country, soldiers and citizens alike, that there can be no higher honor than to be a citizen of the United States, with all that that word means. Before I was fourteen years of age I was a warrant officer under our Government during the war of the Rebellion, and have served her in many capacities since, and for more than the last eleven years have been a commissioned officer of the Medical Corps of the army. So, from such a many-sided experience, I think I can justly judge of Sergt. Cole's case without actually being intimately posted in its merits or demerits.

Now, aside from the question as to whether or no the Signal Bureau of the army should be under the jurisdiction of the War Department, why is it, Mr. Editor, may I ask, that such an apparent, nay, real hostility (for there can be no doubt about it) exists on the part of the War and Navy Departments towards any one serving in those bureaus who may develop or display any scientific ability?

It appears to make no difference whatever—officer, sailor, soldier, or civil employee—they are all treated alike, and Sergt. Cole's case evidently typifies the method of treatment, if we may be permitted to use so harsh a term for it. Nor does it appear to make any difference as to the form his special ability may assume, for it may be directly associated with his legitimate work, or perhaps it may be some collateral branch, or even it may of necessity bring with it certain pecuniary gain, or it may absolutely be of an expense to the individual to prosecute it: but the moment that it begins to attract or call forth public praise for the value of the work, and public appreciation of its worth, then that instant the War or Navy Department, as the case may be, seems to think it its bounden duty to throw every possible impediment in the way of the person who has presumed to be so insubordinate.

And here, even in these minor details of our Government machinery, we cut our own throats, for, to say the least of it, it is nothing more nor less than hostility to our progress as a nation; for you will agree with me that it is alone on the success of these minor details that depends our ultimate success as a whole. It seems to me that there should be some higher power vested in the nation having the guardianship of matters so vital to the public weal, and that it should not fall within the power of perhaps some ill-informed bureau official to crush out at his option the early exhibition of any talent in those accidentally under his temporary sway. Dozens of instances during the past fifteen years have fallen under my own observation where officers of the army and navy would gladly have put forth such ability as they had in their power to do, but were promptly discouraged by this existing hostility, and I even knew of one case where a young officer was actually *unfavorably* reported to the War Department for his determination to prosecute his *scientific studies* during his *spare hours*, by an inspecting official of high rank. Are we becoming Russianized in this boasted land of liberty of ours? I take it, Mr. Editor, that it is the nation's highest duty to encourage in *every way in her power* the labors of any one upon her rolls that may undertake to perform any scientific work whatever, and throw open all the legitimate avenues to its success.

You state in your editorial that "the business exchanges of Boston and leading scientific men have interested themselves to secure a revocation of the order for Sergt. Cole's removal, and it is hoped they may be successful." As to how successful this is likely to be, grant me a few lines more, to cite a similar experience in my own case as a parallel example, and as an illustration in general of all similar cases. In doing this, I am prompted by no personal motive whatever, as my scientific work is a second nature, and my life to me *now*. Nor, least of all, is it my intention to call forth any criticism of the War Department or any one connected with it; but my words *are* directed point-blank *against the system* to which I have been referring in the foregoing paragraphs. During my eleven years' service in the Medical Corps of the army, at least one year of it has been spent with troops in the field against hostile Indians, and fully or nearly three-fourths of it in frontier duty at isolated stations; but, during all this time, I was steadily engaged with my scientific work, and succeeded in publishing between one and two hundred memoirs, letters, and critiques, illustrated by over 1,000 of my own drawings in anatomy and kindred scientific subjects. Then, feeling I was drawing towards middle life, and in view of the fact that I was a member of a corps that boasted of being a scientific one, and prompted by the advice of men of high standing in civil callings, and, too, my service having been a long one, I made a brief and humble request to be placed in some position where the large Government libraries would be a little more available, as well as the material stored up in the great Government museums of ours. My communication was accompanied and strongly seconded by earnest personal letters from some *forty* of the leading scientific and literary men of the present day, and of both continents. Indeed, these letters came from such men as Dr. Oliver Wendell Holmes; Prof. Asa Gray, the botanist; from Agassiz; from Prof. S. F. Baird, and many other leaders in American science and literature; from Sir Richard Owen, F. R. S., etc.; from Sir Wm. H. Flower, Director of the British Museum; from Prof. Alphonse Milne-Edwards, Chargé of the Jardin des Plantes of Paris; from Sir William Turner, F. R. S., etc.; from the Royal Societies of Belgium, Italy, Sweden, and other countries; and even Prof. Huxley was pleased to say for me, in a highly valued letter, in the same connection, "I should be exceedingly glad to see you removed to a position which would afford better scope to your scientific abilities." But, alas, Mr. Editor, the hostility to scientific progress of which I complain and deplore, proved to be of such a nature that, although this official communication, accompanied by such letters, has been for many months in the hands of those who can at a moment's notice place *any one* within the reach of the libraries and museums, it has not up to the present day been so much as favored with an official reply.

Sincerely trusting that the appeal of the scientists of Boston and Cambridge will be favorably entertained in Sergt. Cole's case, and he be allowed to remain where his energy and faithfulness to duty have been productive of such good results, I am, sir, very truly yours,

R. W. SHUFELDT,
Captain Medical Corps U. S. Army.

FORT WINGATE, NEW MEXICO, August 17, 1887.

POSTAL SAVINGS BANKS AGAIN.

TO THE EDITOR OF THE NATION:

SIR: The Canadian postal authorities, in their last report, state that there are 90,000 depositors at their postal savings banks who have on deposit $20,000,000. Estimating our population to be twelve times that of Canada (sixty million in place of five million), in the same ratio, we should have 1,080,000 depositors depositing $240,000,000. We might perhaps reasonably expect that our deposits would at least equal, if not exceed, in proportion those of any other nation by as much as we are supposed to exceed them in wealth.

A friend writes me, "I well recollect a few years since, when the Post office Department of the United States distributed the 'Baby Bonds' of $10 each, seeing the long line of poor women and children who were eager to put their savings in these bonds; and I have no doubt that many of them are now held by the original purchasers. I have two of them that were bought by a person now dead, bought with the intention of having something laid up for a 'rainy day.'" It was almost pathetic to see these long lines of the poor (some of them, indeed, hired by the rich to gobble up the bonds of the Government) awaiting for hours their turn to express their confidence in

the Government, and to secure those advantages for the investment of their small savings which the Government thus offered them. For some occult reason the Government never again, I believe, opened its coffers to receive the gentle showers of small sums which would have perennially rained in upon it.

A distinguished rector of your city, to whom I had sent the Post-office Savings Bank blanks, writes me:

"A glance at the implements, if I may call them such, actually employed in the practical working of a scheme of this sort, is worth a volume of description. The value of such a system for the encouragement of thrift cannot be doubted. The main argument against introducing a similar institution here would come, I imagine, in the shape of a protest against whatever looks like 'paternal government.' You are aware, I dare say, that this very scheme forms one of the 'planks' in the platform of our United Labor party. This fact ought not to damage the enterprise, but doubtless will do so at first in the eyes of those who cannot conceive of any good thing coming out of this Nazareth of Socialism. Yet when we look back at the programme of the Chartists, it is instructive to note that almost all the demands thought by the Conservatives of forty years ago so revolutionary are practically conceded in the England of to-day.

"That there is a tinge of Socialism in the postal-bank system cannot, I think, be denied; but then there is the question whether a good deal of what is stigmatized as Socialistic legislation be not in reality nothing more than is really demanded by the political economy of the New Testament, the proper legislation of the kingdom of God."

I send you what the rector, by good metaphor, calls the "working implements" of the Post-office Savings Bank, and request, if you cannot find space to reproduce these blanks, that you at least reprint so much of the legend as you can find room for.—Very respectfully, H. J. S.

HANOVER HOUSE, UPPER NORWOOD, LONDON,
August 5, 1887.

WHAT SHALL A MUGWUMP DO IN '88?

TO THE EDITOR OF THE NATION:

SIR: It seems to me that the letter which appeared in the *Nation* of August 18, under the above caption, shows a degree of despondency and perplexity not warranted by the present political outlook. So far as may be seen at present, the case for '88 stands about as follows: The re-election of Cleveland means the erection of a firm barrier against pension steals, Blair bills, River and Harbor jobs, and all legislation of that kind, against all which Mugwumps are understood to be pretty unanimous. It also means the continued growth of civil-service reform—not so rapid a growth, perhaps, as many think entirely practicable, but nevertheless a continual and a healthy growth. Also, aid to tariff reform. On the other hand, the election of a Republican means in all human probability the signing of any pension bill or Blair Education Bill, however demagogical, and the veto of any bill to reform the tariff system. In case the man elected should be Blaine, or any man nominated by the Blaine influence, it would also mean a distinct backset to civil-service reform. In *no* case would it mean any more rapid advance in the reform than under Cleveland.

If the President is not giving Independents all they want, he is certainly standing between them and a great deal which they emphatically do *not* want. "What shall a Mugwump do in '88" then? Certainly not add another to the already unremediable number of new parties.

INDEPENDENT DEMOCRAT.

DOUBTING INDEPENDENTS.

TO THE EDITOR OF THE NATION:

SIR: Two letters in your last issue well expressed the doubts which are paralyzing the minds of many conscientious men who are anxious as to their future political position. Mr. Catlin is so impressed with Mr. Cleveland's backslidings in regard to civil-service reform, that he wants to bolt again and have a new leader "*sworn* [his italics] to the great reform."

Let us consider for a moment what Mr. Cleveland's position has been. For more than twenty years the Republican party was in full possession of the Government, and confessedly used all the offices without stint for party purposes. With Mr. Cleveland a Democratic Administration came into power for the first time. When I consider the perfectly *enormous* pressure to which he has been subjected, my wonder is not that he has made some bad appointments, but that he was able to hold his own at all. Nothing but his personality and iron will prevented such a clean sweep from the start as would have scandalized the world. Naturally he wants a reëlection, and what is the basis for it? As to Congress, it is enough to say in a word that it has disgusted the country. The President and his Cabinet, from the nature of their position, have been unable to create or establish any policy. The only two decided things he has been able to do were negative—the veto of the General Pension Bill, and abstinence from fomenting trouble with Canada—for which those who reflect what would more than probably have happened under Blaine, ought to be devoutly thankful. If in this colorless atmosphere the President has made some concessions to the partisans who are raging around him, though I may regret it, I do not believe it is possible to get a President who, under the present system of government, will do any better if as well. For one, I am ready to take the stump for Mr. Cleveland as decidedly as in 1884, although a life-long Republican up to that time, and thinking little better of the Democratic party than before.

Mr. Spaulding begins his letter with a sentence with which I most cordially agree: "The best and surest evidence of a righteous cause lies in its simplicity"; and closes it with another almost equally good: "Let us demand in exchange for our votes a principle plainly stated that can be followed. . . ." But where is such a principle to be found? Certainly not in either tariff reform, honest money, anti-centralization, or even civil-service reform. These are all complex questions—simple enough as ends, but as to the means of attaining which opinions may be as various as men. But Mr. Spaulding offers in another sentence an indirect suggestion:

"But we have seen in this Democratic Administration a Secretary who could so state the needs and dangers attendant upon existing conditions, that all argument in opposition to his views was stopped, although the power to remedy the evil was not given him."

Here is a perfectly simple principle—*Give him* the power to remedy the evil. Let the executive officials who are charged with the responsibility of administration, and who, through the President, represent the whole nation, have as good a chance to be heard by their constituents as local members and chairmen of committees in Congress. Take the business out of the committee-rooms, where it is manipulated in secret by the lobby, to the floor of Congress in such decent and orderly manner that great public questions, instead of being buried in a mass of local, and private, and chaotic bills and resolutions, can be taken up early in the session, and so argued out between the two branches that the country can understand what wants to be done and who are the men to do it. The true relation between executive and legislature—this is a simple principle, which, when rightly adjusted, will furnish the machinery for settling all the others.

To recur for a moment to civil-service reform. I have never had any faith in the permanent effect of the present law, because the opposing forces are too powerful. A seat in Congress does not depend upon what a man has done, can do, or can honestly promise to do, in public affairs. The mode of business is such that secret intrigue is the only instrument, whether for good work or bad; that individuals disappear from sight, and only majorities and minorities are visible. A man goes to Congress not because he can do honor to himself, his district, or the country, but because he can command sufficient local influence to get a nomination. Now the strongest, in fact the only permanently reliable, means of influence is the use of offices, and this necessity will in the long run defeat the law. The only effective guarantee would be to change the basis of election. If the members of the Cabinet could take the lead and guidance of business in Congress, so that it could be conducted in public and in such a way that the country could understand the merits of questions and individuals, we should then have a different class of candidates presenting themselves on the ground of their attitude towards, and their intelligent exposition of, problems of public interest; and we should then be able to dispense with these miserable conditions of bargain and sale. G. B.

LAKE PLACID, N. Y., August 22, 1887.

THE REPUBLICAN PARTY AND THE SALOONS.

TO THE EDITOR OF THE NATION:

SIR: In connection with the "signal of distress" and appeal made by the Republican leaders in Massachusetts to the Prohibitionists, you recently remarked: "Any fresh promises which the Republican managers may now make will count for little, in view of the fact that the party last year pledged itself to submit a prohibition amendment and then failed to keep the pledge when the question came to a vote in the Legislature."

This for Massachusetts. What Prohibitionists have to expect from Republicans in New York will sufficiently appear from the fact that, in the Republican Committee in session in New York city, *fifty-three* members are either actually liquor-dealers or have made their money in that business.

In the great Republican stronghold, Buffalo, the Mayor is a "grocer and liquor-dealer." His appointments appear to be largely made from actual saloon-keepers, or those lately such. In the city government, the liquor interest is vigorously represented by liquor-dealing Republican aldermen, supervisors, etc.; and in the General Republican Committee for Erie County eighteen out of the sixty-one Buffalo members are in the liquor business.

It is therefore no exaggeration to say that from Massachusetts to Texas (where the Republicans voted almost solidly for free liquor) the liquor interest largely influences, if it does not quite control, the Republican party. A miserable state of things truly. And in the face of it all, Messrs. Hoar, Dawes, and the rest are not afraid to say: "It is not the part of wisdom, it is not in the interest of the cause we all have at heart, to slaughter it [the Republican party], and thereby destroy the only agency by which we have had, or are likely to have, any temperance legislation at all."

M. C. L.

A HINT TO MR. BLAINE.

TO THE EDITOR OF THE NATION:

SIR: Why does not some astute politician propose to equip separate military and naval academies for the colored cadets? The surplus could thus be reduced several millions without touch-

ing the tariff. The plan would allay the sensitiveness that is manifest in some parts of the country in regard to mixed schools. If Mr. Blaine were only this side the Atlantic to seize the golden opportunity of being the first to propose the thing, why might he not hope to carry Georgia? Then what influence might be exerted on doubtful States by judicious suggestions in regard to the location of the schools! Some civil-service reformers might object to having the naval academy offered to Colorado or West Virginia, but the new military academy might be held before these two States as the prize to be awarded to whichever gives the largest majority.

Yours respectfully,

W. E. C. WRIGHT.

BEREA, KY., August 24, 1887.

THE "OFFICER'S DUEL" IN GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the Boulanger-Ferry affair, perhaps the following incident, illustrative of the duelling practices in Germany, may be of interest. The parties are, of course, unknown to the world, but the principle is thereby illustrated.

It is against the civil law of Germany to duel, and yet if an officer in the army refuses to challenge when he considers himself insulted, or refuses to accept a challenge which may be given him, he will be expelled from the army, and that by the express orders of Kaiser Wilhelm himself—the "Christian" Emperor of Germany. Combating this and other loose moral notions prevalent among the young men of Germany, there exist at all the prominent universities of Germany chapters of a Christian fraternity called the "Wingolf," whose members pledge themselves, among other things, to reject absolutely both the student's duel (*Mensur*) and the duel of extra-university life. The writer is a member of this fraternity, and can therefore vouch for the incident he wishes to relate, knowing the one party personally. The incident occurred this spring.

A member of this fraternity had become an officer of the Reserve Corps. On the occasion of a certain celebration in a restaurant, he was making a speech, when a half-tipsy post-office official, who had been a corps-student (dueller), publicly insulted him by using abusive epithets. Common sense would seem to dictate that such a one should be hustled out of the restaurant and treated with utter contempt. But no; the officer was privately urged to send the fellow a challenge to a pistol duel. Upon his replying that such was contrary to his principles, he was summoned before a so called Court of Honor (!), practically a court-martial. His colonel wrote to the general, saying that Officer S. was an excellent officer in every respect, but that the authorities had unfortunately not known of his connection with the Wingolf fraternity. At the court-martial it was proved that Officer S. had in no wise provoked the insult; also, that when he refused to challenge, he was perfectly sober. Had he been intoxicated, it would have been an excuse! And then this honorable court of German army officers passed the verdict that this man, in every respect acknowledged to be an excellent officer, on account of the utterance of principles incompatible with the position of an officer (refusing to fight a duel with an insulting rascal), should be ignominiously expelled from the army. By special Cabinet order of the Emperor, this verdict was commuted to that of simple dismissal. This in the nineteenth century, and in a nominally Christian and civilized land!

Duelling is by no manner of means extinct in Germany, although fatal cases are of comparatively rare occurrence. The students' *Mensur*, when the students amuse themselves by slashing each other's faces and clipping off ears and noses, take place twice a week, but are rarely fatal. However, on an average, two or three, or even four, students lose their lives in duels every semester.

PAUL DE SCHWEINITZ.

NORTHFIELD, MINN., August 13, 1887.

DUKE GEORGE.

TO THE EDITOR OF THE NATION:

SIR: Glancing the other day over an old book just received from Europe—it was Wolfgang Hildebrand's quaint hodge-podge on witchcraft—my eye was caught by a bit of fifteenth-century manuscript used in the lining of the binding. A moment's study showed it to be a complete document, and one not without historic interest. It was an original letter or order of Duke George of Saxony—Luther's Duke George—he of the Leipsic disputation and of the Wartburg defiance, in spite of whom the Reformer would go back to Wittenberg "though it rain Duke Georges nine days running." Writing at Dresden on the Thursday following St. Martin's Day (November 11), 1499—Martin Luther, a boy at school, was just sixteen—he orders a horse made ready for the Friday evening after St. Elizabeth's Day (Nov. 19):

"GEORG VON GOTS GNADEN
" Herzog zu Sachssen, [etc.]:
"Lieben getrewen Wir begerrn von euch, Ir wollet unns ein gutt genngе pferdt, mit Sattell vnd zawme allerdinge zum reitten zugericht, auf freitag nach Elizabeth, dess abenndes, hirauf in vnnsern marstall verferttigen. Das nicht anders halden noch abeschlaen, In dem thutt Ir vnsern willen. Geben Dressden Donnerstags nach Marthini Anno ic [incarnationis Christi] Im xcviiij."

In 1499 the Thursday after St. Martin's came on the 14th, and the Friday after St. Elizabeth's on the 22d. But the year puzzles me. All the authorities at my disposal set the death of Duke Albert and the consequent accession of George on the 12th or 13th of September, 1500. That the Saxon year may possibly have begun with the Annunciation or with Easter (it probably, like the Imperial, began with Christmas) could here make no difference. How could George write as "Herzog zu Sachssen" a year before his father's death?

GEO. L. BURR.

THE WHITE LIBRARY, CORNELL UNIVERSITY,
August 14, 1887.

Notes.

GEO. ROUTLEDGE & SONS will publish an English translation of the new Hachette Series of French Men of Letters, beginning with M. Boissier's 'Madame de Sévigné,' a subject treated gracefully by Miss Thackeray in the series of "Foreign Classics for English Readers." They have also nearly ready translations of the younger Dumas's 'Lady with the Camellias,' and his father's 'Count of Monte Christo.' On September 1 they will begin the delivery of their Chapman's Homer's Iliad, a limited illustrated edition.

G. P. Putnam's Sons' fall announcements include 'A Study of American Finance, 1789-1835,' by John Watts Kearney; a revised edition of Simon Sterne's 'Constitutional History and Political Development of the United States'; 'The Kentucky Resolutions of 1798,' by Ethelbert D. Warfield; 'The Student's History of the English Parliament,' a new translation of Prof. Gneist's work by Prof. A. H. Keane; 'Arcady: For Better or Worse,' a study of rural life in England, by Augustus Jessopp, D.D.; 'Bodyke: A Chapter in the History of Irish Landlordism,' by Henry Norman; 'Slav or Saxon,' a study of Russian development, by Wm. Dudley Foulke; 'The History of the Revolutionary Movement of 1848-49 in Italy, Austria, Hungary, and Germany,' by C. Edmund Maurice; 'La Société Française au 17e siècle,' edited by Prof. T. F. Crane; 'Two Years in Europe,' by Rodney Glisan, M.D.; 'Taxation: Its Principles and Methods,' from the Italian of Prof. Luigi Cossa; 'Egyptian Archæology,' by Prof. Maspero, translated by Miss A. B. Edwards; a second edition of the Rev. C. W. King's 'The Gnostics and their Remains'; 'The Art of Conversation,' by Prof. J. P. Mahaffy; 'The Life of Reginald Pole, Archbishop of Canterbury,' by Frederick George Lee, D.D.; 'A Vacation in a Buggy,' by Maria L. Pool; and the following series: "Knickerbocker Nuggets," a selection from the world's classics in 32mo; and York Powell's "English History from Contemporary Writers."

Dodd, Mead & Co. announce a new edition of Ormsby's 'Don Quixote' in four 12mo volumes, as well as on large paper; 'The Life and Times of John Jay,' by William Whitlock; and ten etchings by Mr. A. H. Bicknell of Boston.

A new edition of 'Voice Culture and Elocution,' by Wm. T. Ross: 'Modern Cities and their Religious Problems,' by the Rev. Samuel Lane Loomis; and 'Evangelistic Work in Principle and Practice,' by the Rev. Arthur D. Pierson, will speedily be issued by the Baker & Taylor Co.

T. Whittaker has nearly ready 'Five Last Things,' by the Rev. J. A. Spencer.

John C. Buckbee & Co. have nearly ready 'English Masterpiece Course,' by Alfred H. Welsh of the Ohio State University, a book for private study or school use; and a 'Complete German Manual,' by Prof. Wesley C. Sawyer.

Mr. James C. Dibdin (4 Duncan Street, Drummond Place, Edinburgh) has written and is about to publish to subscribers, in an edition of 500 copies (at fifteen shillings each), 'The Annals of the Edinburgh Stage, with an Account of the Rise and Progress of Dramatic Writing in Scotland.' Mr. Dibdin belongs to the family of the bibliographer, the dramatist, and the song-writer of the same name. He has devoted himself to his task, searching not only the histories and biographies in print and contemporary journals, but also the official records of the kingdom and the city. His book will cover the whole history of the Edinburgh stage from the earliest introduction of the drama into Scotland to the present time. Subscriptions may be sent to him direct.

In Mr. Andrew Lang's series of "English Worthies" the next volume will be 'Claverhouse,' by Mr. Mowbray Morris, formerly the dramatic critic of the London *Times*, and now the editor of *Macmillan's Magazine*.

The Bankside Parallel Edition of the quarto and first folio texts of Shakspere (the first volume of which will be issued by the New York Shakspere Society in October) will employ the entirely unique system of Line Notation finally adopted by the Society, and which the Society believes to be satisfactorily adjustable for all critical purposes to any edition of the plays.

Mr. Henry Irving's production of Mr. Wills's perversion of "Faust" was the exciting cause of several new editions of various translations of Goethe's poem; and his recent single performance of Byron's "Werner" is probably the reason why that doleful play has been issued as the August volume of Routledge's Pocket Library. This pretty collection now contains two dozen books, of which seven are of American authorship: Mr. Bret Harte's Poems and 'Luck of Roaring Camp,' the 'Song of Hiawatha,' Irving's 'Sketch Book,' the 'Biglow Papers,' and the Poems of Dr. Holmes and Edgar Allan Poe.

Shelley's 'Banquet of Plato,' Fielding's 'Voyage to Lisbon,' Thomas Woolner's poems "My

Beautiful Lady" and "Nelly Dale" (in one volume), and the first volume of Mungo Park's African Travels, are the latest additions to Cassell's National Library, and show how well Prof. Morley maintains the level of his selections.

The Essex Institute (Salem, Mass.) sends us a handsome reprint, from the *American Architect* of May 28, of the paper describing Prof. Edward S. Morse's exceptionally large and fine collection of Japanese pottery. The four charming heliotype views of the rooms in which the collection is stored are retained. Prof. Morse is now preparing an exhaustive work on the subject.

Mr. J. C. Rowell's essay on 'The Sonnet in America' (Oakland, Cal.) is also a reprint—if we mistake not, from the *Overland Monthly*. New, however, in the pamphlet is the appended list of sonnets that have appeared in 191 American magazine volumes, viz., of the *Atlantic*, *Californian*, *Century*, *Critic*, *Harper's*, *Overland*, and *Scribner's*. They are arranged by authors, two women (Helen Hunt Jackson and Edith M. Thomas) leading in the number of their productions in this form of verse—27 and 21 respectively. Longfellow furnishes 15, Edgar Fawcett 17, R. W. Gilder 12, C. P. Cranch 10, T. B. Aldrich 10, Lowell 5, etc. By a curious confusion with a well-known scientist, Mr. Lowell's prenomen, by the way, is printed "Alfred Russell." Of the (say) 170 poets, 101 are represented by a single sonnet. About 53 are obviously women.

A *Journal of Pedagogy* was begun at Athens, O., in July, with J. P. Goody for editor, and C. W. Super, President of Ohio University, and Albert Leonard for associate editors.

The *American Genealogical Queries* (1887), published by R. H. Tilley, is an experiment for which the state of genealogical studies in this country is, we believe, fully prepared. The pamphlet is sent free to upwards of a thousand select addresses, and the cost of it is defrayed by a uniform charge of two dollars for the query inserted—"Information solicited respecting the descent," etc., etc. The queries are arranged alphabetically, and the family names involved are repeated in an index. A list of American and English genealogical publications concludes the pamphlet. The appearance of a second issue of the *Queries* is implied, but no date is fixed for it. Mr. Tilley promises to issue early next year a sort of genealogical primer and guide-book for the benefit of students of family history.

The opening paper of the August Proceedings of the Royal Geographical Society is Mr. J. T. Last's account of two journeys in an unexplored region in southeastern Africa, between Lake Nyassa and the coast. The first part of his way led through a fertile country which showed signs of a former dense population, but is now so nearly deserted that the large game, especially lions, are to be found in great numbers. He describes the Namuli Hills, the chief object of the expedition, as culminating in an inaccessible peak 8,000 feet high, but not snow-clad, as had been reported. The scenery was very beautiful and the land extremely fertile, inhabited by negroes who have proved themselves friendly. Cannibalism is practised by them, but only by the chiefs. They have also a custom of burying alive one or more persons in the grave of a dead chief. Should the victim chance to sneeze, it is taken as a sign that the dead man refuses to accept him, and his life is spared. Mr. Last notes the curious fact that Mohammedanism has made no progress among this people, while to the north it is fast becoming the prevailing faith among all the negroes. Following this is an interesting account of a journey made by Gen. F. T. Haig through Yemen, in southwestern Arabia. There is a map, with accompanying text, showing the recent political changes in eastern Equatorial Africa. From this it appears that the territory over which Germany has assumed a protectorate amounts to nearly 150,000 square miles, England's to 72,000. Consul O'Neill contributes a short article on the district of Delagoa Bay, which has recently become important on account of the discovery of gold fields in the western part. Through the consequent influx of Englishmen, the Portuguese are being almost entirely supplanted. All the trade and lines of commerce are now in the hands of British subjects, and Mr. O'Neill more than hints that Portugal will soon be called upon to show by what right she claims the territory in which gold is found.

The *Scottish Geographical Magazine* for August contains a paper on recent physical research in the North Sea, founded on observations made by the German Navy during the past few years, and an abstract of the first Government Report on Upper Burma, giving a brief outline of events leading to its occupation, the present methods of government, its resources, etc. We remark, too, a paper by Prof. James Geikie on "Geography and Geology," in which he shows how necessary the study of geology is to explain the reasons for the facts of physical geography, and closes with an earnest appeal for the introduction of this study into the schools.

The eighty-page manual (Ticknor & Co.) on 'Home Sanitation,' by the Sanitary Science Club of the Association of Collegiate Alumnæ, stands on its own merits as an admirably practical statement of the most necessary principles of "housekeeping," as regards the care of cellars, drainage, plumbing, ventilation, heating, lighting, furnishing, clothing, food, and drink. Under each head, after a concise statement of principles, a series of questions is added, which have the double merit of teaching truth in a most forcible way and of bringing personal conviction of sin to the conscience of the reader. The book is also adapted by these questions to the purposes of the "Society to Encourage Studies at Home." It would be hard to name a book more suited to be widely useful.

The Excelsior Publishing House of New York have just issued a stout volume of 500 pages, called the 'Standard Hoyle, a complete guide and reliable authority upon all games of chance or skill now played in the United States.' The outdoor games are inadequately considered at the end of the book, the bulk of which is devoted to card games; poker and whist receiving most attention, as they ought. In the eighty-five pages given to whist are reprinted the laws, Pole's rhyming rules, Pole's 'Theory of Modern Scientific Whist,' Cavendish's 'Rules for Leading at Whist,' the 'Whist Primer,' and the 'Pocket Guide to Whist.' In the forty pages devoted to poker are included Gen. Schenck's "Rules," a set of "Laws of Poker" (in the main excellent, although lacking in authority), a series of notes on the proper playing of the game, and Mr. Proctor's paper (which is quite superfluous, as poker is one of the more or less numerous things Mr. Proctor knows very little about). Twenty pages are given to Draughts and sixty to Chess. Altogether, the book fulfils the promise of its title-page.

People who have been interested in the views of Christ and His teachings, as set forth in Count Leo Tolstoi's 'My Religion,' will take pleasure in reading what really forms the introduction to that work, in the convenient form offered to the American public under the title of 'My Confession, and The Spirit of Christ's Teaching' (T. Y. Crowell & Co.). The two articles of which the volume is composed were originally printed in England in 1885, in company with a direct translation from the Russian of 'My Religion,' under the title of 'Christ's Christianity,' which was noticed in these columns at the time. Count Tolstoi's exposition of the Gospel will be found to bear out, substantially, the views which Mr. George Kennan mentions in his delightful account of a visit to the author at his home, in the June *Century*, though at the earlier date when this essay was penned he seems, at times, to have had somewhat more faith in a possible life hereafter than he had when Mr. Kennan talked with him. His opinion that Jesus was not divine, but only an ordinary man, led to a holy life through the teachings of John the Baptist, appears to have been already formed. The autobiographical portion is characteristic and deeply interesting, as is to be expected of everything from this source.

Taking up an old number of the *Harvard Monthly* (for May, 1886), we found a Harvard youth descanting as follows in the course of a thoroughly serious and very high-pitched essay on Robert Browning: "It [the undervaluing of Browning] has now become so much the mode that even female colleges are taking up the cry. The fact has been widely heralded of late that the Browning Society at Girton College had broken up, and that the young ladies composing it had spent the funds of the Society in lollipops. There could be but one thing more ridiculous than this—the fact that a company of young ladies have formed a Browning Society at all. The money ought to have been spent in lollipops at the beginning." Talk like this would probably be impossible now, since Miss Ramsay's success in the classical tripos at Cambridge, England. One cannot read the above without smiling at the picture which spontaneously arises of the self-complacent writer engaged in a desperate struggle with one of these despised Girton girls, and finding himself nowhere—not on Robert Browning, but on Sappho and Aristophanes.

M. Doniol, the head of the French Government Printing-office, has composed and published in two volumes a work designed to be the contribution of his establishment to the coming centenary Exposition of 1889. It is very appropriately a history of the negotiations which preceded French intervention in the American Revolution (1775-1778). M. Albert Sorel points out, in the *Temps* of August 17, that M. Doniol demolishes the *œuvre paradoxale* of Bancroft, and—all allowances made for the purely calculating and unsentimental policy of Vergennes—vindicates France's claim to gratitude as opposed to Prussia, with her policy of cold abstention. The old grounds of enmity to England as well as the recent ones to Germany are also revived for the approaching celebration.

—The September *Harper's* has an article in a field which is so promising that it is surprising that it has not before been cultivated. In comparison with other lands, the republics of South America are practically unknown to us, notwithstanding the prominence they have had in both our political and trade discussions in late years. A thoroughgoing comprehensive volume upon them, after the pattern of Wallace's 'Russia,' is really a desideratum. Meanwhile, scraps of information are valuable; and in the current number of the above magazine there is a paper upon Chili which has much popular interest. It is only a sketch, with pen pictures of Valparaiso and Santiago and their suburbs, some notes upon curious customs, and a short characterization of the people. The author calls the inhabitants the Yankees of South America, but he also compares them to the Irish—two types not generally thought to be compatible. Yankees they may be in their energy and acquisitiveness, and Irish in their excitability and comradery; but, the immigrants apart, it is clear they are colonies of the old sovereign country in blood and tradition. In the magnificent alamedas, the costumes, the neglect of indoor conveniences such as fires, even in such trifles as the method of collecting horse-car

fares, one finds here a new Spain; in the continuance of a feudal tenure and the law that a tenant cannot leave his landlord while in debt to him, the Old World still survives. Again, the streets and squares of Valparaiso and Santiago are filled with statues and fountains and other objects, down to ornamental lamp-posts, plundered from the Peruvians; clocks from the churches, and all sorts of treasures from the altars and sacred images, were among the spoils; pictures and objects of curiosity and science from the same source fill the Chilian museums. It is with pleasure that one reads of statues of Washington and Lincoln in the Court-house Square, but with other feelings that they were taken from Peru. But this people is one of schools, wealth, the refinements of luxury, a Liberal majority, and a modern policy. They have, they say, everything Parisian in their shops, and the power of the priests is broken. It is the beginning of a secular commercial state, to which the future of the west coast seems to be intrusted.

—The student of history may find few social topics more penetrating than that of the sources and supports of the humane spirit either in individuals or groups. The humane spirit, one would say at first, is the sense of the brotherhood of man, passing successively into conviction, character, and temperament, impregnating institutions and education. It depends in the individual on the activity of sympathy and the capacity of the imagination more than on other personal traits; but when one is informed that it belongs to the Japanese, this becomes merely a Christian and Occidental view, or, to include the ancient civilizations in which the humane spirit was present, though rare, it is at its broadest only an Aryan view. In the *Atlantic* Mr. Percival Lowell attempts an analysis of "the soul of the Far East," and his formula of solution is to look at everything "reversed" from the way it exists in the Occidental soul. Thus, he finds the sense of personality fundamental in the West, and to get what is fundamental in the East he "reverses" this and finds it is absence of the sense of personality. The whole article, which is the first of a series, is ingeniously worked out on these lines, and it is marked by reflection, novelty of thought, and perhaps too much literary point. The Japanese are impersonal: they can possess only in a weak form that sense of the human brotherhood, that sympathy and imagination, which are the sources and supports of the humane spirit among us; democratic sentiments and power of imagination do not characterize that race. Is their humanity otherwise derived, then, or are they not really humane, but only polite, like a red Parisian or an Italian peasant? In war and riot, in prison discipline and penal codes, are they "mild" and "gentle"? We occasionally hear much of the humane spirit developed by Buddhism, as if it were the same or as good as that which Christianity first made a great element in history. Is it so, or no more than a religious rejection of animal food, the amiableness of neighboring people so long as they are at peace with one another? The disposition to exalt, or at least to justify, Oriental thought and practice as something different, but not worse, in comparison with our own, to limit our superiority to the material element of civilization, and to find in that our distinction, is often to be met with in writers on the East. But for those who hold such views (we do not mean to ascribe them to Mr. Lowell) it would be a test worth making if they will examine this alleged humane spirit in the East, and show wherein it consists and whence it proceeds; for the presence of the humane spirit is the most rational test of progress.

—The province of the Abruzzi is fortunate in having two such enthusiastic collectors of its traditions as Finamore and De Nino. The former has published two volumes of popular tales (the first of which was noticed in the *Nation*, No 881) and a valuable 'Vocabolario dell' uso Abruzzese' (Lanciano, 1880). So prolific, however, is the province in this popular literature that Signor De Nino has been able to glean four volumes of 'Usi e Costumi Abruzzesi' (Florence, 1879–1887). The first two volumes are devoted to customs, the last two to popular tales—the volume just out containing the *Sacre Leggende*. This volume is very welcome, for although Italy must be extremely rich in this class of folk-tales, comparatively little has yet been published. De Nino classifies his material as follows: God the Father; Birth of the Madonna and of Christ; Flight of the Madonna and St. Joseph with the Child; Christ on his Travels with the Apostles; Passion, Death, and Resurrection of Christ; Saints and Demons. Among these will be found many variants of stories already published in collections made in other parts of Italy, but there are also many which now see the light for the first time in an Italian version. We say in an Italian version, for most of them of course are common to all Europe. Among them are some very interesting ones—the first, for example, about the creation of the animals and the age of man. After the animals were created, they thanked God for it and asked what their fate was to be. When they learned that they were to labor and suffer for twenty years, they each prayed to live a shorter time, and ten years were deducted in the case of the ass, the dog, and the ape. When man was created, and learned that he was to live but twenty years, he begged hard for a hundred, and finally the Creator gave him the thirty years which the animals just named had refused. Hence man's first twenty years are his happy ones; then come labor and the ass's ten years; afterwards children and domestic cares, and the ten years of the dog's life; at last the children marry and abandon their father, and then come the ape's ten years. "After fifty, what more is life to thee? He who has had, has had!" A very interesting feature of many of the legends is the singular mixture of legend and fairy tale, as where a maiden eats the heart of St. Andrew and the saint is born again, or where Christ teaches a man the language of animals, and he learns how to rule his household by overhearing a conversation between the cock and the dog ('Introduction to the Thousand and One Nights,' etc.). The legends are given in an Italian translation only, except the few which are in verse, when both original dialect and translation are printed.

—Before Prince Ferdinand of Coburg—or, as he now styles himself, Ferdinand, Prince of Bulgaria—finds an occasion to muster his Bulgarian legions against Muscovite, Turk, or Serb, he may find it useful to employ the host of royal relatives with whom he is blest, almost above any other mortal, in the field of court diplomacy. A genealogical survey of these relationships will, therefore, not be without interest to our readers. Prince Ferdinand, born in 1861, is the son of the late Prince Augustus of Coburg-Kohary, and the grandson of Prince Ferdinand, uncle of the reigning Duke of Saxe-Coburg-Gotha, Ernest II. His grandfather's brother, Leopold, ascended the throne of Belgium in 1831, and was succeeded on it in 1865 by his son, Leopold II., the reigning King. Ernest II.'s brother, Albert, married Queen Victoria in 1840, and in 1841 became father of the Prince of Wales, the heir apparent to the throne of Great Britain. Prince Augustus's brother, Ferdinand, married in 1836 Maria da Gloria, Queen of Portugal, daughter of the Emperor of Brazil, Pedro I., and in 1837 became father of the late King of Portugal, Pedro V., and in 1838 of the present King, Dom Luis. Prince Ferdinand's mother, Princess Clementina, is the daughter of Louis Philippe, King of the French in 1830-48, and the aunt of the Comte de Paris, who now unites in his person the pretensions to the throne of France of both the elder and younger (or Orleans) branch of the House of Bourbon. Clementina's sister, Louise of Orleans, was the consort of Leopold I. of Belgium. Clementina's brother, the Duc de Montpensier, is the husband of the Infanta Luisa, sister of the ex-Queen Isabella II. of Spain, and aunt of the late King Alfonso XII., father of the present infant King, Alfonso XIII. Clementina's nephew, Gaston of Orleans, Comte d'Eu, son of her brother, the Duc de Nemours, married in 1864 Isabella, daughter of Pedro II. of Brazil, and, as his only living child, heiress apparent to the throne. Another son of the Duc de Nemours, the Duc d'Alençon, married in 1868 the Bavarian Princess, Sophia, sister of the Empress of Austria. The Comte de Paris's daughter, Amélie, was in 1886 married to the Duke of Braganza, Crown-Prince of Portugal. Princess Marie, daughter of Duc de Chartres, brother of the Comte de Paris, was married in 1885 to Prince Waldemar, son of the King of Denmark, brother of the King of Greece, and brother-in-law of the Czar of Russia and of the Prince of Wales. Of Prince Ferdinand's two brothers one married a daughter of Leopold II. of Belgium, and the other a daughter, now deceased, of Pedro II. of Brazil. Of his two sisters, one was married to Archduke Joseph, a second cousin of the Emperor of Austria, and the other to Duke Maximilian, brother of the Empress of Austria.

THE REIGN OF VICTORIA.

The Reign of Queen Victoria. A Survey of Fifty Years of Progress. Edited by Thomas Humphry Ward, M.A., late Fellow of Brasenose College, Oxford. In 2 vols. London: Smith, Elder & Co. Philadelphia: J. B. Lippincott Co. 1887.

It would be cheap and easy criticism to say that this book is not properly a history, but an encyclopædia—an 'Encyclopædia Britannica' circumscribed by the boundaries of the British Empire, and limited to the brief period of fifty years. If its editor had called it an encyclopædia, it would also be cheap and easy criticism to say that it is not properly an encyclopædia, but a collection of essays by very able writers on the arts, sciences, business, health, religion, and development of mankind, as illustrated by the progress of a single people during the compass of a single life. If, however, the editor had called the book 'Essays on British Development,' it would again be cheap and easy criticism to say that, while the work is nominally a collection of essays on progress, it is, philosophically considered, a history—a history of the inhumanity, prejudice, stupidity, and ignorance which ruled the foremost nation of the earth only fifty years ago, and of the means by which a great people have worked, or are yet working, out peacefully their disenthralment.

It consists of twenty-five chapters, written by twenty-two authors, and filling two octavo volumes, which together contain more than twelve hundred pages. The first chapter treats of the Legislation of the Reign; the last, of Music. Between these are twenty-three, many of them as diverse as the first and the last, but all dealing with matters of interest to every intelligent mind. The titles of these chapters do not express their scope. Thus, a person glancing at them might say: "Locomotion and Transport in Great Britain will interest only the people of that country; Literature is wider, and will interest all English-speaking people; Science, or Medi-

cine and Surgery, belong to the whole human race." But Locomotion and Transport mean the railroad, the steamship, the telegraph, and, in this chapter, mean substantially their history from the beginning. When the Queen came to the throne, it was not yet seven years since the first railroad train had made its first trip; and the great mart of western traffic, Liverpool, and the great metropolis of the kingdom, London (only two hundred miles apart), were not yet connected by a single iron track. The steam merchant marine, including all vessels of over 100 tons (gross), was then measured by 70,000 tons—now by upwards of 4,000,000; and the first telegraph patents of Cooke and Wheatstone in England and of Morse in America, by a strange coincidence, belong to the same year of her accession.

The twenty-five chapters range over not only the great fields of industry and legislation, but also over almost every field of human action. Nevertheless, there are two chapters left unwritten which might well have been added to the book. The first of these should have been a comprehensive chronological survey of the reign, which, by an able author, would have shown the relations of things, and have demonstrated how the numerous eddies of thought were parts of a general current. The second should have been a chapter on the sociology of the reign; and such a chapter is both so obvious and so interesting that one cannot understand how it could have been omitted. By sociology we mean, of course, those subjects that of late years have been considered by social-science associations: the relations of classes; the relations of the sexes; marriage and divorce; immorality and drunkenness; vice and crime; prisons and reformatories, etc., etc. Certainly no country in the world, and no period in history, can furnish so complete and instructive a chapter on these subjects as Great Britain and the last fifty years.

The workmanship of the twenty-two authors is—as is inevitable in all such composite undertakings—of very uneven texture. Those best known to the American public are Prof. Huxley, Lord Wolseley, and Sir Henry Maine, and their chapters fairly illustrate the diversities of subject and of treatment that run through the book. Sir Henry Maine's chapter on India is a clear and comprehensive survey of British India since 1837, dispassionate in manner, philosophical in treatment. Matters in conflict are calmly discussed; every sentence is the product of careful thought, and every statement is framed of well-weighed words. It is a picture of the wonderful growth of a wonderful dependency—of a new India, which is indeed one of the products of the Victorian era. "There are now 13,000 miles of railway in India open to traffic." "In 1885, 27,000 miles of canals and their distributaries irrigated 10,000 square miles of land. These creations of the Indian engineer literally drank up whole rivers. The Ganges, when it leaves the Himalayas at Hurdwar, passes wholly in the dry weather into the bed of the Ganges Canal, and the natural bed of the stream can be crossed on foot. Further on, at a lower level, when the great river has recruited its water, it again flows entire into the canal." And the development has not been limited to things material. Sir Henry Maine is able to say of the "modern mechanism" of the land system, "I shall surprise those only who have paid no attention to it by saying, that there is nothing to be compared with the mechanical part of it in any portion of the British dominions." And here is a sentence for the average American to ponder:

"British India during the present reign has thus become one of the few countries—becoming fewer rather than the contrary, *through the strange tardiness of the Americans in this branch of legislation*, and through the mass of uncodified law which has grown up round the French codes—*in which a man of moderate intelligence, who can read, may learn on any point emerging in practical life what is the law which should regulate his conduct.*"

Within the lives of men now living, India will probably present the most curious political phenomenon of the world. In 1859 material force had fought itself out in India just as in 1865 it had fought itself out in America, and since then the people have silently and unconsciously accepted the belief of their Anglo-Saxon rulers that hereafter political redress can be won by moral conflicts. The educated Indian is already appealing for political equality; and with a large educated class, intelligent, crafty, proud, and determined, the question must soon be met. Can the British Empire confide a province six times greater than itself to native hands? Shall the great-grandchildren of the Sepoys of 1857 control the administration, the revenues, and the armies of British India?

Prof. Huxley's chapter on Science is probably the most unscientific chapter in the book. It contains a great deal too much rhetoric and far too many hits. It is interesting, brilliant, combative, terribly discursive, and thoroughly characteristic. The task which he assumed was, to write a philosophical survey of scientific progress and attainments in Great Britain during the last fifty years; the work which he has produced is a scientific oration designed for a popular audience, in which one is somewhat surprised not to find the smart things pointed by "(cheers and laughter)." Instead of beginning with the Victorian era, he begins with Lord Bacon and knocks him down. Descartes he first raises high above Bacon, but in the end likewise knocks him down, and asserts dogmatically that "Galileo and Harvey, Boyle and Newton, would have done their work just as well if neither Bacon nor Descartes had ever propounded their [*sic*] views respecting the manner in which scientific investigation should be pursued." He even brings the ghost of Lord Bacon upon the philosophic boards and puts a speech in his mouth which, "if ghosts are consistent, he would have said." He rates roundly the "influences" of the Middle Ages, which "blighted natural knowledge in the Christian world"; but gives Oxford and Cambridge a capital thrust by saying, of "the founders of the schools of the Middle Ages," that "it is only just to them to observe that they were far in advance of those who sit in their seats," and that "we," meaning Oxford and Cambridge, "have not even yet reached that stage of enlightenment."

Prof. Huxley's place in this book was that of a judge, and his sixty-five pages should have been a calm and impartial charge to the intelligent, truth-seeking jury who, looking to him for information and guidance, desire to do justice to all of the laborers in the field of science, no matter whether their theories were justified by subsequent discoveries or not. If any one wishes to see a paper of that character, let him turn to the chapter on Religion and the Churches by Dr. Edwin Hatch—a paper dealing with the most delicate and difficult of controversial subjects, but so comprehensive, calm, philosophical, and impartial that the uninformed lay reader will question whether the author belongs to the Church of England or to the Church of Scotland, whether he is a Churchman or a Nonconformist.

Lord Wolseley's recent article on Gen. Lee impressed most people in this country as being rather the work of a magazine writer than of a general. There was an easy, popular style, an avoidance of military detail, and a good deal of magazine sentiment. His chapter on the Army in this book has the same characteristics. But the sentiment here is "of the right sort," relating to the wrongs and merits of the common soldier, and forming a singular supplement to Gen. Sheridan's recent address to the cadets at West Point, wherein he ascribed his own military success to the fact that he always took care of his men. At this end of the Queen's reign it is well-nigh incredible how the British soldier was *not* taken care of at the other. Officers yet live who remember "when the men had only one regular meal a day," and their only breakfast "was a glass of rum." "Even in India," says Lord Wolseley, "the poor British soldier was sent into the field with a high, stiff leather stock and closely buttoned jacket"; and under a tropical sun the men "were fed on salt beef that would have made them thirsty in a Canadian winter, receiving nothing else for weeks at a time to live on beyond biscuit, rum, and a trifling quantity of tea and sugar." The condition of their wives and unmarried daughters "was very repulsive and demoralizing." "The officers did their best to collect the families into rooms apart from the unmarried soldiers," but "it was the commonest thing to see women and young girls herded together, brute-like, in the sleeping-rooms of the unmarried men." The number of marriages in a company was limited, but the men would marry without leave. At law such marriages were valid, but in the army they were ignored. When a regiment was embarked for foreign service, "it was no uncommon thing to see women rushing madly into the water after the boats which carried away their husbands." Lord Wolseley speaks always with commendable temperateness, but he says, "There is but little in the most affecting stories of American slavery more repulsive, more heartrending to any person of ordinary humanity than the scenes which too frequently accompanied the embarkation of a regiment for foreign service forty or fifty years ago." These abuses were not swept away by men in authority, by the Duke of Wellington and numerous Secretaries for the War Department, but it is pleasant to know that the work of amelioration was begun by that brilliant soldier once known as "the bravest man in the British Army." "Sir Charles Napier," says Lord Wolseley, was "the real soldier's friend of this century."

The inefficiency of the British Army in the Crimea is attributable directly to the mistaken policy of its great master, the Duke of Wellington. Lord Wolseley does not say so in words, but he arrays facts and results in a manner which leads irresistibly to that conclusion. Another curious fact he candidly displays, and that is, that the efficiency of the present military establishment is not due to its generals, but chiefly to two civilians, one of whom was Prince Albert and the other Mr. Cardwell. The first of these fairly forced the breech-loader into the army, was active in raising the *personnel* of the soldiers, and foremost in organizing the volunteer system. "It is curious," says Lord Wolseley, "to note how much more far-seeing this great Prince was upon all matters of military organization and efficiency than the bulk of our contemporary generals." The second was Mr. Gladstone's War Secretary in 1871, and it was through his intelligence and determination that the military establishment was reorganized and the purchase system abolished. Lord Wolseley himself belongs to the class of utilitarian generals who despise a regiment that can march but cannot shoot, a uniform that is showy in peace and useless in war, or a system of tactics which is effective in Hyde Park and ineffective in the face of the enemy. It would be a good thing for our own military efficiency if the humanitarian and common-sense views of so successful a soldier could be read and pondered by every cadet at West

Point. As an author, Lord Wolseley has done his work unpretentiously and well. In his opinions there is no egotistical assertion; in his reflections, no denunciation of other men's mistakes; in his military narrative, no mention of the Zulu war, nor even a modest allusion to Tel el-Kebir.

In the brilliant picture of successful industry there is but one dark spot, and that is agriculture. In 1885, of the 9,642 merchant steamers in the world, 7,200 had been built in British shipyards, and 5,712 were sailing under the British flag. But of agriculture Sir James Caird sorrowfully writes: "At no period of the Queen's reign has there been such depression in the interests of agriculture as now exists in the year of her Majesty's Jubilee." And not only is there depression, which may be merely relative, but there is what is much more serious, a positive and enormous loss. When the Queen came to the throne, the wheat crop of England and Wales was estimated at 13,500,000 quarters, worth £31,000,000; the crop of 1886 did not "exceed one-half of that quantity," and was not worth "much more than one-third of it in value." Most discordant in the general harmony of growth and success is this note of decrease. We speak of England as "densely populated" and "overcrowded," yet the fact is, that now, in our own time, and in her years of unprecedented prosperity and power, no trivial part of her rich domain is going back to the wilderness—that is to say, is passing from the hands of the husbandman to those of the shepherd and the hunter. That agriculture should have grown poorer while the nation grew richer; that it should have steadily declined throughout this fortunate reign, while every art and trade and traffic increased and multiplied; that farmers, the most industrious of the industrial classes, should be the only class to come as a class to loss and bankruptcy in this golden era, is something which contradicts the general history of wealth and industry.

Sir James Caird deals intelligently with the fact, but fails, apparently, to note the phenomenon; he points out the operative agencies, but does not allude to the primary causes. The fact is, that for a long time before the Queen's reign British agriculture had been artificially stimulated by the enormous bounty which consumers paid through the operation of the corn laws. At the very time when this stimulus was taken away, the American Government began, by means of another system of bounties, to build up a rival agriculture, which in the course of about thirty years has greatly depreciated the value of all agricultural lands east of the Alleghanies, and produced in New England the kindred phenomenon of absolutely "abandoned farms." The American brings down to the nearest manufacturing village intelligence, energy, thrift, and unparalleled diligence, and finds his new environment kinder than the old. He tells you that being "ruined out" of his "hill farm" was the making of him and of his children; he utters no complaints about the confiscation of his landed property in fee simple, absolute though it was; he wastes no sentimental regrets on the crumbling walls which his grandfather reared and in which his father died; nor does it ever occur to him that our public-land system which made his land worthless, has paid a liberal bounty to polygamy, and been the main instrumentality in such lands as Brigham Young's for building up the Mormon hierarchy. The forest, like a rising tide, encroaches upon the former fields; population in the "mountain towns" diminishes; taxes increase; civilization recedes; the Celtic immigrant succeeds the Pilgrim stock; there are deserted villages as well as abandoned farms; but there is plenty of land out West and railroads to take us there; so no commission investigates nor blue book records the changes.

It is exceedingly difficult—it is well-nigh impossible—to pronounce judgment upon a work of this size, the product of so many authors, comprising so many subjects, without inflicting a false impression upon the reader. After the previous glance at the contents, however, we trust that we shall not be misunderstood when we say that it is a book admirably conceived, and, for the most part, well executed, by writers as well equipped for their respective tasks as could probably have been obtained—some of them eminent, all of them above mediocrity. The book is not faultless. Its encyclopædiac character causes some repetition; the eminence of the writers forbade the editor to prune their redundancy or supply their omissions; there is matter which an American reviser would cut out as of interest only to the English reader, and matter which he would put in, but which the authors left out because the English reader knew it by heart. Nevertheless, the book is the best survey of the progressive movements of its period; its period is the most instructive half-century in the history of civilization; the scene is the country which has moved furthest forward in those things which most concern mankind. With such a book, an intelligent mind cannot go amiss; and there is hardly a person who will not be strengthened and refreshed by pausing in his ordinary work or study, and reviewing here what the human race has done for itself in his own time. Could such a book be made a basis of study in the senior class of our colleges for a single term, in the hands of a competent teacher, it would disclose to the student wide and astonishing views of the age in which he lives—the age he has not studied—and send him into the world a more useful citizen and a broader man.

The Naturalistic School of Painting. By Francis Bate. London. 1887.

RUSKIN'S was the master-key which opened to the reading world new sources of pleasure in nature, but unfortunately, also, new and ever newly opening springs of nonsense and bathos about art; and the inexhaustible rills of wordiness run on "for ever and for ever," consecutively if not individually eternal. Jejune and impressible youth, catching the inspiration of green fields and summer sun, or the melancholy of the twilight, grows eloquent over the delights of art, in childlike innocence of any community (except that of emotional cause) between nature and art. Mr. Francis Bate is even less wise and more laboriously absurd and inconsequent than is the wont of the school, if we may so call a gregarious tendency of thought which teaches nothing; and nothing in this class of literature in our knowledge is so funny as the peroration of his book:

"Is every attempt to progress to be neglected? Are progressive efforts to be opposed in every age? May not a planted seed be protected, a young shoot nourished? Is it not well to clear the ground of choking weeds, that there may be more room and stronger life for the flowers? The conflict between the Natural and the Supernatural, between Truth and Superstition, has not its beginning to-day, nor did it commence yesterday. Old it is—amongst the oldest. Does one dare more than hope that it shall ever quite cease?"

One might "rhyme you so eight years together, dinners and suppers and sleeping hours excepted." Is a cat to be prevented from chasing her tail? Shall the cart always go up hill, and have no change in going down again? Shall the rain when it falls be prevented from soaking into the ground? And shall one dare do more than hope that Mr. Bate will have no successors as inane as he?

The title of his book might leave a suspicion that the author realized the distance between nature and art, for it recognizes the new movement as a school, not of art, but of painting; but he hastens to dispel doubt:

"Art, hugging to itself the mysteries of its religion, short-sighted in its conservatism, has never tried to win the people's sympathy, and they have left it unregarded. But now, at last, it enters upon a new era. It will no longer suffer itself to be petted by the half-neglectful patronage of the cultivated few. It is to become of the nation, of the people, of the people of the world. *They will it.*"

If this extraordinary balderdash has any meaning, it is that art, which has been left to those cultivated enough to know what it means, has now got to be let down to the masses who have had no cultivation—the uncultivated many. Mr. Bate, who dates from "Brook-Green Studios, Hammersmith," appears by this signalling to be an artist. If he is one, he should forswear his pen in future, for its foolishness is beneath anything possible to the pencil; and what seems most alarming for the English uncultivated many is that it has passed into the second edition. And this in face of the following dedication: "I, not without hope that there may be some, venture to inscribe this Book to all those who, having read it, may care for it" (*sic*).

Mr. Bate may flatter himself that he is the apostle of art to the uncultivated; at least it cannot be to the cultivated, even in letters, that his rigmarole is addressed, as for instance:

"The cultivated few who have been for so long among the sole patrons of Art, have, from nearly those very early times when any essay in picture-painting brought forth unlimited wondering praise, been so befooled by the jargon of meaningless terms and nonsensical expressions called technical (explaining virtues and qualities which never existed) as to have long since ceased to be capable of exercising any true judgment or good taste they might have had in the matter; or to have ceased from applying it in fear of being thought ignorant of these indefinite laws and incomprehensible rules which gradually grew to hide the weakness of an almost incompetent art."

Mr. Bate may be assured that in his illogical attempt to extend the knowledge of art from the "cultivated few" to the "uncultivated many," whom he is to deprave by cultivating them, he will not do the harm he means, for even the cultivated few will have some difficulty in following his erudition. As subject of serious criticism 'The Naturalistic School of Painting' would be hardly worth the ink one must give it; but as a sample of the effect the teachings of 'Modern Painters' have had on weak minds, it is curious and not a little instructive. Ruskin holds his audience not by his knowledge of art, or even of nature, though this is great and interesting, but by his rhetoric; and the whole school of the apostles of nature seem to take to wordiness as bearing the same relation to their master's eloquence that their knowledge bears to his. To protest against the bookmaker has been useless since the days of Solomon, and against foolish books we have no defence except criticism; so that when a man who knows no more of the history or nature of art than Francis Bate of Brook-Green Studios, Hammersmith, and as little of Nature herself, attempts to set up as a teacher and confound an ignorant but inquiring public, there is no more evident duty of a serious critic than to put his foot on him. The studying public should have learned long ago, and probably has largely come to the consciousness of the fact, that when a writer talks of the identity of the naturalistic school of painting with art, he has yet his alphabet of criticism to learn, and is not in a position to write books or deliver lectures or set himself up on a pedestal made like unto that of Ruskin.

The Chemistry of the Sun. By J. Norman Lockyer, F.R.S. Macmillan & Co. 1887.

THE character of this work is somewhat mixed;

the first half is elementary enough for text-book purposes, and will be found very attractive to general readers, while in the latter the author travels over the ground of very complex research, of immediate interest to nobody but the scientific specialist. The history of spectrum analysis is excellently written, onward from the very beginnings in the time of Kepler, who, in his 'Dioptrice,' was the first to show that, by allowing a beam of sunlight to fall suitably on a three-sided prism, the colors of the rainbow might be artificially produced. For all that, the birth of the science may be and is taken as coincident with the labors of Newton, and due prominence is given to Wollaston and his discovery of the necessity of the slit—that simple but all-important adjunct of the modern spectroscope. Coming down to our own century, the work of those pioneers in light analysis—of Fraunhofer and Brewster, of Herschel and Forbes, of Becquerel and the elder Draper—is admirably summarized; while later, in dealing with the labors of subsequent investigators, among them Kirchhoff and Bunsen, Mr. Lockyer gives "as far as possible the *ipsissima verba* of the workers whose genius we have to thank for a series of researches which has not only enabled us to study the chemistry of the sun, but has given us as its first tremendous outcome the conclusion that the sun and earth have the same chemical constituents."

Mr. Lockyer conducts the reader very smoothly along the way all prepared for his discussion of the dissociation hypothesis. With the received views of spectra analysis twenty years ago, spectra, he says, "were supposed to be as changeless as the laws of the Medes and Persians"; but it is easily shown that "where the early statements favored the view that the line spectrum of a body was always the same, and that the solar spectrum exactly matched it, further work brought out great differences in the intensities of the different lines observed—differences amounting to the complete absence of some of the lines under some conditions." The history of chemistry had been the history of simplification by heat; the law of continuity was called in, thus, to argue a further simplification of the elements themselves, so regarded. That distinguished chemical philosopher, Sir Benjamin Brodie, in his mathematical treatment of chemical phenomena, was led to assume the existence of certain ideal elements. "We may conceive," he says, "that in remote ages the temperature of matter was much higher than it is now, and that these ideal elements existed in the state of perfect gases—separate existences—uncombined." But the questions of the variations in laboratory spectra had to be settled not only, but the variations observed in passing from the spectrum of iron, for example, on the earth, to the spectrum of iron in the solar spots and storms. The time, too, had arrived when photography had to be summoned to the assistance of the spectroscopist; and Mr. Lockyer devotes a score or two of pages to the important rôle played by this art in furthering the research in purified spectra.

What follows is far from possessing general interest—it is, in fact, mainly, if not entirely, a discussion, in some parts tedious, of the dissociation hypothesis, and leads to the strong suspicion that the support of this hypothesis is the sole purpose of the book. There may be little ground for valid objection to this, but it occasions disappointment to any one who takes up the book with the expectation of finding it full of facts about the sun's chemical constitution. To discuss the dissociation hypothesis in detail is all well enough, but why not confine such discussion to the specialized journals and the proceedings of scientific societies? Some of Mr. Lockyer's elaborate chapters we should much sooner have looked for in the *Philosophical Transactions* than in a work ambitiously entitled 'The Chemistry of the Sun.' In short, the preparation of the book seems premature—there is too much of shrewd surmise and mere opinion introduced to supply the deficiency of recognized fact. So much of the controversy with Liveing and Dewar is out of place in such a work; but whatever view of the disputed hypothesis we may incline to, we can but admire that sentiment of Mr. Lockyer's, so straightforwardly expressed, when he says: "I hold it to be the duty of a student of science who suggests a new view, to spend as much of the rest of his life as is necessary to determine whether it is true or false" (p. 402).

On the presumption that we should find in 'The Chemistry of the Sun' the fullest record of the researches of all physicists into the constitution of that body, we have looked in vain for suitable mention of the elaborate and painstaking experimentation of the lamented Dr. Henry Draper; but, so far as we have been able to find, the name nowhere receives even passing notice. His discovery of oxygen in the sun some ten years ago may not be accepted by Mr. Lockyer—it may not, in fact, be found to stand the tests of subsequent research; its entire absence, however, from a work purporting to deal comprehensively with the chemistry of the sun falls little short of a gross omission.

The lucidity of Mr. Lockyer's style is not more marked than the clearness of the abundant illustrations, noteworthy also for their aptness. Mechanically the book is not fully up to the high general standard of the work bearing the Macmillans' imprint: there are abundant slips of the types which nobody but the proof-reader is responsible for, and the press-work would not bear exhibition as a piece of thorough workmanship. Trifles, however, these are in a book of such character and extent. Taken all in all, it is a work of great moment. Mr. Lockyer writes like the thorough master he is, and chemists, astronomers, and physicists alike must thank him heartily for his newest literary effort.

Bibliographie des bibliographies: Supplément. Par Léon Vallée. Paris: Em. Terquem. 1887. Pp. 354, 8vo.

In 1883 M. Vallée published the work of which this is a continuation. We pointed out at the time that, with all his good-will and industry, which appeared to be great, he had made an unsatisfactory book because he had not appreciated the extent of the field in which he was laboring, and had an astonishing ignorance of the sources of information. The present Supplement is an attempt to fill up some of the gaps in the original. To a certain extent it is successful, for it contains 3,351 titles, nearly half as many as there were before; and, even allowing for the new bibliographies published between the middle of 1883 and the middle of 1886, there remain enough of the older books to testify to his diligent search, and his disposition to profit by the assistance of friends and critics. But he lacks German thoroughness. A German would have scented out every review of his work, and included in his supplement every title that was pointed out to him. M. Vallée, with a Frenchman's indifference to everything that is not French, has missed seeing the notice in the *Nation*, in which thirty-six of his omissions were pointed out—at least he has supplied only a few of the titles. Worse still, he has failed to profit by an article in the *Library Journal* (vol. viii), in which twenty other omissions were noted, and our own notice was referred to. The first oversight might be pardoned, on the ground that he could not be expected to examine all literary periodicals; but what shall be said of the failure to consult a bibliographical journal?

In one respect M. Vallée has much improved upon his original work. He has referred to many bibliographies contained in bibliographical dictionaries—both the general and the special dictionaries of artists, physicians, and the like. It is the excellent practice of the present day to give the list of the writings of the persons commemorated in these works, and a selection of the books about them. The dictionaries, therefore, become author-bibliographies, bio-bibliographies, and, in the case of artistic or medical dictionaries, subject-bibliographies, although these are of but little use, because not arranged by topics. They ought therefore to be mentioned; and M. Vallée has applied himself to this part of his task with great diligence.

The limits of bibliography are very indefinite. M. Vallée appears disposed to include the history of early printing (see No. 7267, Blades's 'List of Medals, Jettons, in connection with the Art of Printing'), which, though it gives him an easy opportunity to increase the number of his titles, only magnifies the incompleteness of his work by reason of the very large number of titles which he has left out in the new subject. He has even gone so far as to put in Mozzani's 'Nozioni pratiche sull' ordinamento delle pubbliche biblioteche,' and fourteen other works on library management. The slightest research would have discovered ten times as many on the same subject, but it would be much harder to justify their insertion in a bibliography of bibliographies. And what claim to insertion has P. de Musset's 'Notice sur la vie de Gustave Ricard [the painter], suivie du catalogue des œuvres de Ricard exposées à l'École des Beaux-Arts'; or Bourcard's 'Les estampes du 18e siècle, école française, guide manuel de l'amateur'; or 7320, Bouchot's 'Catalogue des dessins d'Étienne Martellange précédemment attribués à François Stella'; or 6898, Dezallier's 'Abrégé de la vie des plus fameux peintres'; or 7056, Bart's 'Mémoires sur les sculpteurs des Pays-Bas'? If catalogues of paintings, drawings, and engravings are to be called bibliographies, M. Vallée must prepare a supplement ten times larger than the present. We doubt whether No. 7356, a history of Bassano, in which thirty-eight pages are devoted to the "Lettere e scienze, pittori, scultori, incisori," contains enough bibliography to pay for the six lines M. Vallée gives it. The only approach to bibliography in the two volumes of Lucy Aikin's 'Life of J. Aikin' (No. 6928) is a list of his works two pages long. How many more titles have been pitchforked in in this way, we cannot say. Enough instances have been given to show that the author is deficient in discrimination.

The plan, as we have said, is faulty and poorly carried out; but the technical part of the work is generally well done. We notice a few slips of not much importance. The Portuguese *litteratura* becomes a French *litterature* in No. 7345; and in 7347 "bief records" is an evident misprint. No. 7341, a bibliography of Cantu (*sic*), is entered under the first word of the title, Bozza. A note states that it is by A. Manno; but under Manno, where there are many other titles, this is not referred to.

The High-Caste Hindu Woman. By Pundita Ramabai Sarasvati. With Introduction by Rachel L. Bodley, A.M., M.D., Dean of the Woman's Medical College of Pennsylvania. Philadelphia, 1887.

It is a striking face which looks at us from the frontispiece of this book, and one is almost prepared by it for the striking history of its owner. About thirty years ago she first saw the light in the forest of Gungamul, among the Western Ghauts. To that hermitage her father, Ananta

Shastri, had carried his child-bride, her mother, in order that he might be free to pursue his revolutionary resolve to educate his wife. As a boy in Poona, he had been filled with wonder at hearing the wife of the reigning Peshwa recite Sanskrit poems; and the possibility of female education had dawned upon him. Unable, on account of family prejudice, to carry out his project with his first wife, after her death he fled from civilization, literally into the jungle, taking his second girl-wife (but nine years of age) with him, that he might unrestrictedly follow his ideal. Amid hardships and perils the years passed by, and the little Lakshimibai grew to womanhood, having eaten of the tree of knowledge. When children came to them, the parents gave themselves devotedly to their education. To the mother alone fell the task in the case of the youngest, and Ramabai's earliest memory is of being wakened in the morning twilight to learn and repeat the daily lesson before the household labors had begun. Afterwards, in the wide wanderings of the pilgrimages on which the whole family went, the girl saw and learned more both of men and books, becoming mistress of four languages besides the Sanskrit. Upon the death of her parents, she and a brother journeyed through many parts of India as pilgrim-advocates of female education. In Calcutta, Ramabai began audaciously to lecture on the sacred books. The pundits of the city summoned her before them for an examination, from which she bore away the title Sarasvati, fairly wrested from them. Left a widow after a brief and happy wedded life, she has since given herself to the cause of Hindu female education. Going to England, she was there about three years, studying and acting as Professor of Sanskrit in the Woman's College at Cheltenham. Drawn to this country early last year to witness the graduation in medicine of the first high-caste Brahman woman who ever came to the United States, Dr. Anandibai Joshee, she has remained here studying and lecturing, hoping to be able soon to return to India to execute the plan which she sets forth at the end of this book.

What she has written seems to us altogether admirable. She has given a clear, calm, and simply direct account of the life and place of a Hindu woman, in society and religion; has shown the strangling effect upon the mothers, and the destroying effect upon the race, of the social customs bulwarked by religious sanctions, and has especially emphasized the pitiable condition of Hindu widows, of whom the last census shows that there are in India nearly twenty-one millions, over half a million being under nineteen years of age. To these Mrs. Medhavi's educational plans chiefly look. She hopes to open houses for young and high-caste child-widows, "where they can take shelter without the fear of losing their caste or of being disturbed in their religious belief, and where they can be taught to become teachers, governesses, nurses, and housekeepers, in order to help them make an honorable and independent living." It is her belief that she can already count upon a measure of native support for her project, and that if she can successfully conduct one such establishment for ten years, the future of female education in India will be secure. Her lectures have been given as a means of obtaining funds for the cause she has at heart, and this book is privately printed that the money derived from its sale may be devoted to the same end. We are deeply impressed with the strength, good sense, and lofty purpose of this writer. Her English is remarkable—even allowing for a possible revision. In method and style the author of the 'Introduction' might well learn from her. She has real grip and movement in her argument. She does not write as a visionary. In her, certainly, the Sphinx no longer crouches in stone.

The Story of Assyria, from the Rise of the Empire to the Fall of Nineveh (continued from 'The Story of Chaldea'). ["The Story of the Nations."] By Zénaïde A. Ragozin. G. P. Putnam's Sons. 1887.

We have had repeated occasions, without being sparing of criticism, for praising single volumes of "The Story of the Nations" as in one or more respects superior to most of the preceding ones. In this instance we must speak more broadly, and say, that were the whole collection as well done as the work before us, it would be, in our estimation, as a whole, incomparably more valuable than it is. The author has succeeded in her endeavor to make a history teeming with revolting or dry-as-dust details poetically attractive, and a popular book, mainly destined for those ignorant of the subject, brimful of information even for scholarly readers. In this she has been partly aided by her enthusiasm for the history of the ancient nations of the Mesopotamian regions, as revealed by the explorer's pickaxe and the decipherer's ingenuity, and partly by the clever device of drawing into the compass of her task as much that is, in one way or other, kindred or contiguous, and also worth knowing, as the widest stretching of the meaning of her title would permit. Whole chapters—see those inscribed "The Sons of Canaan"—are devoted to topics non-Assyrian, but slightly illustrative of Assyrian national relations and conceptions, and interesting in themselves. By so doing, the unity of the book as a special history has been somewhat impaired, but its value as a member of the series, which is collectively to form a universal history, immeasurably enhanced. Copious quotations—from the Assyro-Babylonian inscriptions, the Bible, and recent histories—lend additional variety to the 'Story,' the telling of which they have also rendered more easy and smooth. The twin volume, 'The Story of Chaldea,' is constantly referred to.

Mme. Ragozin's favorite guides are George Rawlinson, Lenormant, and Sayce, but many a page proves also considerable familiarity with Schrader, Delitzsch, E. Meyer, Stade, Kaulen, and other German authorities of the latest date. Perrot and Chipiez's 'Histoire de l'Art dans l'Antiquité' is her chief source of art information. The volume is well supplied with illustrations—we might say too well, for some of them are horrid pictures of royal Assyrian barbarism. It surely was not necessary to add to the picture (46) showing how "Sargon puts out prisoners' eyes"—"The Pride of Asshur" is the title of the chapter devoted to that conqueror—these words: "The ring passed through the lips with bridle attached is to jerk the head into the right position and keep it from moving" during the operation. Altogether, a little less admiration for the heroes of the cuneiform inscriptions, and a little more regard for the self-revealed untruth of their atrocious monumental bragging, would have suited us much better.

We also find the Biblical material very unevenly weighed in the author's critical balance. Had she read and digested Stade's 'Geschichte Israels' when she wrote (p. 25) what fact explained how Joseph could have become Prime Minister of Egypt, or (p. 152) that it was David who made his sanctuary "the only holy place of the nation"? We should also have preferred a more frequent adherence to Biblical spellings, when not really conflicting with the Assyrian names. If "Accad" is constantly used, why write "Kush" for Cush, and "Kutha" for Cuthah? Why "Karkhemish," which is not Assyrian, for Carchemish? "Ashkalon" (p. 150) is, of course, an overlooked slip of the compositor, as is "Zurim" for Zuzim (p. 74); "Lybia," for Libya (p. 91); "Yemen, the southeastern corner of the peninsula" (p. 69); "the Syrian Melkarth," for the Tyrian Melkarth (p. 133); or "Irkhulini," for Irkhulina (p. 183). In the list of "works read and consulted"—and a very creditable one it is—we find "Baudissin, W. S.," for Baudissin, W., Graf (Count); "in einzelnen Darstellungen," for "in Einzeldarstellungen," as Oncken's titles have it; and the 'History of Sennacherib' transferred from George Smith to Schrader. We must also, while giving due credit to the author for a consistent transliteration and careful revision in general, point out "Burnaburiash" and "Burnaburyash," on page 20, and "Karduniash" and "Kardunyash," on page 170, as well as "Shebaoth" (p. 10), which is neither English nor Hebrew. The Hebrew equivalent of *copper, Kupfer*, is *not* "kopher" (p. 86), though this covers the Greek κύπρος in a different meaning. M. Clermont-Ganneau is not "the discoverer" (p. 216) of the Moabite stone, whatever his other merits about it may be.

The Pleasures of Life. By Sir John Lubbock, Bart., M.P., etc. London: Macmillan & Co.; New York: Appletons. 1887.

Sir John Lubbock, in introducing this volume to his readers, tells them that it consists of the substance of various addresses which he has made before the young of schools and colleges, and explains his choice of subjects in general by saying that he is himself "rather prone to suffer from low spirits," and hence he has taken the opportunity frequently of "dwelling on the privileges and blessings we enjoy"; and he reprints some of these speeches, with considerable revision, "hoping that the thoughts and quotations in which I have myself found comfort may perhaps be of use to others also."

The character of the book is thus admirably stated, with the sincerity and directness which charms throughout the whole of the too brief pages. The tone is serious—there is much from the old sources, the great moralists of the past; but one feels in it all that best of the reader's pleasures—continuous contact with a cultivated mind and a kindly nature. He quotes in one place the remark of Nasmyth: "I have heard much about the ingratitude and selfishness of the world. It may have been my good-fortune, but I have never experienced either of these unfeeling conditions." And then he adds on his own account, "Such also has been my own experience." This is one of those unconscious strokes of simplicity that endear a writer to his reader, by virtue of the temperament and habits which they reveal without thought. The same naturalness pervades the volume, and the personality of the author, always present but never self-asserting, wins upon the reader with a power beyond that of his "thoughts and quotations," and turns the old counsels of perfection into the advice of a friend. His own thoughts partake of the quality of his quotations from the sage philosophers: "We must be careful, then, how we choose our thoughts; the soul is dyed by its thoughts." "If we are ever in doubt what to do, it is a good rule to ask ourselves what we shall wish on the morrow that we had done." These are fair examples of his homely but truthful *sententiæ*. Speaking of the blessing of friends, he says: "I do not quite understand Emerson's idea that 'men descend to meet'"; and he goes on to question the Emersonian conception of the necessity of aloofness for the soul, with a power so cogent, from his own humaneness and humility, that, without realizing it, he strikes far into one of the great weaknesses of Emerson, who wrote of friends almost as a naturalist writes of bugs. Occasionally he makes an acute criticism—by the way, as it were—which in a single phrase holds many ideas, as when he parenthetically charac-

terizes Socrates as "the very type of intellect without science."

But one will not read these comparatively few pages on happiness and duty, on friends, home, and travel, science and time, and that fertile essay on the "best hundred books," in order to get ideas of the brilliant and startling kind, but rather to return to those permanent well-springs of peace and good-will, and to those foundations of manly character in constancy, modesty, and gratitude for the blessings of human life, which are its daily bread; and, at the end, to be better for this hour's converse with a wise, patient, and conscientious man, who desires to lead others in his own walks of pleasantness and peace.

The Story of Alexander's Empire. By Prof. John Pentland Mahaffy, D.D., with the collaboration of Arthur Gilman, M.A. [The Story of the Nations.] G. P. Putnam's Sons. 1887.

THE title of a book ought to be an essential and characteristic part of it; and the above title places vividly before the mind the scope and aim of the book before us. It begins with the establishment of Alexander's empire, which it sketches briefly but vigorously, and then proceeds to tell us what became of the mighty structure after the untimely death of its founder. The disruption of the empire is narrated, and then the fortunes of each of the shattered fragments are followed in detail, and the result is a work of a rare degree of unity in diversity. It is not merely a supplement to—or rather the second part of—the history of Greece, but will be found equally valuable as a companion to Roman history. The history of Hellas when Hellas meant Alexandria, Antioch, Pergamus, and Pella, rather than Athens, Sparta, and Corinth, has not until now been accessible in an attractive form. But although Greece is treated as an influence rather than a power, the point of view is still that of the empire; when the empire, even its fragments, has sunk into dependence on Rome, after the battle of Magnesia, the author's task is done.

In all the works of this series the illustrations play an important part; but here, as in some others, there is now and again a certain lack of appropriateness. What business, for example, have the Erechtheum and the temple of Agrigentum at this epoch? And is it not rather audacious to introduce the Venus of Melos as without question a work of the second century before Christ? We are not disposed to insist overmuch upon the dignity of the muse of history, and we remember what the Autocrat has said of the opportuneness of slang, and of the descriptiveness of the word "slow," in particular; but we must confess that when we read (p. 307) that the performances of the Greek artists in Rome were "voted slow by the audience," it does not sound quite right.

A History of the University of Oxford, from the Earliest Times to the Year 1530. By H. C. Maxwell Lyte, M.A., F.S.A., Deputy-Keeper of the Public Records. Macmillan & Co. 8vo, pp. 504.

THIS handsome volume is the first instalment of what was intended to be a complete history of the University of Oxford—the first complete history of it, for Antony Wood, whose well-known work has heretofore been the standard, "was avowedly an annalist, who recorded events, not always accurately, under particular years, without attempting to classify them, or show their connection with one another." Whether the work will ever be continued by the author is left uncertain. Mr. Maxwell Lyte has not attempted to enter minutely into certain discussions which nevertheless had to be touched upon briefly—such as the scholastic philosophy, the history and topography of Oxford, and the general subject of the organization of the mediæval universities. By giving only a cursory treatment to these subjects, he has been able to bring the history of the University itself, together with the foundation and management of the several colleges, into reasonably narrow compass, so that the book is really very complete for the period which it covers. The "chief academical buildings" are likewise only briefly noticed, the reader being referred to other works for technical accounts of them. This is all very well; but it were to be desired that the book contained some fuller account of the erection of these buildings, and their plans, so far as would have been suited to the general reader. The beginnings of academical instruction at Oxford are likewise not made so clear and intelligible as they might have been.

There is an interesting plan of Oxford; a copy of a mediæval illumination, representing Edward III. granting a charter to the University; and a very full and accurate index, which, however, misses its highest value by giving only bare references, with no indication of the special points treated.

BOOKS OF THE WEEK.

Andrews, Lilian H. Only a Farmer's Daughter. Chicago: Rand, McNally & Co. 25 cents.
Dahlgren, Mrs. M. V. Divorced: A Novel. Belford, Clarke & Co.
Davis, Minnie K. The Lollard: A Story of the Wiclifites. Lutheran Pub. Society. $1.
Dorsey, E. B. English and American Railroads Compared. John Wiley & Sons.
Essays and Leaves from a Note-Book. By George Eliot. Harper & Brothers. 20 cents.
Farmer, Lydia H. The Girls' Book of Famous Queens. T. Y. Crowell & Co. $1.50.
Field, E. Culture's Garland. Boston: Ticknor & Co. 50 cents.

Scribner & Welford's

LIST OF BOOKS

Suitable for Use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

Architecture, Sculpture, Painting, Music. By N. D'Anvers. With a Preface by Prof. Roger Smith. New Edition, with over 200 wood-engravings. Large crown 8vo (800 pages), cloth, gilt top, $4.50.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class no handbook of Art History could be more suitable than this volume.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and students of Music. Each volume strongly bound in decorated cloth. Price, per volume, $1.00. Including

HAYDN, SCHUBERT, BACH, WAGNER,
HANDEL, SCHUMANN, WEBER, ROSSINI,
MOZART, PURCELL, MENDELSSOHN,
ENGLISH CHURCH COMPOSERS.

A History of Music from the Earliest Times to the Present.

By W. S. Rockstro, author of 'The Life of Handel,' 'The Life of Mendelssohn,' etc. In 1 vol., 8vo, cloth, $6.00.

Art Hand-Books.

A new series of Illustrated Text-Books of Art Education. Edited by E. J. Poynter, R.A. Each volume contains numerous illustrations, and is strongly bound for the use of students. Price, per volume, $2.00.

I. PAINTING, Classic and Italian. By E. J. Poynter and P. R. Head.
II. —— German, Flemish, and Dutch. By H. W. Buxton.
III. —— English and American. By H. W. Buxton.
IV. —— French and Spanish. By G. Smith.
V. ARCHITECTURE. Classic and Early Christian. By T. R. Smith.
VI. —— Gothic and Renaissance. By T. R. Smith.
VII. SCULPTURE. Antique, Egyptian, and Greek. By G. Redford.
VIII. —— Renaissance and Modern. By G. Redford.

Biographies of the Great Artists.

Specially prepared for Schools, Amateurs, and Students of Art. Each volume contains about 16 illustrations, including a portrait of the master, and is strongly bound in decorated cloth. Price, per volume, $1.25, unless marked otherwise, viz.:

REYNOLDS—HOGARTH—GAINSBOROUGH AND CONSTABLE—LAWRENCE AND ROMNEY, $1.00—*TURNER—WILKIE—LANDSEER—GIOTTO—FRA ANGELICO—FRA BARTOLOMMEO—GHIBERTI AND DONATELLO*, $1.00—*MANTEGNA—LEONARDO DA VINCI—MICHEL ANGELO—RAPHAEL—TITIAN—TINTORETTO—CORREGGIO*, $1.00—*VELASQUEZ—MURILLO*, $1.00—*ALBRECHT DURER—THE LITTLE MASTERS—HOLBEIN—OVERBECK—REMBRANDT RUBENS—VAN DYCK—DELLA ROBBIA*, $1.00—*WATTEAU*, $1.00—*VERNET—CLAUDE—FIGURE PAINTERS OF HOLLAND—MEISSONIER*, $1.00.

Complete detailed list supplied.

Lord Lindsay's Sketches of the History of Christian Art.

By the late Lord Lindsay (Earl of Crawford and Balcarres). New Edition. 2 vols., crown 8vo, cloth, $9.00.

The Moon: Considered as a Planet, a World, and a Satellite.

By James Nasmyth, C.E., and James Carpenter, F.R.A.S. A new and Cheaper Edition. With 26 illustrations of Lunar Objects, Phenomena, and Scenery, produced from drawings made with the aid of powerful Telescopes, and numerous woodcuts. Medium 8vo, cloth, $7.50.

Freeman (Dr. E. A.).

The Historical Geography of Europe. With 65 maps. 2 vols., 8vo, $12.00.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE,

With Dictionaries and other Books of Reference,

Comprising in all Translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin, and Greek.

687 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth, Translator of Dr. Gneist's 'History of the English Constitution.'

READ IN THE

September Number

OF

Scribner's Magazine:

CAMPING AND HUNTING IN THE SHOSHONE. By Rev. W. S. Rainsford, Rector of St. George's Church, New York. With superb illustrations from photographs and trophies in the author's possession.

THE MODERN NILE. By Edward L. Wilson. With many illustrations.

AN UNPUBLISHED DRAFT OF NATIONAL CONSTITUTION BY EDMUND RANDOLPH. Found among the papers of George Munson. By Moncure D. Conway. With a facsimile. A most timely and important discovery.

THE SACRED FLAME OF TORINJI. By E. H. House. With drawings by George Foster Barnes. A charming two-part story of Japanese life, to be concluded in October.

A COLLECTION OF UNPUBLISHED LETTERS OF THACKERAY. VI. With reproductions of letters and drawings. To be concluded in the October number, when the letters written from America will be printed.

THE DEVELOPMENT OF THE AMERICAN UNIVERSITY. By Prof. George T. Ladd of Yale College.

THE MOTIF OF BIRD SONG. By Maurice Thompson. A charming out-of-door paper.

FLANDROE'S MOGUL. By A. C. Gordon. An exciting railroad story.

ENGLISH IN NEWSPAPERS AND NOVELS. By Adams Sherman Hill.

POEMS. By Mrs. James T. Fields, John Boyle O'Reilly, Julia C. R. Dorr, and others.

FOR SALE BY ALL DEALERS.

25 cents a number. $3 a year.

Charles Scribner's Sons,

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 8, 1887.

The Week.

THE Baltimore and Ohio "deal," or one of the many that have been agitating financial circles for months, has been authoritatively announced. Upon the face of it it is a plan to furnish $10,000,000 of new capital "for the purpose of paying off the entire floating debts of the company and placing it upon a sound financial basis." This is a task which engages the efforts of four of the strongest banking-houses in the world, and has for its object the relief of a company which publishes a "surplus" of $48,047,461. If the surplus were twice as large, probably twice the number of banking-houses would have been needed to "syndicate" it to a "sound financial basis." Such a surplus is evidently a dust-bin. Instead of being a reserve to fall back on in hard times, it is rather a burden to be removed, having in this respect a striking resemblance to the $2,600,000 surplus of the Cincinnati, Hamilton and Dayton. The banking-houses agreed to perform the last offices of respect and affection for this surplus on certain wise conditions. The principal one is, "that satisfactory contracts shall be made between the Baltimore and Ohio and the other roads for New York business, which shall remove all antagonism between them on the subject, and insure the permanent working of the Baltimore and Ohio in entire harmony with the other trunk lines, and also avoid construction or threat of construction of extensive parallel lines north and east of Philadelphia."

In order that these proposed contracts may be effectually guaranteed, they require "that the management of the company shall be placed in competent hands, satisfactory to the syndicate." Competent hands! There is a great deal of significance in these two words. They imply that the hands now controlling the Baltimore and Ohio are not competent, and this is manifest upon the face of things. If any testimony were needed upon this point additional to the carting away of the $48,000,000 surplus, it might be found in Mr. Garrett's recent negotiation for the transfer of the Baltimore and Ohio property to an impecunious scamp of the name of Ives, on a pledge of overissued stock of the Cincinnati, Hamilton and Dayton Company, of the fraudulent character of which Mr. Garrett was notified either at the time he took it or very soon afterwards. Certainly, more competent hands are needed in the management of the Baltimore and Ohio property, and more competent hands will undoubtedly be found. The Baltimore and Ohio, divested of its surplus and put into harmonious relations with the Pennsylvania and Reading Companies, is undoubtedly a good property. On the other hand, Pennsylvania and Reading on those conditions are much better properties than before; and so, likewise, are all the trunk lines. The transaction announced by the syndicate is the lifting of another very black cloud from the money market, and comes very happily to reinforce the movement inaugurated a few days before in the Oregon and Northern Pacific affairs.

A suit has been brought by a holder of common stock in the Cincinnati, Hamilton and Dayton Railroad to set aside as fraudulent the bulk of the preferred stock issued under the Ives & Stayner régime. This is an eminently proper proceeding, but if the expectation is to make the common stock what it was before those rascals got control of the property, it will prove a bitter disappointment. The fact, as we have reason to believe, is, that the road is so completely wrecked and its capital so greatly impaired that it needs not less than $1,500,000 of new money to put it in good condition—such condition as any experienced railway manager would consider safe and sound. If this is the state of the case, the interest on the fresh capital required will consume the small remnant of surplus earnings applicable to dividends on the stock, and leave both common and preferred wallowing in the mire of "fancies" on the Stock Exchange, having no value for a long time to come except for voting purposes. It is claimed that $1,000,000 of the preferred stock was properly issued, so that no dispute can be raised as to its legality. The dividends upon this amount accordingly become a part of the fixed charges of the road as against the common stock, and this dividend is included in the reckoning we have made. It is our belief, based upon information such as business men usually rely upon, that the C., H. D. has passed, under the Ives & Stayner management, from the list of sound dividend-paying properties to the category of sick estates requiring reorganization of the most radical character, and that this condition has been brought about by barefaced robbery of its treasury and assets.

The holders of "secured loans" to Ives have been remarkably patient up to the present time. One or two of the number extricated themselves by a bold dash. They were wise. They would have been wiser if they had never lent any money to a notorious sharper; but this remark applies more especially to those who are still counting as valuable assets the stock of the Cincinnati, Hamilton and Dayton Railroad, either common or preferred. It is most likely that they will take possession of the road and operate it. When they find out how greatly its capital is impaired, and how large a sum of good money has to be thrown after the bad in order to save the property from being engulfed, it is to be hoped that they will invoke the aid of the District Attorney to secure the ends of justice and to make the way of the future transgressor hard. The transactions of Ives are no whit better than those of the scamp who helped himself to the money of the Manhattan Bank. He borrowed money on the pledge of certain securities, and then spirited away the property that the securities represented. If there is no punishment for such operations, there ought to be none for bank robbery.

It is in one sense surprising that the offerings of bonds to the Treasury on August 31 should have been smaller than on any preceding Wednesday since the Secretary's circular was issued, while the money market is working closer than before, and the rate of interest stiffening. The reason probably is, that during the previous week there had been several thunder-clouds hanging over the money market, making investors timid, and leading them to hold on to first-class securities with more than usual tenacity. In such times a Government bond is a precious thing to have, even though it is sure to be called in and redeemed at par within four years. Although the premium will be lost if the bond is held until maturity, the bond itself is the one fire-proof thing that a capitalist likes to have within reach if a conflagration is apprehended. The bond pays a fair interest, and the principal is known to be secure beyond peradventure. With the gradual disappearance of trouble on the Stock Exchange, we may look for a freer offering of bonds. Meanwhile, the large disbursement of money for pensions this month will prevent any undue accumulation of money in the Treasury.

Gen. Butler has taken the field as a pension candidate for the Presidency, and it behooves Gov. Foraker and all other aspirants for that position to look out for themselves. We are unable to see how any of them can go further than Butler does in his platform. He says that we have to day $585,000,000 in the Treasury which "is of no earthly use." The question is, How is this money to be got out of the Treasury? "My idea, comrades," he says, "is that it should be distributed equitably. How is that? Make a service pension for every man who served three months in the war so much, and so on, according to the desert of the pensioner. In this way the money would be distributed, and could never go wrong." If there is any surplus left after this has been done, he is in favor of using it "for the purpose of administering to the necessities of the Confederate soldiers of the South, who were not blamable for this war being brought upon us, but are only sufferers by it." That is the first bid of the kind we have seen. The Mahone Republicans in Virginia have been in favor of State pensions for Confederate soldiers, but have said nothing about national aid to them. Butler's scheme is far ahead of all others, therefore, and no man can doubt that, if it were put in force, it would dispose of the surplus problem for many years to come.

The Democratic Convention of Pennsylvania has adopted a platform which is in the main very strong and serviceable. It is the first State platform we have seen that gives due recognition to the financial success of the Administration. The neglect of the party generally to

signalize the first rate achievements of the Treasury Department, and the credit it has reflected upon the American name, may be due to inability to understand what constitutes success in that line, or it may result from a lingering belief, handed down from the greenback era, that the poorest kind of money is the right kind for the poor man. Somebody in the Pennsylvania Convention, and most probably Mr. Scott, has brought the party to a knowledge of the fact that Mr. Cleveland's Administration has strengthened the public credit, and has contributed, as much as any Administration can, to the state of business prosperity which now exists. It is perhaps an overstatement to say that it has restored to the business community confidence in the Democratic party as regards the management of financial affairs. It will require more than one Administration to do that. It has established confidence in itself, and it has proved that the Republicans have no monopoly of financial skill, prudence, and integrity.

The resolution regarding the tariff is trumpeted in some quarters as a great victory for Mr. Randall, but we cannot so understand it. Mr. Randall has repeatedly declared himself in favor of repealing the whole internal-revenue system—whiskey tax, bank-note tax, oleomargarine tax, and all. The object he has in view is to avoid any reduction of duties on imports. The resolution declares in favor of "a wise and prudent reduction of internal taxation *and* of duties on imports." This surely is not Mr. Randall's programme. It is an unobjectionable programme, whoever may have been its author. Free-traders would prefer that the reduction of taxation should take effect on import duties only, seeing that the internal tax rests now almost wholly upon liquors and tobacco, neither of which can be accounted necessaries of life. But they are not so impracticable as to insist upon theoretical perfection in a tax system. All that the great majority of tariff reformers ask is what the Pennsylvania platform promises, a wise and prudent reduction of both internal and import duties. On the two subjects of immigration and pensions the platform is more rational and honest than that of the Republicans. It does not hold out the delusive promise of prohibiting the coming in of such laborers as may compete with laborers already here, on the flimsy pretence of stopping the immigration of paupers. It declares merely that existing laws should be strictly enforced, opposes illiberal restrictions, and favors such additional measures of "regulation" as may be necessary. It favors liberal pensions, but with a proper saving clause against fraudulent claims, and puts the party in accord with Mr. Cleveland's policy in this regard. Upon the whole, there is less cant and more directness of speech and more common sense in the platform than the public commonly look for in the resolutions of party conventions.

The platform of the Iowa Democrats is notable for its hearty commendation of the President, and its frank avowal in favor of tariff reform. It calls for the "immediate revision of our tariff laws to a revenue basis," and opposes the abolition of the taxes on liquor and tobacco. There is no clap-trap about this, and no attempt to disguise its meaning. Indeed, we think a noticeable improvement is visible in the Democratic platform literature this year in the direction of plainness of statement. The party appears to be gaining something in self-confidence and in the courage which ought to accompany its convictions. It has a great opportunity to do this now, for the Republican platforms are coming more and more to be mere catch-alls for various kinds of "votes," being constructed upon the idea that the way to carry elections in this country is to offer some sort of a bribe for nearly every man's vote.

The findings of the Civil-Service Commissioners, in their inquiry concerning the conduct of the Collector at Chicago in removing Mr. Webster from the Appraisership, are very interesting. The charge made against the Collector by Mr. Webster was that when the former demanded his resignation, he called upon him and asked the reason, and was assured by the Collector that no complaint had been urged against his official conduct and ability, which were excellent, but that, owing to a great pressure, there was a necessity that vacancies should be made, adding: "You must remember that our party has been out of power for twenty-five years, and you should be thankful for having been allowed to stay two years under a Democratic administration." The case of Mr. Webster was taken up by the Civil-Service Reform League of Chicago, and made the basis of a complaint to the President against the Collector. The Civil-Service Commission appointed one of their number, Mr. Edgerton, a special committee to investigate the charge. Mr. Edgerton did so, and made a report to the Commission in which he exonerated the Collector, took the ground that Mr. Webster was not removed but had resigned, censured the Civil-Service Reform League for its course in the matter, and declared that the Collector, in refusing during the inquiry to give his reasons for demanding Mr. Webster's resignation, inasmuch as those reasons were in his "own mind and keeping," was acting in strict conformity with the Civil-Service Law.

This report of Mr. Edgerton was reviewed by the other two members of the Commission, Messrs. Lyman and Oberly, and an opinion directly adverse to its conclusions was reached. This opinion has been sent to the President with the report. It sustains Mr. Webster's charge and the course of the Civil-Service League of Chicago completely, and calls attention to the facts that Mr. Webster was an honorably discharged wounded soldier, who passed the civil-service examination with an average of 90.5 per cent., was absolutely appointed to office after his probationary term had satisfactorily demonstrated his conduct and capacity, was afterwards promoted for faithful and efficient service, and was never guilty of partisanship, offensive or otherwise. The opinion also pronounces untenable Mr. Edgerton's position justifying the Collector in refusing to give his reasons for the removal, and in conclusion expresses its dissent from Commissioner Edgerton's censure of civil-service reform leagues and associations, and particularly of the Civil-Service Reform League of Chicago, and says that the Commission's observation has discovered no purpose in any of them to antagonize the Administration, or to in any way embarrass it in the enforcement of the Civil-Service Law and Rules. On the contrary, all such leagues and associations have shown a most earnest desire to support the Commission in the discharge of its duties.

We trust that the President will follow in this case the precedent which he set in the Indianapolis case, and sustain the finding of the majority of the Commission, without regard to the fact that while in the Indianapolis case the report was in favor of the accused official, in this case it is against him. It would be difficult to find a more brazen defiance of the Civil Service Law than the Chicago Collector has committed. He has not merely demanded, without cause, the resignation of an incumbent, but of an incumbent who obtained his office through civil-service examinations and in strict accordance with civil-service regulations, and who, in the performance of his duties, has shown himself in every way efficient and faithful. If such an incumbent can be removed without cause or without specified reason, there is no protection for any official against a similar fate. The law might as well be nullified *in toto* at once, for if the view which Mr. Edgerton and the Chicago Collector attempt to take of it is allowed to prevail, it is not worth the paper it is printed upon.

The attempt of some stockholders in a Louisiana newspaper to get an injunction restraining the editor from "supporting" the nomination of one of two candidates for an office, on the ground that the paper was naturally or constitutionally Democratic, has an absurd air, on the theory that the campaign editor is a sort of prophet, laying his soul's convictions before a bewildered people. But it is not in the least absurd on the theory on which campaign journalism is usually conducted. There is rarely a canvass for a high office in which scores of editors do not turn round, after the nomination is made, and cover with laudation a man whom they had previously been abusing and proving to be unfit for any office, even if his election were possible. In some, but rare cases, an editor avoids this humiliation by "going to Europe" until after the election, or nominally handing the editorship over to some one else. Generally this delicacy is not thought necessary. During the Blaine canvass in 1884, for instance, many of his chief eulogists were writers and speakers whose contempt for him and distrust of him had previously been proclaimed on the house-tops, or were well known among private friends. The truth is, that the editorial "support" given to candidates by party newspapers is not a moral, but a purely mechanical agency, which is therefore really a perfectly proper thing for

the courts to lay hold of and either enjoin or mandamus. There is no more reason why a party editor should not be made to stop supporting by injunction or made to keep on supporting by mandamus, than why he should not be compelled to refrain from cutting off an ancient light or to execute a contract for advertising. In view of the way canvasses are notoriously conducted by "organs," it is preposterous to ask the courts to treat them as consciences or moral entities of any description.

Kentucky has long stood in urgent need of a new constitution, the present instrument being an antiquated affair adopted before the war, which contains the declaration that the right of property in slaves is "before and higher than any constitutional sanction," and which still forbids free negroes to live in the State. Repeated efforts have been made to secure the calling of a convention to frame a new constitution, but they have always failed because the restrictions placed upon any change in the instrument itself are extremely severe. Not merely must a majority of the voters who go to the polls vote for a convention to start the movement for revision, but this majority must be a majority of all the qualified voters in the State, which is always an extremely difficult thing to get for any proposition. Fortunately, however, the vote at the recent State election was unprecedentedly large, and out of 278,308 persons entitled to vote, 162,557, or a clear majority, took the trouble to vote for a convention. Even now the people must vote again upon the question two years hence, and it will be four years at the earliest before the convention can meet.

Delaware is another State which urgently needs a new constitution, and which is also discussing the matter this year. The last Legislature appointed a special election next November, to take the sense of the people upon the question of holding a convention; and as the only other possible method of amending the instrument, by the action of successive Legislatures, with the approval of the Governor, has been tried and found wanting, there ought to be no question of carrying the proposition. The difficulty in the way is, that many of the politicians in both parties are hostile to any change, and are evidently going to do all they can to defeat the convention movement. As it is always hard to get a majority of the people to take interest enough in an election which involves only the question of constitutional revision to overcome the opposition of men who have selfish motives for preventing a change, there is too much reason to fear that the reform may fail.

A great light is thrown upon the George-McGlynn anti-poverty crusade by a response which Mr. George made in his paper last week to a man who wrote him a letter suggesting that a fund of $10,000 be raised to provide coal and soup for the poor of New York next winter. Mr. George declined to have anything to do with the project, saying that the Anti-Poverty Society was formed to abolish poverty, not to relieve the poor, and that "in using all the money we can raise to urge on the crusade we have begun, we shall be using it for a far higher and more beneficent purpose than if we applied it to alms-giving." What this purpose is we presume is indicated by another remark in the same paper, that the "great means by which the emancipation of labor is to be attained is not the carrying of elections, but the stimulation of thought." In other words, the way to abolish poverty and emancipate labor is to put money in the anti-poverty contribution box and subscribe to Henry George's paper, and then, if there is anything left, buy copies of Henry George's books. That is called stimulating thought, but to the unsympathetic observer it looks uncommonly like a scheme for getting a living by quackery.

Bishop Wigger of Newark, N. J., seems to the lay eye to have made a great mistake in his address before the German Catholic Union at Chicago on Sunday, in appealing to his hearers not to send their children to the public schools, on spiritual grounds solely. He disposed of the argument by which most Catholic parents are influenced, that the education given in the public schools is better than that given in the clerical schools, by saying that this was of no consequence—that the salvation of the child's soul was the principal thing, and that this can only be secured by clerical training. He even went so far as to admit that the public schools were better for the purposes of this life than clerical schools. This was injudicious, because it is likely to make the continued attendance of Catholic children at the public schools seem a proof or indication of the parents' indifference to their fate in the world to come. We should have thought it sound policy to leave a veil of uncertainty over the state of mind of Catholic fathers or mothers who use the common schools, and, indeed, to assume that when they sent the children to them they did not know the risks to which they were exposing them. For if they continue to send them after such warning as Bishop Wigger's, will it not seem that they do not believe their clergy, and care nothing about spiritual dangers? It is on these grounds that ecclesiastical authorities in all denominations in modern times refrain as much as possible from the infliction of the higher ecclesiastical penalties. They are afraid of the scandal which would be caused by the total indifference of the culprits to the punishment imposed on them. It was in remembrance of this that the old Scotch Judge reminded a prevaricating witness that "the eye of Almighty God *and* of the police of Edinburgh were upon him."

It would hardly be possible to conceive of a more embarrassing difficulty in the working of a federal system than has arisen in Canada. The Canadian Federal Constitution gives the Federal Government the exclusive right to authorize the construction of new lines of railroad, and it has guaranteed the Canadian Pacific line against competition westward and southward. In defiance of all this, the Provincial Legislature of Manitoba has authorized the construction of a line from Winnipeg to the United States boundary, where it would connect with the Northern Pacific, and it has disregarded the "disallowance" of the Federal Government and an injunction from the Federal courts, and is going on with the work. Sir John Macdonald, the Dominion Premier, was reported to have declared he would call for British regulars to overcome this resistance, but this foolish speech he repudiates. In fact, it is not easy to see how the Manitobans can be put down in seeking their material development in their own way. Had they strong national feeling, they would probably be willing to sacrifice themselves for the Federal idea, but they evidently have not, and the Government can hardly venture to kill them for trying to construct a railroad on their own soil at their own expense. If blood were once shed, it would be ever after very difficult to keep the province in the Dominion.

The broad assertion of *Le Nord* of Brussels (a journal employed as a semi-official organ by the Russian Foreign Office), "that there can be no question at present of sending a Russian general to Sofia, which will only be done when the authority of Turkey is completely restored in Bulgaria on a loyal basis," may be accepted as disposing of the recent reports that Gen. Ernroth was to be sent by the Czar, jointly with the Sultan, to bring about the election of a new Bulgarian Sobranye and a fresh election of a Prince; that he was to be supported by Turkish forces; and that Prince Bismarck approved of the measure. Not that *Le Nord* must always be thought truthfully inspired from St. Petersburg, but the statements thus semi-officially denied were intrinsically improbable. The Russian Government would surely not repeat, through the instrumentality of Gen. Ernroth, the attempt made by his former coworker in Bulgaria, Gen. Kaulbars, which ended in so painful a fiasco. Were the attempt to be renewed in a different way, with the positive announcement that a rejection of the Russian military envoy's proposals would be followed by the entrance of a Turkish army into Bulgaria, is there much likelihood that Prince Ferdinand, who has shown such plucky, or say reckless, determination in accepting the Bulgarian crown, would timidly drop it at the feet of a Russian would-be proconsul, from fear of a first collision with a pasha? And would not the Bulgarians, in defence of their independence, stand by him as they stood by Alexander of Battenberg, when he called out their raw levies against Milan of Servia? And supposing him defeated by overwhelming forces, as Milan was by inferior ones, would not Austria-Hungary, now the protector of Bulgarian interests, check the Turkish advance by a threat of counter-intervention, as it checked Alexander in his pursuit of Milan? Such intervention and counter-intervention could not but lead to a general war in Eastern Europe, and for this Russia is not prepared at this moment, nor has the Czar the least inclination for it. Russia protests firmly against Ferdinand's usurpation, but she will wait patiently for a more favorable moment for effecting his downfall, by open force or secret intrigue.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 31, to TUESDAY, September 6, 1887, inclusive.

DOMESTIC.

THE public-debt statement shows a reduction of $4,809,475.41 for August.

The Department of State has received copies of a recent contract made between the Venezuelan Government and one of its citizens for the establishment of telegraphic communication between Venezuela and the United States.

The American Board of Foreign Missions has made a statement to the Department of State of the imprisonment without cause, as they have been informed, of the Rev. Mr. Doane, an American missionary to the Caroline Islands, by the Spanish Governor, who transported him to Manila to be tried. The complaint has been transmitted to the United States Consul at Manila, with instructions to ascertain the facts and to take the necessary steps to protect the missionary from unjust treatment.

Gen. Terry has reported to the War Department that "the Utes are all on the reservation, and that everything is quiet."

The people of Arizona have presented to Gen. Nelson A. Miles a sword which is said to be, with one possible exception, the finest gift of the kind ever received by an officer of our army. The hilt is of white shark skin and gold, and is set with a large amethyst. It is ornamented also with an engraved portrait of Chief Nachez. The scabbard, which is of gold, bears on one side a portrait of Geronimo and a series of pictures of warfare on the frontier. On the other side is the inscription of presentation. The Spanish blade is so perfectly tempered that its point can be made almost to touch the hilt. Its cost is thought to have been not less than $10,000.

The President on August 31 appointed S. S. Carlisle of Louisiana to be Minister Resident and Consul-General to Bolivia.

In reply to an invitation by Mayor Hewitt and the Common Council of this city to Mrs Cleveland to present a stand of colors to the firemen at the annual parade next month, she has written a letter of declination, in which she says: "I hope that I shall not be misunderstood when I base my declination of your kind invitation upon my unwillingness to assume that I, as the wife of the President, ought to participate so prominently in a public ceremony in which he takes no part."

The International Medical Congress began its session in Washington September 5. President Cleveland opened the Congress, and Secretary Bayard made an address of welcome. There are more than 4,000 physicians in attendance, nearly every civilized country being represented, and among the visitors are many distinguished men.

The members of O. J. Crane Post of the Grand Army of Cleveland, O., have adopted resolutions declaring that "this Post looks with disapprobation and condemnation upon every demonstration of disrespect towards the legally constituted Executive of the national Government, the same being subversive of the foundation principles of the Grand Army," and expressing the hope "that the Department, in its convocation at St. Louis, will take such action as will demonstrate that the Grand Army is not an organization for political purposes, or through which to manifest malice, hatred, or ill will."

The Pennsylvania Democratic Convention at Allentown, August 31, nominated J. Ross Thompson for Supreme Court Judge, and B. J. McGrann for State Treasurer. The platform expressed praise of Mr. Cleveland's Administration, and declared that the internal-revenue taxes should be reduced; and the plank about the tariff was a declaration in favor of the position taken by Mr. Randall and the protectionist faction of the Democratic party.

The Democrats of Iowa, September 1, nominated a State ticket, with T. J. Anderson for Governor. The platform commends President Cleveland's Administration, especially for the restoration of the public lands to the use of settlers, for the reform of the civil service, and for "the efficiency, liberality, and impartiality of the Pension Department." The Iowa Democrats "call upon Congress for the immediate revision of our tariff laws to a revenue basis," and "favor the retention of the internal-revenue tax on intoxicating liquors and tobacco, and protest against its proposed reduction for the purpose of continuing the present high tariff on the necessaries of life." They desire to repeal the present prohibitory State liquor law and to substitute a local-option law.

The Baltimore *Civil-Service Reformer*, the official organ of the Maryland Civil-Service Reform Association, which speaks for the Independent Democratic voters in that State, in its September number announces its support of the Republican State ticket. An Independent Democratic campaign will be conducted.

George W. Thobe, the Labor candidate in the Sixth Congressional District of Kentucky, has filed his notice and his testimony within the time prescribed by law, as a contestant of Mr. Carlisle's seat in Congress.

The Lackawanna County (Penn.) Republican Convention on September 3 elected delegates to the National Convention of 1888, and instructed them to vote for Mr. Blaine.

A large meeting of business men was held at Buffalo August 30, at which speeches favoring commercial union with Canada were delivered by Mr. Erastus Wiman of New York and Representative Benjamin Butterworth of Ohio. A resolution favorable to commercial union was unanimously adopted.

Labor Day (September 5) was observed as a holiday by most of the working people of New York; and there was a parade of perhaps 25,000 members of labor organizations, which was reviewed by Henry George and other prominent men of the Labor party. Manufactories and the business exchanges were closed, but the day was observed as a holiday (as it is made by law in this State) by few other persons than members of labor organizations. In Boston and Philadelphia and Baltimore, and in a number of the Western cities, the day was spent in similar fashion.

Before the German Catholic Union of the United States in Chicago September 4, Bishop Wigger of Newark, N. J., preached a sermon, wherein he said: "Some parents have an idea that the instruction in the public schools is better than in the schools connected with the church. This is a false idea; but, admitting even that it is true, what justification can it be for such parents? Think of the effects of public schools on your offspring! When they grow up, does it not result in their falling from grace and saying to themselves: 'Is religion so weighty a matter as the priests and our parents say it is?'"

On August 31, the anniversary of the destructive earthquake at Charleston, S. C., the more ignorant people, especially the negroes, were greatly alarmed. During the year more than 5,000 buildings, exclusive of churches and public buildings, have been restored, and 141 more have been rebuilt, and 271 new ones have been erected. Of the total amount contributed for the relief of sufferers, $600,000 have been applied to the repair of 2,200 houses, mostly the homes of very poor people. Besides this sum, the property-owners of Charleston have expended for repairs about $1,500,000. Altogether not less than $3,500,000, it is estimated, have been spent in the restoration and improvement of the city.

The Grand Jury of Dodge County, Georgia, has indicted a superintendent of a convict camp, named Bryant, for murder, because he compelled a sick convict to work till he fell dead.

An "Anti-Russian Treaty Society" has been organized at Chicago to agitate for the defeat of the projected treaty between the United States and Russia.

The franchises and business of the Baltimore and Ohio Express Company have been sold to the United States Express Company for a period of thirty years. It is generally understood that the price paid was $2,500,000, of which $1,000,000 was in cash, and the balance in stock of the United States Express Company.

Mr. A. B. Stickney, President of the Minnesota and Northwestern Railroad, at a cost of $100,000, will present to the city of St. Paul a building for a public library, art school, and conservatory of music.

Mrs. F B. Thurber on August 31 sent a communication to the press announcing the suspension of the National Opera Company. The company yet owes a considerable debt, the payment of which at present is impossible, but the hope is expressed of a resumption of the work. The National Conservatory of Music, which has been in existence two years, will be maintained and developed. In another year it will have finished the training of a number of young artists.

The annual meeting of the American Library Association was held at Round Island, N. Y., and adjourned September 2, to meet next year at St. Louis.

A trotting race was run at Fostoria, O., on the night of September 1 on a track illuminated by natural gas.

An oil well was shot near Cygnet, O., August 30, which in three hours filled a 900-barrel tank, and during the first twenty-four hours gave out 5,000 barrels of oil.

It was discovered on August 31 that the Saco and Biddeford Savings Institution, at Saco, Me., had been robbed by a young clerk, Frank C. McNeilly, nineteen years old. He ran away, taking $3,500 in cash, United States registered 4 per cent. bonds, payable in 1907, amounting to $185,000, and railroad, municipal, and other bonds amounting to about $80,000.

Many small vessels have been wrecked in the Atlantic within the last fortnight, and nearly all that were at sea during the last week in August suffered more or less damage. The schooner *William H. Jones*, from New York for a Haytian port, returned September 6 almost a wreck. The captain and one of the seamen were washed overboard in a storm which was encountered near the Great Bahama Islands.

Bishop Wm. L. Harris of the Methodist Episcopal Church died in this city on September 2, in his seventieth year. The Rev. John Allen, an eccentric and widely known preacher in Maine, who was commonly called "Camp Meeting" John Allen, died on the East Livermore Camp Grounds August 31, in his ninety-third year. The Rev. Dr. Augustus Abeel of Stamford, Conn., died September 5, in his eighty-seventh year.

FOREIGN.

Ten thousand persons September 4 attended the meeting of the Irish National League at Ennis, Ireland, which had been proclaimed. The police took possession of the hill of Ballycoree, where it was intended to hold the meeting, and when the procession, including Messrs. Timothy Sullivan, Dillon, Cox, Sheehy, William O'Brien, and Philip Stanhope, all members of the House of Commons, and several priests, moved towards the hill, it stopped in a field and listened to speeches. After a parley with the officers of a troop of hussars the crowd returned to Ennis, where Mr. O'Brien addressed it in a public square. The soldiers and police again appearing, the procession passed on to a hotel and dispersed quietly. There were lighted

candles in the windows of almost every house in the town, and an enormous crowd welcomed the visitors. Speeches were made by nearly all the members of Parliament present. The incident was important because it was the first meeting that had been proclaimed in the time of the present Ministry.

Mr. Lane, member of Parliament, speaking at Queenstown September 5, said that the Parnellites intend to continue to hold meetings, even at the point of the bayonet. If the Government attempted to suppress their meetings, they would meet with barricaded doors. The Liberal League, at a meeting in Alexandra Palace, has resolved to establish branches of that association wherever National League lodges are prohibited in Ireland.

The votes for the police and for the expenses of criminal prosecution in Ireland have provoked long and angry debates in the House of Commons.

It is given out that Mgr. Persico, in his report to the Pope on his Irish mission, points out the necessity for the interests of Ireland of a permanent agent of the Vatican at London.

In the House of Commons September 1 Mr. Balfour said that the Government would allow no more money for the transportation of pauper emigrants to America during the remainder of the year. Seven steamers which sailed from Queenstown August 30 and 31 took on board 858 emigrants for this country.

In the House of Commons on September 5 the Allotments Bill passed its third reading.

In the Parliamentary election to fill the vacancy in the Ramsey or North Division of Huntingdonshire August 30, Mr. William Henry Fellowes, Conservative, was reëlected over Mr. Saunders, the Gladstonian candidate, by a vote of 2,700 to 2,414. In the last election Mr. Fellowes was unopposed, and as the Liberals this time came so near capturing the district, they regard the result as an additional proof of the change of English public opinion in favor of Mr. Gladstone's Irish policy.

Many Americans who are visiting England went to Hawarden September 4 to pay their respects to Mr. Gladstone, and attended church, where he read the lessons of the day. After the service the path from the church door was lined on both sides by the visitors, who greeted him as he passed, and Mr. Gladstone returned each greeting cordially.
